THE ENGLISH SCHOOLS' MUSIC ASSOCIATION, with which the Tonic Sol-Fa Association is incorporated, will hold its seventy-sixth Great Choral Festival on June 25th, at the Alexandra Palace. With the passing of the ill-fated Crystal Palace, even London has but very few rooms to accommodate a chorus of four thousand singers, with the audience this would draw. Our British cousins have a genius for organizing and handling monster musical groups.

OLIN DOWNES, well known music critic, has been appointed Musical Director of the New York World's Fair.

HANDEL'S seldom heard secular oratorio, "Semele," containing the perennial *Where'er You Walk*, solo, had recently a large scale performance by the Glasgow (Scotland) Choral Union and Scottish Orchestra.

MRS. H. H. A. BEACH, eminent American composer, appeared on a late program of the MacDowell Club of New York City, when she presented a group of her own piano works, including *La Fee de la Fontaine, Young Birches*, and a *Nocturne;* to which was added *The Hermit Thrush at Eve*, as encore. She also accompanied Ruth Shaffner in some of the most famous of the Beach songs.

"THE MAN WITHOUT A COUNTRY," an American opera by Dr. Walter Damrosch, had its first hearing in the regular season of the Metropolitan Opera Company, when presented on February 17th. The work had its world première last spring in the popular season of the "Met" and was later produced by the Chicago City Opera Company; in both of which performances the composer conducted his own work.

THE VIOLONCELLO CLUB of London recently held its "one hundredth meeting" with their friend and patron, Pablo Casals, as guest of honor.

THE MUSIC EDUCATOR'S NATIONAL CONFERENCE, under the presidency of Joseph E. Maddy, held its annual session from March 27th to April 1st, at St. Louis. It featured a Festival Celebrating One Hundred Years of Music Teaching in the Schools of America. Also there were the usual many events with speakers of world reputation, with concerts by the National High School Band, National High School Orchestra, and National High School Chorus of fifteen hundred voices.

THE PHILHARMONIC ORCHESTRA OF ROTTERDAM recently devoted a program to compositions of nationals of the Netherlands, among those represented being Mmes. J. Bordewijk and Dina Apeldorn.

OTTORINO RESPIGHI'S "Concerto for Piano and Orchestra in the Mixolydian Mode" was heard for the first time in Portland, Oregon, when given there on the program of February 17th of the Portland Symphony Orchestra, with Olga Steeb as soloist and Willem van Hoogstraten conducting. As a tribute to the memory of the late Maurice Ravel, his suite, "Le Tombeau de Couperin," was offered.

THE AMERICAN GUILD OF BANJOISTS, MANDOLINISTS AND GUITARISTS announces its thirty-seventh annual convention to be held from June 26th to 29th in St. Louis.

PROFESSOR WILLIBALD LEO FREIHERR VON LUTGENDORFF-LEINBERG of Weimar died on December 31st at the age of eighty-two. He was a man of rare talents; and his stupendous work, "The Violin and Lutemakers from the Middle Ages to the Present," published in 1904 and now in its fourth edition, is an invaluable contribution to literature about the stringed instruments.

MUSIC LIBRARY ADMINISTRATION is a new course to be offered for the first time in the summer school of Columbia University. It will be under the direction of Richard S. Angell, librarian of music in the University Library.

"L'ENFANT PRODIGUE (The Prodigal Son)" by Claude Achille Debussy has been presented in Amsterdam, Holland, by the Concertgebouw.

IRENE JESSNER

THE PHILADELPHIA SEASON of the Metropolitan Opera Company closed with a gala performance of Mozart's "Don Giovanni" before a gala audience which tested the capacity of the historic and acoustically perfect Academy of Music. Irene Jessner from the little National Theater of Prague where "Don Giovanni" was first heard on any stage, was the new and very capable *Donna Elvira;* Dusalina Giannini sang voluptuously the impassioned music of *Donna Anna,* for her "home folks;" and Ezio Pinza was a dashing *Don Giovanni.*

NICHOLAS ORLOFF has won recent a brilliant success as soloist in the "Concerto in B-flat minor for Piano and Orchestra" of Tschaikowsky, on a program of the Concerts-Colonne of Paris.

THE SAN FRANCISCO OPERA ASSOCIATION already announces its plans for next season, which include eleven performances in San Francisco and six in Los Angeles. Beniamino Gigli will be the *Faust* in the "Mefistofele" of Boito for the opening night; the cast for Mozart's "Don Giovanni" will include Mme. Rethberg and Ezio Pinza; there will be Mme. Rose Pauly in the title rôle of the "Elektra" of Richard Strauss; and Fritz Reiner will conduct.

DR. JOHN McE. WARD has finished half century as organist of St. Mark's Lutheran Church of Philadelphia, in honor of which event he has been honored by special service in the church and by programs and social functions under the direction of his fellow musicians.

ARTURO TOSCANINI has resigned his post as one of the chief conductors of the Salzburg Festival, giving as his reason "the unsettled conditions in Austria as reported in the American press." (And this even before the debacle of March 13th.)

THE WOMEN'S BAND of the University of Wisconsin, with forty-one members, claims the distinction of being the first organization of its kind in any university.

ARNOLD EIDUS

ARNOLD EIDUS, thirteen and another Louis Persinger discovery, made his début in Town Hall, New York City, on March 1st, with a brilliant success. He already had appeared with the National Symphony Orchestra, the Naumburg Symphony Orchestra, the Long Island Symphony Orchestra, and on important radio programs. Query:—Has Persinger started another prodigy on his way to the violinist's Parnassus?

(*Continued on Page* 346)

Liszt's Green Gloves

BALLYHOO is circus lot jargon for the lurid perorations of the side show barker as he goes through the operation of separating the sucker from his nickels for the opportunity of passing behind the canvas wall and peering at a pathetic collection of nature's merciless jokes upon the human race. Hear his leather throated strident tones as he chants, "Come on, ladies and gents, see the rabbit-faced girl, see Rajah Rien, King of fire-eaters, Gertie Glands the human elephant, all for a dime, two nickels." In we go, with the rest of the public to gaze on the freaks who sit back with tragic complacency as the river of bulging eyes passes daily at their feet.

Ballyhoo men are a fraternity in themselves and are very proud of their technic; and we even have seen serious articles in which they had interjected two, three, four and even ten dollar words to stress the dignity of their calling. Some even like to refer to themselves as "psychologists," "publicity specialists" or "midway orators." They explain that even John D. Rockefeller, J. Pierpont Morgan, and the great industries, all had to have ballyhoo artists to command and direct public attention. They are partly right, but largely wrong. In these days ballyhoo and the business of advertising have very little in common, save that both are designed to command attention and to induce the public to hunt for its pocketbook.

To the ballyhoo man, all pocketbooks have the lockjaw. Advertising, in the higher sense, is now regarded largely as a process of education. The advertising man must guard his clients' interests, not merely for the present but with the idea of building up permanent patronage. That means that all of his statements in print, paint, exhibition, display, pageant, sky writing or on the air, must be based upon truth, if they are to be regularly profitable year after year. When the public is deceived it does not easily forget. Millions have been spent upon advertising music, musical products and musicians. Those who advertise these things have long since found out that a Hollywood vocabulary of superlatives, does little to convince the public. More than this, the employment of music in advertising over the air now runs into many millions monthly.

The problem of advertising is a very serious and highly important matter to all who are professionally in music, as well as to the musical industry. Anyone with experience in the musical field realizes how very easy it is, for a personality or a business may seemingly drop so badly out of sight that it is very difficult to restore it to attention. "Keep your name up" might be a good motto for all music workers. Every time your name appears in connection with commendable achievements, whether at concerts, recitals, church services, or through the appearance of your pupils, it is distinctly to your advantage. Look upon any exaggeration of your accomplishments, no matter how flattering it may be to your vanity, as unfortunate; because, if you cannot "make good" when called upon, you may find yourself in an unfortunate position.

The value of an advertising medium, as a business asset, depends, of course, not merely upon the circulation, but also, among other things, upon the confidence that the readers have in that medium. If they know that the publication's policy absolutely prohibits any financial or other collusion between the advertiser and the reading columns, it is put down by the readers as an honest and trustworthy publication and this reader confidence is reflected upon the advertisements that appear.

FRANZ LISZT

The old days when an artist was ballyhooed with cheap fables is now happily past. Of course, in building up a personality any matter of genuine interest to the public is legitimate news. However, when such incidents are obviously contrived and invented merely to capture public attention, they become very little better than the cheap patter of the circus barker.

From a newspaper standpoint, some people are so original and distinctive in their behavior that they become what the journalist looks upon as heaven sent "good copy." The Duke of Windsor, George Bernard Shaw, Theodore Roosevelt, Charles Lindbergh, Mussolini, Paderewski, and some others, seem to have been born as answers to a journalist's prayer. Franz Liszt was always such a figure. Apart from his magnificent musicianship and big souled personality, he was so distinctive in his behavior and habits that he always attracted attention. His dress, his walk and his "platform manner" were the talk of every city where he appeared. He is said to have had three hundred and sixty-five neckties and to have worn a different one on each day of the year. At a concert he always wore green gloves, which he removed, upon sitting, and tossed into the audience as souvenirs. Thereupon, there was a scramble that certainly could not have contributed to the poetic atmosphere of the occasion. Time was when most artists wore gloves. Comm. John Philip Sousa almost always did, when conducting, a habit he had held over from his military and naval service. The fantastic conductor, Louis Antoine Jullien (1812-1860), who was more merchant and showman than musician, always had his baton brought to him on a silver salver, whereupon he removed his white kid gloves and exchanged them for the baton, a striking piece of stage claptrap.

The world owes a debt to Dr. Josef Hofmann for establishing the tradition of highly dignified publicity. Moreover, Dr. Hofmann has discouraged cheap or misleading advertising throughout his entire career. Without the least suggestion of ballyhoo, he rose in his youth, to the highest ranks; and every year has seen him going higher and higher. Without long hair, monkey pranks, or fantastic dress, he set an example to a new generation of pianists which is now very carefully followed by all artists desiring to command the respect of the art loving public. All honor to this noted musician, virtuoso and educator.

Words by
Ethel Morris

Music by
Doris Hoff

Your Editor, during a Western trip, saw the above on the walls of the dining room of Dr. D. W. Morehouse, the eminent American astronomer and President of the progressive Drake University at Des Moines, Iowa; and he obtained permission to reprint it. The work is the result of an idea of the late Dean Cowper, and it was produced by members of the staff and the faculty of the University. The music is, however, by a Drake student, Doris Hoff.

The Goal is Always Music

A Conference with the young genius of the violin

YEHUDI MENUHIN

Secured Expressly for The Etude *Music Magazine*

By R. H. WOLLSTEIN

YEHUDI AND HEPHZIBAH MENUHIN

This highly gifted brother and sister have given numerous violin and piano recitals during the past year.

THE MEANING of violin playing, as I see it, is to effect the most perfect realization humanly possible one's own conception of the composer's essage. It is a simple enough goal to put o words, but requires a life of devotion carry it out. All the parts of the defini- n must be in first class order, like the rts of a picture puzzle one might put gether. One must strive always for the st realization; there must be a search- g of one's self for a personal conception meaning; and the ultimate result must flect the composer more than it does the rformer. Nobody knows with any degree accuracy what the composer really ant when he wrote this or that work; d the student of music can accept other ople's statement of such meaning only a limited degree. Therefore, the search r one's own conception of the composer's aning remains the purpose of all playing. Such a search grows, with years, to an a great deal more than interpretation. becomes a life philosophy, by which the erpretation of any music stands not as goal in its own right, but as the result one's general habits of musical thought. s the performer grows and develops, his bits of thought change, and his musical eech, or interpretation, changes also. us, music study is constantly develop- g, constantly growing. To learn a piece d to play it perfectly means that the ung artist has arrived at a certain step his journey forward. It does not mean at such a piece, once learned, is a bit finished business, to be left behind for future time, and never to be altered cause it was once learned in one way. n the contrary, the more it is played, e greater the changes that will be made the interpretation of the student's reper- ire. In my own work, I find myself mak- g the most tremendous alterations in the ay I play music with which I have been miliar ten or fifteen years. Each time I over a piece of music I try to penetrate eper into its meaning than I did the last ne, and to bring up some new shade of ntiment, of color, of emphasis—or even fingering—which never had occurred to e before.

Well Rounded Study

HUS, THE TWO great elements of which l music consists—technic and meaning— ust be developed side by side, but always ith a perfect realization of the relative portance of each. The technical or me- anical aspects of violin playing are im- ensely vital; indeed, without them one uld not make himself understood at all. et they must always remain a means to end. The end in itself is musical mean- g. The technical part looks the more dif- ult. That is to say, it does not come turally to the student; it must be de- loped, from the outside in; it requires methods of perfection which may be even artificial in approach; and it may be used for purposes of display. The ability to read a significant meaning into a piece of music does not look hard at all. Therefore, perhaps, many students tend to shift the proper balance between these two parts of music making. Technic is important only as it opens the way towards more fluent and more perfect musical utterance. Aside from that, it is meaningless. The important, the really thoughtful part of violin study, is the personal approach to musical meaning.

I cannot, however, offer any of these points in the nature of advice. What has proved good for me might be actually harmful to another student. Let me speak strictly of my own work, then, without encouraging anyone to follow what I have done.

The most necessary thing to carry into the practice studio—as necessary as the violin itself—is patience, not in the technical work, but for the maturing of the conception. It is a mistake to fly at some new conception and expect to perform it perfectly at the first trial. That never happens; or it happens so very seldom as to be out of the picture as a goal in study and practice. I have been very fortunate, thus far, in that I have always been able to realize, on the violin, my imagined conception of a composition; but it has taken years of devoted work.

The next requisites are calmness, serenity, and a sense of freshness in one's approach to his study. During the working week I always retire early and get plenty of sleep. I am always calm. The busy concert season brings, of course, its own schedule of living; but during the annual vacation periods, which usually amount to five or six months (not to speak of the two years of retirement that I had at home recently), I have no hard and fast rules. Everything must be flexible, whether it is for working, practicing, swimming, hiking, or just sheer happy relaxation in the sunshine and open air. I manage to practice a number of hours every day from Monday to Friday; but I do not go anywhere near my instrument, not so much as touching it, over Saturday and Sunday, as far as this is possible. Those two days of the week are reserved for complete relaxation, outdoor exercise, and rest. Then, when I return to my work on Monday morning, I not only am refreshed in body, but I also experience a high sense of anticipation, in getting back to the problems that have been left to themselves two days. For me, this system brings fine results.

As a Superlative Talent Studies

IN MY ACTUAL PRACTICING, I study my music away from the violin as much as, if not more than, I work it out on the instrument itself. I never draw a tone of a new piece without having looked it over most carefully for a general conception of its style, its peculiar technical problems and a general conception of its musical meanings. I like to take a score with me when I retire for the night, to read it through, and to indicate in the margins, with a pencil, such technical or interpretative ideas as the various passages suggest to me. I prefer to play a new work only when I have a firm grasp on it. I study the technical part by a note by note analysis of the score. And I build up my idea of the meaning by a thematic analysis, sometimes singing the themes, making up my mind about the different qualities of tone I shall use, and about the give and take of the phrasing. Then, at last, I take up my bow and begin to practice.

What do I practice? Well, I have never practiced scales. The fleet and even scale value—which must be firmly lodged in the fingers—can be gotten by selecting individual technical passages from the various violin works, and then by practicing them. At least I have always done it that way.

As to the deeper musical meaning of what I play, I live with my music until it becomes a part of myself. I try not to give an "interpretation," but a carefully thought out statement of the music's deepest meaning. I can give a more graphic example of what I mean, from the field of dramatic acting. All of us have seen performers who appear to go through the motions of their parts perfectly, but who always leave one with the feeling that they are doing this or that simply because the coach has told them to do so. They are giving what I call an interpretation. And then we have seen other actors—never too many—who seem not to be acting at all. Never is one conscious of their having been told anything. And, indeed, what they do and say seems less a series of individual words and motions than a single, well knit expression of the character they are playing. This is what I mean by penetrating to the deepest significance of the author or composer. And this, to come back to our starting point, is what the music student should strive to do. A piece is never a series of notes. It is a single, coherent bit of musical thought—of musical philosophy, if you like that term.

The Discovering of a Soul

LET ME GIVE YOU a very personal example of what I mean by developing a musical conception of my own. For the past year my keenest interest has been directed towards the "lost Concerto for Violin" of Robert Schumann—the last thing he wrote before falling a victim to the cruel illness which obscured his great mental powers. Fate seems to have been against this work. Joachim, for whom it was written, did not think highly of it, expressed himself to this effect, and sent it forth into the world with a stigma upon it. To me, however, the composition is beautiful; and it was a source of great pleasure to find that at each concert where I played it, the audience itself gave every evidence of sharing my views. I brought the piece before them in an honest belief that it is a great work. They accepted it as such and showed me that they approved of it.

The concerto, by the fated Schumann, represents a human being at grips with

(*Continued on Page* 340)

Yehudi Menuhin was last represented in THE ETUDE *when, as a phenomenal boy prodigy, he discussed his methods of work and of furthering his general education. Now, a young man of twenty-one, Mr. Menuhin has, by his steadily developing artistic progress, amply justified the promise of the little prodigy; and in this conference he brings to readers of* THE ETUDE *his more mature opinion of the meaning of violin playing.*

Operatic Spectacles Two Centuries Ago

KEY TO THE ILLUSTRATIONS:

The Austrian Hall of Fame: ***a scene from The Prologue of "Il Pomo d'Oro (The Golden Apple)"***

A War Camp of the Athenians: ***a scene from Act II of "Il Pomo d'Oro (The Golden Apple)"***

The Feast of Mars: ***a scene from Act V of "Il Pomo d'Oro (The Golden Apple)"***

Entrance to Hell: ***a scene from Act II of "Il Pomo d'Oro (The Golden Apple)"***

The Kingdom of Pluto: ***a scene from Act III of "Il Pomo d'Oro (The Golden Apple)"***

Heaven, Earth and Sea: ***a scene from Act V of "Il Pomo d'Oro (The Golden Apple)"***

Gorgeous stage spectacles did not originate in Hollywood, as the reproductions of the rare engravings on this page indicate. They are the stage pictures for Cesti's "The Golden Apple (Il Pomo d'Oro)," which dates from 1668. Marcantonio Cesti was born at Arezzo in 1620 (some authorities give 1618) and died in Venice in 1669. He was a pupil of Carissimi. In 1646 he became maestro di cappella of Ferdinand II de Medici; he entered the Papal Choir in 1660; and in 1666 he began service as Vice Kapellmeister of Emperor Leopold I at Vienna.

Although he was a Franciscan monk, he was best known by his works for the theater. Spectacular presentations were particularly successful in those days. Repre sentations of heaven and hell were prevalent, and the candle footlights blazed with brilliance that would probably now be excelled by a dozen incandescent lights. "Gree fire," or colored fire, was used, however, at climaxes; and the audience was awed an thrilled by these lurid effects. Real trees were sometimes brought in huge boxes fo stage decoration, and troops of soldiers were marched over the stage to produce mas effects. The casts of some of the lavish performances would be considered large eve in these days of the cinema.

Musical Memory: Why, When and Where

By the Eminent French Lecturer, Conductor, Author and Virtuoso Pianist

MAURICE DUMESNIL

How They Memorize at the Paris Conservatoire

OF ALL QUESTIONS pertaining to the world of music, memory and memorizing are among the most widely discussed. The matter is, in fact, of such interest that since several years here have been invented many systems, or methods, whereby those who show but little natural disposition can hold their own next to others who are lucky enough to have been better endowed by nature.

Quite recently, such distinguished critics as Olin Downes of the *New York Times* and Luigi Vaiani of the *Kansas City Journal Post*, have devoted important chronicles to memory—attempting to demonstrate the advantages, or the disadvantages, of using it, particularly in the field of orchestral conducting. They seem to have come to the conclusion that it is desirable only in some exceptional cases.

There are, however, many other phases to be considered; and the problems, in this respect, of either vocalists or instrumentalists, are very distinct from those of the orchestra or band leaders. Personally, I have often been questioned by American teachers and students, upon how the matter of memory, its development, and the methods of teaching it, if any, stand in European countries and particularly in France and Paris. A review of the entire subject seems, therefore, to be in order.

Which is the best and quickest way to memorize? This is the point that always comes up first; and to this point, a considerable number of answers can be given. There are so many different plans, or ways, by which music can be committed to memory. Yet, generally speaking, there is no best way; or rather, there is one for each individual; so that it is up to him to discover this. Nobody can help him much in this quest, and it is very largely a matter of self observation and analysis.

One person, for example, will actually visualize the printed text as he plays. He will remember what is at the top left, or the bottom right of the page. The music has literally made a sort of imprint upon his brain, and he can at will draw a mental picture of it, such as it stands and looks in the engraved score. Another student prefers memorizing by ear. Instinctively he reproduces the music, as it unfolds itself and sings within him. Still another musician will use a more elaborate process; that, for instance, of memorizing both hands separately, before attempting to play them together. There is also the system of assimilating two or three measures at a time, until the end is reached and the entire piece can be assembled much in the same manner as a puzzle game.

Sometimes, a little trick may prove useful, especially in the early grades; the recitation of words, along with the musical text, is one of them. This accounts for the large number of easy pieces with words which have been and are being published year after year. The method is commendable and offers the added advantage of developing the poetic imagination of the student, at least when the words are intelligent and refined, which is not always the case.

Much help can be derived from the study of eurythmics; and it is natural that it should be so, because rhythm is at the basis of everything musical; it existed in nature before music itself began. By learning to express rhythms through motions of the body, one promotes the assimilation by the brain as well, since all organs are linked together in some way and, as it were, interdependent. For the same reason a thorough study of solfeggio (ear training), previous to taking up an instrument, helps strongly in the matter of memorizing. Thus the ground is prepared and a sound foundation is established; then, when the study of the instrument itself starts, the difficulties are mostly of a technical order and are conquered more rapidly. In America, however, there has been but slight adoption of the use of solfeggio (ear training as pursued in Europe), which for two centuries has been found so practical and beneficial in France. Consequently at least ninety-five per cent of American music students will have to work for their goal without this aid.

This leads us to perhaps the most widely accepted process of memorizing, at the same time that it is the most simple one; repetition. May I risk the comparison that here the instrumentalist acts more or less in the same manner as a trained animal learning to do his tricks. Mind you, what can be achieved by the latter is properly uncanny; and I remember a dog picture I once saw, in which the animal performed his part so extraordinarily that one could hardly believe it was not a real human being in disguise. How many hundred or thousand times this clever "Fido" had rehearsed his part, it would be impossible to tell; but it must have been many months, or even years.

Likewise, the pianist who uses the repetition process must be ready to have much patience, if necessary. How much time will be needed is once more an entirely personal question. No two memories are alike. In the same class and by the same process, John may need two hours to learn by heart his Cramer *Etude*, whereas Frank will require two days, and Sam, two weeks. It must be emphasized, however, that with patience one will always reach the goal. The worst thing that can befall the prospective memorizer is to throw up his hands in despair, shake his head, and cry, "I'll never be able to do it!" In which case he proves to be his own worst enemy; and, if he quits, of course it will be just as he said.

Once I heard an astonishing remark from Camille Saint-Saëns. "There is nothing that cannot be read correctly," he said, "not even the most transcendental works of Liszt, if one will only take the tempo slowly enough."

This struck me as one of the most illuminating things I ever heard, and, although it regards the deciphering of a composition, its meaning may well be extended to the memorizing that follows. Because (here I refer to students, not to musicians or pianists of the Saint-Saëns' caliber) reading too fast means, in most cases, reading incorrectly. If incorrections are repeated, they begin to record themselves in the fingers; when the rectification takes place, it means a change, and this change momentarily creates a confusion; this confusion, then too, must be eliminated before the repetition, or any other process, can work efficiently. From this it is quite clear that memory is much favored by an all around observance of law and order, of which one most important phase lies in the matter of fingerings.

What teacher has not had this experience: despite the fingerings marked by him or by the student himself, if not printed by the editor, this student does not observe them. He does not stick to them, rather, and from one lesson to the next he alters them, as if improvising them constantly. Here again there is bad confusion and much unnecessary trouble which could be easily avoided with a little concentration; and without getting into the discussion of the fingerings themselves, why not listen to Claude Debussy's advice, printed at the head of his first book of "Etudes": "Let us find our own fingerings." This being done, let us observe them scrupulously and never depart from them; memorizing, then, will become much easier.

All concert pianists play from memory nowadays, because it allows more freedom. Still, only a century ago it was different, and in the correspondence between musicians of that time there are persons mentioned as "having turned the pages for Kalkbrenner, Mendelssohn, or Chopin himself." This was especially true in the case of large works such as concertos with orchestral accompaniment.

In our days Arturo Toscanini is often quoted as an example of phenomenal memory. It is generally known that, apart from the gift itself, he was compelled to develop it on account of a deficient eyesight. The capacity of his brain is colossal. He not only conducts but rehearses (here is the real test) without notes, more than sixty operas and several hundred symphonic scores. It is undeniable, however, that his influence in this respect has not been altogether good, since it started an epidemic among conductors less genially endowed than the Italian *macstro*.

At this point, and in the eyes of the public at large, it is necessary to debunk this fact of conducting from memory when, as often happens, it is done only as a "stunt." In reality it is much easier to direct a symphony without the score, than to play, let us say, a piano sonata where everything, melody, harmony, counterpoint and all the other elements of musical writing must be conjured up by the pianist's own fingers and without any help. Watch certain conductors, whose purpose is obviously showmanship. Often they are more concerned with the lines of their evening coat than with the music they are directing. But this word is inadequate. They do not direct; they are being directed, or rather trailed along by their men, whom they follow as best they can, clinging here to a melody, there to a rhythm. It is the

ARTURO TOSCANINI

***This splendid portrait of the internationally famed Maestro, who is credited with having one of the greatest musical memories of all time, appeared in* Fortune *magazine of January, 1938, in connection with an excellent article relating to his broadcast with the National Broadcasting Company Symphony Orchestra. It is reprinted here with the kind permission of* Fortune.**

men who do the playing. Often, too, those would be Toscaninis become insecure; they lose their poise, or pose; and their fear and anguish permeate the audience. Once I saw a Midwest conductor absolutely at sea, calling the orchestra one measure after the piece was concluded; he was completely lost and had reached the end only through his musicians' good will.

Summing up, conducting from memory is no feat in itself. It shows no greatness. Bad conductors may do it; fine conductors may use the score; and *vice versa*.

Coming back to the piano, it is evident that a sound knowledge of harmony is a considerable help to memorizing. Let us take, as an example, the *Berceuse* of Chopin. The left hand formula which repeats itself throughout, with an occasional change of C to E-flat, is in itself a serious difficulty, but not for one who is familiar with the technic and rules of chord formation.

Some of the so-called systems rely upon a sort of suggestion. Once, in New York City, I met an English gentleman who claimed to have discovered a relationship between tone and color. To each degree of the scale he assigned a different shading. Upon one of my remarks, he said, "You must not form the idea that the pianist sees a multitude of colors dancing before his eyes like the little bulbs on a Christmas tree. The idea works quite differently and in a subconscious way only." He assured me that after a short time of study one could memorize any piece merely by reading it away from the piano; and it must have been true, since he had received enthusiastic endorsements from several well known musicians.

When appraising the value of the various processes of memorizing mentioned earlier, it is well to consider the amount of safety which they afford. Which of these processes will stand best under such a severe test as, for instance, stage fright?

Here also there is a great variance of opinions. Which "goes" first in case of extreme nervousness; the brain or the fingers? Some people contend that it is undoubtedly the fingers. Still I have observed cases where it was exactly the opposite. Once I heard a student play Bach's *Fugue, No. 1, in C major,* followed by Chopin's *Etude in F minor, Op. 25, No. 2.* I remarked that, after breaking down repeatedly, in the *Fugue* (where the brain has most to do), he, or rather his fingers, went through the running *Etude*—hurriedly and nervously, to be sure—without a single stop. Another personal observation which supports the preceding statement: when trying a piece which I have not played for years, I may stumble on a certain passage, especially if I know it is arduous from the memory standpoint. This creates a sort of self suggestion through fear. It invariably results in a breakdown. Then, I place a book on the music rack and start reading some exciting chapter so that my mind is absorbed and distracted from the thought of the passage. My fingers do the work, and they go through it without any trouble.

As a matter of fact, consciousness is liable to act as a very disturbing element. Therefore, teachers should be most careful in their approach of the question. Otherwise a complex may develop in the pupil. The possibilities of each student should be gauged and the amount of memorizing work assigned accordingly, without ever forcing in the least. When I was at the Paris Conservatory, memory was not considered as an issue. It just came. The slow practice, the use of rhythmic patterns and transposition, all the devices which modern technic has brought about, gradually did the work. One good day the music on the stand remained closed, and still the piece went off without a hitch.

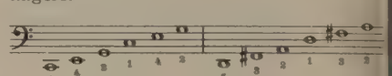
Raoul Pugno, the great French pianist whose fame was international in the first decade of this century, always used his notes. Once as he played Beethoven's "Concerto in C minor" at the Concerts Colonne, he had forgotten badly in the slow movement. The passage happened to be precisely where the melody is so strikingly reminiscent of a certain passage in Gounod's "Faust"; so Colonne tried to come to the rescue by humming *Salut, demeure chaste et pure.* It was in vain. The orchestra stopped. Thereafter Pugno never played from memory.

Hans von Bülow, once in the same hall, gave as an encore the *Scherzo in E-flat minor* of Brahms, an exacting number. His brain got entangled and he was unable to find the *Coda.* Five times he went *da Capo,* laboring, panting for breath, suffering mental and physical agony, until somehow or other he struck the ending.

A similar thing happened once to Edouard Risler, the first pianist who ever played in a series the thirty-two sonatas by Beethoven. He repeated four times the first part of the *Presto* from the "Moonlight Sonata." Seemingly, he was unable to conjure up the harmony of the second ending which leads to the development. Of course, as in the case of von Bülow, the audience suffered for him and with him. Finally some one shouted discreetly "E-sharp!" and it was Risler's salvation.

Another experience deals with Saint-Saëns. He was rehearsing Mozart's "Concerto in D minor," at the Concerts du Conservatoire, before an audience of invited students. This work contains many runs whose texture is dangerously similar. In the *finale* he began to make mistakes and suddenly found himself back somewhere in the first movement. He stopped, turned to Conductor Taffanel, and, with his characteristic nasal voice, sniffed, "How tricky this is. Send next door for a copy, please." Needless to say, at the public concert also he used the notes.

The preceding examples show us how careful one must be and how advisable it is to equip one's self as perfectly as possible and in more ways than one. For instance, although I use and recommend the repetition process, because of the good results it has given me, it is also necessary to establish a few mental landmarks here and there, which will act as milestones along the road. Had Risler's brain simply thought of *E-sharp* at the approach of that dangerous passage, he would have had no trouble at all.



Chamber music, of course, should be always played with the notes. It is more intimate and in keeping with the true character of the music.

And, as a conclusion, something quite comforting: If you forget once, and break down, please do not worry. It acts as a wonderful cure and will never happen again. At least, in the same passage.

Arpeggio Fingerings

By **Gladys M. Stein**

In teaching the root position of triad arpeggios beginning on *white* keys on the piano, the teacher will find it helpful to give the following rule. In the left hand when there is one white key between the first two notes of the arpeggio, use the fifth and fourth fingers. When there are two white keys, use the fifth and third fingers.

In the right hand the same rule can be used for the third and fourth fingers. With these fingers properly placed, little need be said of the others, as they fall in position of themselves.

THE NEW NATIONAL BROADCASTING COMPANY SYMPHONY ORCHESTRA IN RADIO CITY

This magnificent new organization has already attracted international attention and the highest praise. The picture is printed with the permission of* Fortune *magazine. The Studio at Radio City is considered the most perfect large auditorium in the world, judged from an acoustical standpoint.

How to Start a Prosperous Summer School

By JOSEPHINE HOVEY PERRY
Author of "Pleasure Paths," "Busy Work for Beginners," and "Early Adventures in Music Land"

How a Teacher in a Small Vermont City Built a Prosperous Summer School Despite the Depression

JOSEPHINE HOVEY PERRY

THIS IS AN ACCOUNT of a local adventure which, like *Topsy*, "just growed."

In the heart of Vermont, six miles dis-nt from its capital city is another, slightly -rger, community with a population of -out twelve thousand inhabitants. This is -e city of Barre, which claims the dis-nction of being "The Granite Center of -e World"; and its inhabitants include -otch, French, Italians, Swedes, Assyrians, -reeks and Yankees. Barre is an unusually -ogressive little city and a very musical -ace for its size, considering its remote--ss from larger musical centers. Possibly -e of the reasons for both its progressive--ss and its love of music is its cosmopoli-n population. It boasts of a fine public -hool system, with its choruses, glee clubs, -rchestras and band; a parochial school -stem; and a very old private school -lled Goddard Seminary and Junior Col-ge, for young ladies. The Seminary has -any buildings on a beautiful campus on a -ill in the center of Barre and commands gorgeous view of the Green Mountains the distance; while in the foreground -es the town itself. For ten or twelve years -arre has had a Junior Symphony Or-hestra of nearly one hundred members, a -ne Kiltie Band, an excellent drum corps, -side its city band. Literally hundreds of -ildren study piano, violin and other in--truments, privately or in groups.

In such a setting the Perry School of -usic began about ten years ago, in the -ving room of my home," with a per--nnel of five little pre-schoolers. The rea--n for its beginning was that one of its -harter members was my own little five -ar old daughter who already had shown marked interest in music, manifested a -od ear and sense of rhythm, and also -me creative ability. From previous ex-erience as a piano teacher of private -upils, as a grade teacher in the public -hools, and still later as a supervisor of -usic, I had become firmly convinced that, -r beginners at least, where two or three of the same age) are gathered together in -utual endeavor, there is the happiest ap-roach to learning. Ten years previous to -y marriage to a Barre man I had come -o Barre in the capacity of supervisor of -usic in its city schools, with specialized -aining in piano and pedagogy. Since my -arriage, however, I had rather com-letely given myself up to the cares of -omestic life, and in what spare time I did -ave I continued to write music, mostly for -hildren, some of which had seen the light -f publication and was used in this part of Vermont. It was, therefore, doubtless eas-ier for me to start a musical project in this locality than had I been an utter stranger. At any rate, anyone who knew me at all knew that I was exceedingly fond of children as well as music; so, when I made known to some of my acquaintances that I was about to initiate a small group of youngsters to the delights of music, I had more applications than I could then accommodate in my living room, with the necessary accompanying paraphernalia of piano, blackboard, small chairs, tables and rhythm band instruments, and a clear floor space for dramatic action. Then too, although I believed (and still do) in group instruction, I have never believed in large groups for piano instruction.

And So We Began

ACCORDINGLY, MY LITTLE "SCHOOL" opened with four formal entrants, and one very informal one in the person of my three and a half year old youngest, who, up to that time had never shown any special precocity in music, but just simply had to be in on everything that went on. I had no intention of having her in my class, but she thought otherwise! After both my maid and I had exhausted all our wiles to lure her to other scenes of activity, and all in vain, I succumbed. I realized that it was easier to let her enter the class than to try to keep her out; and, lo, I found by so doing that I had gained another enthusiastic and really very good little pupil. I was never afraid, after this, to teach three and a halfs or four year olds.

This class met with me for two periods of an hour and a half each week, for diversified activity in music, such as singing, dancing, musical games in ear training and rhythm, stories for interpretation and appreciation of music, listening to music, playing the rhythm band, and finally learning to read and write music and to play the piano; and apparently "a good time was had by all."

More applications came, so I decided to run two classes; and I took on also a few private pupils. So almost before I knew it I had two full days a week engaged. The following year the little kindergarten classes graduated into full grown piano classes; and some had even outgrown the class and were having private piano lessons. Then, as this increasing demand for music instruction grew, I opened a studio down town and soon was teaching more than half the time.

The idea of class instruction in piano, and the materials which I was using (much of which were my own books), attracted the attention of other piano teachers, and of some would be ones, who had just finished their music studies in various places and were anxious to try their wings at teaching. Consequently I ran a small class of piano pedagogy in my home and began turning over the prospective pupils, who wished to enroll with me, to these piano teachers.

My part time enterprise bid fair to become a full time job; and I began to realize that one can not be a mother, a home maker, a writer, a teacher, and an advisor, without a most careful budgeting of time.

The idea of a daily summer school of music began to take shape in my mind, in which I should continue to start groups of beginners of all ages in their music, and at the same time I would run a normal class for teachers. At the conclusion of the session the pupils, who so desired, could continue their studies with these same normal teachers or with anyone they wished. I would then withdraw from the teaching profession for the remainder of the year, teaching only a few periods a week those classes which included my own children, or age groups for which I should, at the time, be writing.

From Little Acorns Mighty Oaks

THE IDEA GREW as I began to realize the advantages to parents, pupils and other teachers beside myself, namely:

Advantages to Parents:

1. A chance to introduce their children to the universal language of music, as well as to a social group of the same age, and to receive a diagnosis at the end of the session as to their child's reaction to the subject of music and his general response as a member of the group.

2. The reduced rate of class instruction under private instruction would make it possible for more parents to take advantage of the opportunity, for summer school rates were to be lowered to even one half of the regular rates for class instruction.

3. Children would cover ground faster and better by seeing their teacher every day instead of once a week. They would not forget so much between daily lessons as between weekly lessons; they would not incur so many faults in practicing; they would not lose interest; and, last but not least, at the expiration of two weeks of daily lessons they would undoubtedly be farther along in music study than if they had taken but one private lesson a week for ten weeks. The saving in time and money surely would be an advantage to parents.

Advantages to Children:

It would be a happy and worth while experience, which should promote a love for music rather than a distaste for it. A daily school would raise the standard of music for all youngsters.

Advantages to Town Teachers and Others in the Normal Class:

1. The methods, grading of instructions, problems and materials, all would be discussed daily.

2. A laboratory of children would be available wherein teachers would be able to visit classes and see their theories proved or disproved.

3. Last but not least, it would hold a great advantage to all local teachers. These same children would undoubtedly go on with some teacher, and here was a chance to study their near-future prospects. It was a fine chance for all nearby teachers to recruit their classes.

The Wheels Begin to Move

THE RESULT WAS that, nine years ago, in the summer of 1929, I did a little advertising in the local papers, sent out about one hundred circulars explaining the course, hired a small hall with a good grand piano, and, one July morning, opened the Perry Summer School of Music, with an enrollment of thirty beginners and a normal class of eight students and teachers. At the end

(*Continued on Page 342*)

Making Pupils' Recitals Fascinating

By VIRGINIA B. HOBSON

VARIED AND INTERESTING departures from the old cut and dried forms of piano recitals are easy for the teacher to arrange and present, once a practical and entertaining repertoire has been chosen. These recitals can be made to include pupils from the very earliest ages to those near the end of their 'teens.

Of several species from which to choose, the recital in costume is the most colorful and is fast becoming popular, although as yet it remains uninitiated to many teachers. For the costume recital the selections chosen for the program must blend with the personalities of the young performers. For instance, one should scarcely expect a serene and willowy blond to interpret a Spanish dance which would be naturally associated with a dusky and vivacious *senorita*. No more could some dark eyed, black haired damsel typify Debussy's *Girl with the Flaxen Hair*. And here it is well to introduce the suggestion that the pieces chosen should be somewhat showy and well marked with the spirit they are meant to represent, although the wise teacher will always avoid the cheap and maudlin in preparing any such distinctive program.

Each pupil wears a costume to match the character of his or her selection to be played. This problem of costuming is more simple and inexpensive than the novice is apt to believe at first thought. The writer has found two ways that are both expedient and satisfactory. The first, and the way which is pleasing to many pupils, is the shifting of the responsibility to the mother's shoulders and letting her make the dress for her child. Patterns for costuming are issued by all large pattern printers, and the bright colored materials can be purchased reasonably. The advantage here is that the child owns the attire to wear and gloat over for months after the recital has become a memory. Another way, and just as simple (save that the burden of securing costumes is left to the teacher), is to hire the garments from a costumer. In nearly every large city there are costume houses which make a specialty of renting their goods to individuals and organizations in rural as well as urban sections of the country.

The pupils must be taught to preserve the character of the nationality they are representing. Characteristic bows are easily taught, and the children like to have the added individuality of differing stage deportments. Absorbed with the glamour of her garb, and concentrating on the rôle she has temporarily assumed, her stage fright dissolves, and the most timid child steps delightedly to the piano.

Another medium to cloak the monotony of the customary recital is that of presenting one's pupils in a Hallowe'en program. This is especially adaptable for purposes of introducing children of elementary and intermediate grades. The effectiveness is enhanced if the recital is given a day or two in advance of the night when witches ride brooms through the frosty air, and white clad spooks haunt deserted roadways. Young children are keyed to a most enthusiastic pitch at this eerie season, particularly if they have spent art periods at school cutting out black cats, pumpkin faces, and so on. The question of costuming is entirely optional with the teacher; it may or may not be done.

Mailing out invitation programs ahead of time is an attractive device for luring the reticent public to the recital. These ma be printed with black ink on smoot orange paper with envelopes to matc Each child is given a number of the printed programs, from five to ten, to ma to friends. Teachers who have never trie this will be surprised to find how much enlarges attendance at children's perform ances.

Then a diverting entertainment alon this line is the Program of the Season This style of recital does not depend upo costumes for its effectiveness, but upon th variety of music which it presents. An en tire program of the four seasons may b given at one time. Or one season at it respective time of year may be hailed wit music akin to its particular type and moo This latter plan is especially pleasing to th younger children, who are well acquainte with the characteristics of the changin periods of the year.

Such an abundance of material is avail able for an occasion of this sort that there is room here for only a small suggestiv list, which may be augmented to suit th teacher's needs:

Programs of the Nations

Title	Composer	Grade
AMERICAN COLONIAL		
Yankee Doodle	Rickaby	1
Don Juan Minuet	Mozart	1
Yankee Doodle	Greenwald	2
Musette in D	Bach	2½
Washington's March	Phile	3
Sarabande	Handel	3
Gavotte from Iphigenia in Aulis	Gluck	3
Minuet from Military Symphony	Haydn	3½
Gigue	Corelli	4
AMERICAN INDIAN		
Indian Medicine Man	Richter	1½
Little Indian Chief	Strickland	2
Indian Papoose (from "Dolls of Many Lands")	Mueller	2
An Indian Legend	O. P. Endres	3
By the Waters of Minnetonka (Easy Arrangement)	Lieurance	3
Legend of the Plains (from "Prairie Sketches")	Cadman	4
From an Indian Lodge (from "Woodland Sketches")	MacDowell	5
AUTUMN		
The Falling Leaves	Mana-Zucca	2
Autumn Days, March	Lindsay	3
Autumn Idyl	Renard	3
Flying Leaves Op. 147, No. 3	Koelling	3
Red Leaves	Ancliffe	3½
Twilight in Autumn	Felton	3½
Song of Autumn	F. A. Williams	4
Tangled Vines	Bliss	4
CHINESE		
Sing-ling, China-Boy	K. A. Lively	2
Wing-Foo	Burleigh	3
Chinese Jade	Keats	3
The Chinese Laundryman	Smith	3
Green Jade	Grey	4
Springtime in Chinatown	Renton	4
Orientale	Cui	4
Song from the East	Cyril Scott	4
DUTCH		
Dutch Stories	Bartlett	2
Tulips and Windmills	Humes	2
Dance of the Dutch Doll	Klemm	2½
By the Zuyder Zee	Rebe	2½
Wooden Shoe Dance	Wright	3
Piet Hein	Vollenhoven	4
Watch (Folk-song)	Vollenhoven	4
EGYPTIAN		
Traders from the Desert	Bixby	2
The Camel Train	Baines	2½
Ballet Egyptian No. 2	Luigini-Felton	4
A Bit of Cairo	Mrs. H. H. A. Beach	4
A Nubian Face on the Nile	Cadman	4
Egyptian Dance	Friml	5
FRENCH		
Air de Ballet	Deprêt	2
Fifi, the Little Ballet Girl	Altbayer	2½
The French Clock	Bornschein	3
Scarf Dance	Chaminade	3
The Swan	Saint-Saëns-Hodson	3
Idilio	Lack	4
Pomponnette	Durand	4
The Girl with the Flaxen Hair	Debussy	5
A la Jeunesse	Schütt	7
GYPSY		
Gypsy Dance	Behr	2
The Gypsy Child	Paldi	2
Gypsies	H. Smith	2
Gypsy Dance	Lichner	2
At the Campfire	Krentzlin	3
The Gypsy Boy (from "Seven Musical Pictures")	Schytte	3
Two Guitars	Arr. Peery	3½
Gypsy Rondo	Haydn	4
Dark Eyes	Arr. Peery	5
HALLOWE'EN		
Merry Pranks	Hyatt	1
The Ghost	Wright	1
Midnight on Hallowe'en	Bilbro	2
Hallowe'en	D. Blake	2
Mischief Makers	Rodgers	2
Spooks	Aaron	2
Ghosts	Kinscella	2
The Wicked Witch	Kern	2½
A Witch Goes Riding	Rebe	2½
A Ghost Came Creeping	Ketterer	2½
Spooks	Gallup	3
The Ghost of the Haunted Grange	Ewing	3
Hallowe'en	Burleigh	3
Witches	Rogers	3
Witches' Dance	Schytte	3
Moonlight Revels	Andre	3½
Shadow Dance	Wright	4
Ghosts	Schytte	4
March Grotesque	Sinding	5
Witches' Dance	MacDowell	6
ITALIAN		
'Neath Sunny Skies	Paldi	2
Petite Tarantella, Op. 46	Heller	3
Tarantella	Dennée	3
Gondolieri	Moszkowski	5
JAPANESE		
The Japanese Doll	Swift	1
Oriental Melody	Friml	2
Japanese Doll Dance	Volkart	2½
Japanese Doll	Peery	3
Chanson Orientale	Tellier	4
Japanese Study	Poldini	6
MEXICAN		
Mio Carita	Groton	3
La Golondrina	Serradell-Earle	3
Poinsettia	Overholt	3½
Ecstasy	Fernandez	4
Estrellita	Ponce	4
The Vaquera	Kern	4
Three Mexican Dances	Gariel	5
NORWEGIAN		
Skiing	Richter	2
Northern Lights	Lemont	3
Norwegian Minuet	Henriques	3
Norwegian Hunter's March	Mero	3
To the Rising Sun	Torjussen	3
Norwegian Bridal Procession	Grieg	3
Northern Lights	Torjussen	3
PIRATE		
A Pirate Bold	Stairs	1
Captain Kidd	Blake	2
Three and Twenty Pirates	Seuel-Holst	2
A Pirate Ship and a Pirate Crew	Mueller	2
Song of the Buccaneers	Kern	2½
A Pirate's Tale	Berwald	2½
RUSSIAN		
Ivan in Russia	Ryckoff	2
The Cossacks	Rebe	2
The Red Sarafan	Arr. Hodson	2½
Song of the Volga Boatmen	Arr. Felton	2½
Chanson Triste	Tschaikowsky	3
Melodie Russe	Beaudoux	4
Russian Romance	Friml	4
Valse in A	Rachmaninoff	6
SCOTCH		
A Hundred Pipers	Arr. Hodson	2½
A Highland Laddie	Morey	3
Scotch Lullaby	De Leone	3
Scottish Legend	Mrs. H. H. A. Beach	4
Scotch Poem	MacDowell	5

The Threshold of Music

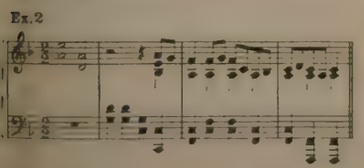
A Melodic Alphabet — The Major Scale

By LAWRENCE ABBOTT
Assistant to Dr. Walter Damrosch

This article is the fourth in a series on "The Doorstep of Harmony." The first appeared in The Etude *for January, and an article will appear each month hereafter*

O FAR WE HAVE RECKONED in a general way the distances between tones, but our measurements have not been exact. We have not yet taken into consideration the existence of sharps and flats. We have decided that from D to E is a second, and from E to F is also a second; yet one glance at the piano keyboard will show us that D and E are far enough apart to be separated by a black key, while E and F are as close together as any two notes can be. Another point we failed to consider when we agreed that the interval from C to D is a second is that there are several D's: D-natural, D-sharp and D-flat. There are also several C's: C-natural, C-sharp and C-flat (which is the same key on the piano as B). How can the distance from C-sharp to D-natural be a second, and from C-natural to D-sharp also be a second? One is only a half-tone apart: the other a tone-and-a-half apart. The fact is: our definitions have been incomplete. We shall have to make further distinctions. For intervals come in not only various sizes, but each size has a number of styles, or subdivisions, or fractional parts. Certain intervals (fourths, fifths, octaves) have three different forms. They may be either *perfect, diminished* or *augmented*. Others (seconds, thirds, sixths, sevenths) have four different fractional parts or styles, known as *major, minor, augmented* or *diminished*.

With the first group, *perfect* is the normal form. A slightly smaller form is *diminished*. And a slightly larger form is *augmented*.

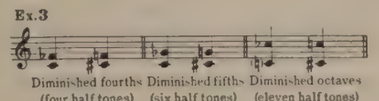


With the second group, *major* and *minor* are equally normal. *Diminished* is a compressed version of the minor; and *augmented* is an enlarged version of the major. On the white note scale (the major scale of C), the interval from C to F is called a perfect fourth, from C to G a perfect fifth, and from C to C a perfect octave.

Ex.1

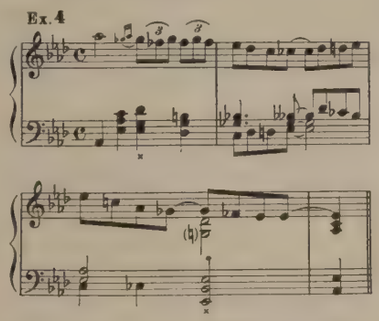
Violins, violas and violoncellos are tuned in perfect fifths. When orchestras are tuning, the sound of this interval predominates. The transcription of "Turkey in the Straw," by David W. Guion, starts with an imitation of a country fiddler tuning his instrument. Hence the empty "perfect fifths" in the introduction:

Ex.2



(This quotation from the transcription of *Turkey in the Straw*, by David W. Guion, is reproduced with the special permission of its publisher, G. Schirmer, Inc.)

Perfect fifths are the fifths found in the music of hunting horns, as in the illustration of a former one of these articles. Only the perfect intervals (fourths, fifths, octaves) found their way into the organum of the mediæval church music.

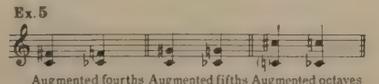


If we alter the perfect intervals by squeezing them together, so that they become a half tone smaller, they become diminished.

Ex.3

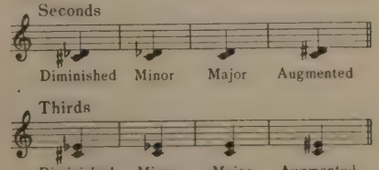
Diminished intervals occur almost constantly in music—especially the diminished fifth, which, to name but one example, is the dominating interval in Schubert's *Hark, Hark, the Lark*. The diminished octave occurs less often, but can be strikingly effective. Being just short of a perfect octave, it has the bite and pungency of the seventh. It occurs twice in the first theme of Gershwin's *Rhapsody in Blue,* from which we now quote.

Ex.4



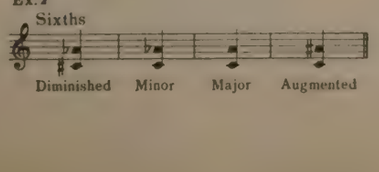
(This excerpt from *Rhapsody in Blue*, by George Gershwin, and the later one from *What is This Thing Called Love*, by Cole Porter, are reproduced with the permission of their publishers, Harms, Inc.)

The two x's show where the diminished octaves occur. In each case the interval is G-natural to G-flat. As it happens, these same x's also indicate the occurrence of diminished fifths—G to D-flat.

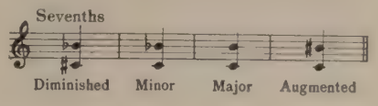


If, instead of squeezing together perfect intervals, we pry them open, making them a half tone further apart, they become *augmented*.

Ex.5



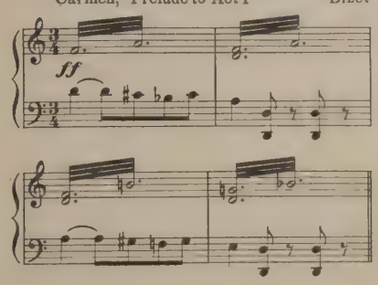
Seconds, thirds, sixths and sevenths have four positions. The major is most common; the minor, a little smaller, runs a close second. The minor can shrink further still and become diminished; while the major can let out another notch in its belt and become augmented. Here are the four styles of seconds and thirds:



Ex.6

And here are the four varieties of sixths and sevenths:

Ex.7



By turning back to Article three of this series, and glancing over the white note intervals of the key of C, it will be found that the fourths and fifths are all perfect, that the seconds, thirds, sixths and sevenths are half the time major and the other half minor, and that there are no diminished or augmented intervals at all. This brings us again to the point that the perfect, major and minor intervals are the most natural and normal, while the diminished and augmented intervals are exotic and less usual.

As fascinating as any of the less usual intervals is the augmented second. It occurs frequently in oriental music, and, as a result, has become an invaluable aid to composers who want to introduce the exotic flavor of the East. It makes its appearance in Rimsky-Korsakoff's *Hymn to the Sun,* occurs in the opening measures of Tschaikowsky's *Marche Slav,* pervades the temple scene in "Aida," and colors one of the most distinctive melodies in "Carmen":

Ex.8

"Carmen," Prelude to Act I — Bizet

In the first measure, the augmented second is between C-sharp and B-flat. In the third measure it is between G-sharp and F-natural.

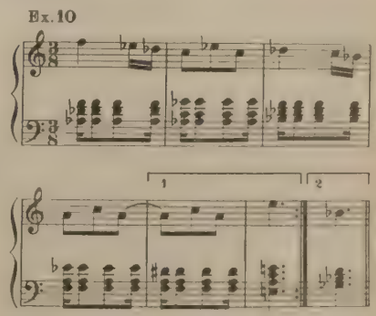
In the realm of popular music we find an interesting use of the augmented second in the first three notes of the chorus of *The Moon Is Low.*

Certain of the intervals we have been mentioning appear to be duplicates. A diminished second (C-sharp to D-flat) has the same sound as a unison (C-sharp to C-sharp). An augmented fourth (C to F-sharp) sounds just like a diminished fifth (C to G-flat). A major seventh (C to B) is identical in sound to a diminished octave (C to C-flat). But in each case they are purposely written differently, and they have different meanings and uses in music—just as words which have similar sounds but different spellings (sale, sail — principle, principal) have different meanings and uses.

Later we shall have an opportunity to go into the reasons why a note is sometimes written E-flat and sometimes D-sharp. For the present, it will be sufficient to explain that a melody poised on D-sharp has a tendency to move to E-natural, whereas on E-flat its tendency would be towards D, or possibly F, but certainly not to E. So if you are a composer, and want to arrive at E, you will make sure that you spell the black note just below it D-sharp and not E-flat.

Two illustrations of this feeling of movement in notes we cite from two different fields of music. The first is from *What Is This Thing Called Love,* from "Wake Up and Dream" by Cole Porter.

Ex.9



The note to which the word "called" is sung has an ambiguity which makes possible a sort of musical pun. Cole Porter's "blues" melody succeeds in persuading us that we are in the key of C Minor. Our ears jump to the conclusion that the note on the word "called" is E-flat, which would naturally lead to D or C. So it is a distinct surprise to have it followed by an E-natural. Cole Porter's musical pun is in the same vein as Beatrice Lillie's verbal pun in her famous marching song: "March, march, April, May and June!"

The second time the phrase appears, Mr. Porter surprises us again by refraining from the now expected pun.

The same device, in symphonic literature, will be found in the second movement of the "Unfinished Symphony" of Franz Schubert.

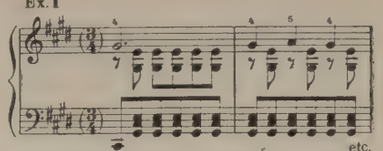
Ex.10

Here Schubert makes a breath taking jump into a distant key by indulging in a musical pun. You will find the ambiguous note which provides his golden opportunity in the fourth and fifth measures. Schubert writes it first E-flat, then, to forewarn the performer of his intended surprise, alters the notation in the next measure to D-sharp, thus changing the meaning of the music and diverting its course into a wholly new channel.

Only the first six measures, which include the section marked *first ending*, are from the "Unfinished Symphony." The seventh measure, marked *second ending,* has been added to show how Schubert might have written the phrase if he had not chosen to make a play upon notes.

Edvard Grieg's famous song, *A Dream,* the melody of which rises from A to A-sharp, to B, and then falls through B-flat to A, furnishes us another example of a change in spelling (musical notation) to indicate a change in harmonic meaning.

The Forgotten Fingers



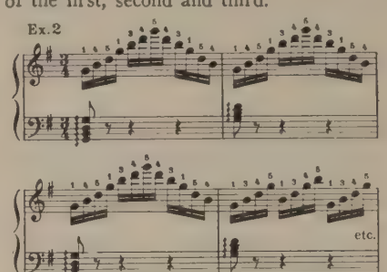
By JOHN BERGEN SKILLMAN

IT IS BEGINNING to be generally realized by piano teachers that the practice of the average technical studies and exercises fails to develop, even with the most conscientious effort on the part of the student, that equal independence and control of all the fingers which is desired. Let us consider the reason for this failure. With most students the fingers which are weakest, over which they have least control, and which (together with the thumbs) cause most of their errors, are the fourth and fifth. These fingers require special work and attention.

Now when we examine the studies of Czerny, Clementi, and others which are assigned to students, we find that instead of the weaker fingers being given the larger proportion of the playing, this is, in most cases, given to the stronger fingers. This is also true of scales and arpeggios. However useful they may be for other purposes they do not develop the fourth and fifth fingers. In playing a diatonic scale with the regular fingering we use the first, second and third fingers twice in each octave—the fourth finger only once. The fifth finger is rarely used in ordinary scale playing. In playing arpeggios the first, second and third fingers are used at least twice as often as the fourth. It is thus obvious that the more we practice studies and exercises of this kind the more unequal will be the development of the hand.

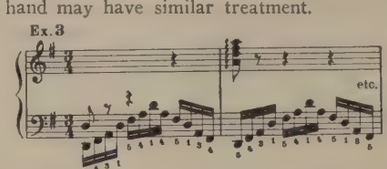
A moment's reflection will convince us of the importance of these weaker fingers. To the fourth and fifth fingers of the right hand are necessarily entrusted the top notes of all chords and octaves, many important melody notes and, in some cases, the melody itself—as in the following example from the middle section of Schubert's *Impromptu, Op. 90, No. 4.*

Ex. 1



With the left hand these fingers must be depended upon to play the bass of the harmony which is next in importance to the melody. Especially is this true in such compositions as the Chopin waltzes and mazurkas. It is evident that the development and control of these fingers is of vital importance.

Special studies and exercises are the most efficient means of bringing about this development. Some are to be found in compositions already familiar. An excellent example being the *Etude, Op. 10, No. 2* of Chopin, which, for the advanced student, is splendid practice for the right hand and may be obtained in an interesting transcription for the left hand alone, by Leopold Godowsky.



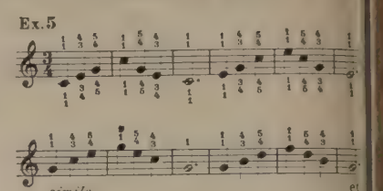
For organ students the *Toccata* from the "Symphony, Op. 42, No. 5," by Widor, will be found good practice for the right hand. The practice of scales in double sixths is also recommended. The writer, however, has derived the most benefit from refingering familiar studies and exercises. For example, the *Study, Op. 740, No. 2,* by Czerny, may be refingered in such a way that most of the notes are played by the first, fourth and fifth fingers instead of the first, second and third.

Ex. 2

The sixteenth note passages for the left hand may have similar treatment.

Ex. 3

In the same book, No. 31, may be practiced in like manner.



The study of scales with the fingering given in Ex. 4,

Ex. 4

and the arpeggios as offered in Ex.

Ex. 5

will be found most helpful. For the l hand these will be played with the finger marked below the notes; and they shou be transposed into all keys, major a minor. They should be studied slowly various rhythms, in contrary motion, thir sixths, and tenths; both *legato* and *stacca*

Of course exercises of this kind shou not be attempted until the student is w grounded in the normal fingerings. Th will seem awkward at first, even for a vanced students. If carefully practice however, they will bring gratifying resu in a short time. Obviously these fingerin are for technical practice only and not a substitute for the more usual fingering Other uses of this principle will no dou suggest themselves to the reader.

The importance of the fourth and fif fingers and the relation that their full d velopment bears to the independence of t other fingers is not always realized; a there is a curious lack of exercises f them alone. It is for this reason that t above studies are suggested as a mea toward the desired end.

Musicians of May Birth

By W. FRANCIS GATES

ALONG WITH ITS SWEET scented breezes, the month of May has brought to the world some of its most gifted of singers — including those who have poured out their talents through the voice, the musical instrument and the pen. Towering among these are the mighty Wagner, Brahms and Tschaikowsky; with Sir Arthur Sullivan inimitable in his field. Of composers less certain of permanency in the musical sun are such names as Stanislaw Moniusko, Giovanni Paisiello, Ciro Pinsuti, Sir George Smart, Jules Massenet, Raoul Laparra, Stephen Heller, Karl Goldmark, Giovanni Sgambati, and Karl Millöcker. Among singers are our own immortal Nordica and the equally supreme Melba of antipodal Australia, Alda of New Zealand, and the almost legendary brilliant Catalani. Conductors are represented by the great Anton Seidl, who made America Wagner conscious, and Eugene Goossens, as leaders. The piano may point with pride to Cristofori, its inventor, and to Silbermann, one of its most gifted of makers. Then to American musical art this month has contributed generously, including Amy Fay, Leo Sowerby, Hollis Dann, Louis Moreau Gottschalk, Clarence Dickinson, Alfred John Goodrich, W. S. B. Mathews, Walter Raymond Spalding, W. O. Perkins, and Wallace Goodrich.

A Natal Chronology

1st—Hollis Dann (1861), Leo Sowerby (1895), Florence Edith Sutro (1865)

2nd—Hans Christian Lumbye (1810)

3rd—Max Alvary (1858), Édouard Gregory Hesselberg (1870), Egon Pollok (1879), Auguste-Désiré-Bernard Wolff (1821)

4th—Bartolommeo Cristofori (1655), Emil Nikolaus Rezniček (1861)

5th—Johann Nepomuk Beck (1828), Pietro Floridia (1860), Johann Nepomuk Fuchs (1842), Homer Grunn (1880), Stanislaw Moniuszko (1819), Hans Erich Pfitzner (1869), Henry Playford (1657)

6th—Wilhelm Ernst (1814), Harry Farjeon (1878), Georges-Adolphe Hüe (1858), Paul Kalisch (1855), Alfred Humphries Pease (1838)

7th—Johannes Brahms (1833), Clarence Dickinson (1873), Karl Heinrich Graun (1701), Euphrosyne Parepa-Rosa (1836), Anton Seidl (1850), Karl Stamitz (1746), Peter Ilyitch Tschaikowsky (1840)

8th—Alfred John Goodrich (1848), Louis Moreau Gottschalk (1829), Francis Alexander Korbay (1846), William Smythe Babcock Mathews (1837)

9th—Giovanni Paisiello (1741), Ciro Pinsuti (1829)

10th—Angelica Catalani (1780), Amalie Joachim (1839), Sir George Smart (1776)

11th—Filippo Capocci (1840), Alma Gluck (1884), Anatole Liadov (1855), Alfred Wooler (1867)

12th—Adolph von Henselt (1814), Ginari Korganov (1858), Jules Massenet (1842), Lillian Nordica (1859), Johann Baptist Wanhal (1739)

13th—Henry Clough-Leighter (1874), Alphonse Daudet (1840), John Sullivan Dwight (1813), Henry Farmer (1819), Gabriel-Urbain Fauré (1845), Paolo Gallico (1868), Raoul Laparra (1876), Ottokar Nováček (1866), Sir Arthur Seymour Sullivan (1842)

14th—Alphons Czibulka (1842), May Mukle (1880), Sigismond Stojowski (1870)

15th—Michael William Balfe (1808), Isaac Van Vleck Flagler (1844), Stephen Heller (1813), Maria Theresia von Paradis (1759), Augustin Savard (1861)

16th—Frank Lynes (1858), Arthur Henry Mann (1850), Johann Georg Nägeli (1773), Andreas Silbermann (1678)

17th—Charlotte Helen Sainton-Dolby (1821), Erik Satie (1866), Antonio Scontrino (1850), Adolphe Vogel (1808)

18th—John Lewis Browne (1864), Karl Goldmark (1830), Giovanni Sgambati (1843), Marie (Mary) Wurm (1860)

19th—Dame Nellie Melba (1861), Karl Müller-Hartung (1834)

20th—Eaton Faning (1850), Jean-Henri Ravina (1818)

21st—Amy Fay (1844)

22nd—Joseph-Louis d'Ortigue (1802), Émile Sauret (1852), Walter Raymond Spalding (1865), Humphrey John Stewart (1856), Teresina Tua (1867), Wilhelm Richard Wagner (1813)

23rd—William Oscar Perkins (1831), Giovanni Battista Viotti (1753), Joseph Wieniawski (1837)

24th—Richard Hoffman (1831), Tito Mattei (1841), Henri Prunières (1886)

25th—Camille Erlanger (1863), Herman Laroche (1845), Mischa Levitzki (1898), Albert Augustus Stanley (1851), Gerard Tonning (1860)

26th—Pierre Gaviniés (1726), Eugene Goossens (1893), Willard Patton (1853), George Templeton Strong (1856)

27th—Wallace Goodrich (1871), Géza Horváth (1868), Julia Ward How (1819), Joseph Joachim Raff (1822), Freiherr Alfred von Wolzoge (1823)

28th—Edward J. de Coppet (1855), Josep Dessauer (1798), Thomas Moor (1779), Germaine Schnitzer (1888), Riccardo Zandonai (1883)

29th—Isaac Albeniz (1861), Baron Frédéri d'Erlanger (1868), Emilio Edoard de Gogorza (1874), Erich Korngol (1897), Karl Millöcker (1842), Émile-Louis-Fortuné Pessard (1843), Herman Weil (1877)

30th—Ignaz Moscheles (1794), Bryceso Treharne (1879)

31st—Frances Alda (1883), Mark Ham bourg (1879), Gustav Hille (1851), Gustav Saenger (1865)

* * * * *

"If opera is ever to become a genuine an vital art in this country, it must belong t the people; and that means that it mus cease to be regarded as a social pleasure. I must not be at the mercy of smart society Literature in the United States could neve have attained its commanding position i the fate of books depended upon the verdic of our aristocracy. A book gathers strengt and the power of longevity as it goes dow among the countless companies of thos whose names never appear among thos present."—W. J. Henderson.

"In Defense of Mendelssohn"

By JEROME BENGIS

"Criticism often takes from the tree caterpillars and blossoms together."
—Jean Paul Richter, in "Titan."

Mendelssohn in his Youth

GENERAL BELIEFS usually do injustice to the intelligence of those who adopt them, as well as to the putations of those whom they concern. is the general belief, for instance, that opin excelled only in short pieces, while e truth is that his pianoforte *concerti* are orks of rare greatness. It is also the neral belief that Schubert was greatest ly as a song writer; but comparatively w realize that his "Symphony in C ajor" and "Unfinished Symphony" are eat enough to rank with Beethoven's. kewise has it been the general custom underrate Mendelssohn and to say that, hile he had grace, finish, and an abunnce of melody, he lacked the profound pth which goes to make true greatness.

A Choral Monument of the Ages

ET US AT ONCE put an end to this so very neral opinion by turning to Mendelsohn's oratorio, "Elijah." A writer has cently classed this as "a second rate atorio." Nothing could be farther from e truth. True, as a whole it lacks the ry spontaneity of Handel's "Messiah" d the unadorned simplicity of Haydn's Creation"; but for sheer dramatic strength rates far above either of them. It is the ost intensely human oratorio ever written. et those who consider Mendelssohn only child of gaiety and polished grace, turn this work and they shall find worlds of ntold suffering; pathetic, if not heartnding, passages of inner agony; frusated hopes and even more frustrated ayers; all of which are finally redeemed the final chorus of triumphant victory. ndeed, only one who, in spite of his change f faith, yet had the true blood of a ebrew in him, could possibly have unolded such a drama of human suffering of ne Jewish race.

There may be passages in the first part f "Elijah" which are uninspired and unteresting. But let us recall, in this very ction, the outburst of the tormented ople in *Help, Lord!* Surely there are w places in all choral music that are ore breath taking and tumultuous. Then ere is the tender and comforting aria, *If ith all your hearts,* which is so meltingly vely that it must find its way into the eart of even an atheist. And what shall e say of that agonized entreaty of Elijah, *t is enough, O Lord now take away my fe?* This is, indeed, symbolic of the sufferng of all great geniuses and martyrs who ave bled for the eventual good of manind. It is the most subtle agony of which ne human soul is capable, and every note f it seems to cut one's very flesh. Its ying strains leave one infinitely tolerant, nd they are a heavenly lesson in abundant ity and goodness. To drink it in fully is lmost, for the moment, to become an lijah oneself. And for sheer grandeur, oes not the vibrant chorus of *Thanks be o God* measure up to the most magnificent horuses of Bach? What, except the *Hallelujah Chorus* from Handel's "Messiah" is more rapturous and carries the oul upward amid more fiery flames? And s it possible to describe the ethereal loveliness of the soothing aria, *O rest in the Lord?* Only the caressing mildness of Handel's *He shall feed his flock* is comparable to it.

A Voice Eternal

SURELY THERE ARE MOMENTS of sheer dramatic inspiration which are surpassed nowhere. Such moments occur in those passages written to the words, *Behold, God the Lord passeth by; and a mighty wind rent the mountains around, brake in pieces the rocks, brake them before the Lord.* And after the tempestuous suggestiveness of the music to this text, come the words, *But yet the Lord was not in the earthquake,* to strains suggesting awe and wonderment. Nor is Mendelssohn wholly satisfied with this; he repeats these superb effects to the text, *And after the earthquake there came a fire; but yet the Lord was not in the fire.* Then, as a gentle benediction, come the heavenly strains of *And after the fire came a still small voice; and in that still voice, onward came the Lord.* This prepares the appearance of the mighty climax, coming upon us slowly, almost imperceptibly, even like the "still small voice" which brings forth the Lord. Truly, this upheaval is the choral equivalent of the *finale* of Beethoven's "Ninth Symphony."

Let us note the all too human elements of doubt which Mendelssohn expresses so superbly before the final appearance of the "still small voice." Nowhere in the glowing pages of "Messiah," or in the childlike faithfulness of "The Creation." do we encounter such utterly human qualities. The "Messiah" declares the glory of all the certainties surrounding the life of the Savior, and likewise does "The Creation" declare with naïve sincerity the origin of the earth and of its first living inhabitants; but "Elijah," by using the passages in which the Bible itself seems to question the ultimate powers of God, is rendered more intensely human for the very uncertainties it expresses. The "still small voice" does not come at once, but only after long waiting and apparent disillusionment. This is the philosophy lurking behind the text of "Elijah"; and this is one of the many reasons why this oratorio is not second rate but rather a dramatic, musical, and psychological masterpiece.

But leaving Mendelssohn's choral achievements, what do we find? Those very beauties which his critics have continually condemned. There are mannerisms in his instrumental compositions; but in whom does one not find such occasional faults? He has been termed "too gay, too frivolous." Let us then remind the music critic that the great Haydn was also gay and frivolous, and that it was this very gaiety and frivolity which has made him immortal. Within its own sphere of droll humor, the *Allegretto scherzando* of Beethoven's "Eighth Symphony" is as complete a work of art as the magnificent first movement of the "Ninth Symphony." Mendelssohn's gaiety was his blessing, and one of the few blessings of the world. There are many who bemoan his happy and feted existence, and who say that if he had led the life of Schubert, he would have been a far greater composer; but if this had been so, Mendelssohn, with his native sentimentality, would easily have become an imitation of Schubert, and musical literature would have been robbed of many of its brightest pages. Among all his morbid contemporaries, Mendelssohn alone has captured the elusive spirit of gaiety. Essentially a classicist by nature, he both technically and psychologically balanced the subjective spirit of romanticism of his age.

No one has ever had a more perfect knowledge of orchestral lights and shades. He might aptly be called the musical Keats. He knew how to produce the most aerial effects with the intuition of a supreme artist. The four chords, for instance, which open and close his *A Midsummer Night's Dream Overture,* are hauntingly magical and at once produce the state of mind which the composer had intended. This marvelous overture, written by a youth of seventeen, is a work of the highest imaginative beauty. Everything in it combines to make a perfect whole. Even the braying of the donkey, which might, at first thought, seem out of place in such a delicately poetic work, is fitted into the music with a precision which is masterful. Or let us take the *"Fingal's Cave,"* or *"The Hebrides" Concert Overture,* which was written only two years after the one already mentioned. This alone entitles him to be known as the musical Winslow Homer. It is a work of the highest programmatic maturity, and is comparable with Beethoven's "Pastoral Symphony" and with some of Wagner's tonal landscapes. Here Mendelssohn has caught the mightiest, as well as the most delicate, utterances of Mother Nature: he has raised himself to the position of a tone poet who interprets the grandeur of the elements themselves. No one who ever has listened to it has failed to come under the spell of its swaying euphony, its bounding elasticity, its enchanting horn calls which rise above the waves and which seem to announce the coming of Neptune in his chariot, and its final climax of resounding fury which later dies away on the receding foam. This is the work not only of a great tone painter but also of one whose genius can reach the highest dramatic intensity.

Great in His Simple Individuality

AS A SYMPHONIST Mendelssohn does not measure up to Beethoven, Schubert, or Brahms; but he had sufficient originality and beauty of design to remain strictly himself, and not to imitate his symphonic predecessors or contemporaries. One cannot say of him justly, as of the mighty Brahms, that his greatness finds its source in another's soul. No sooner do we listen to the gay rhythms of the opening of the "Italian Symphony" than we realize that we are still in a world which is typically Mendelssohnian. We encounter none of the grandeur of Beethoven or Brahms, but an elfin delicacy of touch which both charms and refreshes us. In the "Scotch Symphony" Mendelssohn took a great stride forward, which, however, he was not to repeat in the "Reformation Symphony." The atmospheric coloring of the first movement, the Scottish brightness of the second, the fragrant loveliness of the third, alternating with lofty meditations on bygone glories, and the brilliant *finale* with its *coda* of hymnlike serenity, which reminds one of the song of thanksgiving of the *finale* of Beethoven's "Pastoral Symphony"—all of these movements raise Mendelssohn up to a place among the great symphonic masters.

His works for solo instruments are no less surpassing in beauty. Of these his "Violin Concerto in E minor" is the most famous, and justly so. It seems as inevitably suited to the violin as Schubert's songs are to the voice, and as Chopin's preludes are to the piano. Its wealth of melodic invention is rare; its finish and

THE MENDELSSOHN HOME IN BERLIN
Here the joyous Felix wrote his "A Midsummer Night's Dream" music.

refinement, utterly exquisite; its emotional range and colorful contrasts, the last word in harmonic beauty. It stands utterly apart from the violin concertos of Beethoven and Brahms, and it is to be wondered whether it has not, for all its comparatively sentimental passages, left a greater influence on composers and virtuosi of our day.

Mendelssohn's contribution to music was extensive. Aside from what his own genius means to us, he restored that of Bach to the world by bringing to light that sublime master's magnificent "Passions" and performing them for the first time in a century. To say that he is not great, because he is not a Beethoven, is like saying that the Victoria Falls are not glorious because they are not like Niagara. If Mendelssohn could not write an "Eroica," neither could Beethoven, for all his titanic instrumental genius, compose an "Elijah." Every planet has its own place in the heavens; some shine less brightly, but they all shine together—all piercing the curtains of the sublime firmament. And when all is said and done, and we take our last glance at Mendelssohn, we see one who was great as a genius, eternally lovely as a poet, and gracious and unselfish as a man. He spent his life pursuing only the highest and the most beautiful; and if he had the occasional fault of mannerisms, they are all the sweeter because they are his very own. So let us not bemoan his happy existence; but let us rather rejoice that the world was not so cruel to him as she was to some of her other geniuses.

Fifty Years Ago This Month

Dr. George Alexander Macfarren, eminent British musical scholar and composer, was thus quoted, from a late volume of "Addresses and Lectures":

"Let us remember that persons of gentle breeding and of highest culture give consideration to music, and let us fit ourselves to be their companions, by similar culture and by raising our minds and manners to a level with theirs."

"Consider that art is the bride of the artist. He woos her lovingly, tenderly, anxiously, has many and many a trial to pass through to win her favor. She may seem capricious, she may seem willful, she may seem spiteful, she may seem resentful; but she is to be won if a truly chivalric devotion chain the artist to the pursuit of her affections. She *is* won, she is his, she is his bride, she is his wife—and then it is his duty to control her; and in this control, in this moulding the resources of art to the particular manifestations of the artist's genius, true justice is done to the pursuit of the object of his aim."

"Success in a low cause is far less noble than failure in the highest. We witness the works and the performances of the greatest artists. We may be unable to equal them, but the endeavor is in itself an elevation. There is a story of a painter, who, when he saw the productions of the greatest masters, forgot his own inability, but felt the glory of the aptitude to appreciate what was before him, and in ecstasy exclaimed, 'I, too, am a painter!' You go to hear the works of a great musician—to hear *Israel in Egypt* of Handel, to hear in that the evidence of the utmost mastery to which human genius can attain—you are moved by its sublimity, and you exclaim, 'I, too, am a musician!' Think, again, of the Persian proverb, 'I am not the rose, but I have dwelt beside it;' and by the happiness of living in a garden of roses you are in a condition to catch the reflection of the rose's color, and to carry home much of its beautiful odor; and association with roses will, be assured, leave its impression of beauty on those who have that good fortune."

"The pianoforte player who delighted me more than any one has done, Mendelssohn, and who had a complete command of the keyboard, refused to play in public a piece which was offered him at a short notice, owning that he could play all the notes, and that he could perceive the meaning of the music, but that he regarded it as an impertinence to the author, as indecent to the audience, and as an injustice to himself, to appear before hearers with the execution of a musical work which he had not entirely assimilated to himself and appropriated to his own being and his own conscience.

"Let us never forget that these two authors (Handel and Bach) stand as a pyramid that will defy the ravages of time, and must ever be the monument of the musical powers of the eighteenth century; but if you will accept this fancy, let it be extended by the supposition that the pyramid is inverted, that its apex was in their own era, and that its constant expansion widens with the course of time, with the capability of men to perceive if not to appreciate its vastness, and that as the cultivation of musical intellect advances, so will its apparent extent. We expect in generations to come there will still be regard to what these men have done, a regard which I trust we all here entertain. In summing up the whole estimate of the characters of the two, one may apply a term, which has almost become a cant term, and say that the real 'music of the future' is that of Handel and Bach."

Some Be's for Your Studio Hive

By ELIZABETH SIMPSON

Be Efficient. Teach fast. Watch the child for the first symptom of flagging attention, and change the subject before he realizes that he is tired of it. It is better to be a spur than a bore.

Be Progressive. Improve upon your own teaching. Your educational equipment is simply a skeleton to be clothed and given life by your own vitality. No code of education will be final for you until it is made your own by putting yourself into it. Every really good teacher must become a creator, not an imitator.

Be Idealistic. The prime object of music teaching is to develop a love for music. We are, first and foremost, trying to make music lovers; then, because the child loves music, we must give him tools fit to produce it; so technic comes into the picture as a means to this end. Then he not only must love music, he also must understand it so as to be able to grasp what was in the composer's mind; so harmony and musical form must be thoroughly studied. Then he must be able to hear accurately, that he may enjoy music more keenly. This necessitates the training of the ear. Thus every phase of a child's musical education must have as its central aim the creation or appreciation of beauty, and the development of the power of self-expression through music. If we constantly strive to attain this ideal, despite all handicaps, we are on the way to becoming good teachers.

Records and Radio

By PETER HUGH REED

ONE OF THE MOST soul satisfying experiences in the concert hall is a well played performance of the "Symphony in G minor," by Mozart. Here, that graceful perfection of detail and outline, for which the composer was so famous, is mated to a cosmic breath of spirit. Beneath the simplicity of its utterance this symphony sounds a note of deep yearning, but not of tragedy. The "G minor" is not tragic, although some writers like to contend that it is; its import is a truly happy one, despite its underlying implication of pathos. We have never had a wholly satisfying interpretation of this work on records until Sir Thomas Beecham's performance with the London Philharmonic Orchestra (Columbia set 316) was issued. Beecham, one of the foremost living interpreters of the music of Mozart inevitably makes us realize that despite his beauty Mozart is powerful. And it is his realization of the power as well as the beauty, and his affirmation of the music's elation rather than its underlying note of gravity, that make his performance so gratifying. The recording here does justice to the conductor.

Beethoven, in his "First Symphony," did not depart from the eighteenth century. As Tovey says, the style of this work "is that of the Comedy of Manners, as translated by Mozart into the music of his operas and of his most light hearted works of symphonic and chamber music." Conductors err who interpret this work in the spirit of the nineteenth century Beethoven, the Beethoven of the "Third" and "Fifth" symphonies. For by so doing they destroy its youthful verve and buoyancy.

Two versions of this symphony, recently recorded, aptly illustrate this point. In the performance of Weingartner, for example, with the Vienna Philharmonic Orchestra (Columbia set 321), the genial, sprightly qualities of the music are rightly attested, while in the reading of Ormandy, with the Philadelphia Orchestra (Victor set M-409), these qualities are refuted by the misapplied power and strength which the conductor brings to his exposition. Both sets are admirably recorded.

With unswerving musical integrity, Joseph Szigeti and Carl Flesch perform the "Concerto in D minor," by Bach, for two violins (Columbia set X90). Their contrasting styles make for a vivifying and electric performance, the best so far on records. The exquisite beauty of the *Largo*, one of Bach's most persuasive and cherishable slow movements, is accomplished with a rare transparent purity of tone. Reproduction is excellent.

From the standpoint of tonal blending and reproduction, Musicraft's recording of the "Trio in A minor, Opus 114," for clarinet, violoncello and piano, by Brahms, is one of the best phonographic contributions of its kind ever made. The trio dates from Brahms last years, and is contemplative rather than dynamic in its import. It is excellently played by Ralph McLane, Sterling Hunkins, and Milton Kaye. (Musicraft set No. 15).

Brahms, on three occasions, expressed his homage to his adopted home town, Vienna, by writing a set of waltzes. One of these sets, the "Liebeslieder Waltzes, Opus 52," for four voices and two pianos, has been recorded by Musicraft (album No. 14). The performance is a delightful one, which will undoubtedly give a lot of pleasure to those who know and admire Brahms' music. The artists are Florence Vickland, Evelyn MacGregor, William Hain, Crané Calder (the singers), and Grace Castagnetta and Milton Kaye (pianists).

Bruno Walter, assuming the dual ro of pianist and conductor in Victor s M-420, gives a most ingratiating perfor ance of the "Concerto in D minor," K-4 by Mozart. Had Edwin Fischer, the no Swiss pianist, not played this in anoth fine recording, previously issued, t Walter set would have been most welcom The "Concerto in D minor" is one Mozart's finest works in its form—a wo intensified in its drama, harkening towa the romanticism of a later day.

Henry Purcell (1658-1695) has be acclaimed as the greatest English com poser. Until recently his music has re mained virtually unknown to the profe sional musician as well as the music love By way of acquainting the world wit Purcell's eminence and worth, Englis Columbia brought forth an album of re cordings of his music, which has be repressed here by domestic Columbia (s 315). In the four-part fantasias for string we encounter a musical genius anticipatin the chamber music of a later date. Th album contains, besides the composer's nin fantasias for strings, his "Golden Sonata for violin and continuo, three songs an two Catches. Dryden once said of Purcell "Sometimes a hero in an age appears, bu scarce a Purcell in a thousand years." Th tribute will be fully appreciated, we fe certain, if one lends an ear to the musi in this album.

Lotte Lehmann, in her "Second Recorde Song Cycle" for Victor (set M-419) bring us songs by Schubert, Schumann, Brahm Wolf, Franz, Jensen, Pfitzner, and Mar The program is well assorted and chose With true inwardness and tenderness, not always with vocal ease and the be of phrasing, the soprano interprets th more sentimental songs. The maturity the singer's voice in these recordings i marked, particularly in her renditions the quicker numbers.

Ernst Wolff, the baritone, sings to hi own piano accompaniments, in a highl commendable manner, Schubert's lovel song cycle, "The Maid of the Mill" (Co lumbia set 317). Lovers of lieder will fin this album a particularly worthwhile one

Among the Busoni transcriptions o Bach's music, the *Chaconne* from th "Partita in D minor," for solo violin, ha been always one of the most popula Busoni glorifies Bach's original intention building his transcription into a virtuos show piece. Ernst Victor Wolff, the pianis in his interpretation of this work (Colum bia set X91) fails to achieve the full brill liance with which Busoni endowed hi arrangement, preferring instead to give quietly musical exposition which is de cided a let down. Recording here is good but the record surfaces are only fair.

In his "Symphony for Voices," Ro Harris proves once again that he is on of the most vital and original of America composers. Using verses from Walt Whit man, he writes for unaccompanied choir treating the voices like instruments of th orchestra. The note of tragedy sounded i this work is a profound one. Sung by th Westminster Choir in recording (Victo set M-427) the work is hardly done notabl justice. It deserves better treatment.

Recommended: Kreisler's re-recording of his own compositions, *Caprice Viennois* and *Tambourin Chinois* (Victor dis 14690); Fiedler's stirring performance o Dvorak's brilliant *Carneval Overture* (Victor disc 12159); Paderewski's per formance of Haydn's "Theme and Varia tions in F minor" (Victor disc 14727) Marian Anderson's expressive singing o *Der Tod und das Maedchen* and *Di Forelle*, by Schubert (Victor disc 1862)

The School Accompanist

How the Piano Teacher May Enrich His Pupil's Experience

By KARL W. GEHRKENS
Eminent Musicologist and Teacher at Oberlin College

Karl W. Gehrkens

TO BE A GOOD ACCOMPANIST requires at least five things: (1) A good pianist, with adequate technic; A sensitive, intuitive personality, re-sive to the thoughts and feelings of rs; (3) Good all-round musicianship; Ability to read music fluently and at fairly correctly; (5) Willingness to rdinate one's ideas to those of another, is, amenability to suggestion.

The Accompanist as Pianist

ACCOMPANY WELL, one must have a in freedom in the use of one's me-—usually the piano. Therefore the essential is that the accompanist shall ible to play the piano. It frequently ens that a child in the grade schools s a special aptitude for music, and, ng already begun piano lessons, that lays the piano for school songs with able enjoyment and considerable unc-If the teacher feels that such a pupil sufficient ability along both general and ical lines, he will encourage him to study more intensively, will perhaps advise him with respect to a suitable teacher. He will keep an eye on such a pupil as he progresses through the grade schools, will perhaps see to it that he is given a chance to play a solo at an assembly in the junior high school, and will coach him a little as he plays accompaniments for the general music class or the glee club. And always he will encourage him to study piano; for, unless he develops a reasonably adequate piano technic during his earlier years, he never will become a satisfactory accompanist as a senior high school pupil.

But it is perfectly possible to have adequate playing technic and yet not to be a good accompanist. To accompany well one must be intuitive, must be able to feel how another person feels, to know without being told just what another's attitudes and desires are. This is a little like, and yet quite different from, two people who live together as husband and wife and who need to adjust each to the other if the marriage is to be happy and successful. But in the marriage relationship, or in any other situation in which two people have to live or work in "close quarters," the adjustment is mutual; while in the case of soloist (or conductor) and accompanist, it is the latter who must do all the adjusting.

Some people are by temperament utterly unfitted to accompany. They are perhaps highly endowed, so far as intellect is concerned, but they are not sensitive to the thoughts and feelings of other people: they are always saying and doing the wrong thing; they are not intuitive. The accompanist must be able to intuit the thoughts and feelings of another. He must "have the power of knowing without recourse to inference or reasoning." He must possess that elusive and indescribable thing called insight.

The Specially Talented Ones

CERTAIN PERSONS are highly endowed with this capacity. They sense how others think and feel, and they adjust their words and actions to these thoughts and feelings. They are thoughtful and imaginative in all their relationships with people. They are tolerant because they understand the motives that are behind the actions of others. They can anticipate and therefore control responses in other people. They quickly establish rapport with a person whom they meet for the first time. And when they act as accompanists they are so closely *en rapport* with soloist or conductor that it seems almost as though the two were one—and so they are so far as artistic intention is concerned; for the accompanist senses the interpretation that the soloist or conductor feels to be artistically correct and subordinates his own desires to the point where his responses are completely subject to the demands of the soloist. Thus soloist and accompanist are one because the latter merges himself in the former to the point where utter and absolute unity of interpretation is achieved. We are of course dealing here with the accompanist of long experience; but the ideal must be recognized and striven for, even during school days.

Some high school musicians show extraordinary aptitude in following the signals of their teacher-conductor, because they have been highly endowed at birth with the germ of intuitional power. This germ should be fostered and encouraged to develop for all sorts of personal reasons, but especially so if the pupil has aspirations to become an accompanist of even the high school glee club.

Intuition, as a method of learning, has not been sufficiently recognized anywhere in modern life; and in our educational system it has been completely ignored. This is a matter to be regretted, when considering the needs and the happiness of people at large; but in the case of the artist—or even of the near-artist—it is actually catastrophic in import. The artist must think, but he must also feel. He must be able to reason, but even more must he be able to intuit; else he is only half an artist—and in this case half an artist is not at any time "better than none"!

So the accompanist must develop whatever germ of intuitive insight he has in him to start with; he must try to feel how another thinks or feels, without explanation or reasoning; he must learn to phrase with the soloist, to feel subtleties of shading and nuance as the soloist or conductor feels them; he must literally live and breathe with the person whom he is accompanying. All this, of course, without much talking and without any scolding. The accompanist who has to be told how to do things is not a good accompanist; and he who has to be scolded for artistic lapses is no accompanist at all. (We are here assuming that the soloist or conductor is an impeccable artist; but sometimes it is the accompanist who has the artistry and the soloist who bungles—or even the high school conductor! For this difficulty we have no remedy—except higher musical standards for teachers of music.)

The Accompanist as Musician

ONE GREAT DIFFICULTY with amateur accompanists is that they are often good pianists without being good musicians. We do not mean this literally, of course; for a really good pianist is always a good musician. But many persons play the piano so that the effect is reasonably satisfactory to the undiscriminating listener, without really understanding the music.

To be a really good accompanist requires musicianship of the first order. This includes, among other things, an understanding of the structure and texture of the music, its harmony, its counterpoint, its form and design. It involves the power of evoking auditory imagery, so that one may be able to hear with one's inner ear while no tones are actually sounding. It necessitates broad knowledge of the various schools of composition, the different national styles, the peculiarities of the various individual composers, including both classical and modern. And it demands of the accompanist that he know a large number of standard compositions, their traditional *tempo*, their accepted styles of interpretation.

All this again presupposes the mature musician, the professional. But the high school accompanist must have the ideal put before him and must work toward this ideal, even though he does not expect to be a professional musician. It is only as the amateur comes to emulate the perfection of the artist that genuine appreciation develops in him; and in order to accompany even reasonably well the high school boy or girl must come to an appreciation of music such as a mere pianist often does not think it necessary to have

HISTORIC WARNER HALL

Home of the Oberlin Conservatory of Music. It contains two hundred practice rooms, a large Concert Hall, and studios for some forty or more teachers. Many of America's foremost musical experts have studied in this building.

So here again the high school teacher will encourage the promising child to strive to achieve at least a modicum of musicianship in addition to his growing ability to play the piano. He will advise him to take a course in harmony and to work especially hard at keyboard harmony. He will suggest that the pupil try his hand at transposing, beginning with a single melody, but persisting until he can play an entire song accompaniment a half or a whole step higher or lower, as occasion may demand; he will suggest that the boy or girl read books about music—its history, its structure; and he will encourage him to attend concerts as frequently as possible, perhaps studying some of the compositions with him in advance. Now that so much more good music is available on the radio, the ambitious student may well provide himself with pocket scores of string quartets, concertos, and symphonies. Even listening to piano pieces with the score before one is an exciting experience.

In all these ways music will come to be a living, pulsating, engrossing experience; a language that the pupil can both speak and understand; a delightful way of filling many hours with happiness, that might have otherwise been spent in reading trash, in silly conversation, or in adolescent brooding. Thus is the accompanist trained in the beginnings of musicianship.

The Accompanist as Reader

THE GOOD ACCOMPANIST must be a master of musical notation, able to read at sight quickly, accurately, and musically. This might seem to be implied in what is called musicianship, and the good musician is usually a good sight reader too. But in the case of the accompanist such ability is rightly considered to be an indispensable.

Most players and singers, who do not read well, have simply not bothered to learn. They have been able, by hook or by crook, to get by without learning to read fluently; and, because reading at sight is difficult for some, their friends have assured them that certain musicians could read music and others could not. This is nothing short of silly. To be a master of English one must be able to read and to write it as well as to understand the language when spoken; and to be considered a master of music without ability to read it fluently—unless there is some physical defect—is impossible.

What, then, shall be done in the case of the high school boy or girl who has all the earmarks of a budding accompanist but who cannot read fluently? The answer is, "Induce him to practice reading."

It is practice that makes perfect, to-day as always; but of course it must be intelligent practice or perfection will be too long delayed. The pupil, who is willing to work at learning to read for an hour every day during an entire year, will—if he works intelligently and has the proper background of piano playing ability together with some knowledge of harmony—improve unbelievably. Of course he must be able to play the piano, and he must have good general intelligence with at least reasonable quickness of perception. But, granting these things, almost any pianist can become at least a fairly good reader.

In advising the high school musician about this matter, the teacher will emphasize the following points:

1. The material used for practice must be easy enough so that the pupil is able to play it fairly well the first time and almost or quite perfectly the second. This may mean using children's songs with only one part at first.

2. A large quantity of material must be provided, the plan of practice being to go through each composition only once or twice or, at the most, three times. As the pieces become more difficult it may not be possible to play them perfectly the second or third time because they are technically too difficult, and of course many matters of interpretation will be left unfinished; but it is the reading of new music that we are practicing; so, after two or three times through, the composition will be abandoned and another one read. If, however, the pupil cannot play the piece reasonably well by the third attempt, the material is too difficult for reading purposes and something simpler should be found.

3. Hymnals, children's song books, volumes of community songs, children's piano music, easy solo songs—all these constitute excellent material for practicing reading.

4. Ensemble playing is good training, if one wishes to learn to read. The members of a string quartet are almost always good readers, the reason being that they spend so much time in reading the quartets of Haydn, Mozart, and Beethoven. The pianist in a trio consisting of violin, violoncello and piano, or other small ensemble, usually becomes a good reader. So do the members of a two piano team. And accompanying itself is excellent, because so much of the time the accompanist is required to read new material. Encourage your budding accompanist, therefore, to play hymn tunes in church or Sunday school, to spend a Sunday afternoon in going through a book of piano duets with his chum, or to become a regular member of some small ensemble.

5. Following a score while listening to the radio or a phonograph record is excellent and should be encouraged.

6. The secret of reading music is the same as the secret of reading language—one must read the notes in groups so as to apprehend the meaning of the individual units as parts of larger wholes. This implies that one must read ahead and take in the material by phrases; and here a knowledge of harmony stands one in good stead, for if one understands the texture of the music he is often able to "guess" at what some of the notes must be. This is not really guessing; it is knowing by context—a perfectly legitimate device which is constantly and efficiently being used in reading language. In reading English one sees only a part of each word; as a matter of fact one does not see some of the words at all. One sees certain "high spots" in the sentence—words and parts of words—and knows what the rest must be. The illiterate musician has to read every note of every chord; but the musicianly musician reads a large part of the material by knowing from the context what these unread notes must be. He reads by phrases, and his knowledge of harmony, counterpoint, and rhythmic structure enables him to skip half of the actual notes and still read accurately. *And he looks ahead constantly so that his musical mind may group the tones properly before his fingers play them.* For the high school musician all this may be summarized in the words, "Look ahead, and remember your harmony."

7. Encourage your accompanist to think of the form of the composition and especially to be on the lookout for repetition—exact or with variation. Encourage him to look for contrast too—contrast of key, contrast of mode, contrast of rhythmic structure, contrast of mood and style. All this will increase his grasp of musical meaning, and thus it will directly improve his ability to read.

8. Insist that your accompanist read the signs and terms pertaining to *tempo* and dynamics as well as the notes. The old idea of "putting in the expression after the piece has been learned" is now a matter for derision. The expression is a part of the music—it is the music itself; and it would be just as sensible to leave out an occasional note or even to omit a few measures here and there as to read new music without any reference to *tempo* and dynamics indications. Urge your pupil who is learning to read to see everything on the page—pedal signs, *tempo* and dynamics terms, fingerings; and not merely notes and rests, sharps and flats.

9. Urge your pupil never to begin playing a new piece until he has looked at it carefully for a minute or two, has carefully noted its key signature and whether this stands for major or minor; nor until he has gone through the first few measures in his mind, noting measure signs and general rhythmic structure, and has set the *tempo*. Now let him begin, and let him play the entire piece without stopping, at the correct *tempo*—or as nearly so as he can—and as perfectly and as artistically as possible.

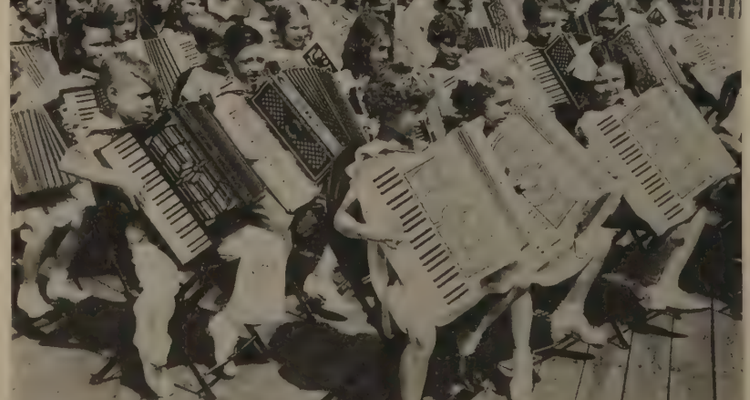
The Accompanist Must Play Second Fiddle

FINALLY, THE ACCOMPANIST must be able to subordinate himself to another, must be willing to take suggestions, must be ready at all times to subdue his own ideas and feelings and to follow those of the soloist or conductor; he even must be willing to interpret music in ways that sometimes seem wrong to him. And he must be able to do all this wholesomely.

The egocentric person never makes a good accompanist. He may be an excellent pianist and a fine musician, but his interests center about himself and it is impossible for him to play second fiddle to another. Such a person is to be discouraged from becoming an accompanist. He should be a soloist or a conductor, for these require precisely such qualities. But the accompanist must be a follower, not a leader, and the combination of these two qualities is but seldom found in the same person. Occasionally it is, however, and the fact that one is a good leader does not necessarily mean that he is thus barred from being a good follower. The odds are against it, however, and in general one is either a leader or a follower, rarely both.

The high school pupil who plays the piano well should be given a chance to accompany as a part of an all-round musical experience. But if he shows himself to be stiff and unyielding in his playing, or, worse yet, if he proves to be belligerent in his attitude, prone to argue, unready to take suggestions, then it will be far better to encourage him to do solo playing rather than accompanying. You might in time be able to train him to be a good accompanist, but the odds are against it—and it would be a long, hard struggle.

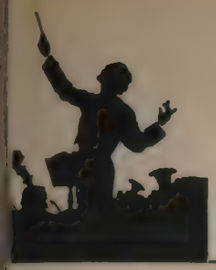
Even though the accompanist must play second fiddle, however, the experience of playing accompaniments is nevertheless a thrilling one—just as participation in any ensemble performance is; and in the case of high school pupils it is only the hopelessly egocentric who are to be barred from its satisfactions.



A Class in Accompanying

IN THE SMALL SCHOOL the teacher knows all the talented pupils, and here it will be easy to keep track of those who play the piano well and to provide opportunity for them to accompany. The teacher will then take the responsibility of coaching such pupils in the fine art of playing accompaniments, making pertinent suggestions concerning tone, legato, pedalling, phrasing, watching and following the conductor, and the like. But in the large school where there are a number of music teachers, a class in playing accompaniments may well be provided. The members of such a class will meet regularly, just as other classes do, and they will receive credit for their work. The teacher will plan each lesson carefully, providing varied experiences in sight playing, in ensemble, in accompanying soloists, in following a conductor's beat. The teacher of such a class should himself be a good accompanist, and often he will demonstrate by his own playing how a thing is to be done. The size of the group must be limited to about a dozen and only those who are reasonably good pianists and are recommended by the piano teachers should be admitted. Under these conditions such a course in accompanying will be a highly valuable offering and its effect upon the artistic performance of the various ensemble groups will be enormous.

But if such a course is not feasible the conductor of glee club, chorus, or assembly must expect to spend considerable time in coaching his accompanists. He will provide them with the music in advance, he will work with them on certain accompaniments before these compositions are sung by the vocal group at all; he will sometimes meet the accompanist after the first rehearsal of a composition and hear him play the music alone, making suggestions concerning *tempo*, dynamics, count, melodies, accents and the like.



"But why," you may ask, "should I take so much trouble to have a mere accompaniment played well? After all it is the voice parts that constitute the really important thing." To which I reply, "No, to the conductor, the accompanist is the most important factor in bringing about the artistic performance of a choral work. And sometimes the accompanist is even more important at this point than the conductor. So the trouble you take to provide and train

WILLIAM D. REVELLI

FAMOUS BAND LEADER AND TEACHER

CONDUCTOR OF THE UNIVERSITY OF MICHIGAN BAND

Tone Production

The Most Important Factor in Band Contests

DURING THE LAST National High School Band Contest it was the writer's good fortune to be one of many spectators and listeners. For the t time in my National Contest experie, I was not a participant, and as a ttle-scarred veteran" of several competi-ns, I must admit that there was a certain ging to be taking part once again in great musical program.

Although the thrill of sharing directly he contest was missed, there was great sfaction in auditing these concerts with-the necessity of judging relative merits erformances and listening solely from a ical and comparative standpoint.

Yet, in observing the excellent work ac-plished by the various bands, I found self asking this question: "What are elements that constitute the differences the performances of these band groups, l what factors involved in these dif-nces will finally decide their rankings?"

After listening to the entire contest, I ld not help but feel that, in most in-nces, the performances left very little criticize in the elements of rhythm, nic, and *tempo*. Most of the groups e remarkably adept in handling the nical problems in the required and ctive numbers; and in many instances interpretation and general effect were y fine indeed. There was a time, not so g ago, when competing organizations e deficient in these points. Now, how-r, due very largely to the various state regional clinics, directors have an op-tunity to receive valuable instruction in correct interpretation of the contest nbers and to exchange ideas that lead to at improvement of our school bands. dio and the excellent phonograph record-s of the great symphony orchestras and ds have proven splendid means for dying the works from an interpretative ndpoint in arriving at the ratings of various bands.

At the Cleveland Contest one of the udicators said, "Most of the bands are hnically proficient—notes, dynamics, gics and precision have been given care-attention. Interpretation is good, yet onation and tone quality are not on a with the aforementioned elements." ithout a doubt, intonation and tone qual-played havoc with the ratings of many the organizations participating at Cleve-d. This was especially true of the Class and C bands, as well as several of the s matured Class A groups.

A backward glance, then, at the accom-shments in the school band field, shows t we have come far in technical and in-pretative achievement. We have yet to quer the vagaries of tonal perfection. nce no musical sound which lacks in od quality can be considered a true sical tone, perhaps it behooves us to give eater stress to this often neglected phase student musical training.

Most of the members of our high school nds have many times played every note thin the practical range of their respec-e instruments, yet have given scant attention to quality of tone. Seldom does it improve in proportion to technic.

Technic is primarily a mechanical reaction which, through constant repetition, becomes a subconscious action, whereas the problem of playing with good tone quality is an auditory, physical, and mental reaction which can never be mastered until the player can actually hear, see, and feel a tone before it is played. Good tone quality, we believe, is the result of a correct mental conception of beauty of tone, plus the ability to perceive and sense the color and image of the tone which is to be produced. Without the knowledge of how to secure this quality, tone cannot improve regardless of the number of repetitions.

Physical Factors Involved

WHAT ARE SOME of the physical factors to be considered in the development of a good tone which will enable us to produce the tone that we hear, see and feel?

The first factor necessary to the accomplishment of good tone quality is the certainty that the student has chosen, or has had selected for him, the instrument to which he is best adapted both physically and mentally. This problem deserves serious consideration, for in many cases we find students attempting to perform upon instruments to which they are entirely unsuited. Granting that a student has selected the wind instrument for which he is best adapted, our second concern, then, is the development of breath control.

Breath is the motive power of the wind instrument player, and good tone quality is largely dependent upon the player's ability to control properly the breath. Just as a violinist cannot adequately express himself without control of the violin bow, neither can the wind player produce and control a tone without accurate control of the breath stream.

Good posture and position are absolutely essential to the securing of breath control. A slouchy, careless position is usually the first obstacle in the production of a good tone. If the student stands or sits erect, both feet on the floor, chest high, and head up he is able to breathe freely and naturally.

Deep breathing or diaphragmatic breathing is merely natural breathing. The infant in its crib breathes naturally from the diaphragm. Although much has been written and said about diaphragmatic breathing, it is comparatively easy to teach and it is not the most difficult problem in the development of breath control. An exercise in correct breathing from the diaphragm follows:

Stand erect. Place the end of the thumb on the pit of the stomach. Exhale, gradually pressing the thumb in against the stomach while doing so. Now inhale slowly and deeply, expanding the waistline—you will notice the thumb being pressed outward. Keep the chest high at all times, and pay particular attention that it does not droop when exhaling.

This manner of breathing, in a short time will enable the student to breathe automatically from the diaphragm. The student must be taught to "breathe from the toes," as it were, instead of from the chest, for this latter method does not provide the necessary support or resistance necessary to the production of a good tone.

The next important factor in securing the desired end is the practice of sustained tones. Five minutes devoted every day to this sort of practice is extremely beneficial. Of course, this type of practice should not be overdone, for it tires the muscles and causes tension and stiffness. The procedure is this:

To Develop Sustained Tone

SELECT A TONE which can be produced easily and without strain upon the embouchure. Inhale deeply from the diaphragm. Attack each tone gently but firmly, making a gradual *crescendo* and then *diminuendo*, holding the tone only to the point where you can produce it with ease and perfect control. Make the loudest point at the middle. In making the *crescendo* or *diminuendo* avoid deviation from the true pitch of the tone, for usually the *crescendo* brings about a tendency to sharpness, the note being thin and strained, whereas the *diminuendo* causes a flat and "tubby" tone.

When making the *crescendo*, listen intently to the tone quality. It will be found that in a certain spot in the *crescendo* the note reaches its very best quality—when that point is regularly recognized, try to play with this quality at all times, and with varying degrees of volume. The fault of inability to maintain consistent tone quality is vividly demonstrated when we hear the average school band play a selection which calls for varied combinations of tonal volumes and color. In most cases the tone becomes increasingly sharp in pitch whenever there is a *crescendo*, and the band's tone becomes flat in the *diminuendo*. Naturally this change in pitch adversely affects tone quality.

A fourth factor of prime importance to development of good tone quality is embouchure. Too often the student is hurried and forced to play tones beyond his natural and normal range. This is injurious to his embouchure; it becomes taut, strained, and eventually weak. Embouchure, whether it be that of the brass or wood wind player, should never be forced out of its normal range, and extension of range should be made only with a gain in the strength of the embouchure to a point where the student can produce a tone as easily as he would hum or whistle it.

Tone quality and intonation, being closely related, should be developed together, with their relationship being understood. Faulty intonation reflects upon tone quality and *vice versa*. Let us consider an example: A young cornet student of limited experience is required to play beyond his normal range. In his anxiety to produce the tone, he develops, without realizing it, an incorrect method of producing that tone. Due to lack of breath support and resistance the tone fails to respond—the student invariably hardens the muscles of the chin, tightens the throat and larynx muscles or reduces the opening of the aperture, strains and squeezes until it seems he will burst; and he eventually produces a tone which is thin, harsh, dull, and sharp in pitch.

On the other hand, the same tone, as produced by a player whose methods of tone production have been carefully guided and correctly established, will sound quite different. Depending chiefly upon adequate and properly controlled breath support of the rib and diaphragm muscles, plus a properly developed embouchure, the tone is produced in a free and easy manner. The throat is relaxed, aperture is open, and a correct embouchure observed. The resulting tone is open, resonant, fine in quality and accurate of pitch.

This difference in the quality of tone is due chiefly to method of tone production. Insufficient breath, without support or intensity, causes a flat, nonresonant tone, whereas sufficient breath, under proper control, is a definite aid to the production of a good tone.

Thus, these factors which lead to true color and pitch can be achieved, but only through the ear, mind, and feeling of the student.

Mouthpieces

THE TYPE OF MOUTHPIECE used is significant in the problem of tone production. It is scarcely possible for any instructor to prescribe definitely the type of mouthpiece that a student should use, whether the instrument be reed or brass. It is usually best for the student to select from a number of mouthpieces the one most suited to him. In the case of brass it may be that a shallow cup is best, or again it may be necessary to recommend a deep cup. This depends upon the individual embouchure, and can be discovered only with experimentation.

In the case of clarinets and saxophones, the lay and facing of the mouthpiece have much to do with the quality of tone. The closed, short lay is usually good for producing the small refined tone, while a more open lay aids in the production of a large,

Don't Blame the Instrument for Poor Tone

Even the best instruments do not give good tone, if improperly played. Read Mr. Revelli's very lucid article and learn how you may improve your tone through accepted methods therein presented.

A Monthly Etude Feature of practical value, by an eminent Specialist

MUSIC EXTENSION STUDY COURSE

For Piano Teachers and Students

By DR. JOHN THOMPSON

Analysis of Piano Mu appearing in the Music Section of this Issue

THE CLOWN AND HIS DONKEY

By R. H. PENDLETON

So descriptive is the title chosen for this piece that it should be kept in mind throughout by the player. The text reads, *Scherzando, but not too fast.* This should not detract from the playful mood of the music. The six-eight meter, if well marked, achieves a semigallop effect and should even be a bit clumsy sounding. Note that the descending accented notes in measures 6, 7, and 8 are evidently intended by the composer to depict the clown sliding and falling off the donkey. The *Sforzandi* in measure eight should obviously, therefore, be stressed.

The second theme, beginning with measure 17 is in C major, sub-dominant key, and in this theme the donkey has something to say. The "Hee-haws," in measures 21 to 24, are to be slurred exactly as marked, with a heavy accent on the first note and a sharp release on the second.

The same slurring effect is apparent again in measures 29 and 30—this time with the addition of a grace note which indicates the cracking of a whip.

After a repetition of the opening theme a new theme is introduced at measure 45, this time in E minor, the relative minor to G major.

The text reads *burlescamente,* "in a burlesque style." This section deals musically with the clumsy antics of both clown and donkey; and it will be noticed that the melody lies for the most part in the left hand. Do not overuse the pedal. Follow markings faithfully as given. A little left hand alone practice is advised for this number.

THE GRASSHOPPERS' PARADE

By CHESTER NORDMAN

Here is a true March Grotesque which begins *pianissimo,* with *staccato* notes deep in the bass. A plucking finger *staccato* will be used to good effect here. The right hand introduces the melody, also low on the keyboard, and it is important that the slurs in the right hand contrast sharply with the *staccati* in the left. Play the descending chromatic passage in measure 9 *senza rit.,* that is to say, without ritard. Flick off all grace notes with a dry, brittle tone as suggestive as possible of the sound made by grasshoppers in motion.

The second section, beginning measure 19, is in the relative major key. Here *tempo* picks up somewhat—*con moto.* Distinguish carefully here between *staccati* and sustained notes.

Note the words *pochissimo rit.* in measures 25 and 26. This indicates that the smallest possible ritard is to be made. The original *tempo* is resumed at measure 27 with the reëntrance of the first theme.

A new theme makes its appearance at measure 35. The *tempo* is somewhat slower and the melody is to be played *legato* and expressively against *staccato* chords as accompaniment. Pauses and pedal marks are of importance in this section.

A DAY IN MAY

By ROB ROY PEERY

Obviously written in lyric style, tonal values and the preservation of the melodic line are of the utmost importance in playing this music. Mr. Peery has written this composition in the form of a reverie and to its interpretation one should bring the best possible singing tone and close observance of all phrasing marks.

As injudicious use of the pedal can ruin a composition of this nature, great care must be exercised in this regard.

In measures such as 11 and 12 make sure that the melody tone in the upper voice is given enough resonance to be heard above moving parts in the accompaniment.

With the introduction of a new theme at measure 41 the *tempo* increases somewhat. Note also that here the melody passes from the soprano to the alto voice; and be careful to keep the melody line intact.

This piece, by a composer who has the gift of melody, should offer an interesting addition to the teaching repertoire. The composition also has the virtue of being decidedly pianistic, which of course is just another way of saying that it lies comfortably under the hands.

ELFIN BALLET

By FRANCES TERRY

Frances Terry has made many interesting contributions to the piano teaching literature and this number will no doubt be welcomed by many who know her work among readers of THE ETUDE.

Aside from its interest as a piece of music, this number has intrinsic teaching value. It offers practice in the playing of mordents; it develops crisp *staccato* in both hands; and, to boot, the groups of thirty-second notes in measures 28 to 32 call for a rolling attack which produces almost the effect of a *glissando.*

Play this composition with animation, remembering always to keep the tonal effects light in quality. Even the *forte* marks in this particular piece should be less robust than usual since the central idea of the music is to suggest the dancing footfalls of tiny elves.

The entire number is in the dance form, rhythm being uppermost. Be careful in the matters of *tempo,* accent, phrasing, and rhythmic effects generally.

Here is not only a valuable addition to the teaching repertoire but an effective novelty for pupils recitals.

MOON DAWN

By RUDOLPH FRIML

The works of Rudolph Friml have an enviable place in American music. His light operas have been phenomenally successful and have been introduced into the movie world during the past few seasons. With a style distinctly his own, Friml's melodies are spontaneous and refreshing and have the rare quality of "sticking" in the listener's memory once having been heard.

This example of Friml's music for piano solo is a fortunate selection and shows the composer at his best. It opens with the melody in the left hand and this should be made to sing with the tones of a violoncello against the chord accompaniment in the left hand.

In the second section, beginning measure 25, the theme is in the right hand in double notes.

Play the groups of sixteenths lightly so as not to obscure the melody. The pedal naturally is to be applied with discretion throughout.

A third section is introduced at measure 41 and is to be played with more animation *piu vivo.* Here the melody lies in the alto voice of the right hand. The trills in measures 55 and 56 will no doubt require a bit of separate hand practice and a good device for mastering trills is to practice them first rather slowly with well articulated finger action, followed by closer application of the fingers as speed develops, until finally the fingers fairly "ride" the keys.

After mechanical difficulties have been overcome, strive to play the piece reflectively, with due regard for tonal values, phrasing and rhythmical balance.

CARNIVAL DANCERS

By RUTH G. CHAUNCEY

Another contribution to this month's ETUDE with decided "teaching value." Here the player is required to apply a sudden expansion of the hand in order to toss off the final note in each of the groups of the first theme. Release the pedal on the second beat as indicated, since otherwise the rhythmic effect is ruined. Since this piece is in dance form, *tempo,* accents, and so on, are of the utmost importance.

The *staccato* sixths in measure 13 will be most effective if played with wrist *staccato,* without pedal of course.

The second section in A minor, the relative minor key, has the theme in double notes in the right hand.

Preserve the carnival spirit throughout and inject style into this somewhat short but effective number.

VALSETTE

By L. VAN BEETHOVEN

This transcription should be of very special interest to readers of THE ETUDE. One of the factors that contributes toward making the piano the unquestioned "King of Instruments," is its faculty for reproducing music of all sorts composed originally for the voice or for other instruments. Orchestral music, chamber music, songs, dances, opera—almost anything can be arranged within the compass of two hands and given a performance on the piano.

This interesting arrangement of the *Valsette* from Beethoven's "String Quartet Op. 18, No. 6," is quite pianistic; and it is an excellent piano solo version for lovers of chamber music, which by the way, is said to be the highest and purest form of music.

Be particularly careful to preserve phrasing marks, since in the original they indicated the bowing for the strings. Set a moderate pace, do not use too much pedal, and keep in mind the limited tone volume of the four instruments—two violins, viola and violoncello for which this music was originally composed. For Beethoven enthusiasts this arrangement will offer interesting diversion and change from the well known and well loved piano sonatas.

THE BROOKLET

By HENRY RYDER

The first section of this piece will be most effective if the left hand part is played with wrist *staccato* while the right employs finger *legato* for the single notes and either wrist or forearm for all double notes. Note the accents which appear on the second quarter of many of its measures and build up a swell and *diminuendo* as indicated in measures 11 to 18.

The second section is in C major—subdominant key—and is sustained in character. Use a slight "roll" in playing the right hand triplets and follow the dynamic marks as given. Pedal may be used in this section if applied with care, changing it as the bass progresses chromatically.

THEME AND VARIATION IN F MINOR

By F. J. HAYDN

"Old Papa Haydn" was so called, doubt, because he fostered and develo the *sonata* form in music and fathered t certain extent the cause of musicians general. The appellation certainly co have no reference to his lack of youth vitality. Born of hardy peasant stock, seemed to retain a vigorous and refresh enthusiasm to the day of his death. At t age of sixty-seven he wrote his orator "The Creation." Two years later he co posed "The Seasons." His work contin to improve as he grew older. In fact, once made the complaint that only after lifetime of study, when it was about ti to die, had he reached the point where felt he really knew how to score effectiv for woodwinds.

All his compositions reflect the m painstaking care and merit the same amou of care on the part of the performer. P strict attention, therefore, to phrasing a be sure to preserve the melodic line as passes from one hand to the other.

Keep in mind the tonal limitations of t keyboard instruments of Haydn's day; a while not depriving the composition of t benefits of the modern piano, try to ke within well defined tonal boundaries.

WALTZ

By JOHANNES BRAHMS

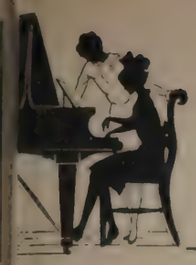
The works of Brahms, especially t symphonies, are considered by some represent the peak of absolute music.

Absolute (or abstract) music is mus which derives none of its interest from e ternal things—in other words, it is pu music. It does not attempt to paint or po tray anything tangible. It is assumed th the musical idea is sufficient inspiration itself and the treatment, the developmen the musical adventures, so to speak, of t theme are of primary importance.

A large part of the music of the gre masters is absolute.

Brahms created a style of writing th is distinctly individual. While he lived the romantic period, his style is distinct classic. He has often been referred to as t philosopher. This may be because of h Ph.D. degree, or because his works oft promote a philosophic trend of mind.

The Waltz here presented is one of th set of *Op. 39.* When playing the dances Brahms it is well to remember that the are related to the German *"ländler,"* peasant dance, rather than to the dance of the aristocracy. Therefore, let the sty be rugged simplicity and sincerity, avoidin extreme nicety of interpretation whic would tend to impart an air of overrefin ment and elegance. After all, the chi charm of these dances lies in their direc ness and artlessness.



ROLLING STONES

By LEWELLYN LLOYD

This little tune in the first grade presen a melody divided between the hands. remains within the compass of five not and can be used as a rote piece if desire

The *tempo* indicates "moderately fa with motion." Fairly heavy accent on th first note of each measure should be give to keep the proper swing. Like many fir grade melodies, it can be made to soun much more "grown up" if the teacher sup plies simple chords as an accompanimen

(*Continued on Page 339*)

THE TEACHERS' ROUND TABLE

Conducted Monthly by

GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

Pupil Problems

1. I am puzzled what to do for a ten year old, ambitious and industrious girl under average musical ability. She cannot tell when she misses a very obvious flat or sharp. Also, although she knows exactly the correct time of each note she cannot play the piece in correct time unless she counts softly to herself or aloud.

2. Another problem is a talented boy who plays entirely by position, so much so that many times he has to stop and figure out the starting note of a piece. He also memorizes quickly and then plays and practices a great deal from memory even though he is warned not to do so. I make him play a great many very simple pieces until he can recognize the name of a note at sight.—Mrs. C. F., Minnesota.

Your question is easy; give me a er one! If you have been reading this for the last two years you must often seen answers to similar problems. s your girl move, swing, step, dance, "conduct" well? If not, you should d ten or fifteen minutes of the lesson loping such very necessary physical dinations. How does she sing? Give some very simple solfeggio assignments week, and fifteen minutes concentrated training at every lesson. Do you know "taa" system of rhythmical reading, so and successfully used by teachers in land and the U. S. A.? If you and rs who are not acquainted with this er method of musical "declamation", send requests to the Editor of THE DE, perhaps he will print an explanation he system in this magazine.

Give him a good dose of flash cards. you cannot buy ready made ones that imaginative enough, prepare a pack of ll cards yourself. Be sure to make them d and stimulating to force your boy to centrate. Give him a little prize for ed and accuracy. Reverse the game, that ave him flash the cards on you, trying atch you or "trip you up" whenever you e the wrong answer or play the wrong es (which, of course, you will often purely do). Or, let him play the first or tones, or measures of five to ten easy es, giving him several seconds for each, ding him on the result for a star or re substantial reward.

Are you acquainted with the little "Etude klet Library" pamphlet—"Sight Read-"? Its two chapters on "Some Secrets of ht Reading" and "How to become a od Sight Reader," will come to your cue with some very efficient first aid tips.

Half Pedal

Will you please tell me what is meant by "half pedal" which I find in a little "music box" piece.—M. M. A., California.

All good pianists constantly use one f, three quarters, one quarter or one hth pedal. Most persons are astounded find that an artist's right foot is so sensively developed that only rarely does he sh the damper pedal all the way down d hold it there. His foot touch is as licately adjusted as his arm and hand. ttle color effects almost always come m slight, quick releases of the strings, catching "ground" or other tones in ift flashes of the damper pedal. Through ig experimentation an infinite variety of quisite effects is thus obtainable.

Half pedal is one of the more familiar fects, and consists of catching just enough sic string vibration to produce a conued (*usually pianissimo*) humming qual-, but not enough to mix the dissonance too violently. I have heard artists play the entire *Etude in F minor, Op. 25, No. 2,* by Chopin, using the same half pedal throughout, creating an indescribably exquisite, evanescent shimmer.

You will have great fun experimenting not only with this piece, and your "music box," but with other compositions of Chopin. Debussy too, in the *Clair de Lune, Reflets dans L'Eau,* and, in fact, in all his pieces gives ideal opportunity for eighth, quarter and half pedals.

Inaccuracy

My worst fault is inaccuracy. It seems that no matter how long I practice a piece, nor how much I perfect each separate portion, when I play the complete composition my fingers "land" on wrong keys. It seems almost as though I were watching for a mistake. No matter how beautifully a piece is played, one wrong note can ruin everything. Consequently, I am never confident that I can play even a simple thing well.—J. G., Massachusetts

To judge from the number of appeals sent this department, the big bad bogey of inaccuracy seems hot on the trail of many readers of THE ETUDE. Numerous correspondents write that their worst fault is dropped, missed or "muffed" notes; and they (naturally!) want to know what to do about them.

It would obviously be foolish to tell them that such inaccuracy comes from careless, thoughtless practice, and to say firmly "Go home, concentrate, and if that does not do the trick, repeat the passage until you can play it impeccably." This is what music teachers have said for generations, but it is not enough. If students will give serious trial to the following points in daily practice, I guarantee not only that their playing will attain a much higher percentage of accuracy, but also that their relaxation, concentration, and general technical control will show improvement.

(1) Practice at least one-half hour daily (in five minute periods) without looking at the keyboard. Chords, scales, arpeggios (which are very difficult when you do not look!), studies or pieces—it makes no difference what you practice so long as you do not use notes. Always do such work slowly, without pedal—and only with easy, soft tone quality. In addition to a new born confidence in key location, you will soon sense the feeling of relaxed detachment so essential to pianistic control. And too, you will unconsciously put into practice the second point, (2) which is indispensable—touching or feeling each key with the tip of the finger before playing it. All persons who possess the natural coördinative ability necessary for piano playing do this without giving the slightest thought to it. The rest of us, alas, go through life without either thinking about it or doing it, missing notes by the handful, getting "inaccurater and inaccurater" with the years! But practicing without looking is a boon, since it compels covering each key before playing. You take the best possible aim before shooting, and you invariably get your man! (By the way, this G-Man stuff is good to use in persuading your young pupils to develop accuracy.)

(3) Practice each day some skipping preparation. This is one of the first pianistic principles and is shamefully neglected by most teachers. The habit of immediate release of a tone or chord, followed by a quick, relaxed leap to the next tones, should be learned from the first lessons. Chords must be practiced in parallel and contrary skips, taking care not to leap in the air but to "flip" the hand and arm swiftly and easily along the surface of the keys, resting for a second or two on the new tones (touching them!) before playing. In other words, the playing of the chord and the leap must be felt simultaneously as a single impulse. An instant's complete relaxation follows, then the next chord is played in the same manner. Count two *very* slowly in the following exercises—one is always "play-leap," two is "wait-relax." Do not use pedal. Play other diminished seventh chords in chromatic succession:

Many similar exercises can be devised—and should often be practiced without looking at the keyboard.

Gustav L. Becker's book, "Exercises for Developing Accuracy in Piano Playing," offers many interesting and sensible helps along these same lines.

There are other tips which students and teachers might well adopt. Only artists realize that accuracy can be greatly helped by practicing all rapid passage work without using the damper pedal. Wind your feet around the piano chair, and hold 'em there! If you let your right foot creep anywhere near the pedal it will not be able to resist temptation; in a moment you will *think* you are playing clearly and accurately, but your foot, pumping the old pedal up and down, is again keeping you from hearing how inaccurate and unclear your playing really is. I am convinced that the only solution would be a detachable pedal lyre which could be removed quickly when passage practice is required. Isn't it enough to know that *all* artists always work this way, light or brilliant, slow or fast, dry, *semistaccato* without pedal?

Superaccuracy is gained by much practicing with hands separately (even after pieces are thoroughly learned and often played) and by unremitting work on short motives or patterns, and longer combination of passages in the slow-fast way recently described on this page.

And now I hope correspondents will give that accuracy "stop" a much needed rest!

Three Interesting Cases

May I have your opinion on three pupils?

(1) The first is a little girl, eight years old, who has had one year of music, completed "Child's First Music Book" by Williams and Book 2 of his "First Year at the Piano." She is very poor in technic as she doesn't like to work (plays all the time) but knows time and notes but cannot play. What book would you recommend for her?

(2) The second is a girl, eleven, who has studied piano nearly three years, is now studying "Burgmüller, Op. 100" (about half through with it) plays all major scales in triplets at fair speed around 120, and has good knowledge of minor scales. Do you think I should start her with the easier classics? If so, what book do you recommend first?

(3) In this case are sisters, twelve and fourteen respectively, that I do not seem to be able to get to work. They have studied two years with me, one year before; and I can not get them interested. Their greatest trouble is time, but I have had them to write time, count aloud and give them sight reading at every lesson. What more can I do except to go to their home and see that they practice? I give them melodious duets. They seem to be fairly interested at their lessons, but their work doesn't sound one bit better at the lesson than it did when I went over it with them the previous lesson. The older girl is in Burgmüller and the younger girl is in "Streabbog, Op. 63." What can I do to get them to practice?—L. G., Texas.

(1) Try her on John Thompson's "First Studies in Style," give her very easy sight reading assignments, have her play duets or simple two piano pieces with you or with one of your pupils, and do not try to push her ahead too fast.

(2) Try Liftl's "Preparatory School to Bach," or Thompson's "Miniature Classics." Avoid teaching scales in triplets, since it makes for humpy, old-horse-galloping-in-the-pasture playing.

(3) If your adolescent girls cannot *feel* rhythm it is no wonder they do not like music! Take them off the piano bench every five minutes during the lesson and get them to dance, swing or conduct to phonograph records or to your own playing. Try assigning some popular "hits" for them to learn. Give more modern pieces—numbers which sound "grand" and colorful—splashy chord pieces, for instance. And of course you know how young people of fourteen despise anything that is "babyfied" or beneath their dignity. Perhaps the musical diet you have fed them has not been up to their age. Let them work at some sophisticated music, even if too difficult.

Pep in Popular Music

When I play popular music, my playing seems to be dull and lifeless. Is there any way I can remedy this, and put more enthusiasm into these pieces? I don't seem to have this trouble with my other music.—A. D., North Dakota.

Your guess is as good as mine! My advice (frowned upon by psychlogists) is, "Don't." Why on earth you should want to play popular music if you cannot work up enthusiasm for it is beyond my comprehension. Aren't Bach, Beethoven, Mozart, Chopin (and a few of the other lads who wrote the most enduringly popular music in the world) good enough for you? If you give them half a chance I'm sure they will make you forget the lesser fellows entirely.

What Is the Secret?

I have often wondered how two pianists, seated at keyboards so that they cannot see each other, seem to start together without any detectable symbol. What is the secret?—J. T., Canada.

All pianistic teams have signals—but experience and long practice together often make them unapparent. No "duo pianists" can get along without the leader slightly tilting his head backward, or raising his hands and arms as a signal to begin.

Important Steps in the Making of a Pianist

By the Eminent French Pianist and Pedagog

ISIDOR PHILIPP

Translated from the French

By FLORENCE LEONARD

ART IS ACTION. It makes use of known facts, basing its action upon these facts. The object of art is to create beauty. Science may be learned; art is inborn. Knowledge is the necessary foundation for action. Bacon said, "Knowledge is power." Art demands that mental and physical powers shall be under the control of the artist. A pianist must have complete knowledge of all the different aspects of sound — melody, harmony and orchestral color. The ear must be trained to perceive all the numberless combinations of these. The pianist must also possess absolute virtuosity. This mastery over the "materials" of the art, over the mind and the body, constitutes what we call "technic."

Virtuosity, music and expression, all are closely interrelated. One does not deserve to be called an artist merely because he possesses virtuosity. But to be an artist without having virtuosity is impossible. What is it worth to a virtuoso to possess energy, power, skill, precision, clarity, if he has not, in addition, the faculty of expression, feeling, and sincerity? On the other hand, what is the value of expressive playing if it is overlaid with errors and carelessness?

To virtuosity and expressive power must be added another quality, general culture. Such great artists as Mendelssohn, Liszt, Busoni, Saint-Saëns of the past; and, of today, our Paderewski, Godowsky, Rosenthal, Sauer, Josef Hofmann, Rudolf Ganz and others, had, or have magnificent, well stored minds, which cause them to rank far above the ordinary virtuoso.

The Student Fundamentals

TEACHING IMPLIES something more than merely giving instruction, and that is skill. Giving instruction is only enumerating facts. Skill it is which leads to the gradual and well planned acquisition of technic, the development of intellectual and emotional qualities in the student, the cultivation of the sense of beauty, of sincerity in expression, and the ability and will to criticise one's self.

Teaching, therefore, must be composed of knowledge and acts, of science and art. The ideal teacher ought to possess full knowledge of his subject, a good technic, knowledge of every detail of different methods of teaching, and the gift of explaining clearly the points which he wants to make.

The writer has often emphasized the fact that attention on the part of the student, and interest in his work, will help to shorten his period of study, economizing precious time and especially insuring uninterrupted progress as a result of his efforts.

Since a perfect, complete mechanism must be the basis of the equipment of every performer, evidently the first care of the teacher must be to see that this mechanism is acquired. For teacher as well as for pupil, concentration of mind and command of one's self are necessary. Much depends upon the personality of the teacher; but he must never impose this personality, that is to say, his individual style, upon the pupil. The emotional response of each person is individual, and the student must be free to express his own response. Naturally, if this feeling is exaggerated, affected, or insincere, the teacher must correct such faults.

M. ISIDOR PHILIPP

The period of work has a limit, and that is set by mental fatigue. A brain which is fatigued loses its elasticity, and therefore the possibilities of physical action are reduced. There are moments when a complete rest is demanded, and such a rest is not a waste of time. Indeed, it is surprising to note how, after a short rest period, the work has become easier, and consequently one perceives that he has made progress. The writer even advises that exercises should not be practiced steadily for hours at a time, even though the student is most careful and has no sensation of weariness. No; they should be practiced several times a day, in short periods. A difficulty cannot be overcome when it is first encountered. Frequent and wise repetition of the passage is the first factor in success.

But all depends on the gift, the ability, the temperament of the student. There are some privileged beings who have transcendent gifts. In these cases—which are rare —the teacher must give especial attention, must deliberate carefully, and must be modest, for lessons to such a pupil are the most difficult to give. He must, above all, guard against too much enthusiasm, too much praise.

Regular, daily work is absolutely necessary. Scales, arpeggios, sustained notes, double notes, exercises for stretching, wrist exercises, trills—all are equally important. But the writer believes that a pianist should be able to discover for himself which exercises give him the best results. Some players prefer double notes, some sustained notes, still others the trill, for equalizing the fingers. But all have need of scales and arpeggios, which contain the problem most interesting to solve passing the thumb under.

The practice of exercises should never be monotonous or dull. Changing rhythms, changing fingerings, varieties of tone, variants in the figures, all these add interest to the work. The continual change, the constant search for diverse features, these arouse the mind to thought, force it to concentrate, and lead to mastery.

A Method for Each Pupil

THE WRITER IS ALWAYS skeptical when he hears of particular methods applied to all pupils. The wise teacher is continually obliged to invent new ways and new schemes for studying, ideas which are adapted to the nature and the temperament of each pupil.

No two natures are alike; and if a method, or a certain manner of studying which is necessary for beginners, is applied indifferently to all advanced students of a teacher, it does not make sense.

Often a student imagines that good practice means repeating a given num of times certain movements of the fin which do not require so much trouble such an expenditure of strength as is plied in the repetitions. Economy strength is too often forgotten in sche of study. The objective is to produce maximum of progress with the minim of effort. Good work—and the cou should be emphasized—is, above all, exercise of the mind which must proc from the conscious to the unconscious (s conscious). That is, the student must f perceive with his mind, consciously, physical means of attaining his object, then he must unconsciously conform to The talent of a pianist cannot reach apogee until he is absolutely master the muscles of the arm, wrist and finge until he can make use, for musical a artistic ends, of all the resources that offered to him by that marvelous inst ment, the modern piano. One should d trust those teachers who ignore and dervalue the principles which govern mechanism; for these are as indispensa to the pianist as are the rudiments grammar to the writer or the elements drawing to the painter. Such teachers d guise their precepts in empty phrases a abstract comparisons, which contain atom of serious importance, but are, stead, a convenient cloak for the abse of all positive knowledge.

The Eternal Practice Problem

HOW SHALL a student practice?

This question can have many answ which vary to some extent according the personality of the student, the obj which he has in view, the circumstan in which he finds himself. Yet it must acknowledged that, although the stud must adapt himself to his work, still p haps one should also say, above all e that the work must be adapted to t student. The length of time that works, for instance, is a decidedly varia quantity, which must be determined accor ing to the ambition and the disposition the pupil. Likewise it is impossible determine absolutely the proportion of ti assigned for practice which should be served for exercises, strictly so-called. O might reckon on a third of the time a lotted for daily study.

At all events one must avoid, as has be stated previously, excessive labor, and t fatigue which will quickly result from The student should not practice too lo at a time, nor without interruption. After half hour, or three quarters of an hour real work—thoughtful, intelligent and co centrated— the fingers, and still more pe haps the brain, require some rest.

The period of practice should not nece sarily be distributed uniformly accordi to the subjects of exercises, études a pieces. It is important to avoid any hab which may degenerate into routine. Bef beginning to work, one should know ju what one wishes to accomplish. Think fir play afterwards. The work of the bra must precede that of the fingers and mu not cease, afterwards, from directing, i specting and controlling it. That sort mental activity will make sure that t student is economizing his time as far a possible. A problem of technic which worked out with ingenuity in variant

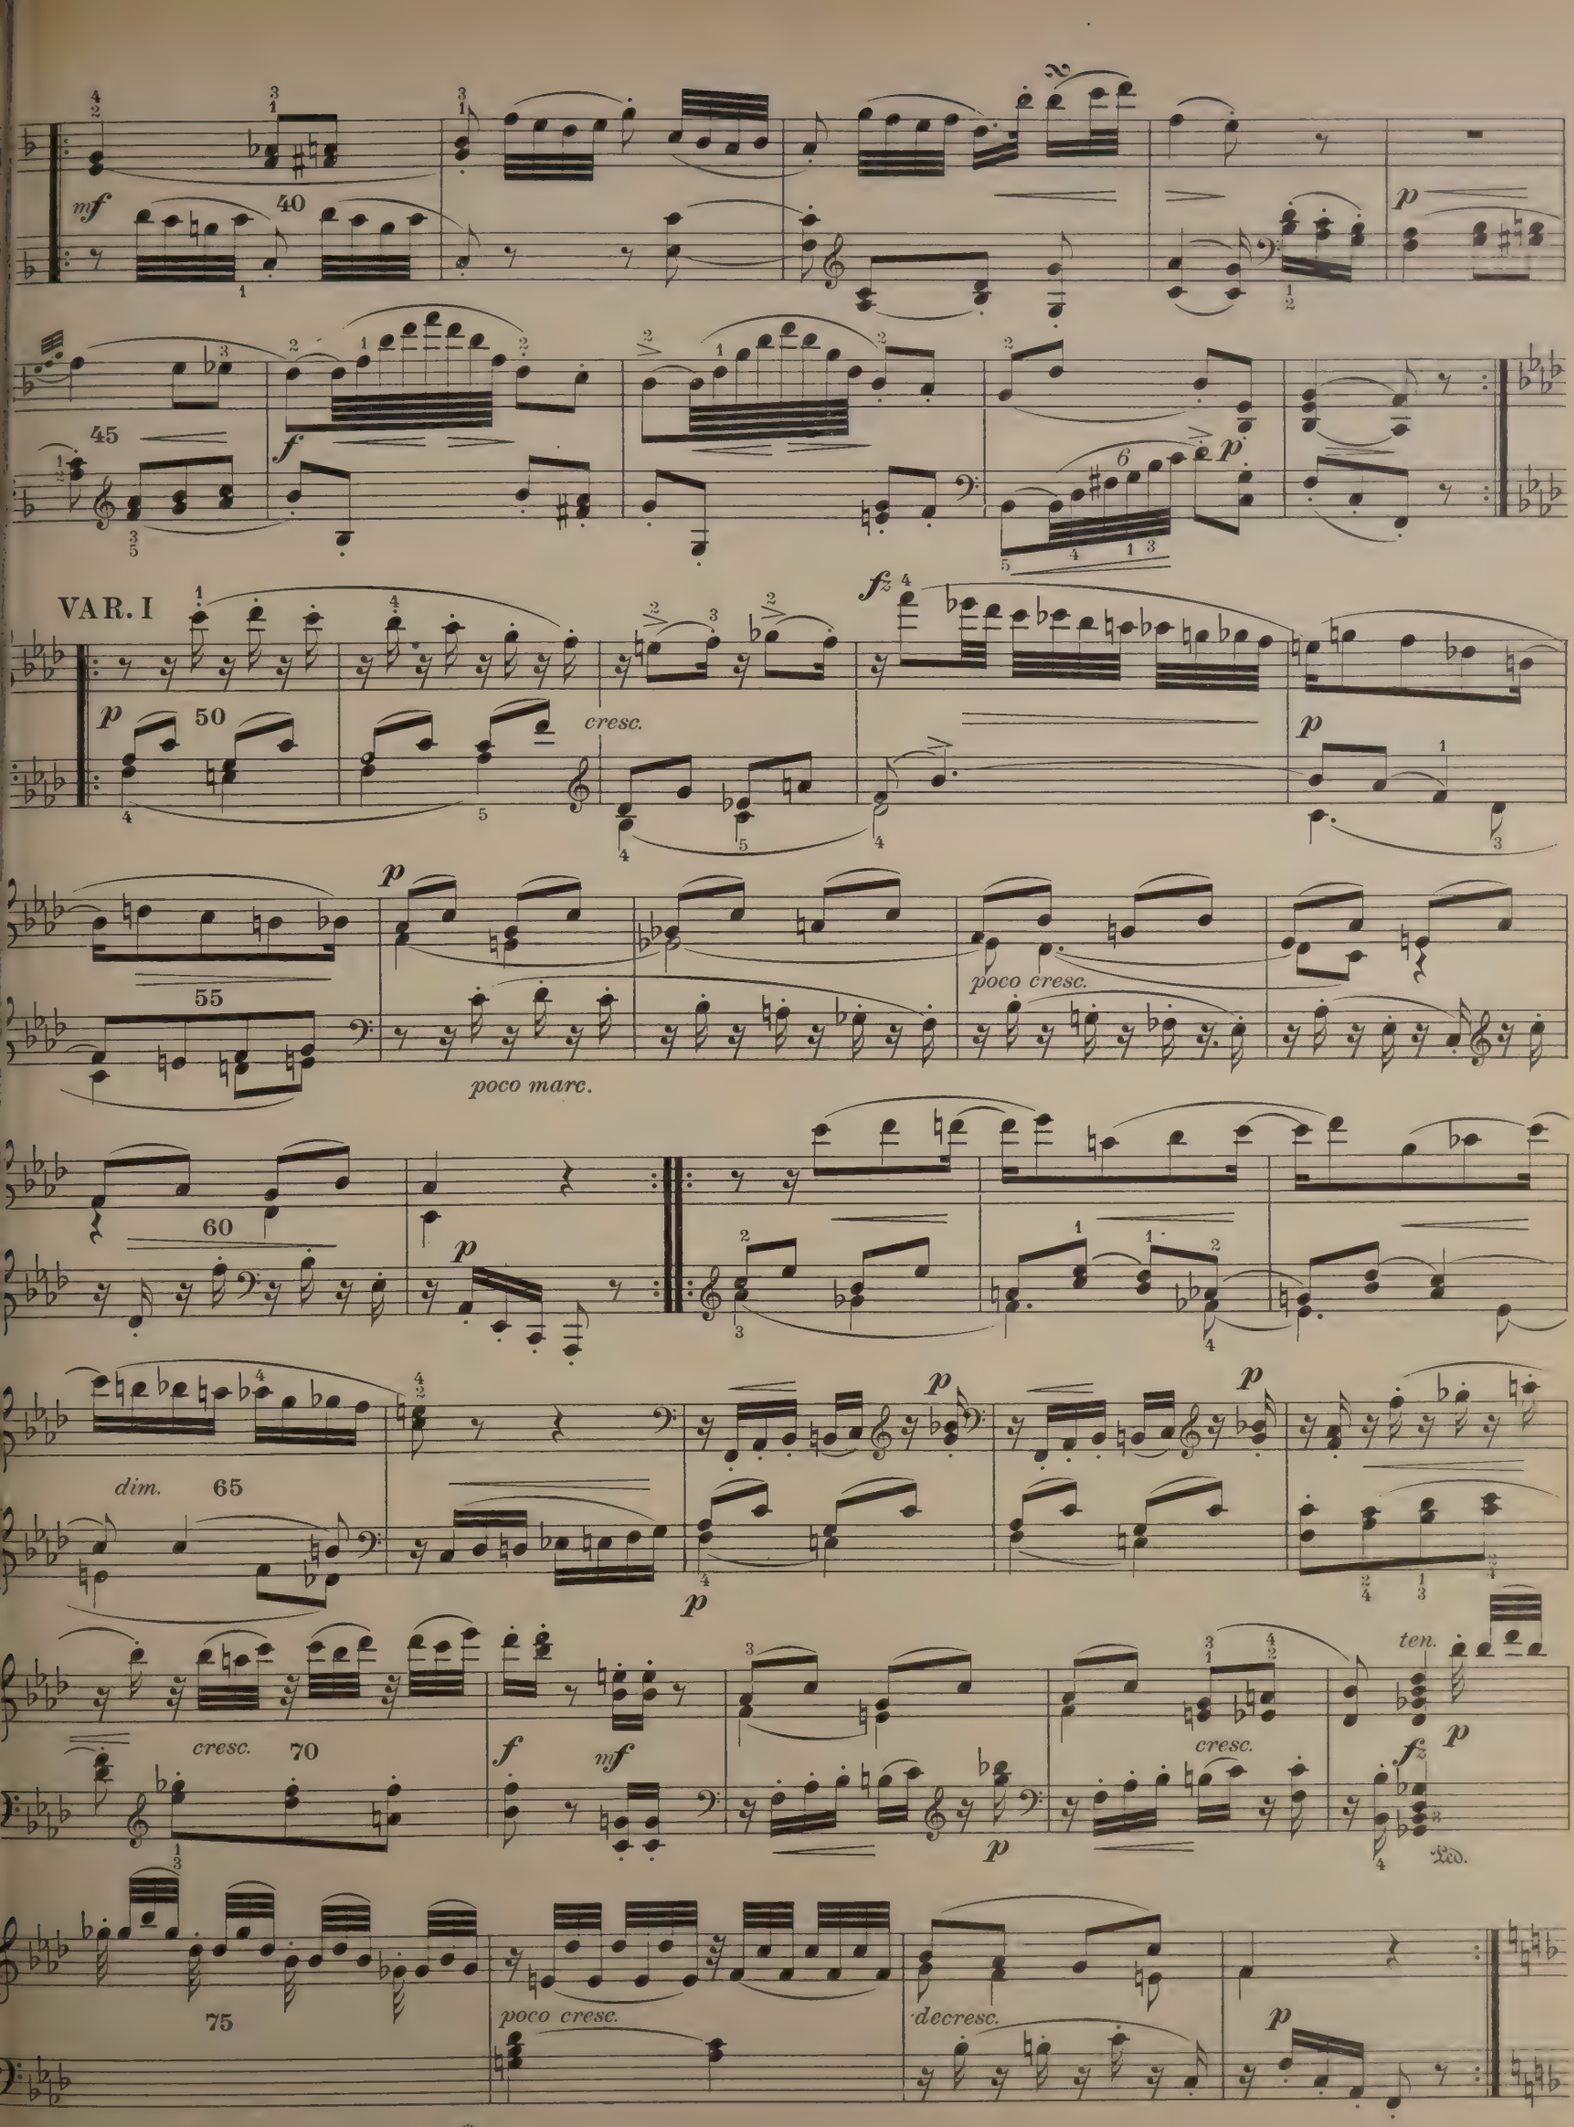
THEME AND VARIATION IN F MINOR



This theme, which is in all probability original with the ever-melodious Haydn, was brought into new popularity some years ago through its exq ite performances by Jan Ignace Paderewski. In the original there are two variations and an elaborate finale, giving the composition the effect of a tasia. Every phrase mark is of great importance in this work. The composition dates from the late nineties of the Eighteenth Century.

ETUDE'S MUSICAL VACATION TOUR

ETUDE is Collaborating with Thomas Cook and Sons in Creating the Most Exceptional Ten-Day Musical Tour in America's History

"The Etude Musical Vacation Tour will be welcomed by students and teachers everywhere as a stimulating and educational overture for the promising season of 1938-1939, which according to present indications should be a most active and profitable one. I am looking eagerly forward to greeting as many of our readers and friends as can arrange to grasp this opportunity to see the wonder city of the world under splendid auspices and at a very moderate rate."

—Dr. James Francis Cooke

Mark Byron, Junior, impresario, who is arranging musical and other entertainment in collaboration with Thomas Cook & Son.

Plan to Take Your Family on this Epoch-Making Tour

FOR months extensive plans have been developing to create what should prove to be one of the major holiday tours in the United States—

A ten-day musical entertainment trip to New York!

—A vacation so filled with musical interest that every musician, amateur or professional, beginner or advanced, young or old, will find it to be of inestimable benefit and pleasure in our ocean-side metropolis.

So varied are the scheduled entertainments that this trip will appeal to musicians, music-lovers and equally to anyone who enjoys a brief sojourn in Manhattan with cultured associates—the world's largest summer playground. The musical program will be generously interspersed with sightseeing, with good shows and with meals in exotic settings in New York's celebrated dining places. An exhilarating vacation for one and all; and the trip will be within reach of the average summer vacationist's purse!

The entertainment is being arranged by Mark Byron, Jr., who has worked out a tentative schedule for seven mornings, afternoons and evenings, from August 21st to 28th, which will satisfy the most exacting tastes. The character and quality of entertainment is assured by Mr. Byron's practical experience in the production of grand operas, the management of symphony orchestras and the presentation of foremost concert artists.

Dr. James Francis Cooke, President of the Presser Foundation and Editor of THE ETUDE Music Magazine, whose editorials and published works have had an international circulation for years, is himself a widely experienced traveler and author of travel works. He is an emphatic believer in the benefits of travel and has arranged to be present personally in New York on the opening day to greet the visiting Etudians and address them upon "Travel and Music." Dr. Cooke, a widely sought public speaker prior to his association with THE ETUDE, was a teacher in New York for years.

The proposed tour will be under the management of Thomas Cook & Son, world-renowned tourist agency. Their supervision will enable you to relax and enjoy yourself, confident that every detail has been thought of and planned in advance.

Every possible advantage that can be secured within a fair price for transportation, living and entertainment will be provided. Negotiations are under way for the best and most reasonable type of railroad travel. Leading hotels, convenient to most of the entertainments, that are within an acceptable price range are being selected. As now planned, the hotels chosen will provide lodgings and light breakfasts only. A group of famous taverns, restaurants, etc., will be recommended for dinners and luncheons, to be included in the total estimated cost of the tour. A planned daily budget will insure one's keeping within a previously determined spending limit.

As now arranged Etudians will spend one full week in (*Continued on Page 316*)

MR. MARK BYRON, JR.
350 Madison Avenue, New York
Dear Sir:

I would like to go on Etude's Musical Vacation Tour in August and will be pleased to receive descriptive literature of same, without obligation on my part.

My party might include ..... persons

Name .....

Address .....

City .....State .....

Musicians

MUSICIANS and music-lovers will find this tour to be the vacation of vaca- ns. Every musician would enjoy a pilgrim- to the greatest musical center on the stern Continent—New York City! With- its boundaries are found some of the ld's most famous musical artists, schools music, concert halls, theatres and opera ses. Such a visit is a real high spot in r musical appreciation.

n this atmosphere, the musician who ves additional inspiration, education or ural development may delve to his heart's tent in musical archives at the great ary, may see collections of rare musical ruments or original musical manuscripts the leading museums. Or he may browse ong the great music shops and find a long cted musical instrument. He can run the ut of musical adventure.

Ve realize however, that few people would oy a trip without seeing something of w York City itself and its environs. There- side-trips of superb scenic beauty are ng planned; such for instance as a trip by tor coach along the Hudson River past Palisades to West Point, where a band cert and a cadet dress parade may be en- ed before coming down the New Jersey of the river to view New York's famous line and crossing the famed George Wash- ton bridge. Another equally desirable trip ch may be included is a motor coach tour Long Island's beautiful parkways to Jones ach where thousands of New Yorkers go y for surf-bathing, boating or fishing in afternoon. In the evening they are ded by other thousands in listening to mer opera or operetta produced on a ting stage and orchestra pit under open s. Such colorful trips will be interspersed h concerts by artists of international as l as national fame, with specially organ- l jaunts into places of national interest, h as Radio City, Chinatown, etc. Such nts show the wide variety of entertain- nt possible in this musical metropolis. Re- ves and friends will also enjoy such ex- sions. Because New York City is a series islands surrounded by ocean currents, it he summer metropolis of America.

This advance notice of plans for The de Musical Vacation is made now so t readers who might be thinking of other s will be given the opportunity to include eastern trip in their considerations. We e and expect that hundreds of Etude ders will take advantage of this oppor- ity to visit the East late in August.

Teachers

THE trip offers unparalleled opportunities for inspiration and observation to all teachers. Just to see new places, gain new art viewpoints, and contact new musical acquaintances will give this trip many of the finest advantages of a convention, offering teachers who desire to keep abreast of their profession unusual cultural benefits.

The latter part of August has been chosen because there will be a minimum of interruption to the general teaching routine at that time. Those who have been in summer school or at summer camps will have had "their fill" and will doubtless welcome such a delightful change as a trip to New York. The plans are being made so that a maximum of two weeks will cover both the planned events and the time involved in getting from New England, the West or the South, to New York. Those who come by train will have a few extra days for stop-overs, for visiting briefly in other centers of musical learning, such as Chicago, St. Louis, Cincinnati, Ann Arbor, Cleveland, Pittsburgh, Philadelphia and Boston, or for short stops in other eastern places of scenic beauty. Those who come by motor car can arrive easily in the designated period, even if they live far West of the Mississippi.

Teachers will find it advantageous to organize local parties among their friends, their pupils and their families. The sharing of such an experience, as this trip will provide, really adds to its interest and benefit. Some teachers may be given the opportunity of accompanying some one of their pupils as chaperones. Teachers are invited to send for a special plan whereby they may chaperone a party and earn part of their expense on this Musical Vacation.

Those who have previously been to New York know that a trip of this kind stimulates, refreshes and revives your teaching ability. A trip supervised by Thomas Cook's Travel Service will free you of many details and allow you far greater freedom of action than a casual trip of your own. If you have never been to New York before and want to get the most out of every minute, you will discover that a semi-conducted tour of the kind we are planning with Cook's will give you much more for every day spent. Your own enjoyment will be immeasurably enhanced by the intimacy and friendliness of spirit which prevail on a jaunt of this kind.

Consult your schedule for the latter part of August, and begin to plan for this great entertainment treat, such as has never before been offered to music lovers and their friends.

Shopping  for Charm

BY THEODORA VAN DOORN

SEMPER PARATUS

A well known movie star was first "discovered" by a motoring talent scout while both were munching sandwiches at a roadside barbecue stand. Lucky girl—who could look her best while munching a sandwich of barbecued beef! Just suppose she had not been looking her physical best at that moment. Just suppose her skin had not been firm and clear! Would opportunity have knocked just as loudly?

Semper paratus—"always prepared"! The old Latin slogan still applies; especially to musicians. A musician, young or old, amateur or professional, is constantly facing her public. She is continually putting her best foot forward. Why should she not put her best *face* forward, with the same expectation of success?

A clean face is essential to a well groomed appearance. While any meticulous person would not knowingly appear with an unclean face, the casual cleanings sometimes given the face leave the skin still uncleansed. The complexion gradually loses its normal transparency. With the forcing open of the pores, deposits accumulate, until blackheads and other blemishes disfigure and coarsen the skin.

One of the best ways to rid the face of this subsurface accumulation is with *Hinze "Ambrosia"*, a clean, amber colored liquid which instantly dissolves the deposits. When attractiveness is so important to progress, no sane move to improve the appearance should be ignored. A musician never knows when she will meet someone who can lend a helping hand in her musical progress. The muddier the complexion, the more reluctant the hand. *Semper paratus!*

PIANISTS' NAILS

Although fashion has decreed brightly colored finger nails for evening functions, the more moderate shades will usually be chosen by musicians of good taste, for their public as well as their private appearances. A pianist's nails must be fairly short to insure perfect fingering, but they should be well shaped and protected with a polish that is pliant. A faint tint is preferable to the darker shades.

Gizella Fowler of *Barbara Bates* has created just such a polish for musicians. It is pliant and clings so closely to the nail that it is unaffected by pressure. Among the available shades, ranging from natural to a deep red, is one which she calls Pastel Rose. This is a warm, faintly rosy tint, translucent and unobtrusive. It has the advantage of being "right" for every occasion.

Barbara Bates also makes a polish remover with an oil base which lubricates the nail and cuticle as it removes the old polish. This is helpful in cases of brittle nails, ragged cuticle and the attendant discomforts. The polish is only fifty cents; and the remover is twenty-five cents for an extra large sized bottle. They hold almost a six months supply, depending, of course, on frequency of use.

Grateful for Mrs. Fowler's interest in musicians' manicuring problems, we pass this word on to interested readers of THE ETUDE and their friends. Teachers, particularly, should appreciate this new flexible polish, since their fingers take considerable punishment through constant use. This special nail treatment is now available for general distribution in the better department stores. If your dealer does not carry it, it may be secured in limited quantities by writing to Gizella Fowler, 565 Fifth Avenue, New York City.

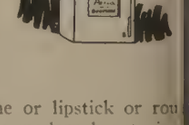
HAIR APPEAL

"Through the ages, hair has always been regarded as a major attraction. When it is beautiful, it compensates for many other physical flaws. Like a colorful aura, it glorifies even a dull personality, making any woman alluring."

All women are not beautiful, but they all can have the magnetic appeal of well groomed, lustrous hair. Features are hard to alter, but a rearranging of the "hair-do" can soften hard lines and bring out unrecognized good ones. A large round face is made more oval by shortening the hair, while a long slender one is widened with curls.

To aid the hairdresser in bringing about such happy changes, the *Ogilvie Sisters* have a line of hair preparations that are easy to use at home. Or, if you prefer, for that very special occasion they can be applied by trained operators at shops using Ogilvie methods and products. We know this first hand, because our Beauty Editor tested these treatments. They are grand. A list of these shops is available on request. They also have a well planned booklet, "Beautiful Hair," from which we quoted above. It outlines treatments for many common conditions of the hair and scalp. At the ba of this booklet is a questionnaire. To anyone who answers these questions, they w gladly give advice on individual hair problems. If interested, write to Miss A Blaisdell, 604 Fifth Avenue, New York City.

CHARM



When a ripple of approval runs through a musician's audience, at her first appearance on the concert platform, that musician knows that her public intends to give gracious attention to her performance. It is not only her dress or her physical attraction that brings this preliminary moment of accolade, but also that elusive something called charm.

Margery Wilson says, "Have you ever watched a baby girl, laughing and cooing her crib? Even at six months she is expressing her inherent spark of charm, and delights everyone who sees her."

Since charm is inherent in all women, why do we not all express more of it? It because somewhere in our busy lives we have forgotten how to be charming. Yet, we are to progress in our musical careers, we must know how to handle ourselves well as how to stand, walk, dress and acknowledge the plaudits of the audience, w the ease of a perfectly self-possessed person who is sure of the beauty she has to g to the world. She must reflect the harmony she creates with her music. She must the charm that she radiates in her interpretation of the harmonies in her repertoir

This charm can be yours, if you follow closely the lessons given by Margery Wils in her correspondence course on "Charm." It can do much to advance you in y chosen profession of music. If interested in more detailed information, write Marg Wilson, 1148 Fifth Avenue, New York City.

PERFUME ENSEMBLE

We wear dresses with coats to match. We buy bags, shoes and gloves with an eye both to color and to texture harmony. A famous actress once owned three motor cars to match her varying moods. The instinct to match things to wear is as natural in a woman to-day, as her instinct to have beautiful clothes.

Many a woman has gone into ecstasies over a new perfume or lipstick or rou only to find that she could not match all of these accessories to modern beauty in same odor. The individuality of her favorite scent was lost in a melange of od which could be spoken of in kindly terms only, as "something sweet." The French an excitable people. We shudder to think of the amount of Gallic hair which m have been torn from the heads of French perfumers, when they encountered th carefully compounded essence of Gardenia offensively mixed on the person of a c tomer, with a competitor's Carnation. What horror!

Fortunately the trend is in the right direction. If you use Bourjois' "Evening Paris," you can start as you should by using the new bath salts in this odor. T you dust yourself with the new bath powder and follow this by lightly spraying y underthings with "Evening in Paris" eau de cologne. Finally you put the custom drop of perfume on your handkerchief and step forth, searching for worlds to conqu *Bourjois'* "Evening in Paris" ensemble is a breath from the boulevards of t romantic city.

TIME AND PLACE

According to a recent pronouncement from *Best & Company* in New York City, women's apparel becomes more "functional" every year. This means, as most people know, that there are certain types of clothing especially appropriate for certain types of activities or occasions. Obviously a spectator sports costume is as out of place at a formal afternoon tea as a chiffon afternoon dress would be at a hunt breakfast.

Taken in moderate doses, this same principle should apply to what we wear in musical activities. It all depends on the time and the character of the function. Fo large recital on a concert platform, the simplest, most formal of attire should course be worn, afternoon or evening. For large afternoon concerts, a formal afterno frock, with a small dressy hat of the same color or black, is correct. At night, an e

he "Rumpus Room"

BY FLORENCE SMITH VINCENT

Every Harmonious Home Should Have One‹‹

. THE call of the world grows more insistent, the greater grows the need for a room in the house that will express the intimately individual side of family character—a "fun room" where, beneath the disturbed surface of modern life, racious humanities, love and laughter, remain serene and enduring.

there are young people, if you and your husband have hobbies you would like to p, if your guests are the informally gay sort who enjoy 'doing something,' then a room is a necessity," declares Dorothy Draper, America's celebrated decorating t.

s. Draper sets us to dreaming, but she does not leave us there. Practical person she is, she tells us how to make the dream come true. She says, "If you have a , the solution is easy. It means merely working a transformation in the basement some room at the top of the house, maybe the attic. If you live in a city apart- the problem is more complicated, but far from hopeless. You may have an extra om that is not much used. The foyer may be large enough. Or you might even the dining room or the dinette into a fun room and serve the meals in the living . You will not mind this slight inconvenience when you realize what enjoyment your family and friends are having together."

here is one place in the home where vivid and dashing color combinations are in , it is in the room where we forget the cares of the day to have a good time. leum makes the ideal floor," says Mrs. Draper. "Keep it bare in the center, for ng, if space permits; for young people have a way of getting around in even the est quarters. Wall paper is the oom's perfect background. Here is opportunity to pick patterns as s you wish—the giddier the better! s panels have made their début spring. You can purchase these s in sets of four, within your et. Or you can be thrifty and use ne panel framing it in a border. are stripes of every width and —jaunty figures or racy patterns sorts. Some of the smartest depict s from excitingly colorful places Mexico.

o not use makeshift fragile furniture other parts of the house in the oom," says Mrs. Draper, warning uch furniture will not stand the of merrymaking. "Dispense with ble furniture in favor of comfort- seats that may be built in or set st the walls. Be sure, too, that the ings for these are washable and to keep clean."

e practical phases disposed of, Mrs. er turns our attention to means of plishing the real purposes of the

ake arrangements for music," she -aplenty of music. Have a radio a phonograph if you want to. But important, is a piano. If the room all, an attractive "pigmy" piano erve both the musical and decora- nds. Or—here's an idea! If your oom is spacious enough, you might our old piano here and fill the dis- ished place in your living room a new baby grand or upright, in ut or mahogany in their most deco- grains. (*Continued on Page* 316)

When you move your old piano to the Fun Room—fill the prominent "hole" left in the living room with a new baby grand or upright piano of walnut or mahogany. Formal living room at right shows a modern Grand.

The amateur orchestra finds a "Rumpus Room" ideal for practice. The Spinet Grand at the right is a decorative asset to any Colonial living room.

Shopping for Charm

(*Continued from Page* 314)

ning dress with a minimum of ornamentation is required. For the more intimate affair, there is greater latitude. In any case, the color must be one that is becoming to the individual. Black or white, with small touches of color, is still in good taste. Bright garish colors should be avoided, since they tend to distract the attention of the audience from the music itself.

Sometimes one dress can be so carefully chosen that it performs a twofold or even a threefold function. For example, *Best and Company* shows a formal evening dress with a matching bolero, which is pictured herewith. It is of white, washable, carnation-printed linen, at $19.95. Without the bolero it is perfectly appropriate for the most formal summer musical performance, while with the jacket it is converted into the proper dress for informal evening musicales. At the same time it constitutes an equally good formal or informal dress for social occasions. If you would like to know more about this ensemble, address Mr. Cutler, Shopping Bureau, *Best & Co.*, New York City.

COLOR HARMONY

At this time of the year when nature is putting forth her fresh color harmonies, a woman's thoughts turn to new clothes as naturally as the newly opened bud seeks the sun. Then comes the perplexing problem of whether that new milky blue, which is so beautiful to look at, will be flattering in a dress, or will it bring out a slightly bleached winter pallor. Will the fashionable dusty pink accentuate those half faded freckles?

Women have answered these and many other cosmetic questions down through the ages, with varying degrees of success. Ancient Egyptians darkened their eyes with kohl and believed this helped. Ancient Greeks and Romans lightened their hair. Chinese and Japanese whitened their skins, so that new and perhaps more harmonizing features could be penciled in with cosmetics. These were abortive attempts at beauty; but it remained for the modern woman to achieve the perfect harmonies of natural cosmetic colors, colors that will enable her to wear any shade of gown her fancy dictates.

But since every woman is not adept at assembling a perfectly natural make-up harmony, *Elizabeth Arden* has produced her lovely Color Harmony Boxes which contain the complete and proper make-up accessories for any of the new apparel shades that are to be found on the standard American Color Code Cards for this year. If your dealer does not have the color cards, send a small sample of your dress material to *Elizabeth Arden*, 681 Fifth Avenue, New York City and she will advise you which of her color harmony boxes is correct.

ACCESSORY

Were you of those thousands of people who wrote limericks in the recent Kayser Limerick Contest? Your Beauty Editor was—and she did not get a prize. Irony of ironies—she helped someone else write some—and that someone else did win a half dozen pairs of the handsomest silk hose you ever saw. Kayser Hose are handsome, and they wear exceptionally well. So do Kayser Gloves. They make one's manual and pedal extremities feel equal to any occasion. Economical too—as good hose and good gloves go. Kayser hose can be had for as little as 79 cents a pair; gloves from $1.00; Kayser nightgowns and pajamas in beautiful flower printed rayon from $1.95 to $2.95, at leading stores everywhere. All of us are familiar with Kayser underwear. Our mothers, and some of our grandmothers, wore it because of its luxurious economy.

And now Kayser starts another competition; a Candid Camera Contest in which you must snap one of your friends in attractive but unconscious poses, in order to compete. But wait, there is a catch in it—a most enticing catch. The snapee must be wearing Kayser Spring gloves or hosiery. As in the previous contest, the prize is six pairs of *"Mir-o-Kleer"* hosiery for every accepted print. And such hosiery! If you would like to get into this fray—send your competitive offering to Miss Walton, c/o *Kayser*, 500 Fifth Avenue, New York City. And may the best "shots" win!

CRACKED LIPS

Cracked lips have an uncomfortable and exasperating habit of appearing at the most unfortunate times. A singer is just about to give a concert; a cornetist is scheduled to essay a most difficult aria. When one of these annoying cracks appears, no musician can do his best. Therefore, singers, brass or wood wind instrument players, and even orchestra conductors, all have inaugurated a very sensible habit; the using of some kind of a lip coating as a preventive. Before each performance, and often in between, they apply it to their lips.

Recognizing the need for an easily absorbed preventive, Roger & Gallet, famous French soapmakers, have provided a lip pomade which many musicians swear by. This is known as *Roger & Gallet's White Lip Pomade*, a colorless cream of the right consistency to stay on the lips, once applied. Although it comes in a container the size of a lipstick, for convenience in applying and carrying, it is not a lipstick in any sense of the word. This comforting thought is passed on to THE ETUDE'S male musicians who should find it just as much of a boon as do the feminine artists. To women there may be real comfort in the assurance by *Roger & Gallet* that a coating of this pomade underneath their preferred brand of lipstick will not interfere with the latter's shade. The product has been found for more than fifty years in the American market. It deserves investigation. Write *Roger & Gallet*, 500 Fifth Avenue, New York City.

THE "RUMPUS" ROOM

(*Continued from Page* 315)

The idea is sound. For people in general and young folks in particular are coming to realize that there is nothing like a piano in the home. It is fun to dash off, whenever the spirit moves them, a tune heard at the movies or over the radio—and fun to lead a group gathered about the piano to sing. Appreciation of the joy of real musicianship is deepening. In many of the forward looking schools, musical training is becoming a part of the curriculum. Amateur music groups are being formed all over the country. In short, for all these reasons, the piano is coming out of its temporary obscurity to become again a real part of family life.

What you do with your fun room, and in it, all depends upon your circumstances, of course. But, large or small, games will be in order. As the dimensions permit, make your choice among the following: a ping pong table, shuffle board, and tables for backgammon and bridge. More g have been introduced into the Am home this year than for a long, long

Americans are fairly conservative. Draper urges us to free ourselves of inhibitions, if we have any, at when it comes to planning the roo have fun in.

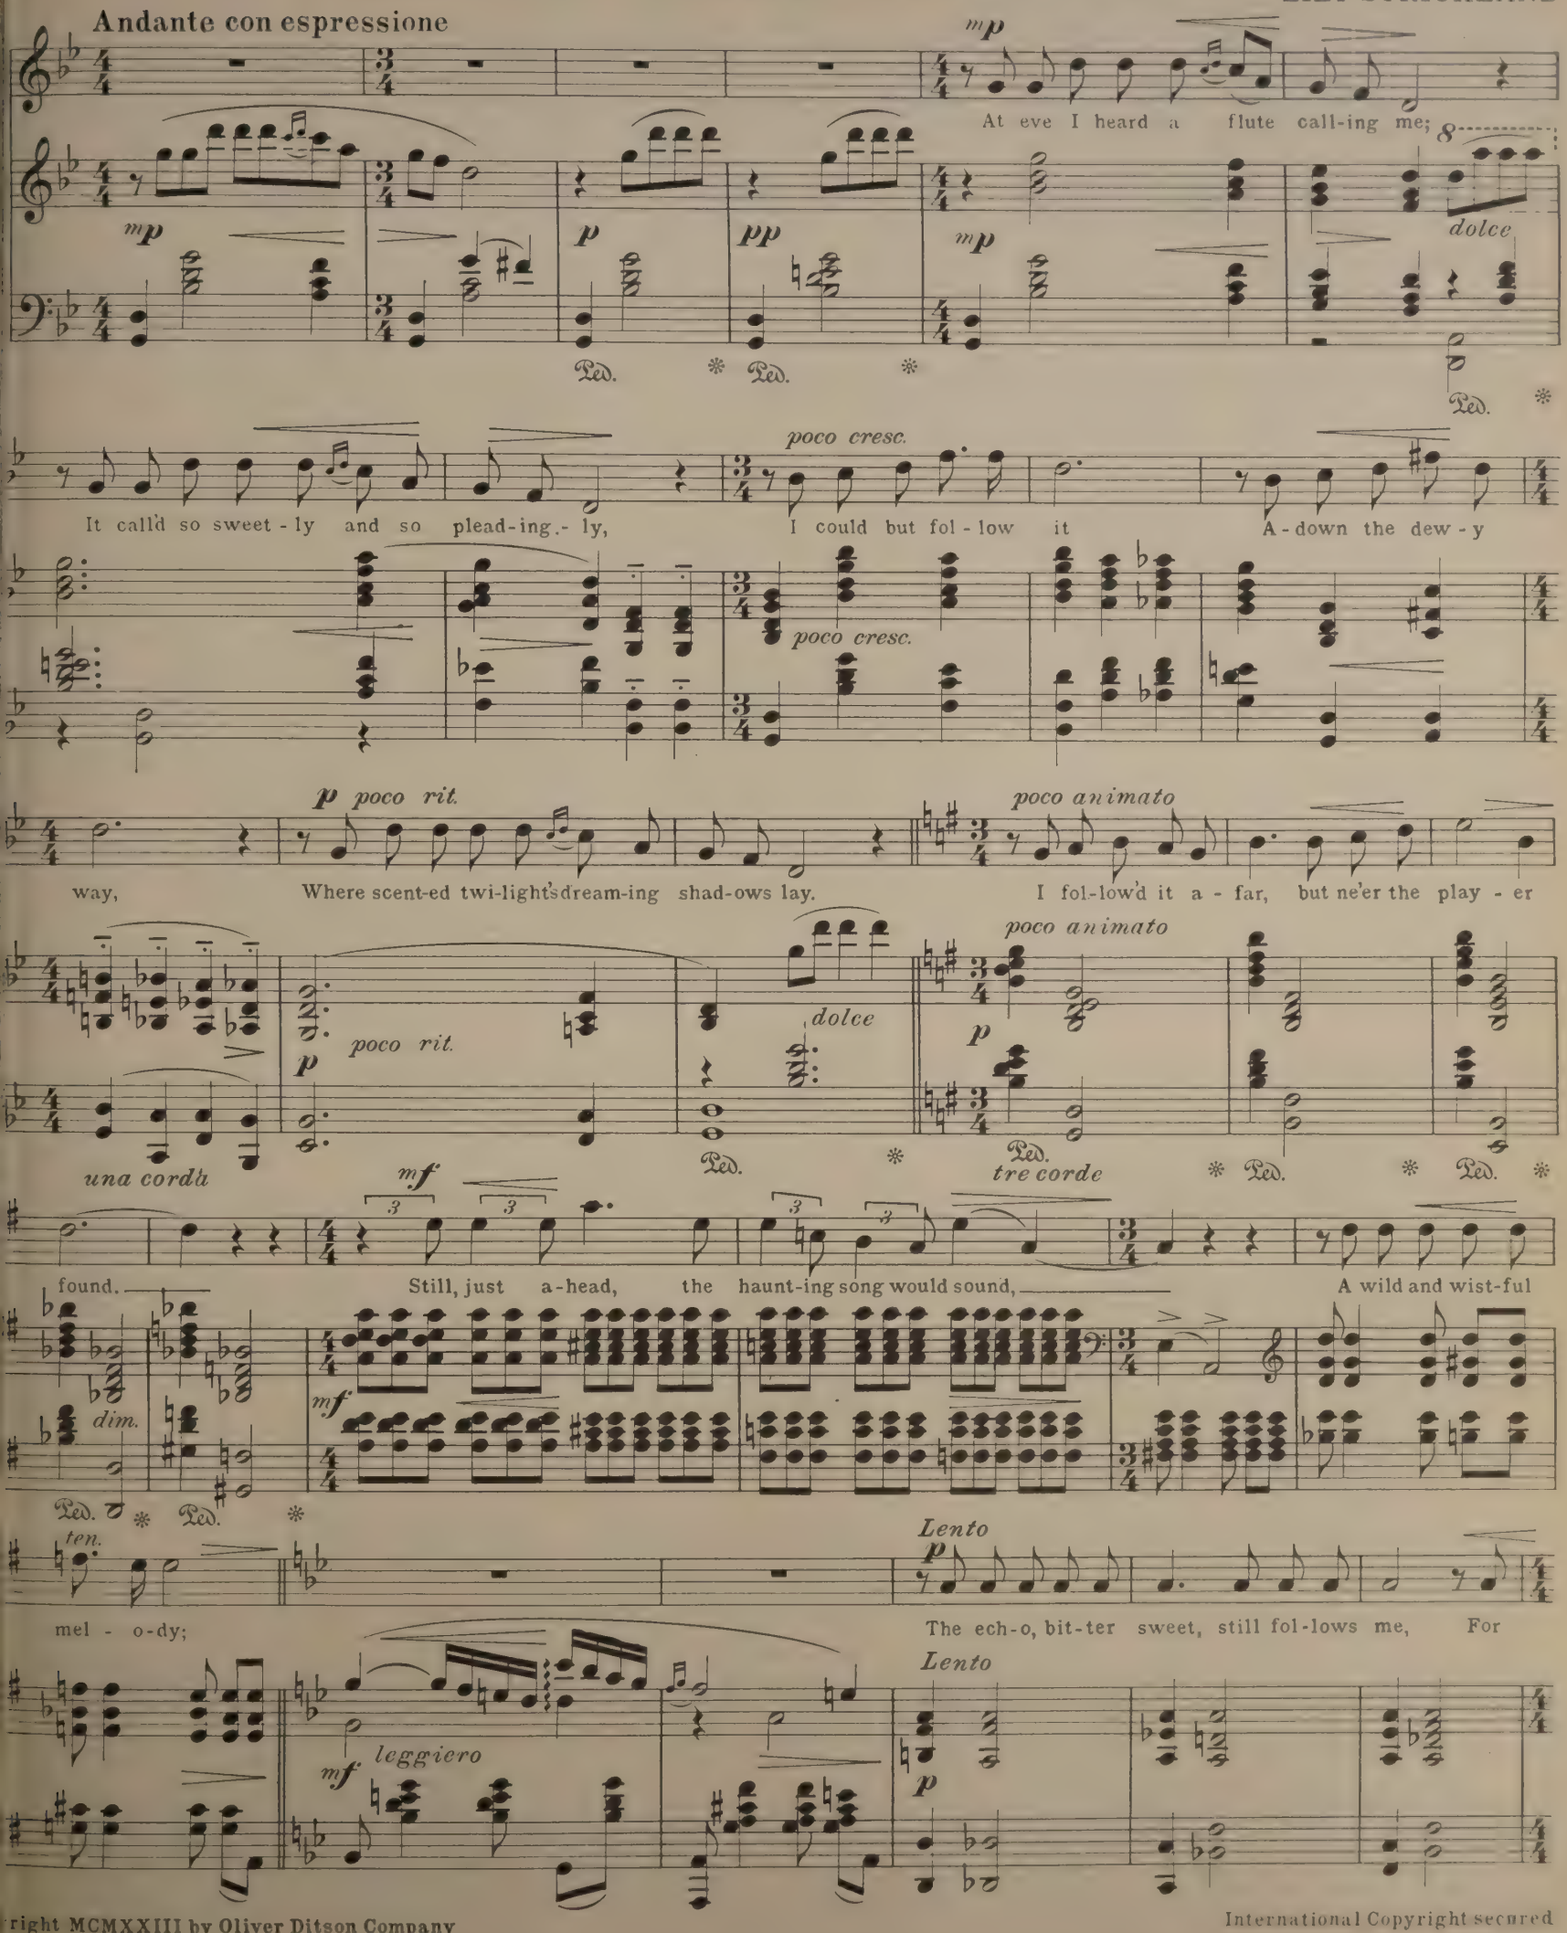
"If you feel like turning the dining into a play room, do it to-day. D worry about what the neighbors will Adapt your house to the needs of family, and you will find that the neigh soon will be imitating you."

We strongly suspect that Mrs. Drap right. Originality and imagination are first aids in becoming a gracious hos Fortunate the mother and housewife w birthright they are; for they are sur inspire her to ways and means of provi a richer and more contented life for t whom she loves.

ETUDE'S MUSICAL VACATION TOU

(*Continued from Page* 313)

New York City, with the privilege of stopping over in Washington and Niagara Falls, N. Y. It is estimated that the stay in New York, *including hotel accommodations and entertainment*, will be between sixty and seventy dollars for the seven days plus round trip travel expenses and stopovers from your home city—the total cost varying with your distance from New York.



And now we need *your* cooperation. There are certain very interesting types of entertainment as well as certain types of eating places that can accommodate a limited number of guests. It is there necessary for us to know approxim how many people are really interest such a vacation before final arrange can be made for their entertainmen you are seriously considering such a and would like to be informed as to tional details as to the plans for the progress, we urge that you fill in coupon below, without obligation on part, and mail it to Mark Byron, J 350 Madison Avenue, New York City

Laying the Span Ghost

By HAZEL VICTORIA GOODWIN

NG THE PIANO, the fingers spread according to the position of the ick; and, from one point of view, piece is nothing but going through rent hand shapes or hand spans ted by the key groupings. The all runs—scale, arpeggio or irregoup themselves into convenient ns; and of course all notes struck ime by one hand, such as chords ves, form in the hand a span, just e keyboard they form a position. position there is an accompanying ape" called, less exactly but more ntly, a span.

are spans that employ but one inger; and others that employ two, ur or all five fingers of the hand. t class in itself forms a subject tly involved. At first it is hard to in the number of spans there can n all five fingers are employed. re more than a hundred. One that itself to the mind is a chord of inished seventh-C, E-flat, G-flat, lere there is a distance of a stepalf between each pair of fingers, a dominant seventh-C, E, G, B-flat, ch also employs all five fingers, the and second are two whole-steps he second and third, one-and-a-half he third and fourth, one-and-a-half nd the fourth and fifth, a whole rt.

with but the three intervals half-ole-step and step-and-a-half, eighty-ns are possible, each of which in aries during chromatic progression the octave. It is feasible to chart s in the accompanying illustration. rill the hands through these spans p away from hand illiteracy. The the list denotes a hand span in ach of the fingers is a step-and-a-om its neighbor; the second, one n the first three fingers are a step-alf apart and the fourth and fifth one step apart. The figures, in ords, denote interfinger *distances*.

Drill the hands separately, taking one span each day. Hold all the keys of the day's span down, letting the arm weigh fully into it. Alternately arch and depress the knuckles several times, slowly enough to keep the weight of the arm equally distributed upon the five keys down. Do this in each of the twelve tonalities. Then play the span (broken) back and forth slowly many times in each key. One may hold all keys under the fingers depressed or simply keep the fingers poised carefully and closely above their keys.

After the eighty-one spans have been thus introduced, one starts upon the chief exercise. Playing the span from thumb to fifth finger, progress chromatically up through the twelve positions and down again. Do it over, playing from the fifth finger to the thumb. The good old rule of preparing each finger above the key it is next to strike, immediately upon releasing the key it has just struck, will indeed repay the trouble. In three months one shall have completed the series, taking each span up and down through the twelve positions of one octave. Later they are played through two, three, and many octaves, still at the rate of a span a day.

One will now be ready for what may be called the second term in spans. Make substitutions in the chart with the figure "2" wherever the hand can manage it; "2½"; "3"; "3½"; "4"; and so on. The places where the distances between fingers may be thus enlarged depends upon the character of the particular hand.

At this point we find that most of the spans employing less than five fingers have been practically taken care of; for, by simply not employing a certain finger or fingers, we may have about any span demanded of us. There is, too, a bit of a problem in the "not employing." It is sufficient to remember that an idle finger may get into mischief and that it must neither beat time, stiffen nor flop about, but must keep itself poised well up out of the way of the playing fingers.

THE SINGER'S ETUDE

Edited for May by Eminent Specialists

It is the ambition of THE ETUDE to make this department a "Singer's Etude" complete in itself

From Vocalise to Song

By GRACE GROVE

THE VOWEL, however pure and perfect in the congenial environment of the Italian *vocalise,* may easily grow dull and ugly in the words of song. As an exotic flower seeking root in a soil more rugged than that in which it first grew, so the *vocalise* vowel, transplanted into the lyric word, may likewise wither and droop. For, unfortunately, the *vocalise* vowel does not readily adapt itself to verbal surroundings. It finds in the word too many new and vexing problems. Like the transplanted flower, it therefore requires tender care until its readjustment is complete.

Thus it is that the singer who pins his vocal faith to a single credo (the Italian *vocalise*) continually finds his song-vowel in grave tonal danger—a danger which he and his *vocalise* are utterly unprepared to meet. With dismay he realizes that his vowel has, in its initial flight in song, become strangely distorted and blurred; that its pure flow is hampered by a new tension of throat and jaw; that its resonance, so carefully injected into its *vocalise,* is now apparently lost. Alarmed at the tonal jeopardy of his gently reared vowel, the singer seeks to protect it through verbal retrenchment, yet all the while condemning the word for his tonal dilemma, and the consonant for his verbal distress.

He may query thus:— "Is not song but the merging of two closely related forms of tonal expression: vocalise and word? To the first, have I not devoted patient years: are not its vowels clear and true? To the second (the word), do I not give ample exercise in daily speech; is not that speech fluent and free? Why then do I not sing words with clarity and ease; with the tonal clarity of the vocalise, the verbal ease of everyday speech? Why this seeming hostility of consonant which I (and my vocalise vowel) encounter in the words of song?"

Some Individual Problems

THE SINGER MAY PERHAPS SUPPLY his own solution (illogical but comforting), thus: "The consonant is inherently hostile to vowels as it encounters them in the words of song. Otherwise, vowels would sing in the word as they warble in the vocalise—clear and true. Therefore, I believe that consonantal interference is something over which I (and my vocalise vowel) have no control. Unhappily, my vocalise must continue to capitulate to song; my whole tonal structure, to consonant and word."

And to be sure the singer's verbal prejudice is in part justified: for the consonant, in its untrained, colloquial state, is indeed rough and clumsy in its verbal contacts. That it should so remain is, however, quite another matter, and can imply only the singer's neglect of it. Unfortunately, the singer (in disclaiming verbal responsibility for his vocalise vowel) may even refuse to make terms with his consonant; he may, in fact, go so far as to doubt that consonant's willingness to become (even with training) the friend and ally of his vowel in words. Much less will he admit that his own lingual clumsiness alone prevents its tonal coöperation with that vowel in song.

When the singer, however, allows himself to become better acquainted with his consonant, he is gratified to find that that consonant (once provided with an individual technic) readily abandons its old habit of crowding and jostling—as belonging only to the untrained and uncouth; that it gradually acquires gentle behavior as, sleek and suave, it gallantly assists the vowel in its trying migration from vocalise to song.

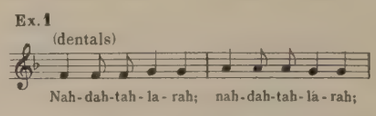
For it is true that vowels, inured to the happy environment of the vocalise, require in song the tonal protection of consonants as carefully trained as they—consonants which have become not only skillful but cultured as well, and so fitting companions to the well behaved vocalise vowel. And if, perchance, the vowel grows less lovely in its new home (the word), then the fault can be only that of the singer who has failed to surround it with congenial companionship.

The Way to Flexibility

SUCH A SINGER REMINDS ONE of a rich but shortsighted philanthropist who, after lavishing time and money upon the highly specialized training of a promising young protégé, suddenly turns him adrift, bereft of all interest or support. The singer unwittingly emulates this thoughtless conduct when he fails to follow his vocalise vowel into its new environment, the word: there to supervise the tonal adjustment of vowel to consonant; there, to solve all other perplexing verbal problems; there, to make at last the relationship of vowel and word as congenial as has always been that of vowel and vocalise.

We must conclude then that the tonal adjustment of vocalise vowel to lyric word depends largely upon the efficacy of an acquired technic in consonants. The singer will find that this technic, in turn, depends upon:—

1. An agile tip-tongue (in dentals).
2. Controlled lip muscles (in labials and labio-dentals).
3. Relaxed, but firmly controlled, back-tongue (in palatals).
4. Relaxed throat and jaw, without which lingual technic is impossible.

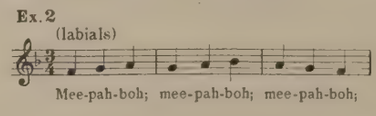


Segregation of related consonants (according to lingual position) is here suggested. Thus, each group may develop an individual technic, gaining, in specific exercises, facility not only in one consonant, but in all consonants of like lingual action. The following grouping (and order) will prove efficacious:—

1. Dentals (N, D, T, L, R)
2. Labials (M, P, B)
3. Labio-dentals (F,V)
4. Palatals (K and hard G)

An exercise for dental consonants follows. It demands the facile and unhampered action of the tip-tongue—an absolute independence of that tip-tongue from all back-tongue and jaw restraint. For the tip-tongue must indeed be free to dart in and out of the tonal stream established in the exercise by attendant vowels. In no other way, may the vowels of eventual words in song be promised the clarity of their tonal model, the Italian vocalise.

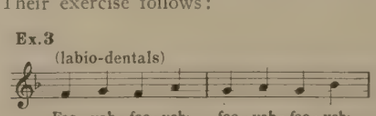
Ex.1



(dentals)

The labials, like the dentals, demand a relaxed jaw for their successful articulation. They further require agility and relaxation of lip muscles. In fact, a clumsy lip action may easily defeat the purpose of the exercise which now follows.

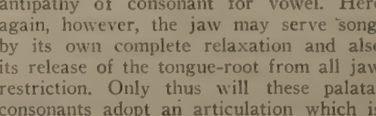
Ex.2



(labials)

The labio-dentals, F and V, require somewhat less lingual action than they usually receive. In fact, upper teeth barely touching lower lip affords ample contact for their articulation. Here again, a relaxed jaw is necessary to correct lyric speech. Their exercise follows:

Ex.3

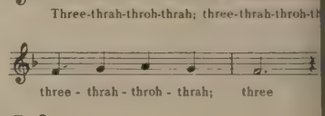


(labio-dentals)

And now we approach that most difficult group of consonants, the palatal K and hard G. Here, lingual position itself, that of the middle tongue against soft palate, encourages, if so permitted, active tonal antipathy of consonant for vowel. Here again, however, the jaw may serve song, by its own complete relaxation and also its release of the tongue-root from all jaw restriction. Only thus will these palatal consonants adopt an articulation which is tonally innocuous to vowels in song.

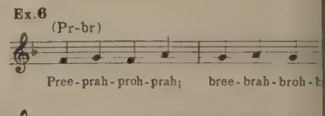
Ex.4

(Palatals)



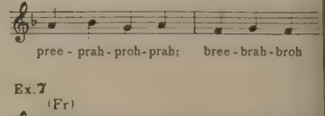
Later, more complex lingual for
be used—preferably those of conso
coördination with a tip-tongue "F
following combinations are suggest
1. THR (tip-tongue digraph wit
2. PR and BR (labials with R)
3. FR (labio-dental with R)
4. KR and GR (palatals with R

In the following exercises, of c
consonantal form, the combination,
R," may, as initial practice, prove
serviceable to those exercises which
it. For it is true that this particula
bination of two lingually contiguc
ticulations gives to the consonant,
freedom not so glibly present in its
spread combinations (BR, PR, FI
GR).



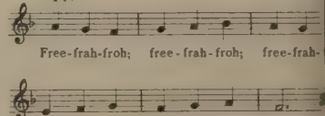
Ex.5

(Thr)



Ex.6

(Pr-br)



Ex.7

(Fr)

Ex.8

(Kr-gr)

A distinct, even temporarily exagg
"roll" of the tongue is here recomm
one which will definitely proclaim t
gual independence of tip-tongue fr
jaw and back-tongue control.

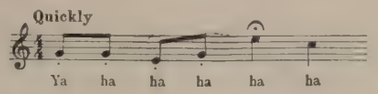
A Well Placed Voice the Goal of Every Singer

By HERSCHELL C. GREGORY

VOICE PLACEMENT is one of the first problems to be solved by the student of singing, and one which has probably caused more confusion than any other problem in vocal technic. The term immediately presents to the student the idea of doing something with the singing voice. However this is not true, for the correct explanation of voice placing implies that the voice flows through an unimpeded passageway, taking in all resonance from the cavities of the chest, throat, and head, when all interference has been eliminated.

It must be made clear to the student that voice is air waves which constantly move to and fro past their point of normal rest. This air current will go in all directions, if there is no obstruction, and will always come freely and naturally forward, up through an open channel; for there is no other place it can go. There is nothing to prevent it except contracted and hardened muscles. The duty of the teacher is to eliminate all muscular interference, so that the voice may flow freely and prevent anything from disturbing the proper conditions for pure tone.



Lamperti, the eminent Italian teacher, insisted that "All singers who think that their voice is a thing to be put and placed where they will, come to grief." The student must remember that muscular interference must be removed before vocal beauty and freedom can be secured. How, then, may this condition be studied so that the pupil may take his first steps toward the goal of artistic singing?

To gain the sensation of proper voice placing, pronounce the word *hung,* with the throat and lower jaw thoroughly relaxed. Drop the lower jaw as in yawning, as the word is pronounced, and change the tone into a *hum* on a medium or lower-medium tone of the voice, as the lips are gradually brought together. It is important that the *hum* should continue for a short time after the lips are closed. Practice carefully and, after a few attempts, certain vibrations will be discovered in both the head and chest cavities. The student should feel these vibrations during the *hum,* before as well as after the lips are closed. These vibrations indicate that there is a certain amount of freedom in the singing mechanism, and as more muscular interference is removed the vibrations will become more pronounced.

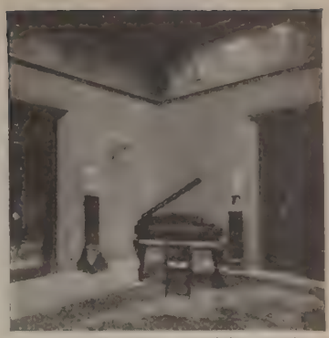
The syllable *ming* may also be used for a study in placing. Pronounce the word by touching the lips lightly together and change the syllable smoothly into a *hum.* It is vital that all throat and facial muscles be relaxed for these exercises, in order that the student may gain and recognize the proper sensation.

If there is a deliberate attempt to place the voice anywhere, rigidity of the throat will be an almost invariable result. The air current will take a wrong course, and the tone will lose much of the reënforcement from the head and chest cavities. The *hum* will be absent to a large degree, and the student will not feel the vibrations which are so essential and pronounced when all interference is removed.

After the student has practiced with *hung* and *ming,* and he begins to feel the sensation of having his chest and head cavities filled with vibrating air currents, he should take up a short phrase and observe if he can experience the same sensations.

Sing the eighth notes lightly, and use no effort in reaching up for the first quarter note. The throat and facial muscles must be relaxed, especially when going up to the highest note. The student should under proper conditions experience a decided richness and power in this note and should make it an example for all of his singing. There should be a sensation of freedom, depth, and elongation of tone which is nothing more than proper voice placing. If all muscular interference is removed the student will experience vibrations in the different cavities. He should discover that the more he tries to compel the production of voice, instead of permitting it to occur, the less he will feel the vibrations. As the vibrations become more and more pronounced, just so will his tone become more brilliant and powerful.

The idea of imparting to students such terms as placing the voice can be very detrimental to the proper concepts of singing. Usually these terms causes the student to make an attempt to direct his voice to different parts of his body, with disastrous results. Some descriptions of voice placing presented by teachers are so elaborate and detailed that the student is utterly bewildered. A clear simple explanation of the term, which encourages the student to remove all muscular interference and to develop the vibrations of his resonating cavities, will open the gate of artistic singing and avoid the confusion which prevails among so many of our singers and teachers.



A Vocal Renaissance

By HENRY E. ELVERSON

FOR SOME time American musicians have declared Oratorio to have had its day. Of late there have been signs of renewed interest in this art form, and so teachers cannot afford to neglect the classic oratorios, because they furnish, some of the best material for training in vocal technic, and in the higher expression. See the oratorios of Haydn and of Handel, in particular.

It should interest vocal teachers and students to learn what the present day professional newspaper music critics require of the oratorio soloist. Read what the late Karleton Hackett, of the *Chicago Daily Press,* and himself a master vocal teacher, says of the recent performance of a solo tenor in "St. Francis of Assisi," by Pierne:

"He had the personality, imagination and the voice. He surrounded himself with an atmosphere, even in the concert hall, in which he lived the story. There were diginity, tenderness and the sense of a great love reaching out to all, yet with the aloofness of a man apart. One of the finest oratorio performances heard in years; if there were more such, Oratorio would not be a dying form of art. A lovely voice of the true tenor timbre, with body in the middle register, yet firm, carrying resonance in the upper notes. Clear enunciation, with meaning back of the words, and fine musicianship that gave character to every phrase."

Liszt's piano in Wagner's Haus Wahnfried at Bayreuth

GERMANY
Happy Land of Music

Germany — land that inspired the majestic symphonies of Beethoven and Bach, the thundering operas of Wagner, the imperishable works of Liszt, Schumann and Brahms. This year, let Germany inspire *you* as you listen to these superb masterpieces—gloriously rendered in the atmosphere that nourished their creators' genius.

Leipzig presents Wagner's entire repertoire during the 125th anniversary of his birth. Famous Bayreuth offers Tristan, Parsifal and The Ring. At Munich, the new opera, Friedenstag, conducted by its composer, Richard Strauss, serves as prelude to the works of Wagner and Mozart. Heidelberg claims attention with its Haydn-Schumann fete and the Reich Festival Plays — also, Vienna with her State Opera and Salzburg with her renowned Festival. At Dresden—the Philharmonic Serenades; at Berlin — the Art Weeks and the State Symphony Orchestra; and in a score of other cities—artistically rendered performances, charming festivals, open air dramas and operas.

In art and architecture, also, Germany offers undying masterpieces . . . and in scenery such beauty spots as the Bavarian Alps, the Austrian Tyrol, the winding castled Rhine, the beautiful blue Danube, and the Black Forest. Health awaits you at famous spas, and there are sports without number.

Everywhere — good living at moderate prices, ***further reduced by registered Travel Marks.*** And the German Railroads grant you ***60% reduction of rail fares.*** Now is the time to see Germany.

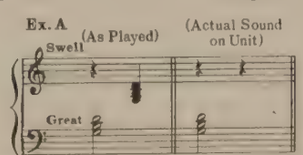
THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

Registration on the Unit Organ

By MARVIN ANDERSON

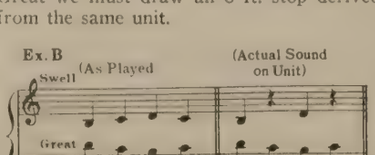
MUCH HAS BEEN WRITTEN and said in condemnation of unification in the church organ, but very little has been done to help the organist who is obliged to play upon an instrument that contains unit stops. Regardless of the controversy on the subject we must all recognize the fact that such organs have been built and are being played. For this reason every organist should understand what unification is and how it affects him.



The church organist will seldom be called upon to play an instrument that is entirely unified, but he is quite likely to find himself at an organ containing at least one unit or some duplexing. We shall consider as an example the unit flute which has been almost universally adopted by all builders who employ unification. This is usually a set of ninety-seven pipes which are available on the manuals and pedal under any or all of the following names: Bourdon 16 ft., Flute 8 ft., Stopped Diapason 8 ft., Gedeckt 8 ft., Flute 4 ft., Flauto Dolce 4 ft., Nazard 2⅔ ft., Piccolo 2 ft., Flautino 2 ft., and perhaps others.

Now the important thing for the organist to understand is that, in the case of a unit, these names do not represent nine different ranks of pipes but rather only one rank available at nine stop tablets. Therefore in choosing his registration he should consider each of these "stops" as being merely a coupler which affects only this rank of pipes. It is apparent from this viewpoint that one single pipe is required to produce all of the following notes: c of the Bourdon 16 ft., middle c of the Gedeckt 8 ft., Flute 8 ft., and Stopped Diapason 8 ft., tenor C of the Flute 4 ft., and Flauto Dolce 4 ft., FF of the Nazard 2⅔ ft., and CC of the Piccolo 2 ft. and Flautino 2 ft. How this poor pipe must blush with embarrassment when called upon to produce several of these notes at one time!

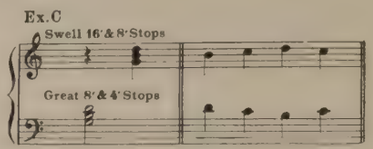
It should be also understood that a straight stop is a full set of pipes controlled by only one stop tablet. It is played from only one manual and at only one pitch except as it may be affected by intermanual and octave couplers. Before proceeding with the experiments here given the organist should determine which stops on his instrument are straight and which are derived. This can be done by comparing the tone of each stop with other stops of similar tone, making allowance for any difference in pitch by playing the 4 ft. stops an octave lower, 2 ft. stops two octaves lower and 16 ft. stops an octave higher. After critical comparison in this manner it is probable that any stops found to produce identical tone are derived from the same rank of pipes either by unification or by duplexing. Besides the Flute stops already mentioned it is not unusual to find a unit string rank supplying Salicional 8 ft., Viola 8 ft., Violina 4 ft., and perhaps others, or an Open Diapason duplexed to produce the Octave or Principal 4 ft.



A few examples will illustrate some of the peculiarities of the unit stop.

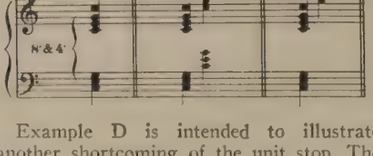
Ex. A

In trying these examples it is necessary to have the registrations carefully selected. Let us draw on the Swell an 8 ft. stop derived from a unit. If the unit is a Flute the desired stop will probably be named "Stopped Diapason" or "Gedeckt." On the Great we must draw an 8 ft. stop derived from the same unit.



Ex. B

Now if Example A is played with this registration the chord written for the Swell will not sound because those identical pipes are being played from the Great. In example B the "c" on the swell is not heard for the same reason. But, if we change the registration on the Great and instead of the unit stop use a stop which is not derived from the unit used on the Swell, both examples will sound as written.



In Example "C" the following registration must be used: Swell—a 16 ft. stop and an 8 ft. stop derived from the same unit: Great—an 8 ft. stop and a 4 ft. stop

Ex. C

derived from the same unit as that used on the Swell. These stops will probably be "Bourdon 16′" and "Stopped Diapason 8′" or "Gedeckt 8′" on the Swell and "Gedeckt 8′" or "Stopped Diapason 8′" and "Flute 4′" on the Great. Using this registration Example C will be found to disclose the same weakness as was found in Examples A and B. From these experiments we may draw the following rule: "When playing simultaneously upon two manuals do not use a registration which will require one unit to produce two notes of identical pitch at the same time."

Ex. D

Example D is intended to illustrate another shortcoming of the unit stop. The full chord is played with both hands upon the same manual. In this case if we use an 8 ft. stop and a 4 ft. stop not derived from the same unit there will be seven pipes sounding at 8 ft. pitch and seven pipes sounding at 4 ft. pitch as indicated by the small notes, thus accomplishing the true purpose of a 4 ft. stop by adding clarity and brilliance to each note of the 8 ft. stop with which it is used. This is always the case on a straight organ, but on a unit organ, or one that is partly unified, if we use an 8 ft. stop and a 4 ft. stop derived from the same rank there will be only three pipes sounding at 4 ft. pitch because the other four pipes are already being played at 8 ft. pitch by the right hand. The result is an unbalanced chord with a shrill treble and an obscure foundation. Furthermore, the 4 ft. tone from a unit is not of exactly the right intensity and quality to supply just the proper amount of octave for 8 ft. tone from the same unit, even when there is no overlapping as in the case of full chords. This fact should argue against the practice of deriving the Octave or Principal 4 ft. from the Great Open Diapason. In the case of softer stops the result is not so disastrous although not especially desirable.

Unfortunately, most organs contain unit stops have very little 16 ft., 4 ft. 2 ft. tone except that supplied by the u The organist must realize that coupler any kind, even on straight organs, pre the same difficulties as do unit stops. this reason couplers must be used c fully. It is sometimes possible to get g 16 ft., 4 ft., and 2 ft. tone by drawing the Swell those stops which are not be used in the Great registration, and t coupling Swell to Great, bearing in m that a 4 ft. stop speaking by means 4 ft. coupler becomes in effect a 2 ft. If the Swell to Great 16 ft. coupler is there should be no 16 ft. stops drawn the Swell. Error in this point is w causes the unit organ to rumble and gr so distressfully in the hands of many ganists, although of course the staten applies to all organs. As for Great to G couplers, they should be used only a last desperate attempt toward volume.

Another weakness of the unit sto often found in the pedal organ. Pedal p sages which run into the upper part of pedal compass often sound indistinct, sometimes do not sound at all, because pipes are already being played from manual. To a certain extent this tro can be avoided by omitting 16 ft. stops 16 ft. couplers from the manual re tration.

While this article may seem to conde the unit organ it is not the writer's tention to condemn unification entir Although it is true that most unit org contain objectionable features, this fac due to poor design and the bad judgm of builder and purchaser. In general it m be said that any organ which depends u couplers or a unit Flute for most of 4 ft. and 2 ft. tone is badly designed. the other hand an organ may be parti unified at an advantage, if it is scientific designed. In any case, the Great O Diapason never should be treated as a u but it should be supported by a suffici amount of true Diapason tone at as m pitches as the size of the organ will per

And So The Boys' Choir Runs Smoothly

By R. M. GOODBROD

THE VALUES of a boys' choir, either as a church organization or as a school music project, are manifold. The problems of interesting and finding a group of boys for such a participation are two of the first obstacles that confront an organizer. However, a Scout Troop, a Sunday School Class, or a Young People's League may provide the material for a boys' choir, while the music supervisor or the regular grade music teacher will find available material in his music classes.

A director of a boys' choir will need to understand fully the following points, if he is to be efficient and successful:

Compass of Voices
Registers of Voices
Limitations of Voices
Possibilities of the Voice
Adult Attitude
Activity
Self-expression
Self-direction
Qualifications of a Director

1. The typical compass of the ten year old boy is generally from B below middle C to G in the first added space above the treble staff. From this register it will be obvious to the director that the boys should sing softly on high pitched songs, in order to produce good quality. Vocalization and drills should proceed downward from the high tones.

2. The head register should be cultivated and developed. The difference and desirability of the flutelike head tone, in contrast to the throaty tones of the chest register, should be made evident. At first the training of the head voice will be discouraging to the boy, because it will so insignificant in comparison with chest tone that he may resent the instr tion and will probably feel that the lea is trying to develop a girl's quality. H ever, after a few weeks of practice improvement and beauty of his sing quality will be so great that he will t kindly to the change.

3. The limitations of a boy's voice sho be fully recognized. Great care should taken in its use, because as yet it is im ture and the vocal organ may be injured

raining in range, forcing, or by long sals.

he possibilities of the boy voice are rdinary. The delightful fresh tones he homogeneity of voice quality in hild's voice can produce an angelic ng such as no other choral organiza- an hope to achieve.

n a boy's world adults are tolerated essary providers of food, money, and ng; but rarely does an adult occupy e in the plans and motives of boys. he director must use every available d to be taken into the child's con- e, and he in turn must let the boys and understand his plans and desires. he excessive physical activity of boys s age sometimes makes them difficult anage. Realizing this abundance of y, the leader must be patient. He must ondemn the boys, but he must provide us exercises and recreations during time of the rehearsal as an outlet for surplus energy.

7. The director must provide material which will appeal to the boys' imagination, emotions, and world. A boy desires music that will give him a chance for self-expression. Boys covet self-direction. Let them supposedly manage and direct the activities of the choir, with the director as a friendly but at the same time a firmly guiding hand.

8. Boys respond better to the leadership of one of their own sex. The choirmaster must be a voice specialist. He need not have a fine solo voice, but he must know the essentials of good singing, and he must be able to demonstrate with his own voice what he means by voice quality, purity of vowel, clearness, and enunciation.

9. Lastly, the director who can appreciate the real motives at work in children; who enters into boys' sports; who is serious and respectful at the right times; who is inventive enough to "play up"; such a one may cross a bridge over the gulf into the charmed land of boy trust, love, and even adoration.

Saviour, More Than Life To Me

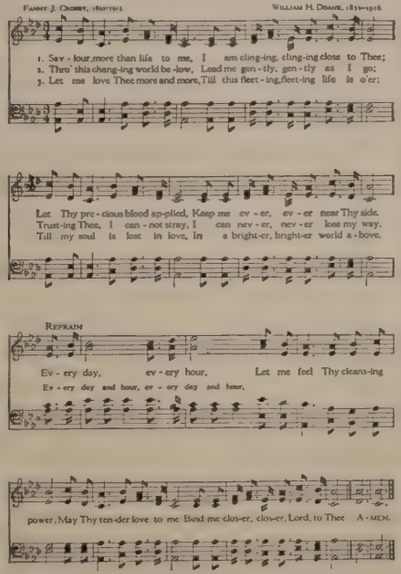
By MRS. W. HENRY HERNDON

THOR: FANNY JANE CROSBY, was born outh East, Putnam county, New York March 24, 1820. She lost her sight in cy, due to the ignorance of a country ician who applied hot poultices to her ned eyes.

e was educated at the New York ol for the Blind. At the early age of . her first poems were published. She ht eleven years in the same school in h she was educated, resigning her ion to marry a blind musician, Alex- r van Alstyne. She was a close friend rover Cleveland, who was employed at School for the Blind as a secretary, and later to become our national President.

anny Crosby wrote hymns by the thou- s, most of which have long since been otten. The few that have survived have so because of the tuneful melodies were written for them, and also be- e they are of an evangelistic nature.

anny Crosby died Feb. 12, 1915.



omposer: William Howard Doane, 2-1916, was born in Connecticut. As a l, he was interested in music, but was r considered a genius. He had a nice e and sang in public at an early age was a member of a boy's choir. He played several instruments, including lute, bass violin, and reed organ. While a child, he began writing melodies. As grew older he worked for his father, owned a cotton mill. He later became expert accountant. He was then man- r and finally president of a wood-work- machinery manufacturing plant.

n 1862, while living in Cincinnati, he lished his first song book. In all, he piled more than forty books, most of m being of the "Gospel Hymn" type. He wrote hundreds of vocal and instru- tal numbers, and several cantatas.

Denison University, Ohio, conferred the ree of Doctor of Music on him in 1875. Dr. Doane's influence has spread to all ilized countries as most missionaries ude some of his songs among their ipment.

nterpretation: This is one of a number songs that are classified as "Gospel Songs." They are used in evangelistic meetings more than in any other service. Most of them should be played in a lively *tempo;* but this song is an exception, as it is usually sung rather slowly and with much

SAVIOUR, MORE THAN LIFE TO ME

feeling. Congregations are prone to drag it.

The first "Gospel Song Book" was compiled and published in 1875. A series of these books followed until 1891. Although this type of song was not new, the manner in which these books were accepted by the public was quite remarkable. Perhaps the reason was that they were so different from the usual hymn pattern, in that they had "catchy" melodies and spirited or "sentimental" rhythm. The old camp meetings under the brush arbors added the "chorus." In the deep south the "Sacred Harp Singers" the "Singing Conventions" (which meet quarterly) refuse other types of books, or songs.

* * * * *

The All-Church Rehearsal

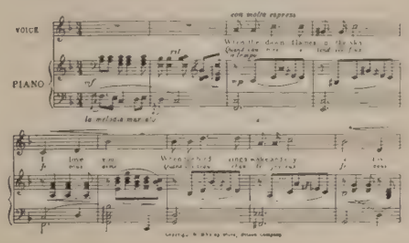
It has been found that a fifteen minute congregational rehearsal of hymns after some of the services has evoked inspirational and hearty singing. This requires a leadership interesting and magnetic. Much may be accomplished at these rehearsals; verses for women alone, for men alone, for choir, in unison, in parts, and with homeopathic doses of descant introduced by soprano voices to emphasize certain verses.—Walter Henry Hall

COMPOSITIONS OF

Charles Wakefield Cadman

IN THE OLIVER DITSON CO. CATALOG

A WITCH OF SALEM
Opera in 2 Acts
A work of compelling dramatic interest which the composer has invested with vital and expressive music.
Vocal Score, $2.50



SOUTH IN SONORA
Operetta in 3 Acts
In settings sparkling with fiesta gala and gaudy military attire, under the clear skies and bright sunshine of Mexico, the story of this operetta is told.
Vocal Score, $1.50

THE GHOST OF LOLLYPOP BAY
Operetta in 2 Acts
A light and fanciful score, ideally suited to the tastes and talents of high school groups.
Vocal Score, $1.50

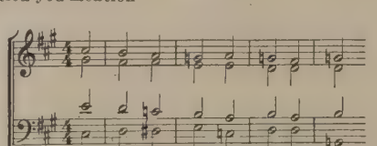
ORGAN AND CHOIR QUESTIONS
Answered

By HENRY S. FRY, Mus. Doc.
Ex-Dean of the Pennsylvania Chapter of the A. G. O.



No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. Will you advise in detail the difference between the old tracker action and the electric and pneumatic? Are the pneumatic actions usually used in churches?—L. B. S.

A. Tracker action is a system whereby the connection between keys and pipes is direct—by means of lever action (mechanical). In tubular pneumatic action the motive force is air instead of levers; and in electric action the motive power is electricity. Present day organs are usually equipped with electro-pneumatic or direct electric actions.

Q. What stop can be substituted for Viol d'Orchestra, also Viol and Viol Diapason? Describe these stops. Please give a model for modulation from a Prelude in C-sharp minor to Doxology in G major. *Are the announcements of hymns played as loudly as for accompaniment of congregational singing? Is the "Amen" at the end of hymns sung softly, and should there be a separation as at the end of a phrase? How should the following words be pronounced: "heaven," "given" and "Israel." Please suggest a good book on Choir directing (I have Dr. Wodell's). What is the correct method for holding a hymn book or anthem (one hand or two hands) and is it correct to fold an anthem into one page and turn it over and over until finished? Please outline the duties of an organist. Of a Choir Director.*—E. W. J.

A. You do not specify the stops of the organ, therefore we do not know what stops are available as substitutes. The Viol d'Orchestra and the Viol suggest the string family—the former the orchestral, while Viol (according to Audsley) is a name that may be accepted as generic of all labial stops of unimitative string tone, commonly known by the inappropriate name Gamba. Viol Diapason is probably intended to indicate Violin Diapason or Geigen Principal-stops of a combination of organ and string tone, with the organ tone predominant. The following is a suggestion for the modulation you mention

It is our custom to announce the hymn more softly than when playing for congregational singing. The singing of the *Amen* softly, is a matter of preference; but there should be a separation between the hymn and the *Amen*, suggesting a phrase. The dictionary supplies the following as the pronunciation of the words you mention: "heav'-en," "giv'en" and ĭz'-rā-ĕl. Do not pronounce the last syllable of "heaven" or "given" with the "un" sound. We suggest as a book for choir directing study—"Choral Technique and Interpretation" by Coward.

Since hymnals are sometimes rather heavy, and there is usually no turning of pages necessary, they might be held in both hands. With anthems, use the method which causes least commotion in the handling of the copies during singing. The duties of the organist, we should say, consist of playing for services and other occasions when the organ is used, and playing the piano for choir rehearsals, if organ is not used. The Choir Director is responsible for the work of the choir, training and so forth, and for securing proper accompaniment to the parts of the service where this is required. The respective duties of Organist and Choir Director may vary somewhat according to particular local arrangements.

Q. I own a reed organ with stops mentioned on enclosed list. The instrument bears the trade mark of The Beethoven Organ Company, Washington, New Jersey. Is the company still in existence? I would like you to recommend some music suitable for playing on this organ, as well as some books that would help me in stop combinations and so forth.
—A. V. H.

A. We do not think the firm you mention is now in existence. For music for the instrument we suggest:

"Classic and Modern Gems for the Organ," by Jackson; "Reed Organ Player," by Lewis; "59 Original Pieces for Harmonium," by Franck; "Reed Organ Selections for Church Use."

Landon's Reed Organ Method contains an article on "Stops and Their Management."

Q. Can you furnish the specification and name of the builder of the new organ for Westminster Abbey? Was this instrument completed in time for the Coronation?—C. F. J.

A. The specification of the organ in Westminster Abbey appears in "Organ Playing" by A. Eaglefield Hull. W. Hill and Son are named as the builders. The organ was rebuilt for the Coronation by Harrison and Harrison, at an expense of about twenty thousand pounds sterling. The revised specifications of this instrument appeared in the Organ Department of THE ETUDE for September, 1937.

Q. Many of the small residence organs include Synthetic Oboe and Synthetic Quintadena? How are these stops produced.—W. I

A. The Synthetic Oboe is usually produced by a combination of a soft 8′ string tone and the 2-2/3′ Nazard Flute. The Synthetic Quintadena is usually produced by a combination of the 8′ Stopped Diapason or Flute and 2-2/3′ Nazard Flute.

Q. Will you publish what you would consider a good two manual organ costing about $8,000? Will you state the stops, pipes and so forth—whether 61 pipes or 73 pipes? What the chief differences?—F. S.

A. The following specification can be built for approximately $8,000:

GREAT ORGAN

Open Diapason	8′	73 Pipes
Flute Harmonic	8′	73 Pipes
Gemshorn or 'Cello	8′	73 Pipes
Dulciana	8′	73 Pipes
Flute Harmonic	4′	73 Pipes
Octave	4′	73 Pipes
Twelfth	2-2/3′	61 Pipes
Fifteenth	2′	61 Pipes

SWELL ORGAN

Bourdon	16′	73 Pipes
Geigen Diapason	8′	73 Pipes
Rohr Flute	8′	73 Pipes
Salicional	8′	73 Pipes
Vox Celeste	8′	61 Pipes
Principal	4′	73 Pipes
Flute Triangulaire	4′	73 Pipes
Piccolo	2′	61 Pipes
Mixture	III Rks.	183 Pipes
Trumpet	8′	73 Pipes
Oboe	8′	73 Pipes
Vox Humana	8′	61 Pipes

PEDAL ORGAN

Open Diapason	16′	32 Pipes
Bourdon	16′	32 Pipes
Bourdon Dolce	16′	32 Notes
Octave	8′	12 Pipes
Major Flute	8′	12 Pipes
Gemshorn or 'Cello	8′	32 Notes
Flute Triangulaire	4′	32 Notes
Double Trumpet	16′	12 Pipes
Trumpet	8′	32 Notes

Usual couplers, including Swell to Pedal 4′ and Great to Pedal 4′. Two expression boxes—Swell and Great.

Stops having 73 or more pipes are so ranged as to carry out unification, or to make the stops effective throughout the range 4′ couplers.

Q. The organ which I play is about thirty years old. It has been equipped with a new console and the electrically controlled pneumatic system repaired. We are now faced with the necessity of either affecting extensive repairs, or replacing the old wind chests with entirely new mechanisms. The latter course will probably be followed. It is evident that the stops on the Swell could easily be interchanged with stops on the Great during these repairs. We would like to add, say three stops. Would you look over the enclosed list of stops, and advise what would be the most effective interchange, if any, and what additions would improve the organ? The Great Open Diapason is very loud.—E. L. B.

A. Under the conditions you name, we would advise a new instrument, using such pipes from the present instrument as are suitable for the new one. The old case, of course, may be utilized, as well as the console, if it has proven satisfactory, and if case and console will permit your proposed additions. We do not advise any interchange of stops. The additions we suggest:

(1) Great Organ—Octave 4′
(2) Swell Organ—Cornopean (bright) 8′
(3) Swell Organ—Oboe 8′

A Viole Celeste might be added for use with your present Viol d'Orchestra, or if the present stop is too keen a Salicional might be substituted in its place and a Vox Celeste added, or, a Salicional and Vox Celeste might be added and the present Viol d'Orchestra retained. The extension of the Swell Gedeckt to include a Nazard 2-2/3′ and Flautina 2′ and the extension of the suggested Cornopean to include a Clarion 4′ might also be found useful. If the Great Open Diapason is too loud the condition might also be corrected in the new instrument. Your pedal organ is very small as an Open Diapason 16′ and a Lieblich Gedeckt 16′ might be added. If the latter is included it might also appear as a Swell Organ stop (enclosed).

Q. I am studying musical composition. Will you tell me whether the enclosed melody is original with me, or whether it is copied from another composition?—W. D. W.

A. While the melody you quote is not familiar to us, we cannot tell whether it is original with you, as it might be included in some composition which has not come to our notice.

THE ACCORDION DEPARTMENT

On Purchasing An Accordion

By PIETRO DEIRO

As told to ElVera Collins

PART II. THE ADULT PURCHASER.

THE ADULT PURCHASERS of accordions may be divided into two classifications; those who wish to se new instruments and those who to get the best possible value in nstruments. Let us consider the new nents first.

o size, no adult should consider pur- g an instrument with less than 120 and 41 piano keys. This is called ndard type. It is obtainable either in ll sized accordion or in a slightly r instrument which is termed the rand model. The latter instrument is ularly recommended for ladies of stature as its size and weight make convenient to handle as an 80 bass lion, yet there is the advantage of 40 nal basses.

s indeed a mistaken idea that an should purchase a tiny accordion, which to learn, and then secure a full one later. Knowledge gained upon an instrument will be limited com- rate with the limitations of the in- ent. A beginner cannot harm an ac- n nor does he cause any more wear it than an advanced player. Both be- s and advanced players can seriously an accordion by careless handling and ence when the accordion is not in use.

purchasing of a new accordion is difficult task for the adult who has playing for sometime and has decided nge his old accordion for a new one. new recruit in the accordion world his task somewhat more difficult. He familiar with the standard makes of ments nor does he know the essential es to be considered when purchasing. first advice to such a prospect would go about his purchasing most de- tely. There are numerous trustworthy where one may be sure of no mis- sentation and it is surprising how even the novice can learn after a few iews with accordion salespeople. Be- embarking on a purchase cruise, it is to make a firm resolution not to suc- to any persuasions to place a deposit an instrument until all the leading s have been seen and their prices ared.

Seek Professional Advice

PURCHASERS have found it advan- us to enlist the aid of an accordion rity before making the final purchase. rdion teachers are glad to coöperate in respect and their judgment is reliable. essional accordionists likewise will r assistance. Should one have an ac- onist as a friend, he may be called to act as advisor in the purchase. ir advice is to confine the purchase to ndard make of instrument. There are ıany fine standard makes being dis- d that one need not feel his choice is d. Purchasers are frequently tempted hat appears to be an exceptional bar- Then again there is the other tempta- of the so-called "confidential discount." e apparent inducements should be thor- ly investigated because, while occa- lly there may be bona fide bargains, a novice has been lured into such a ase, only to regret it later. Much of quality of an accordion is concealed ot discernible to the eye. The flaws of strument also may be concealed from novice purchaser.

The quality of tone is naturally the most important feature to consider when purchasing. That is one of the chief reasons why it is advisable to have an accordion authority try out an instrument before it is purchased. His ear has been trained to distinguish between the various qualities of tone. The better accordions are now tuned so they produce the melodious resonant tones of the organ, or by the manipulation of the register switches, the sweet ethereal tones of the violin. These tonal qualities are quite a contrast to those of the old accordion which was tuned to produce a sharp, shrill sound.

When testing an accordion, ask that it be played very softly so that it may be determined if the reeds respond evenly. Loud playing will cover many defects which are revealed in soft playing. An instrument may be tuned correctly as to pitch but may not be tuned evenly as to color of tone. For instance, perhaps the greater part of the keyboard will produce a sweet quality of tone, while occasionally one may hear certain reeds which give forth a shrill tone. Every reed should be tuned perfectly not only as to pitch but as to quality. There are only a very few skilled tuners in the entire accordion industry and their services are naturally at a premium.

The action of the keys on the piano keyboard should be moderately stiff. A keyboard which has an action too easy is not recommended, for one cannot acquire rapid technic upon it. The modern keyboards are made low so the keys need to be depressed only a short distance. This is quite an improvement on the old high keyboards.

The Register Switches

THE STANDARD piano accordion has four sets of reeds for the right hand and five sets for the bass. This introduces the subject of register switches; for it is by their use that the number of reeds brought into action may be varied.

Instruments are now available with either one switch, two switches, or a multiple number of switches for the right hand keyboard. Those who play merely for their own amusement will no doubt find sufficient variety of tone in the one switch accordion. Those who contemplate doing professional orchestra or radio work should have at least two register switches. It is further recommended that before they purchase, it would be well to secure complete information on the multiple switch accordions. The variation of tonal combinations on these modern instruments is so great that many orchestra leaders insist upon their accordionists using them. They are particularly effective over the air for either solo playing or when combined with other instruments.

The bass register switch is a decided asset because it enables one to produce a full rich accompaniment or a subdued accompaniment in close harmony so the melodic line can be featured. The effectiveness of bass passages is enhanced when played on accordions with the bass switch.

The selection of the color of the instrument is purely a matter of personal choice. At present the vogue seems to lean toward black and the decorations have been reduced to a minimum. The bizarre accordion,

Seventy-First Anniversary Year

CHICAGO MUSICAL COLLEGE

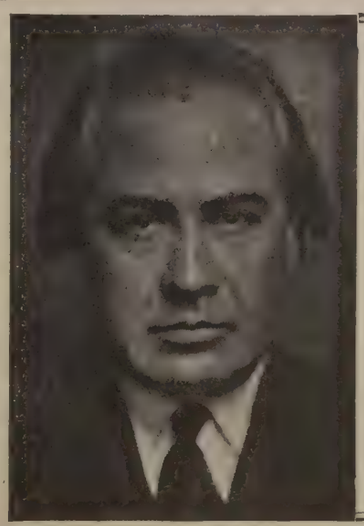
RUDOLPH GANZ, President

Announcing the **SUMMER MASTER SCHOOL** for 1938, offering an unusually complete series in accredited courses in Music Education leading to Bachelor and Master of Music Education degrees.

Member of the North Central Association of Colleges and Secondary Schools, an institutional member of the National Association of Schools of Music; recognized by the Illinois State Examining Board for Teachers Certificates, and by the Board of Education of the City of Chicago. Credits and degrees are recognized by State Departments of Education.

The **COLLEGIATE FACULTY** for the Summer Master School will include concert artists and master teachers of national and international reputation such as: **Rudolph Ganz, Karl W. Gehrkens, Leon Sametini, Lazar S. Samoiloff, Erich Sorantin, Alexander Raab, Graham Reed, Silvio Scionti, John Carre, Max Wald, Mary Strawn Vernon, Oscar W. Anderson, Eleanor Harris Burgess, Hans Herman Rosenwald, Nelli Gardini, Belle Forbes Cutter, Helen Curtis, Mollie Margolies, Lillian Powers, LeRoy Wetzel, Charles H. Demorest, C. Gordon Wedertz, and many others.**

STUDENT AID available to a number of deserving students each summer in the form of part time employment in the College offices; other self-help opportunities are available to many students.



STUDENT DORMITORIES are located on the fourth, fifth and sixth floors of the college building; there are separate floors for both men and women students; rates are economical.

First Term Opens June 20th; Second Term Opens August 1st, 1938

THE VIOLINIST'S ETUDE

Edited by

ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

Can You Concentrate When Playing the Violin?

By KAARE A. BOLGEN

MOST VIOLIN TEACHERS regularly warn their pupils not to waste time. The warning would be very commendable if it were not for the fact that so often they are referring to the wrong time. When they speak of wasting time, they generally allude to the time consumed in rosining the bow, wiping the violin, hunting for the right book and the right exercise, water drinking, and all the other little diversions that help the pupil through the practice and lesson hours. Seemingly they do not realize that the most prodigious amount of time is wasted while the student has his violin under his chin—the only waste of time that is directly harmful. The little diversions are innocent until the violin is picked up. But then they should be immediately forgotten. Unfortunately that is seldom the case. So very often the touch of the bow on the strings is merely a signal for reviewing and intensifying the diversions, and it in no way improves things that they now become entirely mental. This waste of time is generally known as lacking concentration.

It is, of course, impossible to calculate the exact number of hours lost in this fashion by the careless music student; but one might safely say that at least half of his actual practice time is spent adrift in a state of pleasant semiconsciousness; while some students never wake up from the wandering dreams until the violin is safely back in the case again.

To be fair to the music teacher we must emphasize that perhaps all of them stress the importance of concentration. But somehow or other there seems to be a vagueness about their use of the word, and some of them seem to miss the connection between a lack of concentration and waste of time. Therefore one can hear pupils being warned, on the one hand against the waste of time, and being told, on the other hand, to "Concentrate, concentrate"; as if the former were a matter of not drinking water, and the latter merely being asked to concentrate.

Are You Clear to the Pupil?

THE TEACHER WHO CRIES "Concentrate, concentrate," as a rule, neglects to ascertain whether or not the pupil knows what he is talking about, and more important still, whether he is able to carry that knowledge into practical use. Of course, we must stress that the whole subject of learning to concentrate is essentially dependent on the perseverance and intelligence of the pupil. The teacher at his best can only explain the meaning of the word and give a few outlines of action. The action itself is left to the student. But those explanations of the teacher are exactly what the student needs; it takes no more to give him a push in the right direction.

There is naturally no fundamental difference between concentration in violin playing and other concentration; but resulting from certain technical peculiarities, the task of learning to concentrate with a violin under the chin presents a few features which make worth while a separate treatment of the subject.

Now, to concentrate means to fix the attention on one specific object for any length of time. The definition is simple; the difficulty lies in carrying out its meaning. And to most people those are real difficulties, especially in our days, so hostile to anything fixed. The attention itself might be difficult enough to get hold of, not to speak of keeping it fixed for any length of time on the same thing, however interested one might be. As long as a man can follow a column of figures, or the action of a football game, he might be able to concentrate to a certain extent; but the moment he is left with his imagination to do something creative, he is lost.

The great mistake, generally responsible for most of the difficulties, is the mistake of trying to catch the attention as if it were a salmon trout, something that might be caught with a line and a hook. Just like the fisherman throws out his line, thus some people sit down repeating to themselves, "I must catch my attention, I must catch my attention"—which is their way of hooking on the bait. And then they patiently wait for the attention to bite. Let us immediately stress that the only way to catch the attention, is to try not to do so. That means, instead of frantically endeavouring to get hold of it, *one should calmly work to push back every thought unrelated to the subject in question.* Then the attention will be left, as a matter of necessity. In other words, one might say that concentration is negative rather than positive; it consists of pushing unrelated thoughts into the background rather than forcing the "attention" into a desired channel. The difficulty is not so much to keep up the interest in the subject as to keep away all other interests.

Another obstacle making concentration difficult for the student, is the problem of relaxation—or rather the word relaxation; for the moment one understands the meaning of the word, the main part of the problem is removed. Now, it is utterly impossible to concentrate without relaxation. The relation between the two is very much like that between the violin and the bow; the absence of the one makes the other incomplete. Equally similar are the difficulties in uniting the two. Just as the violin and the bow, at first, seem hostile to each other, so it is with concentration and relaxation. When one concentrates, there is a decided tendency to stiffen; when one relaxes, the mind very easily drifts off, released from all bonds of concentration. It is of the utmost importance to guard against this from the very beginning. The aim of every student must be to combine the two.

In speaking of relaxation, it might be well to distinguish between physical and mental relaxation. The first means to loosen or relax all the muscles whose actions are not absolutely necessary for the moment. It goes without saying that one cannot relax *all* the muscles; such action would result in the violin crashing to the floor, with the student following in a more leisurely fashion. One certainly cannot relax the muscles which are in use; they will remain under a strain until no longer in demand. Thus the object of relaxation is simply to detach all other muscles from those needed for the work. As few muscles as possible should be in action, and the moment they are no longer needed, they should join the great mass of relaxed muscles. Moreover, the working muscles, as far as possibe, should be independent of each other. One muscle, or one finger, should be able to exert itself to the fullest extent without influencing in the least the action of the next one.

Mental Relaxation

FOR PURPOSES of concentration, it is mainly the second type, the mental relaxation, which has practical importance. All concentration has its beginning in mental relaxation; unless the mind is relaxed, it cannot function smoothly; unless there is rest, there cannot be efficient action. The physical relaxation is mainly mentioned here because it is the logical step leading to mental relaxation; not until the body has lost its tenseness, can the mind find complete rest; with the body at ease, the activities of the brain can assume the unstrained, almost passive alertness, which is the essence of mental relaxation.

Much mental strain is a direct result of eye strain, the harmful effects of which cannot be exaggerated. Every student should be acquainted with the excellent method of eliminating this strain advocated by Dr. W. H. Bates, in his work "Perfect Sight." The method, very simply, is to cover the eyes with the palms of the hands (cup formed) for a few minutes at a time, excluding the light, and in that position try to see black, and no other gradation of color. Simple as it is, the method often has the most surprisingly relaxing effects.

And now, if the student has acquired some understanding of the terms concentration and relaxation, he may begin to change the understanding into practical knowledge and experience.

The first necessity is to choose an object for concentration, and the simpler the object, the better. To the violin student nothing could be more expedient than the drawing of the bow across the open strings. It involves no complicated coördinated actions, and yet it can give even the most advanced student ample matter on which to concentrate.

Having selected the matter to work with, the student should relax; if necessary sit down until all tenseness of body and mind is overcome.

Then all thoughts should be pushed away. If possible the student should make his mind a blank*. Although this in ma people seems to be a permanent conditi difficulties will be cropping up, the mome steps are taken to create such a conditi artificially. The main difficulty is that self-consciousness. The student who wor on pushing away thoughts, will be so co scious of thoughts that they seem to crow in on him from every side. However, t only thing he can do is to relax—and ke pushing them away.

The motion of the bow should not beg until such a condition is approximate acquired; and then it should begin with t utmost slowness and carefulness, the ey as well as the mind following the motio constantly watching the slant of the bo and its angle to the strings, the action the wrist, and the smoothness of the bo changes. The moment a single new, unr lated thought enters the mind, the moti should stop, not to be resumed until t intruding thought is quite dispelled.

Discard Unrelated Thoughts

IT MAY BE WELL to note here that the mor innocent and unobtrusive the thought, t more dangerous it will be. The ruminatio over yesterday's baseball game may easil be recognized as intruders and kicked ou The thoughts of what to practice next, o the other hand, seem so logically in plac that they seldom are classed with t enemies of concentration. The same is t case with most ideas related to music they seem in place; they are accepted a natural and welcome visitors. And there fore they are the most dangerous of the all. In their wake follow more unrelate thoughts, and soon the mind is wanderin

In the beginning this concentration pra tice should be carried on for short period of time only. Most of the energy of th student must as a matter of fact be spen on his preparations for the work (relaxa tion, pushing thoughts away, and so on With care, however, the difficulties shoul rapidly disappear, and the periods lengthe while the scope of concentration should b widened. More complicated bowings, scale and gradually simple melodies should b included in the practicing material. Th only thing to emphasize is that they *mus be familiar* to the student. A strange exer cise or a new composition might perhap seem to hold the attention for a while; bu we must make the distinction that it is th attention of curiosity. With familiarity, th same tendency to go to sleep will becom apparent in the student. Therefore, as fa as we are concerned here, the only real at tention of concentration is that which capable of holding on to familiar thing And the more familiar, the better. It typical of the amateur that he never play worse, or never is straying so far from th subject at hand, than when he is playin something he has known for years. Throug this simple concentration practice, however he should learn to play everything, no mat ter how well known, in the light of novelt and with the absorbed attention which in truth the secret of the artistic spirit.

In his poem, *Three Worlds,* John Townsend Trowbridge, American poet so popular at the middle of the last century, included these beautiful lines:

With years a richer life begins—
Ripe age gives tone to violins.

* Not to be confused with "going to sleep." detached, druglike condition of the mind, when any thought may enter.

Concentration by its nature belongs to the moment, the present; we concentrate on what we are thinking, not on what we did or may think. But just as the eye is vaguely impressed with the close surroundings of the object of interest, so the mind should receive corresponding border impressions. This is especially true in playing the musical master works, where we have to concentrate on a number of complex problems. To get a true impression of a master painting, the eye has to see more than one single detail; and so must our concentration now be focused on slightly more than the exact present, to prevent the mind from being bent on the present to such an extent that the connection with the work as a whole will be cut off. If a thought of the next step of action could be added to the mental picture, perhaps also with some impression of the preceding passage, one would be in the middle of the subject, so to speak, entirely surrounded and absorbed by it, and thoroughly protected from undesirable intrusions of extraneous flights of the mind into realms of thought to which it is beguiled by past experiences.

In conclusion, a few pieces of general advice. Often during his practice, the student might feel quite suddenly tired and mentally exhausted. If he could accompany his efforts to rest and relax with something to eat, a slice of bread, a glass of milk, a piece of chocolate, or even a glass of water, he might in many instances feel an almost miraculous restoration. Any other little diversion should also be welcome, provided its interest is not too strong and lasting. We must also mention here the importance of always planning short periods of rest before and after the practice hour. Especially towards the end of the hour, the mind of the student seems to stray ahead to the things he has planned to do the moment the violin is in the case. A strict habit of fifteen minutes' rest at the close of each hour would to a great extent remove such tendencies. Upon the whole, the student should spend more time on his rest, because the minutes thus lost, will be manifold recaptured in concentrated work.

The Value of a Good Instrument

By HUGO NORDEN

A VIOLINIST is no better than his instrument. Were this truth more generally appreciated, fewer pupils would quit their violin lessons and advanced players would not give so many indifferent performances.

No person with a weak, raucous or otherwise disagreeable voice would ever expect to become a good singer. Or, could a singer acquire a better voice, he would make any sacrifice whatever to do so. Yet, all too often, violin students are blind to the need of a good instrument, erroneously believing that they can learn just as well on a poor one.

The most prodigious technical skill cannot be properly demonstrated on a bad violin. For even though a violinist may be able to play a trill with electrifying rapidity, what results can he obtain if his instrument is dull and unresponsive? Or, if an artist has the intellectual insight and bowing technic to bring out the subtle, implied counterpoint of a Bach sonata, his efforts are of but little value if his instrument is inadequate to produce the delicate tonal shadings he desires. Or again, the performer, who has the ability to draw a truly beautiful tone, can find no gratification in playing on an inferior instrument.

This holds true with the beginner as well as with the advanced player; and the parent who gives his son or daughter a poor instrument on which to begin, in order to find out if he likes it, is extending a most cordial invitation to failure and loss of interest to nip the child's musical endeavors in the bud. For though a pupil has merely reached the stage where he is learning to draw a straight, firm bow, his efforts can fructify agreeably only if he has an adequate violin.

To place a fine instrument in the hands of a child is to challenge him to do his best. In most cases pupils will respond to this challenge with considerable zeal, because as they develop technically they find pleasure in the variety of tonal effects which they can produce. On the other hand, when given a poor instrument they are incapable of producing anything worth while and consequently the interest wanes.

Of course, not all students are in a position to be provided with fine violins. But a pupil, with even a fair violin, can see to it that it is in the best possible condition by keeping it properly adjusted and fitted with good strings. By so doing, even a comparatively poor violin can be made to sound fairly well, even though its tone may not be entirely pleasing.

A Violin Teacher's Work Basket

By ADA E. CAMPBELL

IT WILL BE FOUND very useful to have a basket on top of the studio piano (or desk) in which these articles may be kept:

Pencils (black, blue and red)
Eraser
Scissors
Bridges
Strings
Mute
Knife
Small pliers
Tuner
Pencil sharpener
Rosin
Mending Tape
Violin Tuner
Tail Gut

Much valuable time can be saved by having such supplies conveniently placed when needed.

* * * * *

Joachim on Harmonics

"We could hardly expect a pupil to play with ease and artistic effect the harmonic notes of the artificial kind, even if he had gained a thorough knowledge of the first position and a good flexible style of bowing. The execution of harmonics demands a certainty of technic on the fingerboard and a dexterity in bowing such as only years of hard practice can give. In order, however, to convey to the pupil a correct idea of the functions of the left hand, it is advisable to give a detailed explanation of the divisions of the string, because the subject is one of great importance."—Joseph Joachim.

Have You Studied Harmony?

Music is a universal language and like the language of speech has its own grammar. The grammar of Music is Harmony—and if you have not studied the subject you should not delay any longer.

Learn to analyze compositions — to identify the chords used and thereby get an intimate knowledge of the intention of the composer. You get at a real understanding of the basis of phrasing and accent, which is interpretation, through a knowledge of the chords used. A knowledge of Harmony helps to satisfy the natural curiosity of every player, which is "How did the composer write it?"

By the study of Harmony you learn to correct errors in notation, which occur even in the best editions of music; also to know when apparent discords are correct.

Harmony will help you to memorize more easily and more permanently because you understand the reason for the progression of chords used, and are able, therefore, more readily to carry the composition in mind.

Let us give you free, a practical demonstration of the thoroughness of the University Extension Conservatory methods and how easily you can master any of our courses. Sample lessons will be sent without obligation to you.

Only by making an examination of the actual lessons can you form an intelligent opinion of the real merit of this remarkable method of music instruction. Let us send you these lessons. They will show you how quickly you can equip yourself for greater things in a musical way and make more money from music than ever before.

Get Catalog and Sample Lessons of our Harmony course or any of our other courses which interest you the most. As this will place you under no obligation whatever, you have everything to gain and nothing to lose. State age and course in which interested. Try the Lessons, then decide.

VIOLIN QUESTIONS

Answered

By ROBERT BRAINE

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

Not Widely Known.

D. K.—I do not know the violin maker you ask about, nor have I seen any of his violins. I am not acquainted with the violinist you mention. There are thousands of excellent violin makers and players in the United States who have never attained wide publicity.

A Gobetti Copy.

M. L. G.—I cannot give an accurate opinion of your violin without seeing it. According to the label it is a copy of a violin made by Francesco Gobetti, in Venice; therefore it is not original. It may be a good violin, for all that. Gobetti had considerable reputation among the Venetian makers. Take your violin to some of the violin dealers in Boston, where you live, and they can examine your instrument and give you full details. Any music store can give you the addresses of violin experts.

Professional or Amateur.

A. F. K.—With the practice, and the private violin lessons you have had in earlier years, I should judge that your chances for doing professional violin work with further practice are very good, especially as you say you are able, from now on, to devote five hours daily to your violin. I should want to know you, however, and hear you play, to be able to give a really dependable opinion as to how high you might be able to rise in the profession. Your best course would be to consult an eminent violinist in New York City, where you live, play for him, and get his opinion as to your talent, and your chances of becoming a professional. Better still, study a year with an eminent violin teacher. At the end of that time he would know all about you, your talent, your natural aptitude for violin technic, and so on. He would be able to advise you as to your chances for becoming a professional, or whether it would be best to study the violin only for your own pleasure, as you say you have a passionate love for music.

Another Unknown Maker.

F. W. C.—I cannot find the maker of your violin in any of the lists of famous makers, but then, there are thousands of these craftsmen, with only local reputations, scattered all over the world. I cannot express any opinion of your violin without seeing it. It was evidently made in one of the Scandinavian countries, and may be an excellent instrument. Your only course of getting at the true value and quality of the violin would be to submit it to an experienced violin expert. As you live in Canada, you might find such an expert in Toronto, Montreal or Quebec. If you visit any of these cities, take your violin with you, and consult a reliable authority. Any large music store in these cities can give you the address of such an expert. No one can judge a violin from a written description.

Pure Intonation.

H. E. M.—Teaching pupils to play in ab lutely correct intonation is one of the m difficult problems of the violin teacher. Y pupil, with whom you have so much troub may be "tone deaf"; that is, seemingly unab through some defect in the hearing, to play correct intonation. Then again, her intonati may be capable of great improvement, if y devote attention to it. It helps to have suc pupil study singing, and also to study vi scales and arpeggi. Practicing simple melodi which the little pupil knows by heart, a helps. The teacher must constantly corr slips of intonation, and have the pupil, rep the incorrect passages over and over aga until correct intonation has been attained. pupil who has thoroughly mastered the scal and knows where the semitones lie, and al plays the arpeggi correctly in all keys w have a good foundation for correct intonati

Schubert's *The Bee*

Y. I. T.—One of the Bagatelles by Franc (not Franz) Schubert, No. 9, *L'Abeille (T Bee)*, is a short and very effective number f violin and piano, which is much heard in c cert. It has some very effective arpeggio wo A pupil, who has mastered the first half Kreutzer, can play it.

Violins by Borelli.

R. W. E. 1. Andreas Borelli was an Itali violin maker of some note, who made violi at Parma (Italy) in the eighteenth centur His violins are mostly of the Guarnerius (a other famous Italian maker) type. They ha dark red varnish; a top of wide grain spru and a back of two pieces of flamed maple. cannot fix a price on a violin I have nev seen, as violins by the same maker vary co siderably in price according to quality, pres vation, beauty, and so on. However I find o of these violins quoted in an American viol catalog at $350. You might write to a deal in old violins, and get late quotations on th instruments. 2. You will find scales (up to t seventh position) arpeggi, and technical wor in Hohmann's "Practical Method for the Vi lin, Book 4," and Hermann's "Violin Sch Book 2."

Cannot Locate.

F. R.—I cannot find the name of the vio maker about whom you inquire, nor do I kn the reputation of the repairmen you mentio but you must remember that there are hu dreds of violin makers and repairmen sc tered all over the world, very few of wh are widely known. Write to a violin dealer one of the large cities; he may know som thing of the maker of your violin, and could also attend to the repairs you say yo violin needs.

Repairing a Stainer (?).

J. S. H. 1. Jacobus Stainer was a famo German violin maker, whose violins at o time sold as high as $4,000; but they have c creased in value of late years, as Cremon Stradivarius, Guarnerius, and other Itali makers have displaced them in the estimati of concert artists. I should judge that yo violin is an imitation, as it has the na "Stainer" stamped on the back. Genui Stainers have the labels on paper, pasted i side the violin. The Stainer model is ve high. The tone is beautiful and sympathet but lacks volume and brilliance. 2. Witho seeing it, I cannot say if your violin is wor repairing. According to your description certainly has "been through the war." A clev repairer could no doubt restore it to somethi like its original condition, but whether it wou be worth the expense I cannot say. Take it a good repairer, and he can give you an es mate of the cost, and whether it would worth while.

* * *

Sight-reading demands careful consi eration by the conscientious teacher, a it is a matter of such grave importan that an argument in favor of it wou seem trite. But to emphasize it to the c clusion of memory work would be serious a mistake as memorizing to t exclusion of sight-reading (which, in r teaching, is inconceivable).—Bevitt.

Bands and Orchestras

(Continued from Page 297)

flexible and more resonant tone. Each of these types of mouthpieces will require reeds of various strengths. Again the determination of proper mouthpiece for the individual becomes a matter of experiment.

The number of players in our school bands that play upon mouthpieces and reeds wholly unsuited to their needs is indeed surprising. This is responsible for much of the inferior tone quality found among our school organizations.

Aids to Development of Good Tone Quality

THE INFLUENCE ON TONE of the type of music which our bands play is profound. I am convinced that too much rehearsal time is spent in the practicing of music which moves too rapidly for the young player; the average high school band which plays the standard marches and light overtures proficiently sounds quite different when attempting some of the works arranged in choral style.

More stress and emphasis upon works of this nature will soon pay dividends in the development of good tone quality. Music of this type demands the utmost in breath control, and cannot be satisfactorily performed without strict adherence to the various factors we have already discussed.

A good tone on any instrument means that the tone is pure, clear, bell-like, and without snarl or roughness. It matters not whether the tone be short or long, its quality must be without distortion. Most young players seem to lose the quality in proportion to the length of the tone; the reason for it is that long notes are made with one system of attack, release, and breath control, while the shorter tones are played with another method, or in some instances without method at all.

The real fault lies in the fact that as the tone becomes shorter, the player emphasizes the force of the attack and plays with less breath line. Consequently a short, sharp, snarly tone is produced; one can easily see that too many marches or fast moving selections played at the proper *tempo* will have a bad influence on the quality of tone of the young player. This is especially true at the initial stages when the student is just beginning to acquire the proper methods of tone production.

I realize that we are called upon to play for events requiring numerous marches, and so on, and it was just this sort of situation which led me at Hobart, Indiana, to rehearse my bands in "Slow motion," that is, practice of marches and other rapid *tempo* numbers in choral *tempo* and style. For example, a march in six-eight meter was first rehearsed in a moderate *tempo*, six beats to the measure. *Tempo* was increased as the additional performances warranted, it being borne in mind, however, that tone quality in the more rapid *tempo* must be just as pure as when playing in the slow *tempo*. We were thus using the march as a means to developing good tone quality and intonation. In addition we were enabled to study the composition from the standpoint of tuning, breath control, balance and blend, as well as receive training of the ear.

It is truly amazing what a few readings at this *tempo* will do in the way of improving the bands' general ensemble as well as its tone quality. Attacks and releases are less likely to be raspy or rough, and the attitude of the student toward the manner of executing a march is rapidly changed. He begins to see that there is something other than the mere technical problems in good performance, and that his tone quality must be just as beautiful in the march as it is in any other selection.

We are approaching the time for the various regional festivals this spring, anxious for good ratings and true musical perfection. If we master and understand the elements which give us excellent tone quality, we have the secret by which we may secure a finer and worthier standing for our bands. Let our motto be, "Tune up—Tone up."

Music Extension Study Course

(Continued from Page 298)

JOE AT THE CIRCUS
By MATHILDE BILBRO

This piece is descriptive in character and, as suggested by the title, depicts scenes at the circus. Cowboys, Indians, galloping horses and playing bands, all come in for their share of the picture. The various effects are all cued in so that they cannot possibly be missed.

Be sure that all accents and slur signs are observed. These are essential in producing desired effects.

TIT-TAT-TOE
By BERNEICE ROSE COPELAND

This little number, while very short—it is only sixteen measures in length—develops grace note playing and affords also a bit of practice in broken chords in both hands.

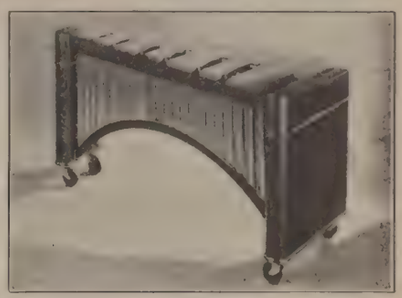
Written in G major, the *tempo* is *Allegretto*, light and lively, and it ranges from *pianissimo* to *mezzoforte* in tone.

IN MY WHITE BOAT
By WILLIAM O. MUNN

Mr. Munn has written many charming little melodies for elementary piano. This one develops melody playing in the left hand against a chord accompaniment in the right. In measure 16 the right hand takes the melody and carries it to the end of measure 32.

The accompanying words help to lend atmosphere to this attractive piece.

BROKEN DOLLY
By LA MARR CHAPMAN



Another first grade piece in which the right hand carries the melody throughout and remains in the five-finger position.

The left hand, for the most part, employs only two chords in broken form—the tonic and dominant seventh. Because of the well ordered patterns, it will be found easy to memorize. Written in the minor key, which is in keeping with the title, it should be played at slow *tempo* and well sustained throughout.

CRISSCROSS
By NINA MITCHELL

This little piece provides excellent practice in playing interlocking passages. It should be learned first at slow *tempo* and with well articulated finger *legato*. As speed develops, the fingers are to be kept closer to the keys until finally the triplets are rolled and tossed from one hand to the other. The title is aptly chosen as it describes exactly the character of the piece.

Carry Out
that
IMPULSE

Play This *Thrilling* Instrument—It's *Easy!*

There's no music so sweet to a musician as applause—and no surer way to win applause than to play the new Deagan Imperial Marimba.

It's a masterpiece of design so beautiful you'll be proud to give it a place in your living room—and so rich in tone that you'll fall in love with it the moment you hear it.

Easiest of all instruments to play—and especially easy if you've studied piano. Write today for full details.

The Coöperation of Teacher and Parent

By ANNA E. EDGAR

THE RAPID GROWTH and far flung popularity of the Parent-Teacher Association in the public schools is proof of the inestimable value of this organization.

Probably the strongest link is that it awakens parents to the fact of their responsibility to assist the teacher, as well as the child, in all ways possible. Some parents seem to feel that sending a child off with a clean face, in time to avoid the tardy bell, is the extent of their part in the program.

The teacher of piano many times encounters this same lack of interest and help on the part of the mother. It is strange how very few children will voluntarily and consistently work at anything unless they all the time feel an urge and sympathetic help behind them.

Feeling strongly this need of coöpe and also a desire to thank the mothers efforts had played such a large part in children's progress, the idea of giving at the teacher's home, near the beg of the teaching year, was carried ou

When all had arrived the teacher an informal talk along these lines— stories and anecdotes, which are so ful in a teacher's experience, were told many discouragements on all sides discussed, but the point stressed wa value of the child's musical education that time, money and effort spent fre these important years would pay dividends for life.

The tea table was as attractive as it inviting, and the result of the after was in evidence all through the year

The School Accompanist

(*Continued from Page* 296)

a good accompanist is merely a sensible and practical way of insuring a more perfect performance. If you do not know this, and act on your knowledge, you are merely being short-sighted."

Alternate Accompanists

IN CLOSING, the author wishes to recommend that in the larger schools two pianists be appointed for each accompanied group. This will give twice as many pupils a chance to have the invaluable experience of playing accompaniments, and it will provide for having an alternate present at all times. In the case of vocal groups, the accompanist who is not playing should sing, unless his voice is too bad. He will accompany better if he himself sings with a choral group, and such a dual program will make the experience doubly valuable.

In small schools the second pianist will sometimes be a younger pupil, one of lesser experience—an understudy in fact. In this case the younger pupil will sit beside the older one during the rehearsal, following the music; and the first accompanist will take considerable responsibility for teaching his understudy. Such coaching will increase the first pianist's ability too, just as all teaching has a tendency to develop the teacher quite as much as the pupil.

Accompanying is so valuable a deve mental experience that the much teacher will take considerable troubl provide opportunities for his tale pupils to play accompaniments. Ofte will be possible for the teacher to b together a school singer and a sc pianist, who have not known each o and who never would have become quainted had not the teacher suggested they work together. Or it may be a vi ist, a violoncellist, or a clarinettist, a pianist. Sometimes an adult singer player in the community would be gla have the services of a good accompa from the high school, and especially these services were free. Here is a sp did opportunity for a music teacher follow the doctrine of individual differen by providing his talented pupil with another opportunity for developing his p ticular powers and interests.

* * *

Accompanying is a fine art, and the companist has much to do with the arti success of the performance—almost much as the soloist or conductor. Let take the trouble, then, to select our acco panists with discrimination and to tr them with both intelligence and ardor.

The Goal Is Always Music

(*Continued from Page* 285)

himself, struggling for the last time in his life to throw off a chronic dejection; and as the work proceeds he actually succeeds in the attempt. This was his last hope; and who knows but that, had Joachim performed this good composition successfully, Schumann's collapse might have been retarded? Though Schumann's wish has come true eighty-four years too late, it still is our duty to fulfill it; and most certainly there is no other music that is more interesting in its appeal, more pleading, more touching than this one. It becomes even more so as the mood brightens; for we know what supreme courage it represents. It is surely unique. It is wrong and brutal to approach it otherwise. The way it is, it remains one of the sublimest and rarest passages in musical literature.

The concerto is also interesting as a p cursor for the "Concerto in C" by Brah to which it bears many striking simil ities. For a period of years Brahms w intimately acquainted with this particu work; and his glorious concerto stands an eternal tribute to Schumann.

One cannot always find long lost mast pieces to be carried before his heare but in every piece he plays, be it a sim minuet or a noble concerto, one has chance of discovering it for his own s exactly as if it were a new creati and of bringing forth from it a perso conception of meaning. Indeed, this is only an opportunity, but a responsibil It represents, to my way of thinking, best approach to music, let alone of vi playing.

* * * * * *

"A man can think of music in such a way that it shall be to him not only a religion but morals, and, if he is great enough, keep his sense of humour as well."—Mr. A. H. Fox Strangways.

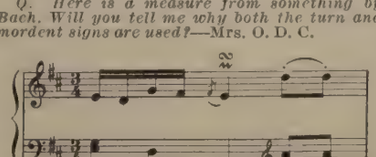
QUESTION AND ANSWER DEPARTMENT

Conducted

By KARL W. GEHRKENS



Professor of School Music, Oberlin College
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Apulia where the dance originated. The correct Italian name is *tarantella* of which *tarantelle* is a French variation—Ed.) The dance was once popular in Italy. You are probably referring specifically to the *Petite Tarantelle*, by Heller. This composition, though small, is a most excellent example of the tarantelle. After studying this little piece you will always recognize the tarantelle when you hear it.

A Duplication of Signs

Q. Here is a measure from something by Bach. Will you tell me why both the turn and mordent signs are used?—Mrs. O. D. C.

A. These two signs, placed one above the other, mean that the playing of either one or the other is optional; however, I should think the mordent here would be preferable to the turn. (Kindly give name of composition when asking questions.)

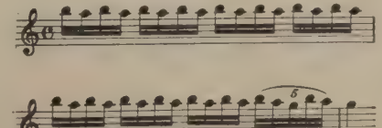
Beethoven Concerto in C Major.

Q. Please answer the following questions regarding the "Concerto in C major," by Beethoven (Schirmer Ed):

1. On page 13, is the trill in the first two measures of the second line continued in sixteenth notes to the end?

2. I wish to use cadenza No. 2 with the first movement. Please give clear directions as to how the cadenza is joined to the first movement.

3. On page 28 (last measure, second line) is the cadenza begun at the end of this trill?



4. Does not the cadenza usually occur at the conclusion of the complete concerto rather than at the end of the first movement?

5. May one use cadenzas when they are not incorporated into the body of a concerto, wherever desired?

6. I am not sure about the two lines of the second piano part on page 28. Do these lines accompany the opening two lines of the cadenza?

7. Does the solo cadenza end the movement unaccompanied?—Mrs. J. R. C.

A. 1. Yes, like this:

2 and 3. This trill, with the fermata and "solo" marked above, is supposed to be the trill that is at the end of the cadenza. After the orchstra (or second piano) has played the final G in the bass of this measure, there is a silent pause of a few beats. Then you start the cadenza which ends with the trill just mentioned.

4. Not necessarily. In this "Concerto," Beethoven has left a place where a cadenza can be used in the third movement (page 59); however, only the first one (in the first movement) is ordinarily used.

5. No. But you may omit any you prefer.

6 and 7. After you have finished the closing trill of your cadenza, the orchestra still has thirteen measures before the concerto is ended. The two lines you mention mean that the pianist can play these five measures with the orchestra if he wishes; usually it is not done.

Statics and Sonatas

Q. 1. In connection with trumpet playing, what are "statics"?

2. In the Simon and Schuster edition of the Beethoven Sonatas (Schnabel), what do the various footnotes refer to when they say see page 5a, 7b, and so on?

3. Already answered by mail.—P. E. H. K.

A. 1. This word in connection with trumpet playing refers to the extreme high overtones.

2. Simon and Schuster write me as follows: "The confusion in our edition of the Beethoven Sonatas is due to the fact that these were published separately first. When the plates were made for the book, the manufacturing department was not aware that the page numbers in the volume do not correspond to the page numbers in the sonatas as they were issued originally in Berlin."

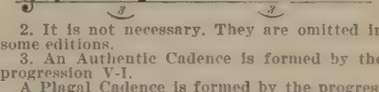
The Seven Rhythms.

Q. Will you please explain what the seven rhythms are?—G. C. M.

A. I would be glad to know where you heard about the "seven rhythms." I have never heard of them, and neither have any of my musical friends. Composers of the thirteenth and fourteenth centuries had what they called the six rhythms. These rhythms were based on the feet in poetry, as follows: 1. — ⏑; 2 ⏑ —; 3. — ⏑ ⏑; 4. ⏑ ⏑ —; 5. — — —; 6. ⏑ ⏑ ⏑.

The only other possibility that I can think of is that you have had some kind of a teacher's course in which the various rhythmic figures such as, ♩. ♪♪, ♩♩, ♪♪♪, ♩♩♪, ♪♪♪♪, have been compiled into a system.

Turns and Cadences



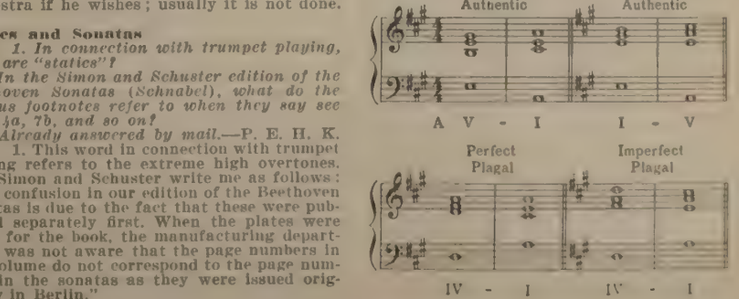
Q. 1. How should the turns be played in the first measure of Haydn's "Sonata in G major"?

2. In Beethoven's "Concerto in C major," does one play the small notes as well as the large notes?

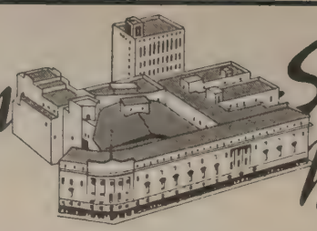
3. How does the Perfect Authentic Cadence differ from the Authentic Cadence? Also, what is the Plagal Cadence?—X. Y. Z.

A. 1. Like this:

Ex.1



2. It is not necessary. They are omitted in some editions.



3. An Authentic Cadence is formed by the progression V-I.

A Plagal Cadence is formed by the progression IV-I.

They are both "perfect" when the soprano of the tonic chord has the root tone: "imperfect" when some other tone is in the soprano of the tonic chord. I think these examples will make it clear to you:

Ex.2

Eastman School of Music

UNIVERSITY OF ROCHESTER

One of America's great institutions of music, the Eastman School offers courses in all branches of music—instrumental, choral, voice, theory, composition, harmony, education, languages, psychology, etc.—for the degrees of B.M., M.A. in Music, M.M. and Ph.D. in Music. Affiliation with the University of Rochester provides additional opportunities for study in the liberal arts and sciences.

MODERATE TUITION

Partly because of the endowment provided by George Eastman, the tuition and other expenses are moderate. Student Aid funds are available for qualified students.

COMPLETE FACILITIES

In physical equipment the School is unusually well supplied—a library of 35,000 volumes, 196 practice pianos, 18 organs, recording equipment, etc.

PERFORMANCES

Frequent opportunity for performance is provided by other regular concerts, recitals, and broadcasts by the Eastman Orchestra, band, ensembles and choruses.

PLACEMENT BUREAU

The School's Placement Bureau has had a gratifying success in securing professional and teaching positions for graduates and students.

SUMMER SESSION June 27-July 30, 1938
FALL SESSION Opens Sept. 20, 1938

Due to a strictly limited enrollment early registration is advised. For information and catalogs, address Arthur H. Larson, Secretary-Registrar, Eastman School of Music, Rochester, N. Y.

How To Start A Summer School

(*Continued from Page 289*)

of the session an informal demonstration of the work that had been accomplished by the children was given. The parents met the members of the normal class, and several of the children who wished to keep on studying during the summer enrolled at that time with members of the normal class or other town teachers; and the remainder, without one exception, I think, resumed their musical studies in the fall.

The next year's advertising brought such an influx of beginners, beside those who had started the year before, and still others in all grades who wished to be in on the fun, that I was forced to engage an extra studio and an assistant.

The following year two extra studios and two assistants were added. I soon found that, due to our activities being carried on in different buildings, it was difficult for me to keep in touch with the work outside my own classroom: and so for the next summer, of 1933, I leased Goddard Seminary with its spacious classrooms and dormitories, hired a secretary to attend to all the details, and engaged a faculty of four full time piano teachers, one piano ensemble director, two part time assistants, and a supervisor for campus and recreation room for the children's periods between their classes. The beginners' schedule was from nine to twelve of the forenoon. Older and more advanced students came in the afternoon, from one to four. The classes included assemblies, a kindergarten, eurythmics, theory, harmony, and piano ensemble, as well as regular piano classes. Many of the older students took private piano lessons (double cost) and attended other classes as well. We opened our session with a faculty concert and closed it with a demonstration by the pupils. own daily schedule was one hour of nor lectures, one hour of kindergarten mu one hour of preparatory grade in pi classes, and one hour of first grade in pi classes, besides a half hour period of sembly both forenoon and afternoon. other members of the faculty taught cla of beginners, advanced first, second, third grades, both in groups and priva (many of whom were their own for pupils). The faculty and some of the of town pupils and normal students at the dining room at the Seminary; and dormitories were also available for normal students, pupils and parents fr out of town.

Last year, in spite of all our facilit we continued to find ourselves overwor with a personnel of ninety-four daily dents, many of whom came from away. had twenty-one local beginners, ranging age from three and a half to thirty ye of age. The rest of the pupils were of ages, and in all stages of musical devel ment. Our closing demonstration was the fore divided into three parts: A morn musical featuring beginners up to the of twelve years; an afternoon piano rec for the intermediate grades; and an e ning concert featuring advanced piano s dents in solos as well as in two and th piano ensemble arrangements. It also cluded original songs and piano compo tions by the pupils.

Thus, we believe that, in the last years, the school has succeeded in maki many children and adults of Barre and vicinity to be musically minded, and t by means of that basic instrument, piano.

Steps In Making A Pianist

(*Continued from Page 300*)

useful rhythmic modifications, and variety of tone, will bring results promptly.

It is not possible to insist too strongly on the usefulness of slow practice. A student must never become impatient of the necessity for slow practice. Certainty and absolute perfection are attained by this deliberate and thoughtful work.

As with excess of speed, so with excess of power, the student must be careful to avoid it, for very quickly it will result in stiffness and fatigue, will paralyze the playing, and change the tone quality. The student must give unfailing attention to suppleness of the arms and of the body, to the kind of touch he is using, and to the quality of sound—which latter depends on these conditions of suppleness.

"Style is the Man"

WHAT ABOUT STYLE? Style is playing each composition in accordance with the thought of him who created it. The performer must listen to himself while he is playing. To be a good interpreter, one must first of all be a good listener. A true artist will know how to give original character to even the smallest things; and, while he tries to identify himself with the intimate thought of the composer, he will still know how to preserve his own individuality. Too many pianists subordinate their thought entirely to that of the composer. Their interpretations are then mere deformities, or caricatures.

One last word of advice: Play a great deal of Bach, Mozart and Mendelssol Nothing else is so necessary for formati of style, of clear and pure technic, of f lowing closely all the nuances.

A pianist who is nothing but a pian is a mediocre one.

Among all executants, the pianists a the only ones who have to undertake t dangerous task of interpreting as a wh the complicated works of the maste They are at one and the same time, b orchestra and conductor. Therefore th need, besides the qualities of virtuosi artistic feeling and sensitiveness, a w culture, so that they can comprehend the works in their entirety and also in deta They must know the elements of the la guage in which the works are written a must be so familiar with the style that th understand it perfectly. They must kno how to distinguish between a superfic *brio* and technic in the most complete a lofty sense of the word. They must n confuse the meaningless acrobatics of t virtuoso with the true executive powe the power of expressing absolutely t meaning of the passage.

The mere virtuoso plays too fast a forgets too often the phrasing, the balan of rhythm and of harmony. This idolatr of virtuosity is found everywhere, and o must protest because art suffers from Finally, remember this thought of Le nardo da Vinci: "To study without enthus asm ruins the memory which does n retain that which it takes in."

"Restlessness and discontent are the first necessities of progress."—Thomas A. Edison.

Voice Questions

Answered

By FREDERICK W. WODELL

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

ones of Males.

am a voice teacher with several years rience. At present I have two pupils tstandingly good voices, one a baritone, r a tenor. Both seem to have difficulty high tones; the baritone on the F, G nd the tenor on the B-flat, B and high can reach the tones without difficulty, true to pitch. The tones do not seem and resonant as they should be. I feel ause they are not breathing properly; I have been giving them breathing s and trying to get them to reserve breath so the tone will "float" easily th resonance, instead of being forced. ight about this, or should I use any ethod or vocalises? Have been using hakespeare's "Art of Singing," and ocalises by George Whelpton and Con- m greatly interested in these two voices sh to do my best for them, as I feel ith proper training these young men can loped into very fine singers.

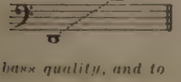
—Mrs. Melourgia.

It is not the exercise or vocalise used unts so much as it is the way in which ging is done. One may sing through ooks of exercises and vocalises, and yet become a good singer. We do not expect t force of voice at the top of the com- earlier in the scale, as a rule. Breath includes the ability to send out the breath with varying pressures, not to hold it back. Increase of force of meaning combined volume and in- or "ring"—involves two principal added breath pressure, and fuller use resonance resources of the voice. How increase of breath pressure? Only so as can be controlled so as to leave all of the vocal instrument free from r. The artist secures a maximum result minimum of effort. As to the second The mind is king. Think, and will a tion of the concept, of a clear, ringing on the vowel. E and A have normally f this *timbre* than do the other vowels; vowels may possess a degree thereof. *crescendo* will a feeling that there is a xpansion at the waist center-front, back les; that the trunk, as a whole, is com- ghtly up and out of the hips, while in ck mouth is a feeling as if about to On the *decrescendo*, will the same sen- , but in lesser degree. Watch all the hat no stiffness is brought into the and lower jaw.

special exercises for resonance, see a dis- n of the subject in "68 Synthetic Exer- by Frederick W. Root; and in "Reso- in Singing and Speaking," by Thomas own. A helpful presentation of the un- ng principles of good tone production is in a small pamphlet, "Common Sense nging," by J. B. Kennedy.

commend your intelligent interest in the with your men pupils.

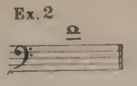
ng a Teacher.



I shall be very grateful if you will mend some excellent teachers of voice —— and ———. I am not acquainted in of these cities, but may have an oppor- to go to one of them in the near future dy voice. Of course I realize that the r who seems best for one might not so for another; and that the success of udent depends, for the most part, on the t himself, no matter who the teacher is. a soprano, seventeen years of age, and ot had much training.—N. T.

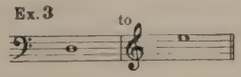
For so young a lady you have done well ur thinking about the relation of teacher tudent in vocal study. It should be re- ered that the personality of a given er may be such as to make it difficult for tain pupil to come into the sympathetic onship necessary for success in vocal It is not necessarily a question of the "method" used. We suggest that you lt the columns of THE ETUDE for a year re past, and as well those of the *Musical* r, of New York, for announcements of g instructors in the cities you name, and to touch with some of them. In making a satisfy yourself that the instructor has, series of years, been taking average and students, from the beginning, and ng them to sing with tone of good quality, isfactory *legato* and *sostenuto*, effective ng, good diction, and at least a reasonable of expressiveness. Beware of being un- influenced by overenthusiastic talk of rs, pupils or their friends, and of being or less misled as to who really did the of training any successful singer who e held up to you as the product of a n studio.

sso's Problems.



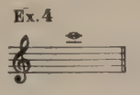
I am twenty years of age and my voice en changing for six years. At present I ing in this range

Ex. 1



a deep bass quality, and to

Ex. 2

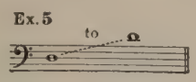


but the top E and F are rather strained. I also can sing a feeble C below the low D. I can also sing in a second register, which is very contralto in quality.

Ex. 3

and with a sharp, hard tone up to

Ex. 4



but above the D on the fourth line of the treble staff, the tone is hard to produce, uncertain and painful. According to one author the two registers may be mixed into one by proper exercises and care. I fear that in the past I have abused my voice a good deal, and at present I am resting it entirely.

1. What range do you think will be useful to me?

2. Do you think the contralto and bass registers can be blended into one? At present I can sing as softly as I please from

Ex. 5

and change registers on any note; but the change is quite apparent, no matter how softly I sing, and regardless of what note I change on.

3. Do you think a long rest will help my voice, which is quite rough though at times quite resonant and powerful?—W. J.

A. That range in which you can sing with good tone quality, exhibiting an artistic *legato* and *sostenuto*, an even scale, and the power to shade and color tone, and to pronounce distinctly.

2. Those notes upon which the singer can do an artistic "swell" from soft to loud and back again, without click or "break," or change of tone color, are properly considered as "in the voice." Excepting only the comparatively few "freak" voices, and students lacking in natural ability to appreciate pitch and tone quality, or without sufficient mental power and perseverance, singers in general may be taught to meet the requirements implied in the foregoing statements. W. H. Griffiths, in "The Mixed Voice and the Registers," has this significant remark: "I have many times discerned two qualities of falsetto in a baritone voice, one of which sounds thinner and reaches higher than the other. Speaking of this to a Cathedral alto, he told me *he* sang with two varieties of falsetto." Again: "The blending of the registers forms a serious obstacle to the progress of the singer, but if every chromatic variation of pitch actually denotes a change of register, once this becomes doctrine it would be possible to train voices more quickly." See a little book, "The Adult Male Alto," by G. E. Stubbs; and "The Rightly Produced Voice," by E. Davidson Palmer.

3. Undoubtedly.

No Forcing

Q. I am called a dramatic soprano; compass from A below Middle C up two octaves. Have a teacher's diploma in piano, and am learning the pipe organ. Your answers to voice questions in THE ETUDE *are very helpful, and I will appreciate any suggestion you may make. I have studied vocal more from the muscular standpoint, as I do not believe one can make nice full, round tones, with defective muscles. The teachers I am able to engage want to force the voice and I do not like it; so I am doing a little self-studying. Kindly give me the names of some beautiful arias, with English translations.*—I. B.

A. Be careful not to think too much about what the "muscles" are doing, when you sing. You are indeed wise to refuse to "force" your voice; but, are you a competent teacher from whom to take lessons, is the question for you to think about? Here follows a list of pieces which may be useful to you:

He the best of all, the noblest, by Schumann. *The Nile*, by X. Leroux. *I will extol Thee*, by M. Costa (A-flat); *Easter Eve*, by Gounod. *Enfold me, O Sea*, by Delibes; in B-flat. *The Lorelei*, by Franz Liszt; low key. *Plus grand, dans son obscurite* ("Reine de Saba"), by Gounod; in C. *O don fatale* ("Don Carlos"), by Verdi; in F. When ordering, specify English translations.

Way Off in India

• Way off in India, the India of Durbars, temple bells, elephants, tigers and interminable mysticism, THE ETUDE has many valued friends. One ETUDE enthusiast in *Lucknow* writes, "As a reward to the two best pupils who pass the examinations for the Royal Academy of Music, I give each THE ETUDE for a year and I find this an immense stimulus."

Thousands of teachers have used ETUDE subscriptions as a reward for good work, and some of them have told us that they ultimately have been rewarded by the results received in improved work from their pupils.

Pupils always value rewards, especially when they feel that they have been earned through hard work. A long desired piece of music, a captivating musical book, an attractive article of musical jewelry, or a fine musical picture—any of these is a stimulus which ofttimes pays for itself many times over.

Graduation Awards

A feature of Presser Service much appreciated by teachers is the supplying of appropriate awards for the graduation or promotion of music students. Diploma and Certificate forms, and Medals for honor students, are most in demand at this season.

Beautifully engrossed diplomas, or certificates, and appropriately engraved medals are awards fo ever afterwards cherished by pupils. Teache who realize the value of building good will i their communities know that each such awar is an ever-present advertisement of their ow efficiency.

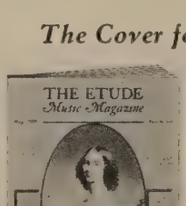
For the convenience of those who do no have ready access to metropolitan shoppin centers Theodore Presser Co. has arranged fo engraving and engrossing service at reasonabl prices. Write for particulars, giving as muc information as possible as to your needs i your first letter. This will help avoid unnece sary correspondence and will make Presse Service more helpful.

Don't fail to send for your copy of th *Music Teacher's Hand Book* which gives complete price list, with descriptions and illus trations, of awards and gifts for music student and music lovers. It's FREE for the asking

Summer Music Study Profitable

Many Teachers and Students Are Planning Now for Interesting Summer Musical Activities

Rare indeed today is the music student, or the music teacher, who lets the summer months drift by in idleness, totally neglecting the technique built up by study and practice during the previous fall, winter and spring months.



Teachers, by the thousands, flock to metropolitan schools of music conducting summer courses, for a few weeks' intensive study. Improvement of their own technique and master courses in pedagogy are usually the magnets that attract these ambitious music folk.

Schools of music in suburban districts or rural communities and, of course, many private teachers in residential sections having facilities for conducting classes outdoors, organize groups of their students for pleasant hours of porch or lawn study devoted to music appreciation, the history of music, harmony and kindred subjects. The parents of many pupils are glad to have such cultural advantages offered to their offspring and cheerfully subscribe to a series of summer study sessions. The pupils, themselves, enjoy the novelty, and frequently do better work in less time than during the regular teaching season.

Appropriate text book material is a prime requisite in conducting summer study classes. A dull, pedantic presentation of the study material easily can kill all enthusiasm engendered by the novelty of the surroundings. Works such as Cooke's *Standard History of Music* ($1.50) Orem's *Harmony Book for Beginners* ($1.25) and Hamilton's *Music Appreciation* ($2.50) are always attractive to students. Teachers of juvenile groups who use Tapper's *Child's Own Book* series of composers' biographies (20c ea.), Moyer's *Introduction to Music Appreciation and History* ($1.50) and Gaynor's *Songs of the Child World* volumes ($1.25 ea.) seldom complain of lack of interest on the part of their students.

If you are in doubt as to suitable text book material to use with your classes this summer don't hesitate to write to Theodore Presser Co. asking for copies of any of the above to look over. These, and any educational publications of this house, the John Church Co. or the Oliver Ditson Co., for which we are distributors, gladly will be sent for examination.

The Cover for This Month

There have been many great artists in the performing and creative branches of musical art, but in Jenny Lind, "The Swedish Nightingale," there is to be found a musical artist who in life received greater acclaim than ever given to any other. Her triumphs in Europe and America were so great that now, nearly a century after the beginning of her triumphs, she seems to be something of a legendary goddess of song.

It is true she had some critics, but these are lost sight of in the overwhelming number of individuals (names today numbered among the immortal lights of history, literature, poetry, music, and drama) who left for posterity written records of their great joy in having heard Jenny Lind sing, and the high esteem in which they held her talents, her vocal accomplishments, and her character.

Queen Victoria of England, King Frederick William IV of Prussia, King of Sweden, King of the Belgians, and other rulers and members of royal families in Europe sat in her audiences and honored her with gifts and decorations. Meyerbeer designed the role of one of his operas for her and was her enthusiastic friend, as was Mendelssohn, Chopin, Schumann, and other famous musicians. Wagner and Michael Balfe were other composers who were members of her audiences. Carlyle, Thackeray, Disraeli (later Lord Beaconsfield), Longfellow, Washington Irving, Walt Whitman, Bayard Taylor, Hans Christian Andersen, Daniel Webster, Horace Greeley, and John Ruskin were among other famous folk who sat under the spell of her singing.

When she came to America for a special concert tour she created a national furore and wherever she went the crowds hardly could be restrained. P. T. Barnum of circus fame managed her American concert tour with great success. Sir Julius Benedict was her accompanist on her American tour. Jenny Lind, who had been christened Johanna Maria Lind, fell in love with a young German pianist who was in Boston at the time of her American tour. His name was Otto Goldschmidt and she married him in Boston, February 5, 1852. The great singer was very loyal to her husband and thereafter used the name of Madame Lind-Goldschmidt. Their family life was a most happy one.

Although European papers criticised the American public for its "Lindomania" there are many evidences that she drew beyond capacity audiences and attracted much attention wherever she went in Europe or on the British Isles. Franz Liszt once refused to conduct a music festival where Jenny Lind was to sing because he felt that she would absorb all the interest of the audience. Her final public performance was in 1870.

The world very nearly missed hearing Jenny Lind develop into an unrivaled coloratura singer because in the beginning of her career she had strained her natural voice to such an extent that when she first went to the great vocal master, Manuel Garcia, for lessons, in 1841, he refused to give her instructions. But, after she had rested her voice on his advice, and followed his instructions carefully, she was his pupil for nine months.

Jenny Lind was generous in her charity, both in cash donations and readiness to appear at benefit concerts, and for her artistry as well as her benefactions she well deserved the honors given her in her life time and the tributes paid her since her passing. One of the greatest of these tributes is the bust now in Westminster Abbey. It was unveiled April 20, 1894.

Her death occurred November 2, 1887, at her villa, Wynd's Point, Malvern Wells, England. She was born October 6, 1820, in Stockholm and was hardly a month past her sixty-seventh birthday when she breathed her last. The last time Jenny Lind raised her voice in song was as she lay on her death bed and when the windows opened and the morning sunshine streamed in she sang Schumann's song, "To the Sunshine."

Sixteen Modern Etudes

For the Advanced Trumpet Player

***By* John Huber**

The position of first trumpet player in th band, or orchestra, of today has become on of importance and responsibility. Modern ar rangements demand players who possess no only a thorough knowledge of their instrumen but also good musicianship and the ability t produce a fine quality of tone.

The ambitious trumpeter will find in thi new volume of studies ample opportunity t develop flexibility of the lips, single and tripl tongueing, correct tone production, prope breathing, and general interpretative ability The book contains daily embouchure drills, ex ercises with special attention given to triplet and chromatics, preparation for trills and mor dents, rhythm and velocity studies. Analytica notes and suggestions are given throughout t help the student overcome the technical dif ficulties which are encountered.

The author of this important book, Joh Huber, is well known both as a performer an teacher. His own training was under such teachers as W. Paris Chambers, world famou cornet soloist, Emil Koeneke, and Max Schloss berg. He has taught in New York City an Philadelphia, at present being on the faculty of the Hyperion School of Musical Art in th latter city. As a performer, he has appeare with famous bands and theatre orchestras o the East, as well as with the Philadelphia Orchestra.

A single reference copy of this book may now be ordered in advance of publication a the special cash price of 40 cents, postpaid

Low Prices on THE ETUDE Combined With Other Publications

Many music lovers are fond of good literature. THE ETUDE is fortunate in being able to offer to its friends, the best magazine publications combined with THE ETUDE at substantial savings. See advertisement of publications and prices on another page in this issue. Note that the prices quoted do not include Canadian or foreign postage. These small extra charges will be quoted on request.

Manual of Fugue

y **Preston Ware Orem, *Mus. Doc.***

While the works of this able educator and editor have been adopted as standard text books in many schools and colleges of music, not only in this country but in other lands (some time ago THE ETUDE printed a reproduction of the title page design of the Chinese edition of *ony Book for Beginners*) they serve an purpose seldom touched by works on al theory. Due to the colloquial style ich they are written they make "good g," and many music lovers have pur- d copies, not with the idea of intensive , but rather to get the gist of the subject erhaps work out the fascinating exercises r Orem provides.

Harmony Book for Beginners ($1.25), *y and Composition of Music* ($1.25) *The Art of Interweaving Melodies* ($1.25) st interesting course of instruction is pro- l. *Manual of Modulation* (40c) is a book- which not only students and teachers usic theory turn, but which has proved helpful to many organ players and nts.

nual of Fugue will be somewhat more rehensive than the latter work and not as extensive as the first three mentioned. ll consist of ten lessons and an Epilogue ing the problems of fugue writing, treat- his science as a making of real music, not exercise in musical mathematics. A prac- working knowledge of harmony and terpoint is assumed, of course.

copy of this work may be ordered now he special advance of publication cash 40 cents, postpaid.

he Etude Historical Portrait Series

E ETUDE undertook a monumental task six years ago when it began *The Etude orical Portrait Series*. It was fortunate d that enthusiasm for the idea got the s under way before there was a chance be frightened out of beginning this hly presentation through a measuring hat would be involved in carrying the s to a conclusion.

housands of letters have been written and to various parts of North America, h America, Europe, and Great Britain n effort to secure biographical details pictures of famous music folk, who were ied to representation in the Series. The involved and the monthly cost of ing the forty-four half-tone cuts used into the thousands of hours and thou- s of dollars.

ery often the only portrait that could ocated would be a very poor print in old publication or long held clipping. se meant additional engraver's problems rder to get a cut that would give in this es a likeness of someone whose name g some era was foremost among music posers, educators, or performing artists. here was also a great amount of corre- dence involved in just handling the let- from individuals who thought they were rving of representation, and likewise, e were letters from loyal pupils and ds who thought some musician known hem should be represented. Because cer- limitations had to be set it was decided to include composers who had published ks, or who had works of ma or propor- that had been performed under notable ces; conductors of major symphonic, al, or operatic organizations; performers singers who had appeared as soloists major symphonic or operatic organiza- s, or who had made successful concert s covering cities of the first rank; authors recognized musical literature works; au- s of nationally or internationally success- methods or study courses; and last, but least, teachers of famous musicians.

ortunate indeed are those who have not ed an issue of THE ETUDE since this es began. In it they have one of the test musical records ever undertaken. It ossible to secure in a single sheet any k page that you may desire of this Se- , or which you want in quantity for class ophook purposes, and every page up to hin the last few is in print in this sep- te fashion, even the very recent ones will available separately since we have these ted when we have about a half dozen put to press at one time. The single sheets supplied at 5 cents each.

Play with Pleasure

An Album for the Grown-Up Piano Student

The rather attractive title chosen for this new publication will be matched by the contents, consisting of even more attractive compositions arranged for playing by the piano student of more mature years, who is advancing in proficiency to the point where he is able to play third grade music, or for the pianist of limited attainments who can't find the time for frequent practice.

In a previous issue the titles of a few of the selections were mentioned, such as: *Selections* from "Mikado" (Sullivan) *On Wings of Song* (Mendelssohn) and the *España Waltz* (Waldteufel).

Here are a few more pieces, some of which never have hitherto appeared in an album of piano music, others being numbers almost everybody delights in playing and hearing: *Poeme* (Fibich), *Valse Triste* (Sibelius), *Chimes of Normandy* (Planquette) *Fair Maid of Sorrento* (Neapolitan Folk Song), *La Golondrina* (Serradell), *Aria* from "Traviata" (Verdi) and the old favorites, *Qui Vive* (Ganz) and *Salut á Pesth* (Kowalski).

The compilation of this material is now completed and it will not be long before copies of the book are delivered to those who ordered in advance of publication. There is still time this month, however, to place an order for a copy at the special advance of publication cash price, 40 cents, postpaid. Sold only in U.S.A. and Its Possessions.

Child's Own Book of Great Musicians

Brahms—Tschaikowsky—MacDowell

By Thomas Tapper

Many leading piano teachers consider some knowledge of the composer of a piece most essential for a sympathetic interpretation of the work. For students of more mature years there are many fine biographical works available, but for juveniles, just being introduced to the writings of the masters, resourceful teachers have been forced to call upon their own memories, recalling some incident in the life of the composer and then telling it in language the children could understand.

Then came Thomas Tapper and his *Child's Own Book of Great Musicians* series, each booklet relating interesting incidents in the childhood of a master composer, containing a packet of "cut-out" pictures to be pasted in designated places throughout the telling of the story, and then giving the youthful student an opportunity to write the story in his own language; after which he binds the book, art style, with a needle and silk cord provided for the purpose.

These booklets "caught on" immediately, and thousands of copies of the 13 composers' biographies heretofore available have been distributed to ambitious young students. Bach, Beethoven, Chopin, Grieg, Handel, Haydn, Liszt, Mendelssohn, Mozart, Schubert, Schumann, Verdi and Wagner are the composers whose biographies have been represented in the series.

Brahms, Tschaikowsky and our own American composer, Edward MacDowell, are others whose workers are frequently heard in radio broadcasts and in concert, and whose composing efforts have been arranged for playing by young students. Mr. Tapper has written a biography of each of these and they will be published shortly in the same attractive style as their predecessors.

The 13 previously published biographies sell at 20c each, but prior to publication single copies of the Brahms, Tschaikowsky and MacDowell books may be ordered at the special cash price, 10c postpaid, or 25c for the set of three.

Fourth Year at the Piano

By John M. Williams

Teachers again have an opportunity this month to order copies of Mr. Williams' latest educational work at the special advance of publication cash price, 50 cents, postpaid.

Announcement last month of a partial list of contents, including titles of some of the teaching pieces included and names of the educational authorities from whose works some of the exercises have been chosen, has increased interest in this forthcoming publication.

Realizing that comparatively few American students strive to attain the status of a virtuoso, practical teachers aim to give their pupils a well-rounded course, combining technical development with musicianship. To accomplish this the works of both standard and modern writers must be utilized. Mr. Williams, for this book, has selected study material from the etudes of Czerny, Concone, Schytte and such moderns as Bilbro, Franz and Lemont, and has included carefully edited compositions of Grieg, Humperdinck, Lack, Dvorák and other well known composers.

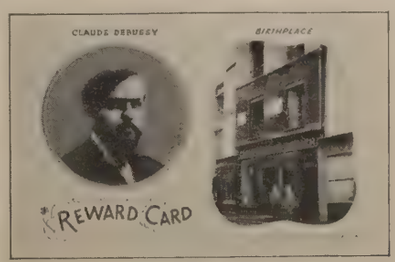
The sale of this book will be confined to the U. S. A. and Its Possessions.

28 Miniature Etudes

A Book of Studies for the Third Grade Piano Student

By Ella Ketterer

One of the things that has made Ella Ketterer such a successful writer of piano teaching music is her ability to make every composition "say" something interesting while clearly illustrating some practical problem. Although her compositions are mostly in the first three grades, their teaching value is great because such problems are fundamental in the higher grades also.



It hardly seems necessary to call attention to Miss Ketterer's earlier books—*Adventures in Music Land* ($1.00) and *Adventures in Piano Technic* (75c)—because they already are in general use and therefore well-known.

Here are a few titles of pieces in the new book with the problems treated in each: *The Whirlpool* (triplets), *Prattle* (the trill), *Oriental Song* (syncopation), *The Giant* (left hand and pedal study), *Sunday Morning* (suspensions), *Up the Stairs* (broken thirds), *In Sprightly Mood* (rhythm), *The Bouncing Ball* (repeated notes), *Harp Song* (arpeggios), *Scamper!* (wrist study), *Run and Jump* (rapid passages divided between the hands), etc. Each study occupies only one page, avoiding tiresomely long concentration on one subject.

Single copies of this interesting book may be secured at the low price of 30 cents, cash with order, if ordered on our special advance of publication plan, delivery to be made on publication.

Reward Cards

(Second Series)

One of the most satisfactory aids to teachers of music who always make a special effort to provide incentive for study, has been the set of Reward Cards issued by the Theodore Presser Co. These sixteen cards, bearing portraits and birth places of great musicians, lithographed in a semblance of beautiful water color rendition, have been utilized in numerous ways by ingenious teachers.

A single card sometimes is used for a single lesson reward, and then by the time the sixteen have been earned a musical prize card is filled out, signed, and given to the pupil. Other teachers have used them in music appreciation classes, or in junior music club groups studying the lives of great composers. We also have seen them used to provide a decorative border for the studio honor roll kept in use by the teacher.

For these and many other uses it is easy to understand why numerous teachers have been asking and asking for another set of these cards providing for more composers. It means large editions to get the price per set so reasonable, and the sixteen composers in the set means stock space for thousands of cards, but the new set will be very useful in that it covers: Bizet, Chaminade, Debussy, Dvorák, Elgar, von Gluck, Grieg, MacDowell, Massenet, Moszkowski, Moussorgski, Rimsky-Korsakow, Rossini, Rubinstein, Saint-Saens, and Sibelius.

The one side of the card gives the composer's portrait in lifelike coloring, together with a reproduction of the composer's birthplace, except in some instances where an authentic reproduction of the birthplace can not be secured some other scene of interest associated with the composer is used. The other side of the card is a condensed biography, a facsimile of one of the composer's manuscripts, and a reproduction of the composer's autograph.

A set of this second series (sixteen cards complete, together with prize card) may be obtained for thirty-five cents, the cash postpaid price for advance of publication orders. Only one set may be ordered at this price.

One String Solos

For Violin Beginners

By Kate LaRue Harper

The first ambition of many young American students (and their parents, too) is the playing of something that pleases the ear—usually called "a piece." In piano music there are any number of five-finger pieces published; open string solos (the piano accompaniment supplying the melodic and harmonic background) have been published, both in sheet music and in book form, for young violinists.

In this work the author goes a step further and supplies real musical parts for the violin student, confining the player's activities, however, to the use of three fingers and the open strings.

As this work is intended for use with violin classes, as well as in private teaching, it is published in two separate books, the violin part for the young students and the piano accompaniment for the teacher, or accompanist. These will be printed in the convenient oblong size. In advance of publication single copies of the violin part may be ordered at the special cash price 15 cents; of the piano part, 20 cents postpaid.

A Child's Journey

Rote Songs for Primary School Activities

By Ada Richter

The best evidence of the advancement being made by modern teaching methods is the success of piano teaching material prepared by practical teachers, many of these being members of the fair sex. The teacher who, year in and year out, has under her care the musical instruction of tiny tots, learns from these youngsters, too.

Mayhap, as in this book, it is child psychology. The activities in which the child has reveled on holidays make a deep impression upon him and when called in retrospect, or presented as a possibility of near-future enjoyment, excite his imagination and interest.

In this new work Mrs. Richter offers sixteen rote songs which may be used as a continuity or sung separately, but all of which may be correlated with the activities of the primary class at school. A simple piano part is supplied, but the songs are so rhythmic that they may be sung effectively without accompaniment.

Teachers who have used the author's very successful works, *Ada Richter's Kindergarten Class Book* (A Piano Approach for Tiny Tots) ($1.00) and *My First Song Book* (40 Songs Everybody Knows in Arrangements Almost Anybody Can Play) (75c) will want to become acquainted with this new book. A first-off-the-press copy may be reserved now by ordering at the special advance of publication cash price, 35 cents, postpaid.

Little Pieces from the Classic Masters

For Violin and Piano
Compiled and Arranged

By Leopold J. Beer

Delving into the manuscripts and published compositions of those stalwart pioneer composers of the 17th and 18th centuries—Purcell, Bach, Handel, Gluck, the Couperins (Francois and Louis), Kuhnau and Rameau, this eminent Viennese musician has selected a group of attractive compositions and arranged them for performance by young violinists.

Every selection is a masterpiece of inspiration. All have been carefully fingered and the bowings plainly indicated. They may be played in the first position, but special fingering is given for playing parts of the compositions in third position, if the student is sufficiently advanced.

Single copies of this unique work may now be ordered at the special advance of publication cash price, 35 cents, postpaid.

(*Continued on Page 346*)

Grown-Up Beginner's Violin Book

By Maurits Kesnar

In this forthcoming publication violin teachers will find an abundance of new and interesting material. The newness will attract by the very reason that it *is* new, with the added value of being practical and up-to-date. It is interesting because every selection is melodious. Students, whether young or old, will work hard to be able to learn a pleasing piece, thus unconsciously mastering fundamental principles and problems.

The following are some of the famous melodies contained in the book: *Largo* from the "New World" Symphony, *Dark Eyes, Country Gardens, On the Beautiful Blue Danube, Londonderry Air, Song of the Volga Boatmen, Amaryllis, Choral* from "Finlandia," etc. In all, there is a plentiful use of little-known folk-tunes and dances, and of simplified arrangements of copyrighted compositions. The classics of the masters furnish a number of captivating dances and other tunes.

Such an assortment of material will appeal especially to the "grown-up beginner," who is inclined to avoid books whose main bulk consists of dry exercises and meaningless melodies.

The Key of C approach is used in order better to acquaint the pupil with the finger patterns of each string. Such problems as how to hold the violin, how to place the fingers correctly upon each string, etc, are made perfectly clear by means of special charts and illustrations.

Many of the studies have been made more valuable and interesting by the addition of a second violin part, which may be played by the teacher or a more advanced student. In this way the harmony is made fuller and of greater interest to the pupil. Many of the pieces are provided with piano accompaniments. These features are especially valuable in a group teaching.

On our advance of publication plan single copies of this book may be obtained for 40 cents, postpaid, cash to accompany order and delivery to be made upon publication. This book will be sold only in the U. S. A. and Its Possessions.

Ten Studies in Style

For the Piano

By Carl Wilhelm Kern

A last opportunity is afforded our patrons this month to take advantage of the advance of publication cash price of 20 cents, postpaid, for single copies of this attractive new book, delivery to be made upon publication. Considering that the regular price of this book will be 60 cents, the above offer is an exceptional bargain.

Few writers of teaching music have surpassed Carl Wilhelm Kern in the artistic finish of everything he writes, whether it be simple, difficult, or of medium grade. And when it comes to style, this composer is at his best. Good melody prevails in every number, making an ideal combination that all students will welcome.

Different kinds of style are immediately suggested in the following titles: *Merry May, Banjo Joe, Elfin March, At the Military Post, Con Amore, Tarantelle, At the Airport, Pranks, At Midnight,* and *Rustic Dance.*

For touch, phrasing, pedaling, rhythm, finger dexterity, contrasting dynamics, tonal and color shading, these ten pieces are models; and while each of them illustrates practical details, none is too difficult for players of average ability. Each is a little masterpiece, making the book a logical and welcome addition to the *Music Mastery Series.*

Advance of Publication Offer Withdrawn

Regular readers of the Publisher's Monthly Letter in the piano teaching profession, knowing the educational value of the "master lessons" that appear from time to time in THE ETUDE, have evinced considerable interest in the book released from the press this month by Theodore Presser Co. Advanced piano students, too, who have been helped by these annotated compositions, ordered copies in advance of publication. All copies ordered while the book was in preparation will now be mailed to advance subscribers. Of course, the special pre-publication price is now withdrawn, but copies may be had, either from your local dealer or from the publisher, for examination.

Master Pieces with Master Lessons for the Piano is a volume containing not only the outstanding compositions of the great masters —Bach, Chopin, Handel, Liszt, Mozart, Schubert, Schumann, Brahms and Mendelssohn— but also master lessons on these pieces by educational authorities such as Hambourg, Rosenthal, Orth, Stojowski, Hughes, Goodson, Spry and Biart. Each composition has been carefully edited and "keyed" for the master lesson that accompanies it. Price, $1.00.

Fine Merchandise Given Free for New Etude Subscriptions!

Every piano teacher should strive to make her class "100 per cent ETUDE." As collateral reading, while pursuing his studies, the student will find THE ETUDE of inestimable value. Music teachers can obtain fine merchandise as a reward for their efforts in obtaining subscriptions for the ETUDE MUSIC MAGAZINE. Each subscription at $2.00 means one point toward any piece of merchandise selected. On another page of this issue, there is a list of fine merchandise given to our musical friends as a reward for their efforts. Send post card for Complete Premium Catalog.

Fraud Agents

We wish to say as emphatically as possible, that music lovers should exercise every possible caution in placing subscriptions for THE ETUDE MUSIC MAGAZINE. There are many unscrupulous men, and women too, who will sell THE ETUDE, or a combination of magazines including THE ETUDE, at prices which are cut so low that that feature alone should be a warning that the offer is not a legitimate one.

Pay no money to strangers unless you are convinced of their reliability. Pay no money on any contract offered you before reading it and are willing to assume the risk of loss.

We especially caution our Canadian friends against a gang of swindlers working in the Provinces, and who offer THE ETUDE and other publications at prices that do not cover the cost of printing.

We cannot be responsible for the work of crooks so please help us to help you. Authorized representatives of THE ETUDE carry the official receipt of the Theodore Presser Co., publishers.

Changes of Address

When changing addresses, please advise us at least four weeks in advance, giving both Old and New addresses. As wrappers are prepared several weeks in advance of the publication date, it is important that ample time be given us to insure against loss of copies.

The Crowd Did Not Wait

In a recent report of a large indoor athletic meet the newspapers throughout the country reported one race by telling the time made by the winner and the next few following him, and then of the others said "the crowd never saw them finish."

Despite the efforts of music editors everywhere to publish only those compositions which they feel have some appeal, there are among published compositions those which the crowd never saw finish in the race to success. We might liken the exhausting of a printed edition to the finish of a race, and the printing of another edition to the beginning of another race.

Runners who make good go on to new efforts and new races, but those who never finish in the first meet in which they appear are like the published composition which never sells out the first edition. Every number in the following list has sold out the previous edition in better than average time and, because of the need of a new edition, was among those publications represented on the printing orders of the past thirty days.

World of Music

(*Continued from Page 282*)

THE NATIONAL MUSIC COMPETITION FESTIVAL (ninth region) will be held from May 6th to 8th, in connection with the Third Annual Mid-Western Band Festival at the University of Kansas.

HARRY L. VIBBARD, professor of the organ in the College of the Fine Arts of Syracuse University, passed away on January 14th, at the age of sixty-seven. He had been widely known for his work and had held this post for thirty-seven consecutive years, with the exception of a two years absence for study in Paris.

THE ANNUAL OPEN AIR FESTIVAL of Wagner operas will be given again in July and August, in the woods of Zoppot a popular seaside resort near Danzig.

THE IOWA HIGH SCHOOL MUSIC FESTIVAL will be held from May 5th to 7th, in its twelfth event of this sort. In 1937 one hundred eighty-one schools, with six thousand nine hundred forty-three contestants, and five hundred thirty-four music teachers, supervisors, and school administrators, participated; which is expected to be surpassed this time.

THE PERFORMING RIGHT SOCIETY of London has established a scholarship of one thousand dollars annually, to enable young South African composers to study in the home country.

THE ORQUESTA SINFONICA of Mexico City announces its regular summer season of eleven concerts, with Carlos Chavez conducting. The programs will be given in the Palace of Fine Arts, and among the novelties will be prize compositions by Mexican composers, the "H. P. Ballet" of Chavez (of varied Philadelphia memories), and native dancers in their aboriginal art.

THE INSTITUTE OF MUSIC of Montevideo, Uraguay, has presented its first "all American" program, under the direction of Dr. Francisco Lange, head of the school and editor of the Music Bulletin.

* * * * *

COMPETITIONS

THE AMERICAN SOCIETY OF THE ANCIENT INSTRUMENTS is offering a Prize of Five Hundred Dollars for a composition to require not less than fifteen minutes nor more than twenty-five minutes in its performance, and to be suitable for interpretation by this ensemble. The competition closes August 31, 1938; and full information may be had from Mr. Ben Stad, founder and director of the organization, 4331 Chestnut Street, Philadelphia, Pennsylvania.

A PRIZE OF ONE THOUSAND DOLLARS is offered by the Cincinnati May Festival Association, for a composition for a children's chorus of six hundred voices (to which an adult chorus may be added), with orchestra, or organ, or both. The work will be performed at the May Festival of 1939; entries close August 31, 1938; and full information may be had from the May Festival Association, 142 West Fourth Street, Cincinnati, Ohio.

THE W. W. KIMBALL PRIZE of One Hundred Dollars is offered again by the Chicago Council of Teachers of Singing, this time for a setting of the poem, *Longing*, by Matthew Arnold. The contest closes June 1, 1938, and full particulars may be had from D. A. Clippinger, 617 Kimball Hall, 306 South Wabash Avenue, Chicago, Illinois.

ONE THOUSAND DOLLARS is the prize offered by *The Forum Magazine*, for a new American national anthem to displace the *Star Spangled Banner*. The new work should "suit the voice" and "challenge the American people to be alert to their liberties." The contest closes June 30th. Particulars from *The Forum Magazine*, 570 Lenox Avenue, New York City.

Preparing a Concert Program

A LETTER recently received from ne signing himself "Guitarist," a Sub- ect was brought up, that should be of st to every player of a fretted instru- We quote the principal portion of etter:

have been devoting two hours daily e study of the guitar for the past three . Not until about six months ago did in to play in public, and so far have ed my efforts to the rendition of of medium difficulty. I have memor- about fifteen numbers and when I play at home, they appear to sound per- But when I get on the stage my rs do not seem to function right and never get my solos "across" the way uld like to. Can you suggest any way would help me to overcome this con- n?"

e can most heartily sympathize with player, as a great many public per- ers are subject to this condition com- y known as "stage fright," especially alent during the early stages of one's r. One of the first requisites for any appearing before an audience is to try eep fit physically and mentally. A hy mind in a healthy body will give self confidence and assurance and this self will react favorably on the audi- . Keep your mind from dwelling upon ossibility of failure, step on the stage a smile on your face and an inward rmination that you are going to do best, and half of the battle is won. e of the main causes of nervousness is lack of a thorough preparation of the bers to be rendered, especially notice- amongst the younger players. When a composition is taken up for study ing should be slighted. Play it over a times at a slow *tempo* to obtain a gen- outline of its musical structure and the t of the composer, then practice every se diligently over and over; do not over technically difficult passages, un- hey are mastered and respond to the ers as readily as the easier sections. Ex- sion marks must be carefully noted memorized. Allowing about thirty or y minutes daily, at the end of two weeks number should be fairly well mastered. v put it aside for a week and then re- e practice just as seriously as at first another week, and again every other k for a period of two or three months. that time the number should be ready performance.

his system of practice is primarily mmended to the average player having t two hours at his disposal. The proper sion of this practice period, devoted to mastery of any instrument is also of t importance. The usual procedure many students is to begin with scale rcises, arpeggios, etudes, and conclude concert pieces. The writer for many rs has been in favor of reversing this er; and those who have adopted his gestion in the past have adhered to it obtained good resuts. At the begin- g of the practice period place yourself the proper frame of mind and concen- te on what you are going to do to the lusion of everything else. Now play over numbers in your repertoire that you ect to use in the next concert, just as ugh a discriminating audience were lis- tening to you. Follow this with memoriz- ing a new composition and this in turn with scale and arpeggio exercises and etudes. After a time you will have culti- vated the habit of playing your numbers perfectly, without first having gone through the process of limbering up your hands and fingers. This will prove a valuable asset, when you are called upon to play without having an opportunity to "warm up."

One of the problems the player of fretted instruments has to contend with is the lack of opportunities to play in public, unless he is a recognized artist of consider- able reputation. For this reason the young player should miss no chance to play in front of others and remember that amateur entertainments and musicales in churches, lodges and private homes offer a great field for the budding artist to gain the necessary experience for further musical development.

Selecting a Program

LET US NOW for a moment give considera- tion to the proper selection of the program numbers. Too many artists think of them- selves only and what they like to play and forget that the audience sometimes differs with their musical taste. To be a success your performance must please and arouse your listeners. If your program calls for two groups of three or four numbers, start with a selection well within the range of your technic, one of bright and cheerful character, that will put your audience into a receptive frame of mind. Follow this with a composition in a slow *tempo* and then play your principal number, keeping in mind that these three selections should be in different keys to avoid monotony. Use a similar method in selecting the pieces for your second group.

Those having professional aspirations should attend the recitals of all the great artists, observe their methods, stage deport- ment and program building.

Since the literature for the fretted instru- ments contains many original compositions of great merit, some of them should be in- cluded in the repertoire of every artist, as they will generally give him an opportunity to bring out all the resources of his re- spective instrument and often these will be hailed as musical novelties. In addition to these there are unlimited numbers of light classic transcriptions that can be used with gratifying results.

What we must not forget is that every instrument has its limitations; but we must remember that it also has characteristics of its own, which, when properly projected, will appeal to many.

When a banjoist steps before an audience, it at once begins to feel cheerful because of the bright snappy music it is accustomed to associate with the banjo. The guitar suggests romance, Mozart minuets and Bach preludes; the Hawaiian guitar, dreamy waltzes and hulas; the mandolin, Venetian barcarolles and Neapolitan tarantelles.

But remember also, that present day audiences are discriminating, made so through hearing the best artists over the radio. The big prizes go to those at or near the top in the musical entertainment field. To reach it means not only natural talent but hard study for some years.

It is worth it, why not try for it?

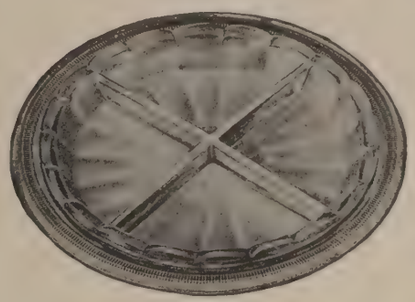
"It is better to create than to be learned; creating is the true essence of life."—Niebuhr.

WE'LL SEND YOUR CHOICE OF THESE

Valuable Rewards



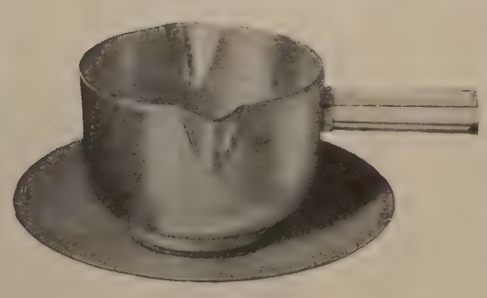
WITHOUT COST, FOR MAKING NEW FRIENDS FOR "THE ETUDE"

● In return for subscriptions to THE ETUDE, which you can easily and quickly obtain from your musical friends and acquaintances, we will send your choice of these attractive articles WITHOUT COST. All you need do is send us the name and address of each subscriber together with $2.00 for one year or $3.50 for two years, together with your choice of reward. It's as easy and simple as that. Get your first order and send it to us today. In Canada add 25c a year for postage. Foreign postage is $1.00 a year extra.

KROME-KRAFT SERVER

Here is a Server for cake or sandwiches that also may be used as a center piece for fruit, etc. It is 10½" in diameter and has a bright chromium finish. Awarded for securing THREE SUBSCRIPTIONS.

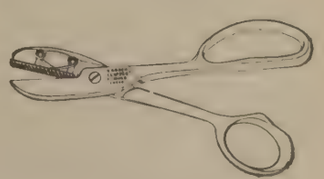
RELISH DISH



This type Relish Dish serves a very practical purpose and makes a particularly acceptable gift. The plate is 8¾" in diameter, is finished in chromium and has a rolled, stamped design rim. The four-compartment crystal glass liner is removable so that it can be used with or without the plate. Awarded for securing ONE SUBSCRIPTION. (Not your own).

PYREX CASSEROLE

As a gift or for your personal use, this Casserole is especially desirable. It has cast handles and feet and a pierced, bulged and embossed design frame, finished in chromium. The lining and cut design cover are genuine heat-resisting pyrex. Size, 7" in diameter. Capacity, one quart. Awarded for securing FIVE SUBSCRIPTIONS.



SAUCE or GRAVY SERVER

Here is a modern design Server that is distinctly different. The container has a knurled edge, comes with an ivory colored handle, is 4¼" in diameter and 3" high. The Tray is 6½" in diameter. Both are chromium-plated. Awarded for securing THREE SUBSCRIPTIONS.

GARDEN SHEARS

This unique implement not only cuts clean but holds the flower part of the stem as it is cut. Saves scratches, increases reach. Your reward for securing ONE SUBSCRIPTION. (Not your own).

FLASHLIGHT

All-metal, chromium-finish, complete with bulb and battery. A surprise gift for boys —a practical present for grown-ups. Your reward for securing TWO SUBSCRIPTIONS.

THE JUNIOR ETUDE

Edited by

ELIZABETH A. GEST

MISS PRATT: We are to study Haydn at our meeting to-day. First of all, Patricia will play the first movement of the "Sonata in F major," by Haydn.
(Patricia goes to piano and plays the Allegro.)

VIRGINIA: Now, Donna is to give a short talk on the characteristics of Haydn's music.

DONNA: Haydn, who was born near Vienna in 1732, led one of the happiest lives of any of the great composers, and his music seems to reflect this peaceful, cheerful existence. The composer was musical director in the house of the Esterhazy's, a rich family, for whose orchestra he wrote many works. He was a kind man, devoted to his patrons, as to all his friends. Always fond of a joke, even in music, Haydn's unfailing fund of humor crops out often in his writings.

MURIEL: Well, every biography tells of the humor of his music, and to tell you the truth, I can't see anything funny about it.

MISS PRATT: Here is one of his jokes. People at orchestral concerts often fell asleep during the music. Haydn decided to surprise these listeners, and keep them awake. Eleanor will play an arrangement of the "Surprise Symphony," and you will notice the surprise.
(Eleanor plays the well known excerpt from this symphony.)

MURIEL: That surprise was daring. I can imagine Papa Haydn conducting this piece and listening for the gasps in the audience!

MISS PRATT: No doubt the whole orchestra had a hard time to keep their faces straight. Here is another of his jokes.

The orchestra at the great Esterhazy palace had been promised a summer vacation, but at the last minute Prince Esterhazy decided to postpone their holiday for two months. Greatly disappointed, Haydn hit upon a way to protest.

He wrote a special symphony to be played at what should have been the last concert—a work even now called the "Farewell Symphony" or the "Candle Symphony." At the end of the first part of the last movement, two players were to blow out their candles, close their books, and leave the stage as if too tired to continue, soon two more players were to leave the stage. Two by two the musicians were to blow out their candles and leave, until only two violins were left, to finish, alone.

The happy ending of this story is that when the orchestra actually did this, everyone was amused, and the Prince said, "Haydn, I understand you. The gentlemen may leave tomorrow."

AMY: That took nerve, too! I never knew Haydn was like that!

MISS PRATT: Now Patricia will play the *Allegro* of a sonata, humorous, but without a story.
(Patricia plays.)

AMY: Would that be called "playful" music? It really sounds to me like two little squirrels chasing each other and jumping away.

MISS PRATT: Yes, the theme is most capricious there.

VIRGINIA: Now Amy will play the *Adagio* from the "Sonata in E-flat."
(Amy plays and the girls are astonished that it is serious.)

MISS PRATT: You see, Haydn is not always jolly. This is one of his most dramatic moments, and very fine it is.

VIRGINIA: The program ends to-day with Ruth's playing of the *Presto* from the "Sonata in F major." This is the last movement of the sonata which Patricia began for us.

RUTH: I know that the first theme is another instance of fun in music. It is such a rollicking little theme, jumping where you least expect it to jump, and eluding you before you can reach it.

MURIEL: I am so glad we had this meeting about Haydn. I will know how to listen to his music a great deal better from now on. And to think he played such tricks in really great music!

PATRICIA: I wish I could have known him. Instead of being as dignified as the white-wigged scholar he looks, probably he would have been great fun to know.

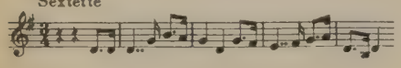
HELEN: These meetings make us feel we know the composers much better.

MISS PRATT: Let us take up Mozart next time, shall we? And Helen you must play them.

HELEN: I will, good-bye.
Good-byes are exchanged.
Curtain.

THE HAPPY MR. HAYDN

(Playlet)



By JEAN C. STEVENSON

Cast: Members of Miss Pratt's Study Club. Miss Pratt, teacher.
Scene: Interior of piano studio where a Study Club meeting is in progress.

? ? ? Ask Another ? ? ?

1. If a complete measure is made up of a quarter rest, an eighth note, an eighth rest, four sixteenth notes and a quarter note, what would be the time signature?
2. Who wrote the opera Faust?
3. When did Mozart die?
4. What is an oratorio?
5. What is the interval from G-flat to D?
6. From which opera is this melody?

Sextette

7. In what opera is the *Pilgrim's Chorus?*
8. Who wrote it?
9. From what country does the song *Santa Lucia* come?
10. What is a minuet?

Learning the Scales

By Ruth Tysinger (Age 10)

OH, ONCE there was a little girl, whose name was Betty Sales; she meant to play her music well, but could not learn her scales. She thought how fine and grand 'twould be, if she could sit at ease and, with her fingers curved just so, trill up and down the keys. She fretted and she worried, and gave up in bleak despair; her dreams of learning music well seemed drifting on thin air. Then one day soon, a fairy kind, who knew just what to do, a secret dropped in Betty's ear ('twill help both her and you). "Try practicing your scales, my dear, a little while each day, and ere you know the time has passed, you'll learn the scales for aye. For all musicians whom we love, were once so very small; and had they not the scales learned well, would ne'er have played at all." So Betty took the good advice the fairy gave that day, and practiced with a will so strong that she soon learned to play. And now her music thrills the world as she plays on with ease; her fingers curved and held just so, play up and down the keys. And now she's glad the secret's learned that you and I now share; if we would be musicians great, just give our SCALES a care!

HADYN CONDUCTING AT THE ESTERHAZY PALACE

TUNING UP

By CLAIRE McLAIN

Oh, fiddle-de-dee,
Oh, fiddle-de-dee,
My fiddle I love,
My fiddle loves me.

I rosin the bow
And tighten a string,
I get it in tune
So fiddle can sing.

I play a long G
So deep and so round,
And then the sweet D
With soft, pleasing sound.

The A string is next,
Its strong tone so gay;
The E string comes last—
I'm ready to play.

Practice Time

By Erna Kable

MARY ANN was on her way home from school. She was smiling and humming a little tune. She was dangling her hat instead of having it on her head where it belonged on a bright sunshiny day like this.

As she passed Miss Patty Westbrook's place, she looked up. Miss Patty was in the garden gathering roses. She was really an old lady and strange as it seemed, she still played the piano beautifully.

"Hello, Miss Patty!" Mary Ann called.

"It's Mary Ann!" Miss Patty answered, "You're out of school early, aren't you?"

"Yes, this is my practice time, but I'm already ten minutes late. I'm always late. Something happens every day. I never get my full hour of practice done."

"Come in, let's sit here under my big tree for a moment," Miss Patty said and led the way to a garden bench.

"Have you ever thought," she said, "that when you fail to practice five or ten minutes of your practice hour that you are stealing?"

Mary Ann gave a start, her eyes grew big and round.

"It is just as dishonest to steal time as to steal a pencil or a handkerchief. Your parents pay your teacher money each month; for that money they expect her to teach you a certain amount. Now, unless you practice your full time, you can not learn as much as the teacher should teach you. When you fail to do your part, she can not do hers. You are cheating yourself, your teacher and your parents."

"Oh," Mary Ann answered in a wee small voice, "I'm so ashamed. I don't want to be a thief."

"Of course, you don't," Miss Patty said, "that's why I told you this. You see—once upon a time, long ago, if it had not been for a friend who told me the same things that I've told you to-day, I might have been a thief, too. Run along now, and get to your practice. We've lost quite a bit of time talking."

"We haven't lost time, Miss Patty, I'll make up every minute we've talked away, and—I'll not steal any more time!" And Mary Ann's playing certainly did improve.

TOMMY'S RHYTHM

By ESTELLE SHERMAN

ENTION, CHILDREN," said the teacher. ier's Day will soon be here. Invite parents to our entertainment at three k. I will now assign the parts you o learn."

me little heads were held up high to e their perfect posture, so that they attract attention and receive an im- nt rôle. Others hid their faces and down in their seats so the teacher ln't see them. One little head— my's—was above the rest, it seemed on a stick. He was anxious to receive nportant part.

ommy, come here. Will you be our st? You know, I thought we would some one from our own class and e obliged to call on an upper class- " said the teacher. "Here are two ions for you to practice: one, a song he class; the other, the music for 's dance. We'll have a rehearsal Fri- morning."

ow, Tommy had taken lessons on the for a year and a half and could read very quickly. Everyone thought of as a coming musician. He practiced fully and was ready for rehearsal on ay.

e class marched into the auditorium took their seats. "We'll have Betty's e first. Come, Betty and Tommy," an- ced the teacher.

ommy and Betty went to the platform Tommy played the introduction; the e was on.

ddenly, Betty stopped and pouted, "I dance to that, his time isn't right. isn't counting."

Tommy, aren't you counting?"

Tommy shook his head shamefully.

"Don't you know, Tommy," asked the teacher, "you must always count? I guess it will be necessary to ask someone from the upper grades after all." "Please, Miss Brown," Tommy pleaded, "I promise to practice and count and have the time perfect for next week."

"We haven't much time, but I know you're sincere. I'll give you another chance."

On the way home, he saw Betty. "Look here, Tommy, you spoiled my dance and I'm angry," she began. "If you spoil my dance at the entertainment, I'll always be angry." Tommy went home heavy hearted but with courage.

He sighed. "Why did they have to put those dotted notes there—let me see, four-four time; dotted eighth gets three-quarters of a beat; then a sixteenth after that—ONE, TWO, THREE, FOUR—Over and over he practiced, slowly at first and then he surprised himself to find that he had learned it so quickly!

That night and every night until the entertainment, he went to sleep counting.

At last, the day came. "A dance by Betty, accompanied by Tommy," announced the teacher.

And, with an air of assurance, Tommy took his place and accompanied Betty. It seemed only a minute when it was over and applause swept the auditorium when they stepped from the platform.

"Fine, Tommy," exclaimed Betty. "No more of this no counting stuff! You know that just does not go, and a dance *must* go!"

nnesingers, Meistersingers and Mothersingers

(For Mother's Day)

By Aletha M. Bonner

g years ago, in foreign lands,
re lived the *Minnesinger* bands,
Meistersingers—wandering bards
played and sang in castle yards.

re is another music clan,
these have sung since time began;
will their song of love e'er die—
the Mother's Lullaby

Naming the Beats

GAME

By Marie Stone

ORE BEGINNING this game draw on small lboard squares the following time sig- res and music characters (one to a re): 2/4, 3/4, 4/4, whole note, whole . half note, half rest, quarter note, and uarter rest.

ivide the players into two groups, with extra person to act as director. The ler picks up a time signature card and a note or rest card, and holds them hat every player can see what they are. he boy or girl who can first name the ber of beats this note or rest is worth the given time signature receives a ton or similar counter. Whole notes not be used in two-four or three-four sures, and the one who quickly recog- s these impossibilities wins a button

ontinue playing until all the buttons e been used; the group then having most buttons is winner.

Schumann Puzzle

By Stella M. Hadden

EACH WORD contains either five or seven letters. The central letters reading down give the kind of music for which Schumann is best known. Answers must give all words.

1. He taught in the Conservatory at —
2. He lived near the River —
3. His wife's first name was —
4. He wrote about two hundred and fifty —
5. His father wrote and sold —
6. His native land was —
7. He wrote music for Goethe's drama called —
8. He lived for five years in the city of —
9. He edited a — journal for ten years.
10. His birthplace was the town of —

Babista Juniors at Club Banquet, Lucene, Tayabas Philippine Islands

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl, under sixteen years of age may compete, whether a subscriber or not, and whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.

Subject for story or essay this month, "Radio Concerts." Must contain not over one hundred and fifty words and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by May eighteenth, 1938. Names of prize winners and their contributions will appear in the October issue.

RULES

Put your name, age and class in which you enter on upper left corner of your paper, and put your address on upper right corner.

If your contribution takes more than one sheet of paper, do this on each sheet. Write on one side of paper only.

Do not use typewriters and do not have anyone copy your work for you.

When schools or clubs compete, please have a preliminary contest first and send in no more than two contributions in each class.

Competitors who do not comply with all of the above rules and conditions will not be considered.

Piano Music

(Prize Winner)

MANY PEOPLE find that piano music is a good companion which young people should carry with them through life. When people are sad and lonely they enjoy sitting down and playing a slow, sad piece. Other moods, too, can be expressed by this never failing companion, piano music.

This companion should be a child's closest friend. Many happy hours in the future can be enjoyed by our own two hands if we practice now. Often when I am told to practice I do not feel like it. Then my mother reminds me of the many happy hours ahead of me with my piano music, and so I do not mind practicing, for I really love piano music.

ROSEMARY MARRON (Age 13), Class B,
Iowa.

Etude Club, Healy, Kansas

Piano Music

(Prize Winner)

PIANO MUSIC, to me, is the most beautiful music in the world. My piano is my symphony, my keys are my instruments and each finger is a musician. I am the conductor and the musicians obey me. Upon my mood depends the types of pieces I shall play. My musicians are always ready to play at my command, whether it is a Bach Partita or a Beethoven Sonata.

Piano music expresses my every thought. If I am lonely I turn to my piano for company. If I am sad I turn to my piano for comfort and if I am happy my piano expresses my joy. Is there anything that can not be remedied by the beautiful music of a piano? If there is I hope I shall never find it.

BETTY LU MAYER (Age 14), Class A
Illinois.

Letter Box

DEAR JUNIOR ETUDE:

I have been taking lessons from my mother for four years and can not remember a time when THE ETUDE was not in our home. Now I am taking violin lessons. My teacher has organized three junior orchestras and three bands in our city; and there is also a city band.

When I prepare for any public appearance I often practice the piece until I am tired of it, but then my mother always says to remember that practice makes perfect.

From your friend,
ELIZABETH STRIKE (Age 12)
Michigan.

DEAR JUNIOR ETUDE:

The name of our club is the St. Cecelia Music Club. We have sixteen members and I am the president. We also have a secretary and treasurer.

Our meetings are held once a month at which we have a program, consisting of piano numbers, songs and readings. Three of the members bring refreshments which are served after the program. Games are played, too, and prizes are awarded.

Every spring we give a recital in our school auditorium, which is always well attended.

From your friend,
VERONICA MALOVEC, (Age 14),
Wisconsin.

Piano Music

(Prize Winner)

I LIKE PIANO MUSIC because it sounds beautiful. In school our teacher plays beautiful music to us to rest. Sometimes the music is soft and sometimes loud. Marches are loud and lullabys are soft. We march to marches, and for skipping and games we have jigs. Some music makes me feel gay and some sad, and some makes me feel sleepy. I like the sonatas of Beethoven on the piano because some are bright and some are sleepy.

I enjoy my piano lessons because I like piano music and I will be able to play all the different kinds of piano music when I grow up.

JEAN BUDDY (Age 7), Class C,
Massachussetts.

Answers to Ask Another

1, Four-four. 2, Gounod. 3, 1791. 4, A composition for chorus, solo voices and orchestra, the words relating to a sacred subject, and produced without any action, scenery or costumes. 5, An augmented fifth. 6, Lucia. 7, Tannhäuser. 8, Wagner. 9, From Italy; it refers to the Bay of Naples. 10, A slow, stately dance in three-four time.

LETTERS FROM ETUDE FRIENDS

A Rosetime Recital

TO THE ETUDE:

Noticing your booklets for special recitals, I want to tell you of a very successful recital that I presented with only three beginners.

It was called "A Rosetime Recital." We had a theme song and all the music pertained to the various kinds of roses. There were a trio, duets and a few readings. The little girls were dressed as pink roses and the studio was decorated with roses.

It was very enthusiastically received; and it has added a new pupil to my class already!

MRS. T. B. PAYNE.

The Accordion Department

(*Continued from Page 335*)

The Used Instrument

LAST, BUT NOT LEAST, let us consider the advisability of purchasing a used instrument. There are often fine opportunities to purchase good used instruments and those whose funds are limited may have the pleasure of owning an accordion without investing a large amount of money. This applies also to the skeptical purchaser who wonders whether or not he will ever learn to play.

The fact that an instrument has been used does not condemn it, because the better makes of accordion, which have hand made reeds, improve in tone the more they are played. Instruments which were of inferior quality and workmanship originally, naturally grow worse with time and should be avoided, no matter how attractive the purchase price may seem. All advice pertaining to new instruments is applicable to used instruments with the additional caution to observe carefully if a used instrument is absolutely air-tight. Also see that the keyboard is of the low modern type rather than the old type with high piano keys. In all these matters we again recommend that the novice purchaser ask an accordion authority to assist him in appraising a used instrument as to quality of tone and other details.

Accordion Questions Answered

Q. What is the most graceful position for women playing the accordion, seated or standing. What touch should be used when playing the keyboard side of the accordion; that is, legato *or* staccato?—Miss E. F. P., Wisconsin

A. It is possible for ladies to appear graceful when playing in either a standing or seated position. The standing position is the same as for men. When seated, ladies may assume a graceful position by resting the piano keyboard against the right thigh and lowering the left knee so that the bass section rests on top of it. Ladies will find the use of a back strap convenient to hold the instrument firmly in place.

The nature of the music being played governs the touch to be used. Novelettes and similar music require an almost *staccato* effect, whereas selections to produce an organ effect, such as *The Pilgrim's Chorus* from "Tannhauser" require a smooth, *legato* touch. The passing from note to note must be made without any perceptible hiatus between the ending of one and the beginning of the next. Always observe markings as given by the composer.

Q. I play the accordion but am not sure that I am holding it correctly as it is not comfortable. I have never had a lesson.

—Miss D. T., Tennessee

A. The reply given to Miss E. F. P. will also answer your question. Be sure that the instrument is strapped firmly so it does not sway as you play.

* * *

"The 'new deal' whether in politics or in education, implies a new coöperation. We need leaders now as always, but the great and healing events for which we long can come only from concerted interest and effort. The new coöperation implies a renewed dedication to the cause of music in its ever-changing aspects."—Louis Woodson Curtis.

These recitals are stimulating, not only to the pupils but also to parents and friends. An entire community will interest itself in such programs, in contrast to the total indifference often shown for the usual "Piano Recital by Pupils of Miss Mary Jones." Progressive music teachers, who are in search of new and beguiling ideas, will be more than enthusiastic when they try these few simple inventions.

Next Month

GLORIOUS JUNE and THE ETUDE

THE ETUDE hails the most joyous, exuberant month of the year, with an issue as full of interest and information as we might put out in the Christmas Holiday Season.

JEANETTE MacDONALD

OPERETTA AND THE SOUND-FILM

Jeanette MacDonald, often mentioned as "the loveliest prima donna of the screen," and who has been heard by millions from coast to coast, gives invaluable advice to those interested in preparing for a film career. You, and many of your friends, will revel in this very timely article.

BE READY FOR YOUR OPPORTUNITY

Eugene Ormandy, who has risen to the loftiest heights among the world's great orchestral conductors, tells the most unbelievable romance of the sequence of events which led him to the position of Co-Conductor of the Philadelphia Orchestra.

PIANO PARTIES ARE FUN!

You will believe it after you have read Madelon W. Jackson's article telling how to give them. Both teachers and students will enjoy reading and experimenting with this profitable and fascinating scheme.

MAKING MUSIC PAY IN A DEPARTMENT STORE

I. A. Kirschman is the executive director of one of the country's largest and finest department stores. He tells how, by creating an affinity with the public through music, the store's interests, as well as those of its employees, have been fostered.

THE MUSIC OF MARCHING MEN

Ex-Lieut. C. Seeward Peterson, M.A., is a real soldier who has seen active service in The Great War, and in the Philippine Islands. He is also a musician who in the coming article has furnished Etude readers with a lively, yet scholarly, review of our military music.

OTHER INTERESTING ARTICLES and special features by distinguished teachers and musicians, PLUS 24 pages of interesting new music to play and sing.

"It is told of Brahms, of all people, that when someone made a slighting remark about Mendelssohn, thinking to please him, he said, 'You must not speak ill of Mendelssohn! He was the last of the great ones!'"

TEACHERS:—You can encourage parents to keep up children's music lessons if you don't discourage them with the cost of music. CENTURY EDITION—at only 15c—keeps the cost of pieces at a minimum—yet, doesn't restrict your teaching in any way.

Remember, this standardized price has not been achieved by printing an inferior Edition. If you are at all skeptical regarding this, we would urge you most earnestly, for your own sake and for the benefit of your students, that you secure a copy of Century and compare it with any other existing edition which you may have or may be familiar with, and we are certain that Century will prove positively and conclusively that it has no superior.

All the suitable classics and a multitude of Standard modern compositions are available in "CENTURY" at this standardized 15c price, irrespective as to whether the Edition contains two or twenty pages.

Here are a few selected at random from our catalogue:

CENTURY PIANO SOLOS, 15c ea.

(Capital letter indicates key—number the grade.)

132 **Amaryllis** (Air of Louis XIII), E—4....Ghys
746 **Avalanche,** Am—3 ....Heller
1321 **Barcarolle** (Tales of Hoffm'n), F—3..Offenbach
514 **Beautiful Blue Danube,** D—4 ....Strauss
1606 **Betty's Waltz,** C—1 ....Martin
2750 **Big Bass Fiddle, The,** C—1 ....Hopkins
147 **Black Hawk Waltz,** E♭—2 ....Walsh
2416 **Blue Butterflies,** Valse Cap., D—4..Leon Dore
516 **Bridal Chorus** (Lohengrin), B♭—3...Wagner
1963 **Bunch of Daisies, A,** Valse, G—1 ....Martin
999 **Butterfly, The,** Etude, Em—3 ....LaVille
1704 **Butterfly,** Op. 81, No. 4, D—3 ....Merkel
968 **Crimson Blushes,** Caprice, G—4 ....Lester
2973 **Dance of Goldenrods,** F—3 ....Fitzpatrick
2671 **Dark Eyes,** Dm—3 ....Grooms
2541 **Deep River** (Transcription), C—3 ....Grooms
1385 **Edelweiss Glide,** Waltz, E♭—4 ....Vanderbeck
2738 **El Choclo** (Tango Argentine), Dm—3..Villoldo
1018 **Elegie** (Melody), Op. 18, Em—4 ....Massenet
1614 **Elizabeth Waltz,** C—1 ....Martin
1225 **Fairy Wedding,** Waltz, C—2 ....Turner
1304 **Falling Waters,** Reverie, E♭—4 ....Truax
209 **Fifth Nocturne,** Op. 52, A♭—4 ....Leybach
1959 **Floral Parade, The,** Valse, C—1 ....Martin
217 **Flower Song,** Op. 39, F—3 ....Lange
1070 **Flowers and Ferns,** Tone Poem, G—4..Keiser
1109 **General Grant's March,** F—3 ....Mack
238 **Gypsy Encampment,** Am—2 ....Behr
628 **Gypsy Rondo,** C—3 ....Haydn
2379 **Hanon Virtuoso,** Pianist, Part 1 ....Burdick
2203 **Hungarian Dance,** No. 5, A—5 ....Brahms
1645 **Hungarian Rhapsody No. 2,** C♯m—5....Bendel
1013 **In Rank and File,** C—2 ....Lange
1015 **Kamennoi Ostrow,** F♯—5 ....Rubinstein
2097 **La Golondrina, The Swallow,** G—3..Serradell
2694 **Let 'Er Go!** (March) F—3 ....Wood
1319 **Love and Flowers,** Em—3 ....Aldrich
2117 **Love Dreams** (Liebestraum), A♭—6 ....Liszt
313 **Melody in F,** F—4 ....Rubinstein
1891 **Menuet in G,** No. 2, G—2 ....Beethoven
1813 **Minuet** (Don Juan), G—2 ....Mozart
1173 **Minute Waltz,** Op. 64, No. 1, D♭—3 ....Chopin
2972 **Moonbeams on the Lake,** C—3 ....Fitzpatrick
1186 **Moonlight Sonata,** C♯m—6 ....Beethoven
328 **Morning Prayer,** Melodic, F—2 ....Streabbog
1226 **Mountain Belle,** Schottische, F—2 ....Kinkel
352 **Over the Waves,** Waltzes, G—3 ....Rosas
361 **Poet and Peasant,** Overture, D—4 ....Suppe
1181 **Polonaise** (Military), Op. 40, A—4 ....Chopin
1028 **Prelude,** Op. 3, No. 2, C♯m—5..Rachmaninoff
2428 **Robin's Return, The,** A♭—4 ....Fisher
376 **Rondo Capriccioso,** Op. 14, E—5..Mendelssohn
681 **Rustic Dance,** E♭—3 ....Howell
2740 **School Pictures,** C—1 ....Hopkins
1341 **Sonata Pathetique,** Cm—5 ....Beethoven
981 **Star of Hope,** Reverie, F—3 ....Kennedy
2932 **Trip to Niagara, A,** B♭—3 ....Cornish
1168 **Trovatore, Il,** Fantasie, E♭—5 ....Smith
2670 **Two Guitars** (Transcription), Dm—3..Grooms
453 **Waves of the Danube,** Am—3 ....Ivanovici
2696 **Wayside Chapel, The,** Op. 42, F—3-4..Wilson
2695 **Whoop 'Er Up!** (March), G—3-4 ....Wood

VIOLIN AND PIANO DUETS, 15c ea.

Each number has separate parts for Violin & Piano

A—1 to A—3 Very easy to medium
B—1 to B—3 Easy to difficult
C—1 to C—3 Medium to concert solos

2178 **Beautiful Blue Danube,** A—3 ....Strauss
1272 **Boat Song,** A—1 ....Vogt
1144 **Crimson Blushes,** Caprice, B—2 ....Lester
2667 **Dark Eyes,** B—2 ....Grooms
1835 **Dream of the Shepherdess,** C—1 ....Labitzky
1275 **Dream Waltz,** A—1 ....Vogt
2408 **Hungarian Dance,** No. 5, B—3 ....Brahms
1457 **La Paloma,** A—3 or B—2 ....Yradier
1745 **Love and Flowers,** A—3 or B—2 ....Aldrich
1890 **Menuet in G,** A—3 or B—1 ....Beethoven
1460 **Over the Waves,** Waltz, A—3 ....Rosas
2129 **Poet and Peasant,** Overture, B—3 ....Suppe
1151 **Star of Hope,** Reverie, B—1 ....Kennedy
500 **Traumerei and Romance,** B—2 ....Schumann
2666 **Two Guitars,** B—2 ....Grooms
1744 **Valse Barcarolle,** A—2 ....Offenbach

The Century Catalogue contains over 3,000 compositions consisting of **PIANO SOLOS—DUOS** and **TRIOS—VIOLIN** and **PIANO—DUOS—TRIOS** and **QUARTETS—SAXOPHONE** and **PIANO—MANDOLIN** and **GUITAR** and **VOCAL.**

Ask your dealer for Century music, and if he can't supply you, send your order direct to us. Our complete catalogue will be mailed you FREE on request.

Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

PADEREWSKI IN 1910

A "PADEREWSKI HALL" is proposed by music lovers of Lausanne, Switzerland. The project was broached in 1898, and in both 1903 and 1928 Paderewski gave concerts of which the proceeds went towards this enterprise. He already is an honorary citizen of Lausanne; and the concert hall is badly needed, as visiting orchestras must now use the Cathedral.

COPENHAGEN, DENMARK, a comparatively small capital, has its three symphony orchestras: the Philharmonic Orchestra, the orchestra of the Royal Theater, and the Radio Orchestra.

THE PRIZE WINNING "Symphony in A minor" of Gardner Read, first heard last November by the Philharmonic-Symphony Orchestra of New York with John Barbirolli conducting, had its first performances in his native Chicago, on February 17-18, by the Chicago Symphony Orchestra under Dr. Frederick Stock.

BRUNO WALTER has resigned his post as director of the Vienna State Opera, as a result of the absorption of Austria by the German Reich. He had but recently signed a contract to act for three years.

BOITO'S "MEFISTOFELE," has been revived at the Royal Opera of Rome, in a superb edition arranged and directed by Tullio Serafin. Beniamino Gigli, another former Metropolitan favorite, "infused much sweetness and charm into his *Faust;*" and Nazzareno de Angelis broke several years of retirement to sing the title rôle for his eight hundred and twenty-second time. The work has been much abbreviated. Its world première at La Scala of Milan, lasted from seven-thirty P. M. till two A. M., with "the audience hissing, howling and groaning."

SIR THOMAS BEECHAM is reported to have become so exhilarated, when leading a recent performance of Mozart's "Symphony in E-flat" by the Philharmonic Society of London, that "in the general excitement towards the end of the first movement, the baton flew out of Sir Thomas's hand and sailed over the orchestra."

JOHN McCORMACK

JOHN McCORMACK is reported to have been urged by Irish friends to return to his native country and become candidate for the presidency of Eire, the former Irish Free State. As a naturalized citizen of the United States there is a probable question as to his eligibility for the office; but he has announced that he would be "very proud and honored, if the Valera and Cosgrove parties want me."

THE THREE CHOIRS FESTIVAL will be held this year at Worcester, September 6th to 9th, under the direction of Sir. Ivor Atkins. Chief among works to be given are Mendelssohn's "Elijah"; Fauré's "Requiem"; Bach's "St. Matthew Passion"; Elgar's "Violin Concerto" and "The Dream of Gerontius"; Vaughan William's "Dona Nobis Pacem" and *Fantasia on a Theme by Tallis;* Beethoven's "Fourth Symphony (B-flat)"; and parts of Handel's "Saul" and "Messiah."

THE "ULYSSES AND THE SIRENS" of Roger Ducasse had its world première on February 20th, at the Concerts-Lamoureux of Paris. Based on an episode of Homer's *Odyssey,* it is developed for a chorus of women, with orchestra.

WAGNER is to have a national monument at Leipzig. Eriel Hipp has been commissioned to do the sculpture, and it will be inaugurated in 1940.

SOME MANUSCRIPT PAGES by Beethoven were sold for twenty-seven hundred and fifty marks (about five hundred dollars, present exchange), at a recent auction in Berlin. A letter of Brahms to Clara Schumann brought seventy-five marks, and a letter of Wagner sold at one hundred and fifteen marks.

THE PHILHARMONIC ORCHESTRA of Lisbon, Portugal, with Ivo Crux conducting, devoted a recent program to works of Mozart, Luis Costa, Claudio Carnerio, Sammartini, Saint-Saëns, and Ivo Crux.

DOUGLAS STANLEY, of New York City, recently received from the College of Puget Sound an honorary degree of Doctor of Music, in recognition of his research relative to the human voice as presented in his books, "The Science of Voice" and "The Voice."

THE YOUNG ARTISTS GROUP, of Passaic, New Jersey, under the direction of Johanna Keller, has specialized in programs of music of the fourteenth, fifteenth and sixteenth centuries, of which they have unearthed numerous formerly unknown treasures, many of them anonymous.

"THE CAPTIVE," an American opera by Gustav Strube, with its libretto by Frederick Arnold Kummer, had its world première on March 1st, at Baltimore.

TWO NEW WORKS by world famous composers—the new "Third Symphony, Op. 44," of Rachmaninoff; and the *Overture Russe,* of Prokofieff—failed to win a "cordial reception," when recently presented at major events in London's musical life. The former was on a program of the famous Philharmonic Society (which has set world standards for a century and a quarter), with Sir Thomas Beecham conducting; and the latter at the Covent Garden Sunday Concerts under the baton of Albert Coates.

WILLIAM GRANT STILL, composer of Los Angeles; David Diamond, composer, Rochester, New York; Paul Creston, organist and choirmaster, New York City; and Carlos Chaves, conductor of the Symphony Orchestra of Mexico; each has received a Guggenheim Fellowship for creative work in musical composition during the year of 1938.

THE KANSAS STATE MUSIC TEACHERS' ASSOCIATION held its Thirtieth Annual Convention on March third and fourth at Kansas State Teachers College, Emporia.

HAROLD VON MICKWITZ, internationally known pianist and teacher, died on February 12th, at his home in Hersinki (formerly Helsingfors), Finland. Born in May, 1859, he became a pupil of Brassin and Rimsky-Korsakoff at the St. Petersburg Conservatory. In America he had been head of the music department of Kidd-Key College, Sherman, Texas, and of Southern Methodist University, Dallas, Texas.

FRITZ REINER, who has conducted the Philharmonic-Symphony Orchestra of New York, and the Philadelphia, Los Angeles and Chicago symphony orchestras, and at the same time was orchestral instructor of The Curtis Institute of Music, has been appointed conductor of the Pittsburgh Symphony Orchestra for the coming season.

ALFRED HOLLINS, widely known British musician, has finished forty years of service as organist at St. George's West Church of Edinburgh, Scotland, in commemoration of which a large gathering paid him homage and the congregation presented a check for $2,500 and a silver tea tray.

PAUL HINDEMITH is reported to have turned his interest to the organ, and his two organ sonatas were heard on a program of January 18th of the Organ Music Society of England.

THE NATIONAL GERMAN-AMERICAN SONG FESTIVAL will be held from June 22nd to 24th in the International Amphitheatre of Chicago, with ten thousand singers, representing one hundred and eighty-six choral societies, participating.

DAVID D. WOOD'S birth centenary was celebrated on March 1st, when a program of compositions of this famous blind musician of the last generation was given at an evening service in historic St. Stephen's Church, Philadelphia, with Uselma Clarke Smith conducting the augmented choir and Rollo Maitland at the organ.

THE "HANDEL HOUSE" in Brook Street, London, where the master lived for nearly forty years, composed his immortal oratorios, including the "Messiah," and where he died, is being secured by public subscription, as a national and world monument. Subscriptions may be sent to Mr. Herbert Westerby, Organizing Secretary, "Sandon," 57 Bexley Road, Erith (S. E.), Kent, England.

FEODOR CHALIAPIN

FEODOR IVANOVITCH CHALIAPIN, world renowned Russian basso, passed away on April 12th, at his home in Paris, aged sixty-five. A blond giant, six feet four inches tall weighing two hundred and fifteen pou his singing and impersonations amounted no less than genius, in such rôles *Mephistopheles* in Gounod's "Faust"; *Basilio* in Rossini's "Barber of Seville"; *Leporello* in Mozart's "Don Giovanni." Si his exile by the Soviet, which confiscated last cent of his large fortune "because sang for the money", Paris had been home when not on tour.

THE FISK JUBILEE SINGERS, and Fisk University Choir, with Roland Ha lending his beautiful tenor art as soloist, g on March 7th a program in the Auditori of Chicago, for the benefit of their al mater, at Nashville, Tennessee. The F Jubilee Singers have been the chief end ment of this famous institution.

ROB ROY PEERY, head of the publi tion department of the Theodore Pres Company, and A. Louis Scarmolin, of Un City, New Jersey, divided honors in recent competition for an original song to performed at the dedication of the Fran Institute of Philadelphia. Mr. Peer *America, My Wondrous Land* and Mr. Sc molin's *Oh, Wisest of Men* were chosen fr more than one hundred manuscripts rep senting all parts of the United States.

THE ROYAL CHORAL SOCIETY London gave for its last program the "M in C minor" of Mozart and the "Dona No Pacem" of Vaughan Williams.

PATRICK HALLING, a young Tasm nian violinist, has won the Henderson Sch arship of the Royal Academy of Mu London.

THE MARY CARR MOORE MAN SCRIPT CLUB, formed originally to courage pupils of Dr. Moore, has served really useful purpose. At the recent celeb tion of its tenth anniversary, it develop that more than two hundred compositi of its members have found places in va ous publishers' catalogs.

PIETRO DEIRO

PIETRO DEIRO, because of his prominence in the ranks of accordionists and of his thirty-eight years of devotion to the development and promotion of the accordion, was elected by acclamation as president of the lately formed American Accordionists' Association in New York City. The Association will conduct competitions and str in all ways to further a better appreciati of their instrument and profession.

(*Continued on Page* 417)

Young Lochinvar

Oh! young Lochinvar is come out of the west,
Through all the wide border his steed was the best;
And save his good broadsword he weapons had none.
He rode all unarmed and he rode all alone.
So faithful in love and so dauntless in war,
There never was knight like the young Lochinvar.

WHEN he wrote his famous poem, *Marmion*, Sir Walter Scott saw his hero, young Lochinvar, come from the West. For some years, American musical history has witnessed a very extraordinary young Lochinvar coming from our West. There are millions of people along the Atlantic Seaboard who never have been beyond the Appalachians; and there are millions who never will go West, because of lack of means or lack of opportunity. Others fail to make the trip because of lack of interest, or because of a lack of information about the marked cultural advances beyond the mountains. For many, many years, however, those who have been "in the know" in education have realized that culture is no longer limited to a thin veneer on the shores of the Atlantic. True, the East can still point to the Metropolitan Opera; the great orchestras of New York, Philadelphia, and Boston; the long established and often munificently endowed music schools of Philadelphia, Rochester, Boston, New York and Baltimore; but the West has been proceeding along different and highly original lines. No longer can the East sit complacently and, with a superior smile, look in patronizing fashion through its telescope of tradition at the folks out yonder.

THE COMMONS

This is not a scene in a great English cathedral but the "Common Room" in the new Cathedral of Learning of the University of Pittsburgh, the masterpiece of America's famous architect, Charles Z. Clauder. In music, as in architecture, the West is manifesting marvelous advances.

There are, of course, parts of the West that are still extremely crude; but, as transcontinental travelers pass through these sections of the country with tiny, little improved, and often unpainted houses, they should remember that horrible jumble of tinder boxes that one sees in Queens County, Long Island, only a few miles from magnificent Fifth Avenue, New York, and similar architectural transgressions in various parts of the East, which are a reflection of the poverty of European immigrants in their brave efforts to gain a foothold in the New World.

The musical progress in the West is by no means of mushroom growth. In fact, its roots might be traced to Oberlin College in 1837, one hundred and one years ago, when the college, then the Oberlin Collegiate Institute, was four years old. A student, George N. Allen, was in that year appointed instructor of sacred music. From this beginning grew one of the most influential musical institutions in the world, in that Oberlin has sent out hundreds of teachers of music to all parts of the West. These men became literally missionaries of music; and the foundations of the marvelous musical development of the West may be said to rest largely upon their enthusiasm, sacrifices and labors.

The college was always extremely liberal and progressive. In pre-Civil War days, Oberlin was distinctly antislavery, and it is said to have been the first college in the United States to admit Negroes. It was also the first college to grant degrees to women. It has had many very distinguished men upon its musical faculty, including George W. Andrews, J. C. Fillmore, Arthur Heacox, Karl W. Gehrkens and Orville Lindquist. The Oberlin Musical Union, founded in 1860, is responsible for the first performance in the Middle West, of many of the world's greatest orchestral and choral masterpieces.

Your Editor, born in the Middle West, but brought up from infancy in New York City, has made many visits to the section of his nativity and has otherwise kept in very close touch with the musical developments of the West. So astonishing have been the achievements of the Western instructors, teaching privately, in colleges and in public schools, that they have been a constant source of inspiration. We have heard of the playing and singing of hundreds of students and, in so far as our musical experience goes, the performances have been, in the cases of superior students, as fine in every way as the best musical performances in the foremost musical institutions here and abroad. At times the playing of certain students has been so brilliant and so excellent, from a criterion of highest musical standards, that we have been astonished.

Many of the music schools have buildings, equipment, and faculties of remarkable excellence. In fact, in one city of less than fifteen thousand inhabitants, there are two music schools, less than half a mile apart, that are both finer than those of any music college in half a dozen of the large Eastern states. The choral organizations in colleges and in many high schools in the West are of amazing character. Among the best known are those of St. Olaf College, at Northfield, Minnesota, under Dr. F. Melius Christiansen; of the College of Emporia, Kansas, under Dean Hirschler; and Augustana College, at Rock Island, Illinois, under Dr. Veld. Musicians of the highest standing in world circles have stated that any one of these choruses would

startle any great European city, with the splendid artistic interpretations given. They have a vitality and virility which seem peculiar to the West.

The bands and orchestras of the universities, colleges, and high schools in the West have been soaring in their virtuosity. The late John Philip Sousa used to say that the school bands of the West were far finer than most of the nation's professional bands in the eighties and nineties. The lovable genius, Commander Sousa, passed on in March, 1932. Since then the quality of the instruments has so improved, and the virtuosity of the students has so advanced, that your editor could not help wishing, when he recently heard the remarkable bands of Wayne University, Detroit (guest conductor, Percy Grainger), and the brilliant band of Kansas University, that his old friend, the "March King," could have heard that magnificent group of musical youths.

Music enters very closely into the home life in the West and Middle West. This is particularly the case with business men who have found the value of music as a leisure background for their strenuous daily affairs. Therefore we were not surprised to see a very much thumbed copy of the piano score of Wagner's "Tristan and Isolde" upon the music desk of the piano in the home of the militant Victor Murdock, owner and editor of the *Daily Eagle;* and we were likewise not surprised to witness the delight with which the famous American editor and publicist, William Allen White, plays the piano. He also has a collection of American and foreign records which have cost him several thousand dollars.

Architecture has probably made a greater advance in America than any other art. This is natural, because America is a country in the making and will continue to be so for many decades to come. The old-fashioned campus in the West, with its incongruous buildings, is being replaced by new structures built with respect for traditions of beauty and appropriateness, and yet with distinctive originality. Thus a new atmosphere has been created. The students of to-day in the West are surrounded by structures which ennoble and exalt them. At Northwestern University, Michigan University, Baldwin-Wallace College, Wichita University, Drake University, Kalamazoo College, Leland Stanford University, University of Pittsburgh, and scores of other institutions, new buildings have been arising yearly; and America can be immensely proud of this wonderful growth. We are presenting herewith a picture of the magnificent commons in the "Cathedral of Learning" at the University of Pittsburgh, designed by the great American architect, Charles Z. Klauder. No student could fail to be influenced by daily contact with such surroundings.

Dr. Howard Hanson, Director of the Eastman School of Music of Rochester University, is distinctly and proudly a product of the Middle West. He was born at Wahoo, Nebraska, and received part of his education at Lincoln University, where he came for a time under the training of Thurlow Lieurance.

It is as hard for an Easterner to think of Lincoln, Nebraska, with its seven colleges, as a great educational center, as it is to think of it as the seat of one of the greatest architectural masterpieces of modern times, the capitol, designed by Bertram Goodhue. By the way, have you ever seen that amazing and original Methodist Church in Tulsa, Oklahoma? It will give you a greater thrill than many famed European structures!

Not one young Lochinvar has come from the West, but armies of them. The West has already taught music supervisors in Eastern public schools new ideals in the training of orchestras, bands and choruses.

The Laboratory of the Keyboard

A RENOWNED Italian piano virtuoso said that the reason why so much piano playing is dull and uninteresting is that students do not try to make it interesting. To me, he said, "the keyboard of the piano has always been a laboratory, an ever growing enticement for experiment. I take a passage and try it in scores of different ways until I find which way seems to be the most effective, then I play it over and over until it is more or less fixed, but not stiff. Stiff music always gives the impression of being hard or stilted. It is the difference between hand playing and machine playing which makes the former more fascinating to the listener. The artist must hold the masterpiece in his hands, while he is interpreting it, and develop it mentally and emotionally every fraction of a second."

The student who goes to the keyboard without the deliberate plan to keep the work he elects to play continually subject to his intellectual and spiritual control, is wasting his time. The best advice any piano teacher can give to a pupil is that he keep his mind constantly on what he is playing and how he is playing it.

A very good motto for the student would be that of Lord Cecil, "The shortest way to do many things is to do only one thing at once."

How Can I Play Quicker?

THAT was the bold question that came to us some time ago. Well, there are certain roads that lead to velocity, that with most students are safe and resultful. Velocity in piano playing must rest first of all upon the firm foundations of correct conditions. In other words the arm must be right, the fingering must be right, the touch must be right, and the time and rhythm must be right. Slow playing seems to be at the base of all rapid playing. We have never known a great pedagog who has failed to lay stress upon the value of slow playing. The reasons for it are psychologically sound. The brain grooves and nerve grooves, if we may call them that, become definitely fixed in slow playing so that when velocity is attempted there is no danger of bad coördination leading to stumbling. Once we heard one of the world's greatest organists, a man who had played before many of the rulers of Europe, practicing upon a fugue that he had played scores of times in public. His tempo was so slow and exact that it would have shocked the ordinary student.

Once the piece has been studied at a very slow speed there are two ways of reaching velocity. The safest and best is that of employing a metronome and advancing the tempo gradually, until the limit of your ability has been reached. Then go back and work up again and see if you can break your former speed record. You probably will not be able to do this at first; but if you keep up the process of advancing the repetitions for several days, until your arms and hands get stronger, you will probably surprise yourself.

The other way is to try spurting ahead and taking a leap at a very rapid speed. This method is adopted with success by some runners, in their athletic exercise. In teaching scales we employed at times a spurt method that proved entirely safe, after years of experiment, and enabled pupils to play at almost fabulously rapid speeds. There is a point in speed at which the human ear becomes incapable of distinguishing notes. That is, they lose their articulate character and become a mere glissando or what the vocalist calls a portamento.

* * * * *

"Originality is nothing but judicious imitation. The most original writers borrowed one from another. The instruction we find in books is like fire. We fetch it from our neighbor's, kindle it at home, communicate it to others, and it becomes the property of all."—Voltaire.

Be Ready for Your Opportunity

A Conference with

EUGENE ORMANDY

Co-Conductor of the Philadelphia Orchestra

as possible being given to all. I do not feel, however, that our modern civilization has any room for waste; and it certainly is a waste to train an individual professionally as a musician, who might have made a remarkably strong man in a circus, as a sprinter. Evidences of talent appear in curious ways. One of the things, I am told, that satisfied my parents that I had musical gifts, was that when I was only one and a half years old, I was able to identify flat, circular metal records, on an old music box of the Regina type, merely by the appearance of the designs on the records. At that time I could barely talk; but, after hearing the records a few times, I could associate the record with a particular piece I had admired.

A New World to Conquer

AFTER THE WAR, in which, owing to my professional work, I was spared participation, I went to the University of Budapest, to study philosophy. What I assumed was an opportunity, arose for a tour of America, and I came to this country in 1921. Imagine my dismay when I arrived to find that the managers who brought me here were without experience and without funds. There were no concerts arranged, and, after three weeks in New York, I found myself one day on the corner of Fiftieth Street and Broadway with only five cents in my pocket. If you have never been in a great metropolis without funds, and with no immediate prospect of getting any, you have not yet had very much to worry about. Obviously something had to be done at once, but the immediate problem was what to do with the five cents. Should I take the subway back to my room, away up town, and possibly dispose of some of my effects; or should I invest my capital in a sandwich and walk uptown? As I was weak and hungry and frightened by the circumstances, I decided upon the latter course, and went into a little restaurant. There I met Miss Opportunity. She was an old acquaintance from Budapest—a professional colleague. She advised me to call upon Erno Rapée, then the brilliant and able conductor of the Capitol Theatre Symphony Orchestra, but now at Radio City.

My meeting with Mr. Rapée shall be long remembered. We talked in Hungarian, and I was delighted to find that he had a position vacant at the last desk in the violin section. This was some drop from my expected triumphal tour of America; but here again was the veiled angel, Opportunity, pointing the way. I sat at that last desk and played with all the sincerity and skill that I might have employed at a Carnegie Hall début. One week later I was moved to the first desk and became the concertmeister of the orchestra; and it was some time thereafter that Rapée moved on to the Roxy Theatre directed by that great managerial genius, S. L. Rothafel, familiarly known as "Roxy."

The famous conductor, David Mendoza, now took charge at the Capitol. He soon tried me out as a conductor, and I was appointed as his fourth assistant. Then it was that, because of the sudden illness of another, I had only fifteen minutes notice to conduct the "Fourth Symphony" of Tschaikowsky. My wife, who as a harpist had had wide experience in symphonic orchestras, chanced in upon the performance; and she said later that the shock of seeing me conduct an orchestra of eighty-five men in a great masterpiece almost gave her heart failure.

Opportunity was smiling, almost laughing. I remained at the Capitol Theatre until 1929—seven and one-half years. There were four or five performances a day, fifty-two weeks in the year; and during that period I conducted a tremendous part of the symphonic repertoire, much of it many times over. What better training could one have? There is a vast difference between conducting 'Til Eulenspiegel' once or twice a year and conducting it, let us say, twenty times in one week. It gives one opportunity to think, think, think, and to imagine new ways of bringing out the beauty of the work; and I have been very grateful for the unparalleled opportunity for this study and understanding of the meaning of music to the general public that my experience in New York afforded me.

Steps toward Parnassus

"I WAS THEN TWENTY-FIVE, and I could not help thinking that if Miss Opportunity had not spoken to me in that little coffee shop, and if I had not been able to grasp that chance, nothing would have come to me.

The newspaper critics were very kind. The late W. J. Henderson wrote such a glowing account of one of the Capitol Theatre performances that Mr. Arthur Judson sought me out and engaged me to conduct an orchestra made up of New York Philharmonic men, for the performances of the Anna Duncan Dancers. Mr. Judson also offered me the conductorship of the Judson Radio Corporation, but out of loyalty to the Capitol Theatre I remained there for one year longer. I did, however, conduct thereafter many radio hours for Mr. Judson. The next year he tried me out at a Philharmonic Concert at the Stadium. In 1930 I conducted two concerts at the Robin Hood Dell in Philadelphia; and for 1931 I was reëngaged for an entire week.

The following season opportunity knocked again. Maestro Toscanini was scheduled to give some guest performances with the Philadelphia Orchestra. Illness detained him in Europe, and I was asked to substitute under these very trying conditions. Obviously, if I had not had my long training in Europe and in New York, I could not have dared to attempt concerts before an audience which was bound to be disappointed by the absence of Toscanini. Fortunately for me, the Philadelphia audiences were most hospitable.

We Venture Westward

SHORTLY THEREAFTER, Willem Verbrugghen, the able conductor of the Minneapolis Symphony, was taken ill, and I took his

place for two weeks. Then, when it became obvious that he could not conduct again, I was given a four year contract. Each year, however, I was a guest conductor of the Philadelphia Orchestra. Finally the labors of Dr. Stokowski became so great that he realized that he could devote but a part of each season to the Philadelphia Orchestra, and in 1936 I was appointed co-conductor. Dr. Stokowski now conducts only about twenty-five concerts of each season.

Students come often to ask, "How shall I study conducting?" I wish that I might place a copy of this conference in the hands of all who ask this question. Of course it goes without saying that the prospective conductor must have as fine a musical training as possible, in addition to whatever natural gifts he may possess; but, more than that, he must have actual experience in conducting, conducting, conducting. Of course, a great deal may come to him through lessons under an able conductor in the class room. He may thus study baton technic and scores without number; but, really, this is only the kindergarten of conducting. The conductor without a very elastic memory and a keen sense of pitch is working at a great disadvantage. After proper training and extended experience the ear becomes accustomed to penetrating the tonal masses and detecting errors that would ordinarily remain unheard. To the experienced conductor they stand out glaringly just as a hole in an Oriental rug obtrudes and attracts attention from the beauties of the rug itself.

They tell an incident about me in connection with a player in the Minneapolis Orchestra. He played the piccolo, and, at a rehearsal, when we were playing de Falla's "Three Cornered Hat" he made an error. I stopped the orchestra and said that he had made a similar mistake two years ago. He corrected by saying that it was three years previously in Chicago. I still persisted and said that it was two years previously in Minneapolis, when he was playing in Stravinsky's "The Fire-Bird." He then admitted that I was right.

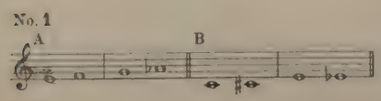
The subject of conducting is so vast, from the theoretical, artistic and applied angles, that no four year course at a conservatory or a university can do much more than cover the primary steps. Occasionally some genius arises who seems to absorb in an amazingly short time the thousands of things he should learn; but the very great conductors are great only because they have grown up in the art, not merely of understanding and interpreting the music, but also of establishing the right mental and artistic relations with the men under them and with the great music hungry public of the world.

When Joviality Relieves

"THE ARTIST'S LIFE is always full of incident and sometimes of humor. Carl Burian, the Wagnerian tenor, well known at the Metropolitan in New York, was very popular in Budapest. He unfortunately had taken also a few lessons from John Barleycorn. Once, in the scene just before the *Swan Song* of 'Lohengrin,' he, instead of stepping into the swan boat, missed it by a foot. The swan moved off leaving poor Burian apparently standing on the lake. It disturbed him not in the least, however, and he turned to a stagehand and calmly asked, "When does the next Swan leave?"

"Sometimes one has to be extremely careful, to please eminent artists and composers. One of the most meticulous is my fine friend, Sergei Rachmaninoff. The first time I ever conducted a work for him was in Minneapolis, when he played his second concerto with the orchestra. His reputation for extreme care had preceded him, and therefore I was not surprised when he asked to have a rehearsal of one hour and a half. The orchestral part was accordingly prepared with very great care. He arrived, we played the first movement through, and he sat back and said, "Fine!" The same thing happened with the second and the third movements. It took just thirty minutes in all. I then suggested that we try certain passages over again. He calmly asked, "Why?" and then commented, "This is the first time in my life I ever have played a rehearsal without stops;" and he put on his coat and left the hall. Again, with the Philadelphia Orchestra, we were rehearsing his choral symphony, "The Bells." As we were approaching the final measures he called out, "Where are the famous strings of the Philadelphia Orchestra?" I replied, "But, Mr. Rachmaninoff, the score is marked first with a *pianissimo,* then a *morendo,* and then another *piano.*" "Then change it at once," he answered; "make the strings *fortissimo.*" Such are the problems of the orchestral accompanist conductor!

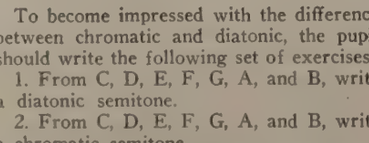
Diatonic or Chromatic?



By ANNA MELONI

THE YOUNG STUDENT may find the explanation of diatonic and chromatic, in referring to semitones, a little confusing; and, if so, this outline should clarify the meaning of these terms.

In the first place, a semitone may be defined as the smallest distance between two consecutive degrees of the major scale; and if located on the piano it will be from any given key to the very next key with no key in between; that is, from E to F, or B to C is a semitone.



Next to be taken into consideration are the two kinds of semitones, diatonic and chromatic. A diatonic semitone is one between two notes of *different* names, as from E to F, or G to A-flat, and so on, as in Ex. 1 A. A Chromatic semitone is one between two notes of the *same* name (or, more correctly, on the same degree of the staff), as from C to C-sharp, or E to E-flat, and so on, as in Ex. 1 B.

No. 1

A whole tone may be defined as the largest distance between two consecutive degrees of the major scale; and, if located on the piano, it will be from any given key to the next key, with one key in between; that is, from C to D, or from D to E, is a whole tone. Within the whole tone there are a chromatic semitone and a diatonic semitone.

Ex. 2

To become impressed with the difference between chromatic and diatonic, the pupil should write the following set of exercises:

1. From C, D, E, F, G, A, and B, write a diatonic semitone.

2. From C, D, E, F, G, A, and B, write a chromatic semitone.

By such practice the young student soon will become able to calculate quickly the whole steps and half steps.

Musicians of June Birth

By W. FRANCIS GATES

JUNE, PERHAPS THE MOST JOYOUS month of all the year, has given to the world, also, many of its sweetest singers—a term which covers those who have clothed their thoughts in immortal phrases of combined tones, as well as the ones who have interpreted these creations to the living ear. Among these have been Glinka, "The Father of Russian Music;" Lecocq, Méhul and Offenbach, three bright particular stars in the field of operetta; Schumann, a luminary of the Victorian romanticists; Gounod and Charpentier, brilliant in the galaxy of creators of serious French opera; and Grieg, the musical glory of Norway.

Of pianists there are such unfading names as Nikolai Rubinstein, Theodor Leschetizsky, Carl Reinecke and Katharine Goodson. Then we find the inimitable Camilla Urso, first of a group of illustrious feminine violinists, and Joseph Joachim, creator of an era of violinistic art. Of singers there are the marvelous Schumann-Heink; the polished French baritone, Victor Maurel; and Italo Campanini, with a tenor's High C among the most brilliant in the annals of singing.

If this month has been not overgenerous towards America, still it has given us Clarence Eddy, perhaps our greatest of organists; Harry Rowe Shelley, eminent organist and composer; and a large coterie in varied fields who have made distinctive contributions toward our nation's culture in the musical art.

A Natal Chronology

1st—Karl Bechstein (1826), Michail Ivanovitch Glinka (1804), Werner Janssen (1899), Jean-Lucien-Adolphe Jullien (1845), Margarete Matzenauer (1881), Joseph Pache (1861), Ferdinando Paër (1771), Ignaz Joseph Pleyel (1757), Alfred Madeley Richardson (1868), Eben Tourjée (1834), William Vincent Wallace (1813)

2nd—Sir Edward Elgar (1857), James Cutler Dunn Parker (1828), Felix Weingartner (1863)

3rd—Karl Fuchs (1865), Charles Lecocq (1832), Charles Steggall (1826)

4th—Joseph Ascher (1829), Karl Wilhelm Kern (1874)

5th—Jakob Niklas Ahlström (1805), Tina Lerner (1890), Arthur Somervell (1863)

6th—William Howard Glover (1819), Bruno Oscar Klein (1858), Alexis von Lvov (1798), Sir John Stainer (1840)

7th—Leopold Auer (1845), Guido Gasperini (1865), Sir Landon Ronald (1873)

8th—Otto Goritz (1873), Nathalie Janotha (1856), Alberto Jonás (1868), Robert Schumann (1810), Harry Rowe Shelley (1858)

9th—Bernardus Boekelmann (1838), Gaetano Braga (1829), Clarence Grant Hamilton (1865), Otto Nicolai (1810)

10th—Francesco Berger (1834), William Henry Dana (1846), Benjamin Lambord (1879), Clara Anastasia Novello (1818)

11th—Julia Claussen (1879), Richard Strauss (1864)

12th—Karl Fortlage (1806), Pol Plançon (1854)

13th—Julius Eichberg (1824), F. Fischer (1838), Maria Gay (187 Frederick Maxson (1862), Edu Poldini (1869), Prince Anton H rich Radziwill (1775), Edw Francis Rimbault (1816), Freder Woodman Root (1846), Anton F Schindler (1795), Camilla U (1842)

14th—Max Heinrich (1853), John McC mack (1884), Nikolai Rubinst (1835)

15th—Johanna Gadski (1872), Edv Hagerup Grieg (1843), J. Ropartz (1864), Alwin Schrö (1855), Ernestine Schumann-He (1861), Abbe Georg Joseph Vog (1749)

16th—Frederick Archer (1838), Joh Christoph Bach (1671), Ete Gerster (1857), Otto Jahn (181 William Shakespeare (1849), Waring Stebbins (1869), Pa Antoine Vidal (1863)

17th—Enrico Delle Sedie (1826), Nich J. Elsenheimer (1866), Charl François Gounod (1818), Aug Hyllested (1858), Victor Mau (1848), Fritz Steinbach (185 Igor Stravinsky (1882)

18th—Katharine Goodson (1872)

19th—John William Glover (1815), hann Wenzel Anton Stamitz (171 Ludwig Stark (1831), Eugen Woy (1843)

20th—Salvatore Rosa (1615), Art Whiting (1861)

21st—Johann Christoph Friedrich B (1795), Alfred Herbert Bre (1865), Calvin Brainard C (1851), Ernest II, Duke of Sa Koburg-Gotha (1818), Will Hawes (1785), Charles Edw Horn (1786), Louis Maas (Phil Otto—1852), Jacques Offenb (1819), Johann Friedrich Silb mann (1762)

22nd—Frank Damrosch (1859), Heinr Karl Hermann de Ahna (183 Theodor Leschetizky (183 Étienne-Nicolas Méhul (1763)

23rd—Theodor Heinrich Friedrich Bo mann (1865), Clarence Eddy (185 Philip Henry Goepp (1864), Ern Guiraud (1837), Raoul Pug (1852), Karl Reinecke (182 Maude Valérie White (1855), dison P. Wyman (1832)

24th—Louis Brassin (1840), Farin (Carl Broschi—1705), Harry Pl kett Greene (1865), Sumner Sa (1856), George James Webb (180 T. Carl Whitmer (1873)

25th—Gustave Charpentier (1860), An Schott (1846)

26th—Frieda Hempel (1885), Joh Andreas Silbermann (1712), Cam Zeckwer (1875)

27th—Fanny Davies (1861), John Py Hullah (1812), Albert Löschh (1819), Henry Bickford Pasm (1857), Friedrich Silcher (1789)

28th—Robert Franz (1815), Jos Joachim (1831), Max Maret (1821), Jean-Jacques Rouss (1712), Oley Speaks (1876)

29th—George F. Boyle (1886), Italo Ca panini (1846), John Coates (18 Nelson Eddy (1901)

30th—Riccardo Drigo (1846), Edw John Hopkins (1818)

Music unites mankind by an ideal bond.—Richard Wagner.

Operetta and the Sound Film

JEANETTE MACDONALD

Prima Donna of Stage and Screen

Tells what the Novice should know about these two interesting fields

An interview secured expressly for The Etude Music Magazine

By JULIETTE LAINE

JEANETTE MACDONALD

THE TWO QUESTIONS which present day students of singing ask more often than any others are, "Is t operetta an easy stepping-stone to bet- things, musically;" and "How can I get audition for the movies?"

Unfortunately neither question can be swered easily or with finality, since so ich depends upon the singer himself, his ice, training, temperament, and back- ound. Moreover, both these fields of sical endeavor are highly specialized, fer considerably from other lines of sing- g, and have their own inflexible stand- ds. Neither should be approached with a tronizing or "tongue in cheek" attitude; t the casual way in which the beginner ys with the idea of operetta or sound film uld imply that a career in either medium to be had for the asking. "If I can sing 'adame Butterfly' and 'La Tosca' I cer- nly can do 'The Merry Widow' or 'The ocolate Soldier,'" they insist with pathetic veté; yet their argument has no reason- g at all. The two fields are as far apart, most respects, as are the poles; and the ility to sing one of these types of music eptably by no means guarantees an equal cess in the other.

An Exacting Art

MUST BE BORNE in mind that light opera not inferior to, nor less important, as an t. than grand opera. It is a question of d, not of degree. Yet it is usually the ger, who finds his equipment unequal the demands of grand opera, who also agines that operetta will be a happy ond choice. Sometimes it does work out at way; but in such a case it is usually cause that particular singer was from e beginning primarily best suited to eretta.

Operetta is no less demanding than grand era; but it demands vocal, physical, and mperamental qualities of a different order. nderstand please, that I am speaking of eretta in the true sense of the word. I ean such works as those of Lehar, Strauss, lman, Friml, Victor Herbert; I do not an the type of entertainment called usical comedy" or "revue."

Perhaps the greatest mistake the aver- e student makes is in thinking that one y succeed in light opera with less natural ice, or with less thorough training than uld be required for grand opera. Which quite untrue. Operetta music is frequently st as difficult, technically; and it de- ands just as much flexibility and range voice as does grand opera. Moreover, any of the modern light operas are as avily orchestrated as some of the grand pertoire. In fact, many of the latter are mparatively light of accompaniment, as is en in the light orchestration of many of e Verdi works, such as "Il Trovatore," "La Traviata," "Rigoletto" and almost all but the ones of his last period.

No Meagre Preparation

MOREOVER, THE OPERETTA SINGER'S voice should be well trained, not only to insure the beauty of her singing, but as well to insure her career. No poorly trained voice can cope with the physical demands of operetta—at least not for very long. Consider how in grand opera one sings a rôle but once at each performance; while in operetta, with its encore to almost every song, one actually may sing perhaps near twice this limit. Then, too, in grand opera one sings usually only two or three times per week; while in operetta there are always at least eight performances each week, including the usual two matinees. A particularly popular production may call for additional matinees, to say nothing of frequent rehearsals for the interpolation of new numbers. With such constant use, it will be readily seen that an inadequately prepared voice would soon become tired and worn of its beauty.

Aside from these considerations, the beginner will find that a fine voice will be essential if she is to interest an agent or manager. Good voices are plentiful, as one learns to her chagrin directly on going to auditions. That all these promising young singers do not speedily find engagements and successful careers is due primarily to two principal causes. The first of these is that, with the present dearth of musical shows, the beginner is overwhelmed with competition from experienced and already established singers; and the second develops from some lack in the way of essential natural qualifications.

The Twin Qualifications

PERHAPS CHIEF IN IMPORTANCE among these considerations is the artist's appearance and her personality. For operetta it is important that the singer be as attractive as possible. This does not always imply actual beauty; but it does mean that she should look smart and chic, should wear her clothes with a certain dash, and should interest her audience the moment she steps upon the stage. Charm of personality, grace in every movement and gesture, and graciousness of manner—all these are essential. Having said this, it seems scarcely necessary to add that she must have a youthful figure. If she has not one, she must acquire it, somehow. Slenderness at any price has become a cult, at least with Americans; yet at the average audition one sees quite as many young singers who look like middle-aged matrons on their way to a bridge party, as there are of young women who might be the heroines of musical romance. It is the duty of the artist to purvey illusions; yet this becomes impossible if the owner of the golden voice looks like the tenor's mother rather than his sweetheart.

Another qualification which the operetta aspirant must have, and should develop to its utmost, is the ability to dance. This will be of immense advantage, especially in the earlier years, before she has become established in audience favor. True, there are many light operas in which the prima donna does not dance; but in most of them she does, even if it be merely ballroom dancing. Moreover, the beginner can scarcely expect to be cast in a prima donna rôle at the outset; and for secondary, or soubrette, rôles it will be imperative that she be able to dance acceptably. I attribute my own rise in the theater largely to the fact that I was an excellent dancer long before my voice was recognized. I had started dancing lessons as a child, in my sister's dancing school in Philadelphia. In those days I had no thought of an operatic career, but I did most earnestly hope to become an important singer. I read all I could of musical history, took piano lessons, dancing lessons, vocal lessons, and avidly studied the careers of contemporary singers. Consequently, when the time came to seek professional engagements I was as well prepared as my teachers and my own earnest application could make me.

One of the most frequent of inquiries is whether chorus work is advised for beginners. To this it can only be said that all depends upon the individual and whether she can stand a great deal of fatigue. As a rule such work is very hard on the voice, particularly because of the long hours of rehearsal which most choruses require. Moreover, in singing with large groups one is apt to try too much to sing above the others. If, on the other hand, one is content to sing normally; and if one has undertaken the work merely to acquire familiarity with stage routine; it may prove excellent experience.

To return to our original question, as to whether operetta does not make an excellent stepping-stone to better things, I can only give an emphatic "no". If the young singer is of grand opera calibre, and intends to make that field her ultimate goal, she should not waste any time on this wholly dissimilar field. Instead, she should study with the best teacher to be found, right here in her own country, until she is ready for a professional début. Then, if possible, she should go abroad for a year or two, for the coaching of repertoire and perhaps to secure a few guest appearances. Her future then will be in the lap of the gods.

A Common Misapprehension

AND NOW WE COME to our second most asked question, "How can I secure an audition for the films?"

Seeing the vast improvements that have been made in sound recording in the past few years, and the enormous popularity of good music by way of the sound screen—to say nothing of the notable personalities such as Lily Pons, Kirsten Flagstad, Nelson Eddy, and Leopold Stokowski, who have bestowed the dignity of their names and their art upon this former stepchild of the stage—we can well understand any student's interest in a possible film career.

We would not at all discourage the ambitious and intelligent student; yet, if the qualifications for an operetta career have been pictured in none too bright colors, what is to be said about the sound screen will be even less encouraging. Nevertheless, the truth should be told, let the tears fall where they may. Personally, we have always thought it better to weep with disappointment beforehand, rather than later, after the expenditure of much time and money, and the shattering of precious illusions.

Briefly, everything that has been said about preparation for the stage applies with equal or added force to the singing actress of the screen. She must be young, she must be attractive, and she should be as good an actress as she is a singer. Film audiences were accustomed to good acting

and charming personalities long before the days of sound films. Consequently, when music came to the screen they accepted this new gift without being willing to forego any of the qualities in their players to which they had been previously accustomed. In grand opera a fine singer may succeed in spite of limited histrionic gifts, but on the screen such a singer is doomed before she starts. No matter how strongly we feel that audiences should make every allowance in case of a superb voice, the fact remains that they do not.

The Thorough Preparation

WITH ALL THESE FACTS displayed, we would say that if a young singer's heart is set upon a career in the musical films, she must make up her mind to study even more, and to develop her voice to a finer degree than for any type of stage work in person. This is because of those bugbears, the microphone and the recording device. For instance, a tremolo, which is not noticeable across the footlights, will sound like a minor earthquake when caught by the merciless sound machine. So will a slight huskiness or other vocal impediment. Singers have been heard to give entire concert programs, despite a bad cold and with few in the audience any the wiser; yet for a microphone such a performance would be out of the question. The "mike" not only discloses flaws of which the singer himself was unaware, but it also magnifies them.

In conclusion, if one is to succeed despite these everpresent ogres—and this applies also to radio broadcasting—her singing must be even better than for almost any other field of vocal activity. She must have absolute purity, firmness, and steadiness of tone; a faultless sense of pitch; a clean, accurate attack; and perfect breath control. All of these qualities are imperative to the singer whose voice is to be successfully broadcasted. However formidable this may sound, these are qualities for which a singer should strive, no matter what her ultimate goal; and, with care and intelligent practice, they are all attainable. Too much cannot be said regarding the importance of proper training, and of the continuance of lessons even long after one's goal has been seemingly reached. I still take a vocal lesson every day, excepting when actually making a new picture, and I practice with the same regularity as when achievement was still afar in the future.

Taking to the Deep Sea

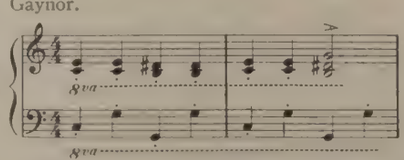
SO MUCH FOR PREPARATION. Assuming that this is all that it should be, how does one embark upon a film career? Briefly, one does the very opposite of what she most wants to do. In other words, she does not go to Hollywood. Nor does she pay a large sum of money to some trickster who advertises in the daily papers that he can get her screen tests and auditions at so much each. She will not write letters to producers and directors—unless she is personally known to them—and she will not lend an ear to any stranger who professes to be an intimate friend of an intimate friend of some star's personal secretary. Hollywood is full of people who did all these things, and believed all these things, and got not one inch nearer their goal.

All fairy tales to the contrary, it is not true that producers delight in discovering wholly new and untried talent. The risk is too great and the experiment too expensive. The new singer may seem to be wholly new and unknown, but only to the screen. She must have distinguished herself, at least in a small way, in some other field, and that identified with the stage, in order to be singled out and tested for screen possibilities.

The best and surest way to secure an audition and screen test is to make an impression in either radio, operatic, concert, or theatrical work. Many an actress has attracted attention by the quality of her work in one of the small, community theaters now common throughout the country. One must be seen by the right people, or by one of the talent scouts who are literally everywhere; and this can happen as readily anywhere else as in Hollywood. The outstandingly successful musicians, who have made good in the films, were not people who came out here and, figuratively, sat on producers' doorsteps. Not one used this method. All have been people who had won distinction far away from Hollywood. So the candidate for screen honors need not lament if a trip to California seems out of the question. Let her find an engagement somewhere nearer home; and then let her do her work as carefully and as beautifully as if she were certain that the most important people in the world were watching her, and sooner or later the miracle will happen.

The one who would succeed must, above everything else, avoid mediocrity. She must work, study, and improve her art incessantly, no matter how many have gushed over her and assured her that she is "just too marvelous!". None of us is ever "too marvelous". It must be always borne in mind that we Americans are accustomed to the best in music, and that now, with the radio and the motion picture bringing the greatest artists and finest orchestras to every village and hamlet, as well as to our cities, the standard becomes higher day by day.

Now in spite of all that has been said, this should not discourage the serious young artist, for the one who truly loves music is only too anxious that an idealistic standard be maintained. Moreover, with the steady growth of public interest there will be also a proportionately greater outlet available to the singer, even to the lesser fry. Remember the words of A. B. Alcott: "Our failure may be our Success."



Developing a Better Staccato Touch

By GLADYS M. STEIN

When teaching piano compositions like *March of the Wee Folk*, which contain many *staccato* notes, it is sometimes wise to have young pupils to practice such measures one or two octaves lower than written.

It is harder to get a clear, crisp *staccato* on these keys because they have larger strings, and the extra effort required to produce the *staccato* will result in a beautiful sparkling touch when these same measures are played higher up on the keyboard, as originally written.

March of the Wee Folk, by Jessie L. Gaynor.

Children enjoy moving about on the keyboard; and the novelty of this work also helps to hold their interest in practicing.

* * * * *

"It would be contrary to all history and to the general nature of things for a great and original musical mind not to perplex, baffle, startle and shock the critics."—Mr. W. J. Turner.

Radio Flashes

By PAUL GIRARD

WITH THE COMPLETION of the first season of the broadcasts of the NBC-Symphony Orchestra, radio has shown for the first time in its history that it not only can rival the concert hall but also can form a national concert hall of its own. It needs only television, which everybody keeps saying is "just around the corner," to make the illusion complete.

It is indeed good news to know that Maestro Toscanini, perhaps the greatest conductor of his time, will return to America in October to conduct another series of concerts with the NBC-Symphony Orchestra, and that he will give a number of concerts in several American cities, which will enable the public outside of New York to see as well as hear his performances with this orchestra. There is no question that Toscanini has heightened the interest in symphonic music. That this great musician has, in the twilight of his career, turned his attention to the greatest modern purveyor of music, the radio, proves his great love for his chosen art.

It was a fine gesture on the part of the National Broadcasting Company to invite that distinguished American composer and conductor, Dr. Howard Hanson, to conduct a concert with the NBC-Symphony Orchestra. In the broadcast of March 26, Dr. Hanson gave the world première of his recently completed "Third Symphony, in D major." This work, dedicated to the first Swedish settlers in America, who, three hundred years ago, landed at the site of Wilmington, Delaware, proved to be a well made composition, melodic in style and harmonically rich in texture. The symphony is not program music, yet its four movements are written in moods intended to reflect the search for religious freedom which inspired America's first settlers from Sweden. Dr. Hanson, who is director of the Eastman School of Music, is familiar to radio listeners of America, through the annual series of programs of the Rochester Philharmonic Orchestra, which are broadcast regularly during the season, over NBC Networks.

Young American singers have been greatly encouraged toward operatic careers through the Metropolitan Opera Auditions of the Air this past season, heard on Sunday afternoons at 5:00 P. M., EST. There were seven hundred and seven voices auditioned this past year, out of which four hundred and forty-three were women singers. More men were heard this past season, however, than ever before. But even with this condition, Wilfred Pelletier, the conductor, feels that it was easier to pick the male winner. Expressing amazement at the number of contestants who selected the same try out arias, he said, "The greater percentage of women have sung either the *Pace, Pace* from "La Forza del Destino," the *Dich teure Halle* from "Tannhäuser," or *Amour viens aider* from "Samson and Dalila."

How far can a radio program extend? The question has often been asked. Around the world, if it can be successfully picked up and rebroadcast. One of the latest long distance pick ups is being worked out by Columbia Broadcasting System, to relay to Egypt some of their radio facilities. The signal strength of Columbia's international short wave station, W2XE, is said to be one of the strongest received in Egypt.

Grace Moore, who replaced Lawrence Tibbett after his departure for a concert tour of Australia, is featured with Andre Kostelanetz' Orchestra over the Columbia Broadcasting System, on Wednesdays from 9:00 to 9:30 P. M., EDT. Miss Moore's colorful career has led her from the little town of Jellico, Tennessee, where she was born, to stardom in the Metropolitan Opera Company and in the picture world. Miss Moore sings a variety of selections ranging from operatic arias to familiar classics and the best examples of contemporary light music. A worthy plan in connection with Miss Moore's broadcasts has been her inclusion of new and unfamiliar singers to radio audiences, selected on the basis of vocal talents, appearance, and dramatic ability. For some time Miss Moore says she has felt that there exists in this country a considerable group of talented young singers who would bring fresh qualities of interest and appeal to many listeners.

It is interesting to note what radio has done for the College Glee Club and other choral groups. They have multiplied their audiences by radio broadcasts. Only a few years back this was impossible because of the imperfections of broadcasting; but now, with the new and more sensitive microphones and the better transmitting facilities, a choral group is broadcast as successfully as a soloist or a small ensemble. There is great value to these types of broadcasts. Heretofore, because of transportation difficulties, it has been impossible for one glee club to compare its work with another. Now, however, a Glee Club from the University of Washington may be heard on the same day with similar groups from such famous colleges as those of Emporia and Harvard. The sociability and good will of young people to-day extends far beyond their own college campus.

Josef Hofmann's fiftieth anniversary of his début as a pianist this past winter has been attracting world wide attention. One of the historical features was his fiftieth performance with the New York Philharmonic-Symphony Orchestra, early last March. This was broadcast over the Columbia Broadcasting System. Imagine the contrast between the boy of twelve years of age playing for an audience of 2000 people in his American début in 1888, and that of the mature artist playing for an assembled audience of more than twice the size, with a radio audience of several millions. Hofmann first appeared with the Philharmonic Society in 1901, under the direction of Emil Pauer, playing a concerto by Anton Rubinstein, his teacher, whom he similarly honored in his fiftieth performance with the Society in March.

Edgar A. Guest, the poet, famous for his "Just Folks" and other similar verses, is now spreading his kindly philosophy in a series of broadcasts called "It Can Be Done," over the Columbia Network, Wednesdays from 10:30 to 11:00 P. M., EDT. Each week a human interest drama is enacted, featuring an individual who has struggled to success in spite of seemingly impossible handicaps. In addition Mr. Guest reads some of his own poetry and Frankie Masters and his orchestra supply the music.

Major Edward Bowes original Amateur Hour recently entered its fourth year as a national network feature. This program, launched in the spring of 1935, is now regarded as one of the outstanding events of the air. "We've brought more than thirty-five hundred aspiring youngsters, and a good many of their elders, too, before the microphone," the Major states; "but our audition schedules are as full to-day as they ever have been." That the Major has been definitely helpful in social service, and that he has stimulated and promoted music study throughout the length and breadth of the land, few will deny.

Music of Marching Men Up To 1865

By EX-LIEUTENANT C. STEWART PETERSON

The author of this article is an overseas veteran of the World War, who arrived in France with the first thirty thousand of the American Expeditionary Forces. In later years he has seen service with the Field Artillery in the Philippines

OT A LITTLE of a Nation's history can be read in its martial music. It was with the purpose of g American history from this viewhat the writer undertook a research of source material revealing Amerartial music. As an aid thereto spe-knowledgment is due the Directors Division of Music of the Library ngress, for their excellent reports on research; and it were well to name helpful books for those desirous of r study: "The American Songbag," l Sandburg (1927); "American Balnd Folksongs," by John and Alan (1934); and "Sound Off," by E. lph (1929).

w soldiers and sailors songs of each can war up to 1865 will be here con-d, beginning with the French and War. In this war French influence songs is noted; British influence is ered in the songs of the Revolution e War of 1812; Spanish influence is t in the songs of the Seminole and h American War; Mexican influence in America's martial music in the with that nation; in the Civil War some German influence is seen; in hilippine Insurrection a Filipino in- is noted; and in the World War Germany and France left their marks erica's martial music.

A Candidate for Fame

OF THE EARLIEST lyrics of America's l music was the *Liberty Song*. The of one version were by Mercy Warwife of General James Warren of uth, Massachusetts; and it is believed he also composed the music. In that *Liberty Song* was probably the first American composition. This is the t American patriotic song, having advertised in the *Boston Chronicle*, tober 16, 1768. Mrs. Warren died at uth in 1814. One authority claims John Dickinson of Delaware wrote *y Song* in 1768. He was an officer Continental Army and a member of rst Continental Congress. The air is me as that of *Hearts of Oak*, written 9 by Dr. Boyce and David Garrick.

stanza:

me join hand in hand, brave Amer-icans all,
d rouse your bold hearts at fair Liberty's call;
tyrannous arts shall suppress your just claim,
stain with dishonor America's name."

Girl I Left Behind Me is undoubtof Irish origin. The oldest known script of this song is dated 1770. This air of an English army marching called *Brighton Camp*, which seems e been of Irish origin and was probwritten in 1758 in the encampment at ton on the south coast of England. before the American Revolution, it en an English custom to play *The l Left Behind Me* whenever a manr weighed anchor or a regiment de- for service elsewhere: and an on to do so would be thought of as of consideration of the ladies. Refer-is made to the lips and eyes of the dames of France, Flanders, Italy and Spain; but the hearts fall back to Erin's Isle. It is at present the regimental song of the 7th United States Infantry. In General Custer's day it was the song of the old 7th Cavalry. This song is a prominent part of the medley march played at West Point when each graduating class stands in ranks for the last time.

God Save the King seems to have been written by Henry Carey and sung during the reign of James II and during the rebellions of 1715 and 1745.

Some Anglo-American Ballads

ANOTHER SONG often heard in America in the prerevolutionary era was *Brave Wolfe*. This was for a long time a popular song and was widely sung in the 18th Century. It was a ballad written in commemoration of the capture of Quebec on September 13, 1759. The author of this song is uncertain and two basic texts appear to exist. In enchanting words the composer gives a beautiful description of a charming setting wherein General Wolfe bids farewell to his loved one and gives her a diamond before leaving England for America, where he landed at the City of Quebec. Then follows a ghastly description of the battle and the mortally wounded General Wolfe speaks of his pleasure in dying, when told of the British defeat of the French and capture of the city. Another song, *Death of General Wolfe* was written by Thomas Paine and was first published in *Aitken's Pennsylvania Magazine of the American Monthly Museum*, March, 1775. The title of this song is descriptive of its contents.

A lyric called *Braddock's Defeat* was a part of America's martial music in prerevolutionary days. Both the composer and date of composition are unknown. The author builds his theme around the progress of the battle against the Indians in the American wilderness, by General Braddock, in which he was aided by Generals Gatefore and Gates from England and the young American George Washington. The crossing of the river is described and how so many British and Colonial soldiers fell so that the water was stopped and it turned red from flowing blood.

Rule Britannia was the anthem of loyalty sung in the American Colonies in the prerevolutionary era. The air was composed by Dr. Thomas Arne about the middle of the 18th century. There appears to be some uncertainty as to who wrote the words. They describe the rise of Britain out of the azure main, with chartered lands, and guardian angels sang,

"Rule Britannia, rule the waves,
Britons never will be slaves."

Tyrants never will tame the Britons; they will build cities of commerce; here the muses will find freedom; and brave hearts will guard the fair.

One song of American prerevolutionary days deserves special mention since it was handed down in American army camps from the French and Indian Wars and was still sung in 1836 during the Seminole War. The name of this song is *How Stands the Glass Around?* At a gathering of General James Wolfe and his officers in Quebec, in 1759, on the night before the British captured the city this song is known to have been sung. The words were first published in London in 1710; and Handel, the great German composer, is said to have written the music. The lyric was one of the very first of America's martial music. It was a special favorite of the old Second Dragoons, now the Second Cavalry. The words describe the severe life of the fighting soldier and the joy he finds in drinking. The soldier's business is to die, so he should drink on and drown fear. The warrior must never complain; the next battle may place him before his Maker; if not, with a glass all will be well again.

One of the most popular songs of the Revolutionary War was *The Capture of Burgoyne*. This song was long lost, but in 1842 it was discovered that a copy was possessed by John Ely who took part in the capture of Burgoyne at Saratoga. The battle is described in fitting words. The composer tells of how when victory was proclaimed the bells were rung on the American plains and praises were sung to high heaven.

One of the Immortals

THE MOST WIDELY KNOWN in our day of all the Revolutionary War songs is *Yankee Doodle*. We are greatly indebted to Oscar G. Sonneck, at one time chief of the Division of Music in the Library of Congress, for his excellent investigation of the authorship of *Yankee Doodle*, covering seventy-eight pages, with several additional ones on musical variants. Sonneck concludes, "Thus to sum up, Dr. Richard Shuckburgh's connection with *Yankee Doodle* remains as mysterious as ever". It seems that this song has come down through all our wars, and in each one a new version has appeared. Lack of space prevents quoting these, but in any case the reader is familiar with at least one version. Doctor Richard Shuckburgh, a witty British army surgeon in the French and Indian War is usually credited with having written the first American version of *Yankee Doodle*, in 1758, while encamped near Albany, New York. He built the theme of his lyric on the ludicrous rustic appearance of the American provincial troops. *Yankee Doodle* is the probably lone American mongrel descendant of many ancestors of other lands. Of the origin of this, the oldest and most widely known in all of America's martial music, E. A. Dolph has this to say, "Whether the prototype of *Yankee Doodle* was a twelfth century chant in a Roman Church, a folktune of the Pyrenees, a harvest dance in Holland, a Hungarian folkdance, a Welsh jig, an Irish air, or a tune used to ridicule Cromwell, will probably never be satisfactorily determined." And whether "Yankee" is an Indian corruption of the word "English", a variation of a Dutch term of contempt, or a Scotch or Persian derivative, is likewise a matter of speculation. But, with the passing of the years, *Yankee Doodle* lives on with ever increasing vigor.

Another of the most popular of all the Revolutionary War songs, and often sung at officers' and soldiers' messes in the camp and field of the Revolution, was *Mad Anthony Wayne*. The original tune appears to have been lost and the one now used was composed about a century ago. That courageous leader, the dramatic and picturesque General Mad Anthony Wayne was idolized by his men. So it was quite natural that the very exceptional thing should occur, namely, that an aide-de-camp wrote a song about his General. It is said to be one of the very rare instances in history where this has happened, since such is not the custom—soldiers do not write songs about their Generals. The words of this lyrical composition are descriptive of General Mad Anthony Wayne in battle. He knew no fear as a leader. He was a man of few words. Rarely did Mad Anthony Wayne fail to gain a victory.

Between the Revolutionary War and the War of 1812 almost continual fighting raged in the old Northwest Territory, between the Indian tribes and the armed forces of our newborn American Republic.

HERE COME THE WELSH GUARDS!
This picture was taken at the historic St. James Palace in London.

An account of America's martial music would be incomplete without including a few songs of the Indian fighters of those early days. When the Indians inflicted the tragic defeat on the forces of General St. Clair's two thousand soldiers of militia and regulars, a song was born known as *Sinclair's Defeat*. All his artillery officers and one half of his men were massacred by some two thousand Indians led by the nefarious American born Simon Girty who turned traitor and joined an Indian tribe, and by Chief Little Turtle. This occurred on the banks of the Wabash, early in the morning of Nov. 4, 1791. *Sinclair's Defeat* was written by one of the veterans surviving the massacre. This is a descriptive battle lyric which tells of how no men of Mars ever fought more bravely, and on that day his own courageous Captain Bradfort of the Artillery fell dead in battle.

Another very popular song of these old Indian fighting days between the Revolution and the War of 1812 was one on General Harrison's victory over the Indians in the West, at Tippecanoe. In "McCarty's National Songbook" this song is found, which gives a picturesque account of the renowned commander, General Harrison, leading his victorious troops near Phophet's Town, and here they encamped after defeating the savages,

Then came the War of 1812 and there occurred the savage massacre of the Kentuckians by the whiskey crazed Indians, on the river Raisin, near Fort Malden, in January of that year. Dolph has handed down to posterity the popular song, *Remember The Raisin*, which was the battle cry and was sung at the camp fires when the Kentuckians, under General Harrison, in September, 1813, at Fort Malden, heaped victorious revenge on their savage enemies. The song recounts the horrible cruelties suffered at the hands of their Indian foes; and the cry was to save the daughters and wives of the men on the frontier. The chorus resounded with the words of how at Fort Malden gold was paid for the settler's scalps.

In this war the Canadians had a battle song expressing their desire to avenge the Yankee capture of their General Burgoyne, and that their intentions were to make the Americans subjects of the British crown again.

Soldiers But Sentimental

One very appropriate little popular battle ballad of the War of 1812 is deserving especial mention. It was entitled *The Yankee Girls*, and Dolph tells us that this song continued to be popular among the soldiers of the some years later Seminole War in Florida, and still later also in the Mexican War. The unknown author built his lyrical composition around the theme that not England's daughter's, Scotia's lassies, Erin's maidens, Italy's maids, the Georgian bride of the Turks, or the black-eyed Houris, could compare with the Yankee girls. To the American soldier, Columbia's daughters were incomparable. So they drank to the form, freedom, eyes, hearts, cheeks, and chastity of their Yankee girls, which were like none other. This song was sung to the tune of *Auld Lang Syne*.

America's martial music of the War of 1812 holds the unique distinction of having given to the land of the free and the home of the brave its national anthem, *The Star Spangled Banner*. Only a few years ago Congress made this song the official national anthem, and thus this country became one of the very few nations on earth to have a national song that was so declared to be by law. Every American schoolboy and girl knows at least a part of the *Star Spangled Banner*, and the story of how the words were written by the lawyer Francis Scott Key while he was a prisoner on a British warship during the bombardment of Fort McHenry at Baltimore, Maryland. The Pennsylvania Militia was at the time in camp near Baltimore, and it is said that they were among the first soldiers known to have sung what to-day is our official national anthem. Bacchus was the inspiration of the music of *The Star Spangled Banner*, according to a report prepared in 1910 by the chief of the Music Division of the Library of Congress. Its verse form and meter are nearly identical with the old English drinking song known as *Anacreon in Heaven*. The song first gained national prominence in the Civil War.

As will be remembered, between the War of 1812 and the Mexican War came the Seminole War in Florida, about a century ago. As previously stated two of the soldier songs in camp and field at that time were *How Stands the Glass Around*, which had come down from the French and Indian War of Colonial days, and *The Yankee Girls*, which was first sung in the War of 1812. Both have been already discussed. A popular song of the Florida War was *Benjamin Beall*, written by Colonel A. T. Lee of the Eighth Infantry, who was a soldier in this campaign against the Indians. The song tells of the bravery in battle of Benjamin Beall, of his jolly and ever new stories, of how he could swim the raging waters of the Swanee River, and how he smiled at cold, grim death.

Songs of the Southwest

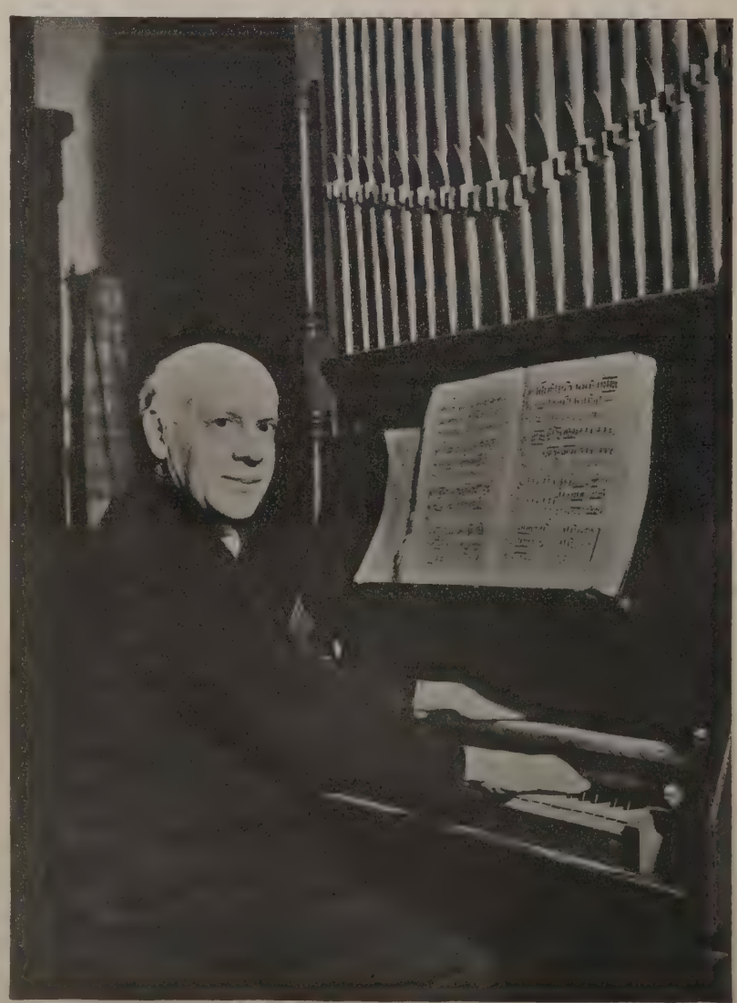
We next pass on to the martial music of the Mexican War now nearly a century old. For a song named *Jackson* we are indebted to one Franz Rickaby, who claimed to have once met this interesting soldier of fortune while walking to the Great Plains from the Great Lakes. Jackson was a survivor of the War with Mexico. The words of this romantic lyric tell of Jackson's return from the Mexican War to a home where the mother told him of how her daughter Mary had dreamed of him the night before. He said that all his money was lost but if he could marry Mary both would be happy. But he was told that she was not at home and would not care to see him if she were. There was no lodging place for Jackson, so he would have to find his shelter elsewhere; but when he pulled out his hands full of gold he at once was told that Mary really was at home and loved him best of all. So downstairs came Mary, kissed and embraced Jackson and informed him there were empty beds that he could rest in. But he refused and said that the street would do and that he would buy brandy with his gold and have a girl on each arm.

Zachary Taylor was a Mexican War song. It is believed that this musical composition was written by the soldiers of that war. It is a story of General Taylor's activities through this war, including the Battle of Buena Vista. The tune used was that of an old song called *Billy Taylor*. The words tell of the superb bravery of the victorious General Zachary Taylor and his men at Arista, Resaca de Palma, Palo Alto, Matamoras, Camargo, Monterey, Saltillo, and at Buena Vista. The song closes with a glowing tribute to old Zachary and his Yankee Volunteers.

The *New York Volunteers' Camp Song* expressed the usual sentiments of the Mexican War times and was one of the popular ballads.

Deserving of special mention am these war songs is the one known as *member The Alamo*. At the old Spa mission at Alamo, in 1836, the Mexi General Santa Anna and his men m sacred the entire company of one hun eighty men and Colonel Travis, Bo and Davy Crockett of the Texas ar The words of this song exhorted the diers to emulate the valor of this br band who had so gloriously met th tragic fate ten years before, and they w urged to seek vengeance on their foe. G eral Santa Anna was finally defea Texas became independent, and the m derous brigands were defeated in the M ican War. The tune was that of *Bruc Address* and the words were written J. A. Durriage.

Cvil War Classics



Prior to the World War, no war which the United States was ever engag brought forth so many songs as did Civil War, when one considers the musi productions on both sides in the confl And there is certainly room for hon doubt as to whether or not three quart of a century after the World War many of the songs of that period will s prevail as now survive from the War the Secession. In the schools of to-d they still learn to sing the songs used those in both blue and gray, in camp a field, when the Union we now know w forged in the fiery furnace of war. T school boys and girls of a united nati all still sing songs handed down from t Great Conflict such as, *The Battle C of Freedom; Battle Hymn of the Republ Bonnie Blue Flag; Dixie; John Brow Body; Maryland, My Maryland; Tram Tramp, Tramp, The Boys Are Marchin* and *When Johnny Comes Marching Hom* One song of the War of 1861-65 was al popular in the Spanish-American War, a a parody of it was sung in the World W This was *Just Before The Battle Moth* by George F. Root; and it was very po ular in the North. In the Southern Ar comic parodies of it soon appeared, telli of a frightened soldier boy homesick f Lorena Juanita, his mother.

On every Memorial Day the Gra Army Of The Republic still plays th old favorite *Marching Through Georg Tenting On The Old Camp Ground* w written by a farmer boy from New Ham shire, who never had a chance to stu music. His name was Walter Kittredg In 1863 he entered the Union Army. O his first night in camp he was deep troubled and wakeful. In the silent nig out of the mind of this farmer boy soldi came the deeply moving, the descripti and so expressive of war time emotio *Tenting On The Old Camp Ground*. Th night, while others slept, Kittredge ro from his camp bed and wrote both t words and music of his cheering, co forting and prayerful song, which was the time and still remains one of the mo popular of all our war lyrics.

One tragic little Civil War balla mournfully sung by the children of tho trying times, was *Poor Kitty Popcorn*. tells the story of a cat that joined a reg ment as mascot and along with the soldie left for the southern battlegrounds. So the cat became more fond of one soldi than others, and she remained his pet. H soldier master died and was buried; a while she was mourning at his grave s perished of cold in a snowstom.

The most popular and the best know of all the love songs of the soldiers the south, was *Lorena*. It was a speci favorite of the Boys in Gray, in camp a field. The words of this song recalled the confederate soldiers fond past rec lections of the girls they left at home, w hopes of early reunions. Lieutenant Fra Brady is reported to have led Gene Morgan's men in singing *Lorena* in fro

(*Continued on Page* 412)

ARCHBISHOP MADE HIM A DOCTOR OF MUSIC

During the reign of Henry VIII (1509-1547) an act was passed known as the "Peter's Pence" act. The Archbishop of Canterbury was given the right to confer degrees. Dr. Cosmo Gordon Lang, the present Archbishop of Canterbury, has just conferred the degree of Doctor of Music upon Walter Vale, who for thirty years has been organist of All Saints' Church, in London.

Piano Parties Are Fun

How to Conduct a Simple Studio or Home Gathering for Music Pupils

By MADELON WILLMAN JACKSON

IANO TEACHERS realize that not many of their young pupils are prospective artists. The vast ma- of children are taking lessons prin- y because the piano provides for them arly companionship with good music. ien, this companionship does not bring e child happiness and satisfying social icts, the piano lessons fail utterly to uce for him a friendship with music h will broaden and ripen throughout ntire life. This has been already proved housands who, as children, took piano ns for four or five years but later ed into neglecting the piano, never ouch it again. To such persons, piano y was an isolated experience never d with practical experiences in life. ildren need to learn at an early age because they can play the piano they better equipped to encounter the human ionships of society. In leading young ls to make this important discovery hemselves, the simple device of giving sional "piano parties" will prove in- able to any teacher. At such parties, playing games, marching and skipping ther with friends, or playing for others ng and dance, children come to realize piano playing is a sharp edged, shining ement with which any one may thrust loneliness, and with which he may e his way into social satisfaction and rity.

any years ago my first piano teacher, Rae, invited me to a piano party. as nine years old and had been taking ons only six weeks, but I was included he privileged group gathered at her e that Saturday afternoon. Never be- was there such a marvelous party—such delicious fudge!

hat piano teacher was a tiny, mouse- creature, but she bequeathed to her ls a remarkable treasure. She not only oduced us to the real values of the o, but she taught us to know and to good music, and to make of piano ing a joy giving, helpful companion.

reserving the Spirit of Youth

MISS RAE'S PIANO PARTIES there were rown-ups to watch us, no performers, program. They were apparently just rmal parties where we mingled happily children of our own age. Yet, remem- ng the things we used to do, I know that Miss Rae was not nearly so ial in her planning as we were led to ve. Remembering some of my attempts give parties for my own pupils, years r, I know, too, that Miss Rae must e worked long and carefully to make little events so successful.

lere are some of the things we used to We sang songs together—jolly songs always seemed somehow to be special us. We played "Marching to Jeru- m." We played guessing games—guess- high and low pitches, names of notes, es of compositions. We marched and ped through other games. We gave s with music or about music. We told ies both funny and serious about great posers.

t every party, the happiest moment of came when Miss Rae would play for famous piano compositions. Sitting und on the floor or on cushions, we ned to the sort of music we dreamed playing for ourselves some day. Sometimes she named her selections; sometimes she played quietly without speaking. We learned how compositions came to be written or facts about the men who wrote them. She illustrated how the piano could play gayly, sadly, fast or slow, how it could sing melodies or play harmonies, how it could make us laugh or cry. In this informal companionship with the best in piano compositions she built up for us a background of happy associations with music which was to last many of us all through our adult life.

No Wall Flowers

EVERY CHILD CONTRIBUTED something, too. Perhaps Donald played while we marched to Jerusalem, or Mary accompanied our singing. Each one of us had to take turns performing upon the big piano which played the most important rôle in every activity. Yet we were asked to play so casually that there never was any fear attached to the performance. The accent was placed on the fun of the game rather than on the performer's skill.

Miss Rae would say, "Of course we need music for this, something quiet but with a strong swing; Dorothy, that little waltz you played for me Thursday would be just right."

"Do you mean the *Fairy Ring?* I cannot remember that all the way through," Dorothy would say, with just a hint of modesty.

"Try it," Miss Rae would say encouragingly and then would add, "I have a copy of it here if you forget."

Somehow or other we never needed those copies she cheerfully volunteered, simply because she knew so well just how each one of us could fit into service. Perhaps later in the year we would play those same selections at a real recital.

While our teacher was getting the fudge, popcorn, or simple confection so necessary to the success of any party, we would investigate the metronome, the piles of music, or crowd around the piano to "show off" a little.

"I'm as far as this in the second book," Mary would brag a little.

"Have you taken this one yet?" Jack would inquire.

"I had to play this at school yesterday," would be Rosa's experience.

We had fun at those parties, but we learned more than we ever realized. We learned to welcome opportunities to play for each other. We learned to hum themes from piano compositions, to distinguish world famous melodies, and to understand the piano's harmonies. Chords, intervals, signatures, signs and symbols were not so difficult when presented through fun. Ears were sharpened with pitch and ear training games. In one game the child who guessed correctly became "leader," playing scales or chords for others to guess "major or minor." That made us work. We learned to sing on pitch, but best of all, because we never knew just when we would be called upon to play at sight, we learned to read music.

We Learned Through Fun

OUR PLAYING EXPERIENCES became purposeful and meaningful. Accompanying for specific activities is stern and exacting discipline. To play *Marche Militaire* for marching feet, a bit of Gilbert and Sullivan for the singing, or a Brahms waltz for swinging, means steady flowing rhythm, with no lagging behind or stumbling; while, on the other hand, to provide incidental music for the Dolly's funeral scene in the little marionette theater means your Tschaikowsky melody must sing softly, with sympathy and true sadness.

Not many children go to piano parties to-day. The small, informal recital seems to have replaced the party idea. There are classes in musicianship, appreciation, harmony, and theory, but few of these provide the temporary fun and everlasting inspiration for a child that a real piano party does.

Perhaps one reason that piano parties have been pushed aside is the fact that children seem busier to-day than ever before. Dancing lessons, swimming and art classes, singing, orchestra and band rehearsals, clubs of every kind, fill the after school hours in scurrying sequence. Yet, because of this, children are better able to contribute to the success of the parties. The teacher, who knows of these additional accomplishments of her pupils, could utilize them to the advantage of all.

Music for all activities may be chosen from compositions children already know or from simpler selections to be played at sight. Fascinating collections of songs, classics, duets, and trios, are available in varying degrees of difficulty. It is significant that music houses are publishing an astonishing amount of excellent material which should make piano parties very simple for these days.

And Such Interesting Books

HERE ONE FINDS A BOOK entirely made up of games to play to music, and ideas for having fun with music. Another unique book furnishes stories, anecdotes, music plays, poetry, and quotations about music. Among many lovely books about composers, is a most successful one to furnish lasting associations with musical history through its cutting out and pasting activities. Still another tells how music comes over the air waves, and gives intimate glimpses of radio artists. For younger children, a new collection of well loved songs furnishes pictorial suggestions for rhythmic pantomimes. In addition, the music magazines, educational, and children's magazines devote many pages to cleverly written musical articles, plays, pantomimes, and marionette shows with music, and riddles, puzzles, and games. Children, discovering such items in current publications, enjoy contributing notes and clippings to the others.

If these books and magazines are available in the teacher's studio, excerpts may easily be read while children await their lessons. Many parents would gladly purchase such books as gifts for their children, upon recommendation of the teacher.

The following suggested list of books will yield many tangible ideas to any piano teacher who may be interested in finding new materials for this phase of music work: "The Magic of Music," Robert Schauffler; "Sing," Stevens and Dykema; "My First Song Book," Ada Richter; "Piano Fun," Dorothy Hughes; "Come and Caper," Virginia Whitlock; "Thirty Rhythmic Pantomimes," Jessie Gaynor; "Music on the Air," Hazel Kinscella; "Young Folk's Picture History of Music," James Francis Cooke; "Complete Book of Great Musicians," Scholes and Earheart; "Great Musicians as Children," Franciska Schwimmer; "Music Stories for Girls and Boys," Donzella Cross; "Magic World of Music," Olga Samaroff Stokowski; "Musical Games and Puzzles," Daniel Bloomfield; and "The Children's Music Party," by Colleen Brown Killner.

* * *

"The success in the musical life that is permanent and grows steadily to the end does not depend only, or even chiefly, upon technical skill or musical knowledge—it depends upon intelligence and character."

—Edward Dickinson.

THE NEW BALDWIN-WALLACE MUSIC BUILDING

The great musical advance in the middle west has another manifestation in the new Kulas Musical Arts Building, at Baldwin-Wallace College, Berea, Ohio. Mr. and Mrs. E. J. Kulas, of Cleveland, Ohio, are the donors. Mr. Kulas, like Charles M. Schwab, is another musical steel king, as he is president of two big steel companies of Cleveland. The great musical activity at Baldwin-Wallace College, with its famous Bach Festivals, is due largely to the eminent ability and tireless labors of the Director, Albert Riemenschneider, whose father was the founder of this fine music school. The new building, which will be completed in the fall, will be one of the most complete college music structures in the country.

The Threshold of Music

Triads, and How They are Put Together

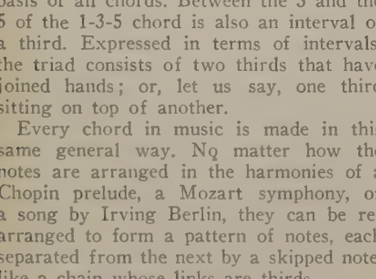
By LAWRENCE ABBOTT
Assistant to Dr. Walter Damrosch

This article is the fifth in a series on "The Doorstep of Harmony." The first appeared in The Etude *for January, and an article will appear each month hereafter.*

NOW THAT OUR NEWLY-ACQUIRED KNOWLEDGE of intervals is complete, we are ready to explore farther into the subject of triads and to discover the patterns from which they are constructed.

The vocabulary of music contains many complicated chords. But they are all ramifications of triads—like country houses which were originally built as simple, box-like structures, and gradually became complex with the addition of wings and gables. All triads, and all the complex chords which are triads-plus, have one thing in common. They are constructed on patterns consisting of "every other note."

We know from experience that this is true of major triads. To form the major triad on G, you press down the G key on the piano, skip A, press down B, skip C, and press down D. Every major triad has such a pattern, consisting of a root tone plus the third and fifth tones above it—the second and fourth being silent.



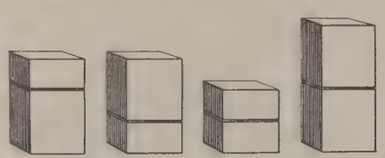
This same formula also permits the construction of other triads, slightly different from major triads. On the piano you can make your own triads very simply, as long as you keep to the white keys. Start with any note you please. Press this note down, skip the next one above it, press down the third, skip the fourth, and press down the fifth. You have a triad. Not necessarily major, to be sure, but invariably a triad.

Since you skipped the second and fourth notes, and played only the first, third and fifth, you can call your triad a 1-3-5 chord. The first note you skipped was an interval of a second from the original note. The next note (which you pressed down) was an interval of a third from the original note. This is an all-important interval, the basis of all chords. Between the 3 and the 5 of the 1-3-5 chord is also an interval of a third. Expressed in terms of intervals, the triad consists of two thirds that have joined hands; or, let us say, one third sitting on top of another.

Every chord in music is made in this same general way. No matter how the notes are arranged in the harmonies of a Chopin prelude, a Mozart symphony, or a song by Irving Berlin, they can be rearranged to form a pattern of notes, each separated from the next by a skipped note, like a chain whose links are thirds.

The following measures from *Estrellita*, by Manuel Ponce, as a random example, will show how chords can be rearranged into patterns of thirds:

Ex. 1



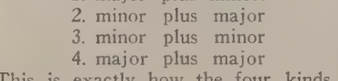
The Four Chief Colors of Harmony: the Four Kinds of Triads

THERE ARE FOUR different kinds of triads in all—the major triad, which we already know, and three others known as the minor triad, diminished triad, and augmented triad.

It has already been shown that triads are built of thirds, stacked one on top of the other, like empty packing cases. Also that there are two normal kinds of thirds—major and minor. We might carry out the simile and imagine for the moment that packing cases come in two standard sizes (dismissing, for the moment, the two less usual sizes known as "diminished" and "augmented"). If we had a supply of such standardized packing cases, some large (major) and some small (minor), and if we wanted to stack them in pairs, we could arrange them in four different ways:

1. A large one with a small one above it.
2. A small one with a large one above it.
3. Two small ones, one above the other.
4. Two large ones, one above the other.

These, we would find, are the only four combinations possible.



Intervals of thirds can be paired in the same four ways:

1. major plus minor.
2. minor plus major
3. minor plus minor
4. major plus major

This is exactly how the four kinds of triads are formed:

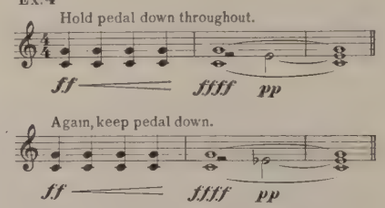
Ex. 3

The different kinds of triads have no names of their own, so they are called after the intervals which mark them as being distinct each from the other.

In the case of the first two triads, the distance between the two outside notes is the same—the interval of a perfect fifth. The distinguishing feature is the height of the middle note. In the first triad that note is a major third above the bottom note, so we call the resulting chord a major triad. In the second triad the interval is only a minor third, and so we call the chord a minor triad.

With the other two triads, the distinguishing feature is not the middle note, since its major third or minor third interval duplicates that of the "major" or "minor" triad; but the top note, which in both the third and fourth triads deviates from the standard height of a perfect fifth which distinguishes both the major and minor triads. The top note of Triad No. 3 is substandard, while the top note of Triad No. 4 is above par. These variations from the standard are what give these two chords their exotic quality. In the first case, the interval from bottom to top note is a diminished fifth—and for this reason the chord is called a diminished triad. And in the second case, the above-par interval is an augmented fifth, which gives the chord its name augmented triad.

Each of the four triads has its own distinct personality. In order that we may tell them apart whenever we meet them in music, we must learn their characteristics.



We already have met several examples of the major triad. It is the bugle call chord, the most natural and common chord in music. It is the backbone of music in the major scale, for the three important triads in major scale harmony (tonic, dominant and subdominant) are all major.

It radiates joy, happiness, serenity, good cheer.

The Sad Chord: the Minor Triad

Make one slight change in the major triad: lower the sensitive middle tone a half step; and instantly the cheeriness of the major chord has vanished, and sadness takes its place. If you wish to prove for yourself that the third is the all important interval which establishes the character of a major or minor triad, make this simple test at your piano:

Ex. 4

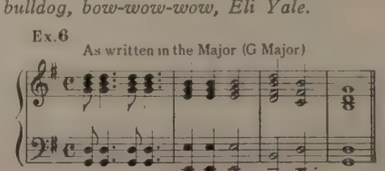
Pound as hard as you please on the open fifths. Then touch the third so lightly that it utters only the faintest whisper. Even so, when the third drops from major to minor the chord changes color as completely as litmus paper dipped into a test tube of acid changes from pink to blue.

Notice that the empty fifths sound characterless, while the third, though played ever so softly, brings life and warmth to the chord; in the first case suffusing it with a contented glow; and in the second, a dark, sombre quality. The first was sunlight; the second, shadow.

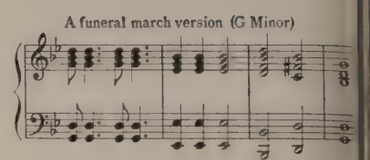
The minor triad has a wide field of expression, its mood ranging from mere pensiveness or solemnity to bitter, heartrending tragedy.

There is a separate scale, somewhat different from the major scale, for music harmonized with minor chords. It is called the minor scale. The third and sixth steps in the scale are minor intervals, like this.

Ex. 5



Just as you can change a major chord into a minor one by lowering its third, you can change major tunes into minor ones by lowering the third and sixth notes of the scale, whenever they appear, to minor intervals. The clear brightness of the major will yield to the sombre coloring which pervades all music in the minor key.

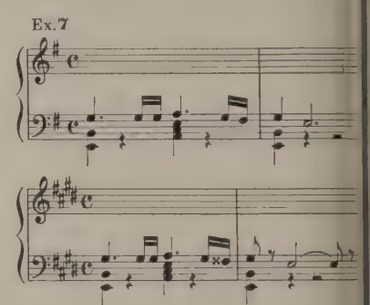


Try this for yourself. Take a tune you know, play it through in the major—and then play it again, changing its major chords to minor. Here is an example: the famous Yale University song, *Bulldog, bulldog, bow-wow-wow, Eli Yale.*

Ex. 6

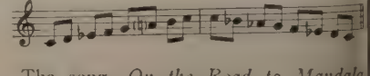
As written in the Major (G Major)

A funeral march version (G Minor)



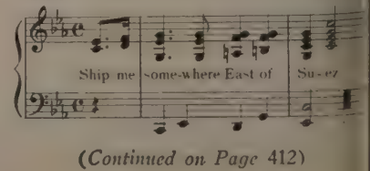
(This quotation is made with permission of Cole Porter, owner of its copyright.)

Way Down Upon the Swanee River another good tune with which to expe ment in this fashion.



Orchestral composers know the effecti ness of this device. In the opening mo ment of Tschaikowsky's "Fifth Symphon for instance, a theme appears in som minor colors. When it reappears in finale it is identical except that it has b transformed into a triumphant major. H are both forms:

Ex. 7



If the music is played as written, in t minor, several notes foreign to the mi scale just given will be found. As a matt of fact, the minor scale has several for each one being in the nature of a co promise. The scale already illustrated is t best one to use in forming chords, but has one serious defect: the interval of augmented second between the sixth a seventh notes of the scale (between A-f and B-natural in the scale of C mino which is considered awkward. To av this uncouth interval musicians have d vised another scale to use in forming mi melodies. Incidentally, it turns out that t smoothest and most effective notes on t way up are not the best notes to use the way down, so in this revised scale b sets of notes are used. It is as if, on t highway between C and C, we came to place where the road divided into two o way stretches, one for going uphill, t other for returning downhill. This revis scale is called the Melodic minor scale distinguish it from the other, the Harmon minor scale.

Ex. 8

The song, *On the Road to Mandala* contains both forms of the melodic mi scale in the short space of two measure This is where they occur:

Mozart's Great Romance*

The Youthful Love Story of a Beloved Master of Music

By HEINZ GREVENSTETT

L THAT WAS REQUIRED of music during Mozart's lifetime was serenity joined to a fair amount of ution. Savants had not as yet busied elves with the esthetic content of ; and the only question, possibly, that they or the public asked was, "How the composition sound?" Surely no would ever have thought of asking, t is the composer's meaning?"

zart lived during an epoch when the requisite demanded of a melody in form—even in a large musical work—hat almost anybody could hum it after gle hearing. At that time the world neither music doctors nor music phi-ers. And that was wholly logical, g that any composition by the immor-Wolfgang Amadeus was frank and d of hidden meanings. No musical te was needed to inform the public whether the music was treating of death, joy, fear, libertinism, a twit-g of birds, or perhaps the pungency ampagne.

Changing with the Tide

FOR THE MUSIC of the majority of the osers living in a later period—those ing to the new romantic school ex-g from Liszt and Berlioz to Richard ss and Max Reger—some sort of nentary became imperative for a com-nsion of the music's intention and ing; because all that could be ex-ed in the way of elemental strength naïve originality had been exhausted e famed trinity of Viennese com-s, and what was left was differentiated complicated. Thus with the coming of sophy in music there entered musical sophers.

merity is a special attribute of today. ake editions of modern fantastic com-ons intelligible to present and future ations, there must be explained the oser's significant use of augmented s and chords of the diminished seventh; after that the audience must be in-ed about all the composer's private mstances, his destiny and moods, his cal views and religious convictions, as his philosophical contemplations based ivisection and X-rays. A new form terature was thus evolved. There is dy an extensive library devoted ex-vely to the life and works of Richard Wagner. Investigation and research, as is natural, have the faculty of working crab-wise.

A Neglected Prophet

IT IS STRANGE, is it not, that while our musical intellectuals engage in profoundly deep studies respecting Beethoven and his symphonies, the compositions of the many-sided, versatile Mozart, whose moods, fate, and innermost experiences found utterance in every musical form, from homophonic song to polyphonic ensembles in mass and opera, has had no commentator. And, parenthetically, it may be added that it seems as though the general public is little interested in "truth about Mozart."

That evidence corroboratory of the last statement may not be lacking, let it be said that the two worth-while biographies and collections of letters—the authentic works of Ludwig S. Meinardus and Karl F. Pohl—circulated in only a few thousand copies; while in contrast, the anecdotal novels of La Mara and Elise Polko, that caricature the person of Mozart, have been universally read and probably believed as true to life. It may be conjectural, but it looks as though some of the neglect of Mozart can be attributed to a hostile clique that has propagated all sorts of falsehoods about the master; for, according to these traducers, Mozart had love affairs with nearly every singer for whom he composed an aria. Should we credit such vilification, then Mozart could well have exchanged rôles with his *Don Juan*.

Annals Short but Rare

MOZART LIVED but thirty-five years. He was born in Salzburg, January 27, 1756, and died December 5, 1791, in Vienna. August 4, 1782, he married Constanze Weber, and for nine years they loved each other through sickness and gruelling poverty.

As a bridegroom aged twenty-six, he opened his heart to his father—to whom he always made conscientious confessions—after this manner: "It is absolutely impossible for me to live like the majority of other young married couples. In the first place, I am scrupulously religious. Secondly, I have too much love of neighbor. And, because I have ever had nothing but the most honorable thoughts, I could declare under oath that I have never had a mésalliance with any woman whatsoever. I can, therefore, either live or die!"

Those who have said malignant things about the composer of "The Marriage of Figaro," "Don Giovanni" and "Abduction from the Seraglio," regarding him as a Lothario, should thoroughly purge their obnoxious verdicts. The life of Mozart is so filled with humor, passion, jubilance and heart-rending suffering, to engage all of one's attention, that it is perfectly inane to conjure up all sorts of false adventures behind the scenes.

Youth and Romance

AT THE AGE of twenty-two, Mozart fell in love for the first time, with the distinguished Aloysia Weber, a singer at Mannheim. Because of his sympathy for this family in distress, it came close to a wedding almost immediately. A serious letter from his father came in the nick of time, to prevent the foolish undertaking. The plan collapsed when he read this advice: "It depends solely on you whether your future course be that of a common musician, a person speedily forgotten, or whether your career be that of a celebrated artist of whom all posterity shall read. It is for you to decide whether in your infatuation for this young woman you spend your life in a squalid chamber with clamorous, suffering children, and sleep and die on a straw shake-down, or else—living as a Christian should—your life be filled with satisfaction, honor and after-glory, making good provision for your family, and at the last dying holding the respect of the whole world."

Naturally, the soft-hearted, boyish Mozart was greatly affected by his father's sobering counsel; and, after a brief period of pain, his filial love for the 'best of fathers' won the victory and he could reply, "Next to God comes papa! In childhood that was my sole maxim and it remains unchanged today!"

What has a cold-blooded countryman of Mozart to say about first-love affairs?—"They are the heart's milk teeth and at the right moment they must be yanked out." And that is exactly what happened to Mozart in his supposed affair with Aloysia Weber. But this unsophisticated youthful experience became almost an insurmountable obstacle to the truly 'grand love of his life,' because Constanze was a sister of Aloysia.

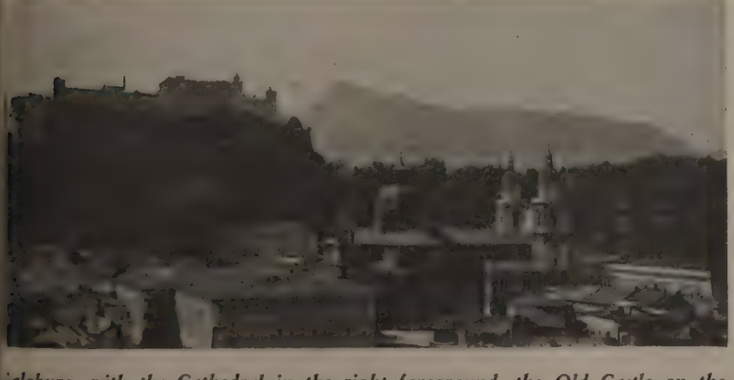
Youth and Love

MOZART HAD but one serious "affair of the heart"—the one with his Constanze. Romance was not absent; and courtship ended in an elopement. The parents of the pair were strenuously opposed to their marriage. This led to a clandestine engagement. Common sense and the past would have argued along with the parents; but the devoted couple voted for the adventure.

After the death of the father of Constanze, the widow and her daughters had left Mannheim and had begun life anew in Vienna. Aloysia married an actor named Lange. The Weber family put up a tough fight for subsistence and meeting of rent, through the rest of their stay in the Austrian city. About the same time, domestic matters had made Mozart's position under the Archbishop of Salzburg decidedly undignified and distasteful, and he resigned. He soon became intimate again with the Weber family, and a little later could write to his father, "A single man, in my opinion, enjoys but half a life. Such are my views and such they will always remain. I have thought and reflected sufficiently, and shall continue to think the same. But who now is the object of my love? Do not be alarmed, I entreat of you! Not one of the Webers, you say? Yes, one of the Webers—not Josepha, not Sophia, but the third daughter Constanze. I never met such a diversity of dispositions in any family. The eldest is lazy, vulgar, deceitful, crafty and cunning as a fox; Madame Lange is false and unprincipled, also a coquette; the youngest is still too childish to have her character defined—she is merely a good-natured, frivolous girl—may God guard her when tempted!

"The third daughter, namely, my good and beloved Constanze, is the martyr of the family, and perhaps because of that is the kindest of heart and the cleverest—in short, she is the best of them all! She takes full charge of the house, and yet does nothing that is right in the eyes of the others. She is not bad looking, although not especially beautiful. Her beauty consists of two snapping black eyes and a good figure. She lacks wit but has enough sound sense to fulfill all duties incumbent on a wife and mother. She is no spend-thrift—a habit that is fundamentally wrong—although she dresses neatly and with taste. She can make all her needed clothing. She is also skillful in dressing her hair. She knows the management of a household and has the best heart in all the world! I love her and she loves me from the heart. Tell me, could I choose a better woman for a wife?"

That letter again shows Mozart's naïveté. The faint-hearted stripling had now become an avid man. And right here a fierce struggle was to begin.



The father was distracted by the irreconcilable view that all his beloved Wolfgang Amadeus had in prospect was a "squalid chamber with clamorous suffering children, to sleep and at last to die on a straw shake-down." Unscrupulous friends promoted badgerings and clashings among the three parties concerned. Of these the Weber party was the worst.

Family Cupidity

IT IS IMPOSSIBLE to say overmuch that is good about the mother of Constanze. She was overfond of her toddy, to begin with;

A Child Portrait of Mozart

Salzburg, with the Cathedral in the right foreground, the Old Castle on the elevated bluff at the upper left, and the Alps showing dimly in the distance.

* Note:—This article, originally entitled "Mozart's Liebe" ("Mozart's Love"), has been freely translated from the German by S. Harrison Lovewell.

and cupidity led her to gain all possible profit from Mozart's love-affair. She slammed the door in his face, because he had not put in writing that he was ready to marry Constanze. On the other hand, Mozart stipulated that he would marry Constanze within the space of three years; or, "if he found this to be impossible because of changed desires," he would pay annually three hundred gulden.

MOZART AND CONSTANZE

Naturally this contract gave Mozart's father real cause for worry. He conjectured that the Webers were mercenary and were taking advantage of his poor, weak and foolish lad; but Wolfgang wrote him reassuringly, "Do you know what the heavenly girl has done? She demanded that contract from her mother and told me, 'I need no writing from you, dear Mozart — your word is sufficient.' She tore up the paper. My dearest, best of fathers, I ask for nothing more earnestly than that you come and visit me so that you can see the girl herself; because I know right well that you will love her dear kind heart." Later he wrote: "The mother is so angry that the girl is now worried to death!"

A God-Mother Intervenes

When matters had come to this extreme pass, a compassionate friend of the young people took the Weber Cinderella to her own home. These were exciting times! And yet, in spite of deep, passionate, tender moments and his troubles, the composer found relief from all distractions respecting his love and strivings for his livelihood, in the writing of the soul-stirring music to his "Abduction from the Seraglio."

Although the Webers threatened to bring the police into the case and to force the return of Constanze, this outrage was averted by the diplomacy and financial aid of Baroness von Waldstädten. The young people were quietly married before Mozart's father could be drawn into the Weber conspiracy.

The son wrote after the wedding, "When we had become united in marriage, both wife and I wept. Our tears touched the hearts of all the others, and all wept, including the priest. Our wedding feast was a supper provided by Frau Baroness von Waldstädten." Two days thereafter, Mozart received by mail his father's blessing.

Constanze was Mozart's only beloved! Constanze must have been noble and profound, consecrated yet smiling, chaste though passionate, to have influenced by means of her love the wonderful variety of melodies that found their place in her Mozart's compositions, beginning with the sad little violet all alone and crushed on the meadow, and then going on through to the other world harmonies in "The Magic Flute." It was love incomparable! In the lives of the twain—Mozart and his Constanze—the most touching compassion stands beside transcendent smiles, a sunny tenderness next to fervid yearnings—the joy and happiness of healthy young people great in depth of character and feeling.

Making the Glissando Easy

By HENRY E. EVARTS

The word *glissando* is the Italian form of our present participle *gliding;* and in music it is applied to an ornamental flourish produced by drawing a finger rapidly over the keys of the piano.

In executing the ascending *glissando* with the right hand, perhaps the safest plan is to close the four fingers (not including the thumb) into a compact flat bunch, and then to turn the hand over, back downward, and draw the nail of the third finger quickly and lightly over the keys, for the distance indicated. The middle finger being longest, it may be easily projected beyond the others, so that these, while adding weight to the hand, will not touch the keys. The arm must draw the hand rapidly along its course, with care that it moves at an even pace so that there will be nothing jerky about the series of tones.

The left hand will proceed in the same manner, but, of course, in the opposite direction.

In descending, the right hand will follow a quite different course. The hand will not be turned over, and its thumb will become the acting member. The elbow should be quite free from the ribs; the fingers will be held loosely and quite free of each other, and the thumb will be held well under the lower part of the hand. Only the edge of the nail of the thumb will touch the keys. As before, the left hand will follow the course of the right one, only in an opposite direction.

It is quite essential that in all *glissandi* each hand should pass lightly along, with the least possible weight coming from the elbow. The hands must be held as high as possible above the normal level. There must be the greatest care that only the nail used shall touch the keys; for, if the flesh is allowed to do so, there will be soon a patch of missing skin.

And so this intriguing ornament is accomplished.

Recent Record Releases

By PETER HUGH REED

Considering the tremendous output of records in the past year, particularly of good music, as distinguished from popular music, one would be inclined to say that the American music lover is more advanced to-day in his musical appreciation than are his European cousins. For no place in Europe are the variety and quantity of recordings issued that are now to be found in this country. Thus it will be noted the American home is being enriched by music to an extent never before equalled and probably never conceived possible. The music library in the home of this day contains not only sheet music, scores, and books on music, but also discs that permit the music to be ideally reproduced for us *ad libitum,* for purposes of study or for pleasure.

The RCA-Victor company has been more active this past year than ever in its history. Its rich output and its wider policies can be traced to the enterprising director of the record section, Mr. E. Wallerstein, a man who has grown up with the industry and not only has seen it expand but also has contributed greatly to this expansion. It was once believed that popular music made the money for a recording company. This Mr. Wallerstein never conceded was true; so he set out several years ago, when he first went with RCA-Victor, to prove that good music was as sound and as good an investment. "Popular music is necessary, but it should not be the featured work of a great recording company," he told us recently. "Good music is and always will be more enduring. To-day, more than ever, the gospel of good music is being disseminated on all sides, by way of radio, concert halls, musical societies, and in teaching studios. Heretofore, coöperation with public events was never considered a function of the recording company. This I have always thought was a mistake. Many fine performances are prepared for public concerts in a way that it would be difficult for a recording company to duplicate. With this in mind, I have made arrangements this past year to secure recordings of definitely meritorious performances planned for a single public hearing. And, in so doing, we have obtained, I believe, some of our best contributions on records." In pursuing this policy, Mr. Wallerstein not only has secured some excellent recordings but also has made record history.

Among Victor's outstanding recordings made in connection with public events this past year are the complete performance of Bach's "The Passion According to St. Matthew"; a series of chamber works made in connection with that enterprising New York chamber music society, The New Friends of Music; a group of recordings with the NBC-Symphony; and another with the NBC-String Symphony.

Those who have a predilection for chamber music will find much for which to be thankful in the special list that RCA-Victor brought forward through its tie-up with The New Friends of Music. Although several works emerge in performances less auspicious than already existent recorded ones, the majority are outstandingly accomplished and, besides, are new to records. Among these latter we would number several engaging early works of Mozart: the *Wind Serenade in D minor* (K. 388); the "Divertimento in B-flat," for strings and horns (K. 287); both performed by Arthur Fiedler's Sinfonietta. Then there is the "Piano Quartet in E-flat" (K. 493), excellently interpreted by Hortense Monath, the American pianist, and the Pasquier Trio; and also Mozart's lovely serenade, "Eine Kleine Nachtmus (K. 525), offered in its original form the Pro Arte Quartet and C. Hal Mozart's Flute Quartet in A (K. 298) notably played by Rène Le Roy and Pasquier Trio. Other works in this ser of especial merit are the Pasquier Tr fine reading of Schubert's lesser kno "String Trio in B-flat," and Miss Mon and the Kolisch Trio's performance Schumann's "Piano Quartet, Opus 47."

Rène Le Roy, the French flutist, a comes to us in two Bach sonatas, "Fifth" and "Sixth" for flute and figu bass (Musicraft set 16). The effortl flowing tone of Le Roy is, as in the c of the Mozart quartet above, well suit to this kind of music, which is thorough ingratiating and delightful. The reali tion of the accompaniment is here acc plished by Albert-Lévecque (harpsichor and L. Kirsch (violoncello).

One of the finest sonata recordings e issued, judged from performance and t balance between the instruments (the m remarkable, perhaps, of a piano and stri instrument combination extant), is Casa and Horszowski's performance of Brahm *Sonata in F major, Opus 99,* for viol cello and piano. There is storm and stre and passion and pathos, in this splendi fashioned work. As one writer has sa the work has the utmost in richness of to and grandeur of style. (Victor set M-41

Less compelling, musically, is Sch mann's *String Quartet in A minor, Op. No. 3* (Columbia set 319). Yet, here aga performance and recording have been e cellently realized. Schumann has given rare grace and richness of effect in th work, which is undoubtedly the m warmly expressive of his string quarte

By far the most satisfactory of the Ba Organ Society issues is the third volu (Columbia set 320), containing "Prelu and Fugues in C major and C mino *Fugue in A minor,* and *Prelude and Fu in E minor* ("The Wedge"). Dr. Alb Schweitzer, one of the leading authorit of our day on the music of Bach, is t organist, as in the other sets, performi these works. Although his playing has technical shortcomings, there is at the sa time much to admire in his clarity registration and his devotional regard the music.

A striking example of devotional rega is given in Victor set M-421, where S kowski and the Philadelphia Orches give us truly inspired performances Wagner's *Prelude to "Parsifal"* and *G Friday Spell.* The glowing tonal qual of a great orchestra is superbly captu and revealed in this recording; and t tenderness and compassion of the mu are movingly set forth.

Alfred Wallenstein, with his Sinfonie (of radio fame) have recorded Mozar early "Symphony in G minor" (K.18 composed in Salzburg in the compose seventeenth year (Columbia set 323). T is one of Mozart's important symphon works; for many years it was his most i portant contribution for orchestra. T work presages in more than one way later great works, "Don Giovanni" a the "Symphony in G minor" (K. 55 Wallenstein gives us a vital, penetrat reading of the score; and, while the to qualities of the recording lack depth a overtones in the *forte* passages, the cla of instrumentation is nonetheless co mendable. Columbia inaugurates an mirable and praiseworthy procedure w this set, presenting a miniature score the work for the first time in the hist of the phonograph.

The Oldest Authentic Voice Method

By JOHN W. DeBRUYN

Instructor in Voice, University of Florida

John W. deBruyn

THE YEAR 1453 A.D. was momentous in the history of art and the classics. In that year Constantinople aken by the Mohammedan hordes, and exile went a multitude of Greek ars in whose possession had lain the ving remnants of the ancient Greek re. These exiles scattered throughout pe, and a goodly number found their abode in Italy.

music education we are accustomed to of 1600 A.D. as the date whence de- ed our modern opera and oratorio. By the Renaissance, succedent upon the of the central repository of what had ved from the old Greek civilization, well under way. In Florence, Italy, we one not inconsiderable proof of the movement in thought, literature, and in the organization of the society n as the *Camerata*. The membership drawn from the ranks of artists, ti, nobility, and other influential men eans. Their chief patron may have been t Bardi, at whose home they usually nbled. The meetings of this group were ed to the study of the classics.

motivation succeeds thinking, so enthusiasts for the ancient culture to a resolution to reproduce the old orms, including the drama. But in the ion of these new operas — literally ing "works"—research disclosed that ctors of the Greek classical era did not their lines but, instead, chanted them. the many details of technic evolved by *Camerata* and others of that epoch, to such problems as how to chant the y made creations, we shall not go ex- to point out that from these exigencies loped the style known as the *recitativo*, h to-day we regard as neither speaking singing, but as a combination of both.

The Origin of Song

HANTING, then, we encounter our oldest entic historical voice method. This word writer considers an equivalent to his combined terms "speech-song"; which urther defines as an attempt to conjoin aspects of speaking and singing into one ed and organic phonation process.

et us not err in mistaking speech and as necessarily one and the same. In ch, pitches rapidly change; there is no ite scale; consonants more nearly equal els in time and space extension; and ities, like the trill, are not easily pro- ed. Speech relates closely to *portamento*. ong, pitches are more constant; vowels e more value than consonants; *sostenuto* ore frequent; agility is easier; and the rvals are definite.

lowever, there are similarities. In speak- and in singing the identical mechanism mployable; the head vibration is the e; both productions, when correct, are anic; both are mediums of gregarious mmunication; speech has singing aspects, song has speech characteristics. These ets and characteristics can be mutually olved—to the benefit of the singer.

What do we mean by "organic"? Just as human body is an entirety made up of ticular organs, like the heart and lungs, of which function together for the good of the individual, so in the voice mechanism we have anatomical parts or compartments —vocal "rooms"—which coöperate and correlate in the production of speech or song. Beautiful speaking or singing always must be organic. But more of this later.

The advantages inherent in the approach to song from speech are several. Correct organic speaking is produced without strain or forcing. The pupil is assumed to have become accustomed through the years to the sensations of his speaking voice. Speech may be exercised to the benefit of singing by right use in the ordinary employments of the day, a boon to those who own little time for practicing. The speech process in one inclusive act can teach the following aspects of singing: æsthetic thought and mood, breathing and support, the open throat, tone projection, phrasing, quality, color, variety, articulation, enunciation, pronunciation, fluency, range, intensity, volume, tempo, and rhythm. Furthermore, the involuntary processes, which we cannot seize upon by conscious thought, are brought into the tonal production very naturally. The inclusion of interpretation in the approach from speaking gives added zest and interest to the beginning pupil. In brief, the speech-song way of bringing out the voice is at once the most natural and the simplest means of mastering a most intricate, elusive, and difficult art.

Difficulties in the Way

FIVE OBSTACLES usually encountered in the speech-song approach are: failure of the beginner to grasp at first the concept of singing as sustained speech; incorrect employment of the speaking voice by intending singers; development of the emotional element without encountering certain pathologies, like throatiness; the difficulty in getting women to express emotion in the vocal studio; and the problem of high note saying. These five obstacles will be considered in the order mentioned; and in doing so we shall introduce additional aspects of the general subject.

The beginning pupil is apt to start his work with certain preconceptions. For example, he has the idea that the initial orthodox step in improvement must be the development of his breathing. This is not so bad. But we shall attempt to make clear later on that this aspect of voice is best inculcated through the medium of emotion and not by direct physiological processes, which is the expectation of the voice. So, with such anticipations, the introducing of the concept of starting "voice culture" from the standpoint of beautiful speech creates something of a shock in the mind of the intending artist, whose reaction to such initiation might well be expressed in the remonstrating expostulation, "Sir, I came here to take singing and not elocution lessons!"

As another preconception, the new pupil very likely has envisioned the running of scales, the vocalizing of trills, and the singing of arpeggios (perhaps for the edification of the neighbors). Lest we be misunderstood, let it be stated that the early stage employment of the sustained speaking voice approach in no wise militates against the later entering of the practice of the embellishments.

We have a pet phrase by which to demonstrate to a new pupil that singing can be regarded as sustained speech. (To the pupil) "Speak the phrase, 'The night has a thousand eyes,' holding the 'eye' in 'eyes' while on the fingers you count five before sounding the 's'. Now repeat but count to ten. Repeat once more counting fifteen." As the pupil is doing this in the third repetition, the teacher interrupts with, "What are you doing now?" The reply invariably is, "I am singing."

Nuts Difficult to be Cracked

THE LARGEST of the obstacles in the speech-song approach is the painful truth that the majority of our young people in America appear to own either inadequate or pathological speaking voices, for the reason that small care is given to this phase of education in the home and in the public schools.

The prerequisite to the teaching of singing, from the speech approach, is beautiful speaking. But what is beautiful speaking and how is it to be attained? Here we go about in circles. A good speech-song process must contain the emotional element, and the hazard of emotion is the tightening of the throat. In treating more particularly the physiological problems of this process, we shall indicate a remedy for the fault.

While other teachers of the approach to song from speech may not have had a like experience, we have found it exceedingly difficult to get women to emotionalize in the vocal studio. To know why this is so would be invaluable; for the successful employment of speech-song at its maximum finds emotional expression to be a requisite. Perhaps another difficulty concerned especially with women—but not altogether related to emotion—is the phonating of pure vowels on high notes. In any event, men appear to get along much better with this problem than do the fair sex.

Those Troublesome Vowels

TO UNDERSTAND ADEQUATELY the difficulty of singing high notes—true of any method of approach—we must turn to the physics of the vowel. We know with a great deal of definiteness that some vowels can and other vowels cannot be phonated in their full purity above certain well-established pitches. "Ah" (father) for example, lies in the first classification and "E" (tee) in the second. "Ah" can be phonated very high in any vocal range. We learn also from acoustical research that the vowel is produced predominatingly in the adjustable cavities of the front and back mouth (and in some instances partly in the naso pharynx, or back head). When these cavities are properly adjusted, the vowel is realized in maximum purity or clearness; when not well adjusted, the vowel is less pure, less clear, or we may have it "impure," though not in the sense of dipthonging.

Whereas certain followers of the older school, perhaps rightly, instruct their pupils to "Ah" any vowel as high pitches are reached, another way is to open the mouth more on the high notes, thus changing the purity of the vowels on middle pitches to impurity. A common sensed student of voice can demonstrate this phenomenon for himself by selecting any vowel (preferably another than "Ah"), phonating it with clear, maximum purity on a middle pitch, and then lowering his jaw. The resulting vowel is the sound he needs to employ, with lowered jaw, on his high notes. "E" (tee) for example changes toward an "Eh" (met) when the jaw is lowered. Contrariwise, we cannot logically assume that clarity of the vowel is possible with the

AT THE UNIVERSITY OF FLORIDA

mouth opened excessively. This is to state again that the vowel production on medium pitched notes in our tessituras differs from the higher.

The Voice a Compound

PREVIOUSLY THE QUESTION has been propounded, "What is beautiful speech and how is it attained?" Because of the difficulty of the answer, more than one teacher in the past undoubtedly has preferred to ignore the present approach and has chosen to deal directly with the problem of the singing voice divorced from the possibly unpleasant and incorrectly produced speaking voice of the pupil. Not always may this have been an unwise procedure. The historical viewpoint has stressed quite emphatically the psychological answer to our question. To be sure, the mental concept of beautiful tone should be helpful in the obtaining of the desired result. The psychological method of imitation can be beneficial in the securing of beauty of voice. But in too many instances the untrained singer, relying entirely on the psychological approach, has run into pathology, in particular the fault of throatiness, so that in the end he contemplates his goal farther toward the horizon than it was before the initiation of his effort. Much more fruitfully can we seek the answer to our question in the domain of physics, as we did in the matter of high notes.

Beauty of voice is synonymous with good quality, and good quality is a blend of characteristic, variously sourced tones, just as in a many stopped organ or in a symphony orchestra. Or we might put it that beautiful tone is like a mosaic. Each part has a place in the complete pattern. In voice we have characteristic tones, each quite traceable to an anatomical source, which in turn is quite well defined, if not isolable. These sources we have designated as compartments or rooms; but it is better perhaps to call them factors. The total list of definable factors (not all of them giving characteristic tones) follows: front head, front mouth, back head, back mouth, larynx, chest, and abdomen. Practical experience has shown that we need to give attention mainly to the first four named. The last three can be relegated quite safely, except for special purposes, to the operations of nature.

The first named four factors, located in the head, with the other factors assisting, coöperate and correlate organically to form a maximum, blended tone in which no factor predominates in the hearing of the trained listener. As the Scriptures have it, "The wind bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh." One of the joys of listening to radio or singers' concerts—for the enthusiastic, even critical, lover of fine voice technic—can be to appraise the prominence of any of these factor tones.

In organic speaking or singing you have the key to the perfection of voice production. In the right combination of the factor sounds lies the secret of beautiful singing. As many teachers of voice have been known to assert, we discover voice—not always merely "build" it. Once the combination is mastered, sometimes in a moment's illumination of the understanding, we sing! Successful singing is the correct motivation of the complete vocal organism.

A Union of Fundamentals

TO ATTAIN THE GOAL of beautiful speaking or singing we must, concretely, place our reliance on those phonetics which will promote the accentuation of the several characteristic sounds. Thus, "nee" will give the front head sound; "wah" (with the lips well articulating the consonant "w") will accentuate the front mouth; "Ah" (without the "w"), the back mouth; and the phonetic "k" (as in "kee") will help to deliver the least distinct, characteristic, that of the back head. As each of these phonetics is sounded, preferably first in speech, let attention be concentrated on the anatomical factor concerned. Finally, speak or sing as though saying an "Ah" or an "Ay"; and in the doing strive to include the sensations of all the head factors in the one full, entire, complete, organic tone. In passing, may we venture the suggestion that isolated, protracted exercising of any phonetic, which is peculiar to any of the anatomical factors, may not assist and can retard vocal development, since in such practicing there is a departure from the organic ideal of combination. Infinitely preferable is the quick succession of the variously functioning phonetics in this manner: "kee"—"nee"—"wah"—"Ah" followed by the attempt with "Ah" or "Ay" to combine their sensations. Remember that wherever in the head air can go, there also tone should be.

Once we are masters of the concept that speech-song is organic, we are in control of the remedies for many pathologies. The term "pathology" derives from the Greek word which means, literally, "suffering."

> "Ful well she song the service divyne
> Intoned in her nose ful semely."
> —Prologue: "The Canterbury Tales."

Nasality, in the pathological or negative sense, is not hard to cure. Any tube vibrating to a sound source, as an organ pipe, will give a nasal sound, if one end be open and the other closed. But if both ends are open, nasality will not be heard. Speakers and singers are nasal when the vibrating tube up above the two palates, hard and soft, although open at one end, the nostrils, is closed at the other end, the aperture behind the soft palate. If you are nasal, open the mouth sufficiently, and the nasality will be heard no more, for now both ends are open. (There is, however, a sound like nasality which comes from constriction in the larynx.) Do not fear giving the front head maximum play in the tone production, provided that commensurately and properly you open your mouth.

Throatiness is a case of over-concentration of energy in the back mouth or throat. The poor victim of the fault attempts to express his emotion in this locality. There is a clean cut remedy. Distribute the energy of tone into the other vocal rooms and acquire the proper technic of emotion, whose physiological expression (as distinguished from its psychological origin) begins far down in the regions of the diaphragm and the solar plexus.

Speech-song in the emotional aspect tends to sublimate the front and back heads. Here the cure is the employment of bright, vibrant, and ringing vowels. Such phonation brings out proper glottising in the larynx and resultant automatic and spontaneous vibration in the upper head, just as the right adjustment of the trumpet player's lips, for any given pitch, will give full vibration in the body of his instrument.

A Composite Process

SPEECH EDUCATORS recognize qualities (distinguished from quality) such as the normal, orotund, oral, aspirate, guttural, pectoral (strong chest vibration), nasal, and falsetto. Speech-song needs to employ at first the normal and the orotund. The normal quality is that of ordinary, conversational speech. The orotund may be considered normal quality with emotion added. This is the quality heard in the stage speaking of Shakespearean actors or of the priest chanting at the altar. It is well to begin work in speech-song with the conversational quality, later on taking up the orotund. Unless in perfected singing we are able to produce all the qualities used in speech interpretation, the vocal art becomes a matter largely of pyrotechnics and a one quality, monotonous production. Consider the *Erl King* by Schubert, whose rendition requires the employment of five of these qualities.

Emotion originates in the brain structure. The chain of operations after mental excitation of emotion includes: increase of blood circulation; stimulation of the nerve ganglia on either side of the spine; stimulation of the solar plexus; breath amplification and because of these stimuli; tone amplification above the glottis; and some extension of the diameter of the back and front mouth cavities. Thus it is at once apparent that conscious physiological breathing, initiated arbitrarily in the region of the diaphragm, is taking to be a cause what actually is a resultant of forces more remote. Emotion is the correct source of the singer's breath and always gives adequate support to the tone. Because of its function in supplying breath, emotional feeling is absolutely essential to high notes, which especially require adequate and intensive breath.

Some years ago we gave up in despair the study of the speech-song, approach because it seemed impossible to get high notes with it. Afterward, when we had acquired the principles of grading, interest was reawakened because it was found that in correctly ascending pitches not only is there a grading of the jaw by progressive lowering, of the vowel by increasing impurity, of the glottis by a gradual diminishing of the diameter of that aperture, but also the head vibrations change in their focuses of sensation from the vicinity of the nose bridge upward toward and beyond the forehead. We do not speech-song higher pitches with the adjustments for lower zones.

A Concluding Process

ONCE THE HABIT of beautiful speaking by the organic process has been acquired, one may proceed to speech-song vowels, syllables, phrases, and entire songs, by no means ignoring the recitative. While voice teachers who stress the sustained speech procedure necessarily must differ in the details of instruction, probably all would agree that the exalted reading out loud of the psalms, poetry, and Shakespeare, is highly beneficial. Few might object to the student's visits at houses of religious worship where chanting is stressed, in order to become familiar with the form of emotional sustained speech which has come down through centuries of history. On his own part, the author likes to have a pupil recite the lines of a song he is studying, paralleling (in speech) the rise and fall of the melody; with himself occasionally touching the exact pitch of a note of the song on the piano and having the student to sing that note as though it were spoken. Afterward the entire song is played with the singer employing the technic of singing as though saying. Another device is to select a phrase and have the pupil begin to speak it, gradually more and more sliding into a sustained pitch, and ending in singing.

At first, easy pitches of the usual speaking voice must be employed, and the intensity of the intonation should be that of ordinary conversation; but later very soft and very loud intensities and all practical pitches, low and high, need to be exercised by the speech-song process. Finally the student should take up all phases of interpretation, including the qualities of speech before enumerated.

Never forget that there is a sociology of singing. Think of directing your voice toward an imagined person a hundred and fifty feet distant. Try megaphoning toward this objective with the palm of one hand at one side of the mouth. Let the chain of the emotionalized urge pass unforced from your mind across the intervening space to the mind and heart of the imagined auditor. Consider how many actors, especially the Shakespearean, by much beautiful declaiming before their audiences, get to own such splendid voices.

If our statement that "speech-song is the simplest means of mastering a most intricate, elusive, and difficult art" is true, then speech-song, or sustained speech, is the best singing method for public school education to employ in the development of ensembles and otherwise. We hail with pleasant anticipation the recent growth of choral speaking in school assemblies.

The principle that speech and song are akin, one to the other, has consequence for the philosophy of voice. Any departure from the technic of the speaking voice should be always regarded as a getting away from the normal and should be viewed with suspicion until it has shown positive results.

The biography of what we have named speech-song is extensive. Many of the world's greatest singers, of both the past and the present, have found this method of inestimable benefit. To cite just one instance, the author's investigation of the rise of the immortal Enrico Caruso, from a parlor singer to becoming the world's most famous dramatic tenor, by what he called "natural means," was all or in part by the sustained speech approach, for he sang as he spoke.

FIFTY YEARS AGO THIS MONTH

MME. JULIE RIVÉ-KING, one of the most distinguished of women pianists and teachers in America's musical annals, replied thus to a request for her opinions "On the Use of Studies in Piano Teaching":

"In reply to your inquiry 'what ten, or more books of studies I consider *indispensable*,' I beg to say that I am not acquainted with any particular book, or set of studies, that, in my judgment, would be 'indispensable.' There are a great many excellent studies. For my own personal technical practice I do not use any studies; I find that the wide range of my concert and recital repertoire is sufficient to keep my technic up to the required standard. My own experience in teaching is so confined to Phrasing, cultivation of touch, and artistic finish, that I use the Chopin and Liszt etudes, and the Tausig Daily Studies, together with a few of my own. Should I, through illness or other cause, lose several weeks' practice, I can soon bring my technic up to its usual smoothness and flexibility by the practice of playing Bach's Fugues. Almost every pianist and teacher has written either an instruction book or a set of studies, and many of them are really valuable. Among the many instruction books, that of Dr. William Mason is, in my opinion, one of the best. The studies written by Mr. Anton Strelezski, and Mr. Carlyle Petersilea, deserve high praise, and as a help to overcoming certain technical difficulties they will be found especially valuable, to those whose technic is not far enough advanced to use the studies of Chopin, Liszt, or Tausig."

Very sincerely yours,

JULIE RIVÉ-KING."

* * * * *

"Any method which confines one to a single style becomes an enemy to progress; and in expressing my preferences for classical music as a basis of piano study, I do not wish to reject modern music absolutely."

—Le Couppey.

BAND AND ORCHESTRA DEPARTMENT

Conducted Monthly by

WILLIAM D. REVELLI
FAMOUS BAND LEADER AND TEACHER
CONDUCTOR OF THE UNIVERSITY OF MICHIGAN BAND

e Arrangement and Editing of Music for School Orchestras

By MERLE J. ISAAC
Conductor, Marshall High School Orchestra, Chicago

Mr. Isaac is well known for his outstanding work with the orchestra of the Marshall High School of Chicago. For the last few years his orchestras have made an enviable reputation at the Chicago City and the National Contests. Mr. Isaac is well known also as a composer and arranger.

HE TRULY UNIVERSAL printed anguage is music, for there is but ne manner of recording the world's for purposes of performance. From y start, every student of music must a knowledge of the physical means ch musical expression is conveyed. n essential the importance of which be overemphasized, whether it be as um of expression or as a factor in cative process.

e printed scores of musical composi- e usually adequate for the purposes d, a greater mobility and usefulness director or teacher of school instru- organizations can be given to the score. The need is obvious, for in ater percentage of our schools the is faced with a large number of s and a heterogeneous group of in- nts. With limited rehearsal time, he ed upon for music performance of and worth, and the task is great. ore every additional aid which can n him through printed musical sign ge will not only assist him but also e the cause of school music educa-

e purpose of printed music is to en- e performer to recreate in the most e manner possible the tonal beauty existed in the mind of the composer, otation should be clear and complete. uld indicate fairly accurately the f tones, their relative duration, and, rtain degree, their relative volume. respect our published music is in- ive; but it may yet be incomplete. meter, rhythm, *tempo* and style are designated, much needed informa- r educational purposes is lacking. of the students of instrumental are players of meager knowledge and ate skill. It is therefore important ese young people develop musically environment that offers them every aid to true musicianship. Not the f these aids is the type of printed l language to which they are sub-

Let us view the typical circumstances attendant with a school orchestra rehearsal. The instructor has placed before the students sheets of music which, if properly interpreted and practiced, will be of permanent cultural value to each player. False intonations, unmusical sounds, and other common student deficiencies make it necessary for the director to stop the orchestra whenever it seems propitious. Upon the correction of these difficulties, he asks the orchestras to resume playing. But who knows the exact place, and how shall the director best indicate the place in the score to begin?

There are many orchestral scores, including some of recent publication that have few or no rehearsal indications. To say to a group of youthful players, "the fourteenth measure after number six," and then at once to bring down the baton, is to invite a mild form of chaos. For a group of this type, four measures are enough to count accurately in a rapidly moving practice period. Thus, rehearsal letters or numbers should be approximately eight measures apart, this distance varying in accordance with the natural divisions of the melody.

For sake of clarity, numbers (encircled) are better than alphabetical letters, as rehearsal indicators. Several of the letters sound very much alike: B, D and E; M and N. Alphabetical letters are limited to twenty-six in number, but numerals are limitless in extent. With large groups a simple gesture on the part of the director will immediately tell the place in the score to begin playing; for instance, three fingers held up in the air would indicate the third, thirteenth, twenty-third measures. Players do not find this confusing.

In the matter of rehearsal indicators, there is no need for excess. The numbering of each measure would be superfluous and confusing, and the mechanical numbering of every ten measures is impractical, since playing should be resumed at the beginning of a phrase or natural structural division of the music. Nevertheless, there is a definite need for frequent rehearsal indicators in printed school music, including solo and ensemble scores.

Uniform Bow Markings

ANOTHER SOURCE of difficulty and waste of time is the decided lack of bowing and fingering notations for the string instruments. Professional players know how to bow passages most effectively, but even they will not bow uniformly unless the parts are clearly marked. With our school players there is often a lack of knowledge as to proper bowing procedures. We cannot assume that all pupils are taking private lessons, nor that those who are have private teachers who are interested in the school orchestra. Not always does the orchestra teacher know the fine points of each and every instrument; and it is more than likely that a teacher with such knowledge will not have the time to mark each individual part.

Such information should be printed on the score, by a specialist who knows the instrument and knows the deficiencies of young players. Once engraved on the publisher's plates, thousands of players will learn the better methods of instrumental technic and will derive added pleasure from their improved performance. The demands of accuracy of intonation and performance made on the school music student are quite enough without the obstacle of incompletely annotated scores. If we agree that the printed page should clearly and completely assist the performer in the effective recreation of the tonal beauty existing in the mind of the composer, then bowing and fingering notations are essential.

At present, among orchestral instrumentation of scores, there appears to be a tendency to increase the number of divisions in violin parts. We can find Advanced or Solo Violin, 1st Violin, 1st Violin A, 1st Violin B, 1st Violin C, 2nd Violin, 3rd Violin, 4th Violin, Obbligato Violin, First Position Violin, and probably several others. In most orchestras of our schools the violin sections are weak. To divide them, subdivide them, and divide them again, is to weaken further these sections. The intention to make provision for individual differences is good in theory, but does not work out in practice. Another plan of doubtful value is that of writing three violin parts equally interesting, equally essential, and equally difficult. In practice, however, there are players of lesser ability whose limitations must be considered, and thus ordinarily it is desirable that less be demanded of the second violins than is expected of the firsts.

Very often we find printed musical scores which provide fingering annotations for the violin parts, but neglect the violoncellos and basses. The need for such aids, however, is greater in the cases of the latter instruments; for, whereas violinists usually study privately, players of the violoncello and string bass seldom have that opportunity. Fingering and bowing should be clearly indicated for all strings. After dealing with carefully edited music, the players should be better musicians; editing should be part of the teaching process.

Certain printing abbreviations commonly used by the engravers may be satisfactory for the publisher, but very often are confusing to the novice. For example the measure repeat sign, $\cdot\ .$, if used only once for a measure containing several notes is confusing to the performer, especially if he is sight reading. If several repeat signs are

By DR. JOHN THOMPSON

Analysis of Piano Mus appearing in the Music Section of this Issue

OLD MAN SCARECROW
By CHESTER NORDMAN

The first musical number in THE ETUDE this month is one whose title heralds the approach of summer. *Old Man Scarecrow* has a tunefulness that almost disguises its efficiency as a study piece—a combination often wished by teachers striving to hold the interest of average students of high school age.

The first section develops a crisp, forearm *staccato*, also sharply carved grace notes, while the second section promotes contrast between *legato* and *staccato*. In both sections it is important to observe the sudden and somewhat heavy accents.

A new theme in the key of G major is introduced in measure 37. The *tempo* is somewhat slower throughout this section, *poco meno mosso*, and the character of the whole is more sustained than that of the preceding sections.

Try to play the entire piece with a touch of humor—even a bit of burlesque is not objectionable if it does not interfere with accuracy.

REFLECTIONS AT DUSK
By GRANT CONNELL

This piece, in lyric form, should be treated like a nocturne. Give the best possible singing tone to the right hand melody in the first section and use the pedal carefully.

At measure 17 a new *motif* appears. Play the right hand triplets with a bouncing wrist, lightly but clearly. Again care must be used with the pedal, being sure to release it on the second quarter.

A new theme in B-flat major begins at measure 49. Play it in sustained manner and keep the *legato* unbroken.

The *crescendo*, beginning with measure 58, works up to a climax at measure 61, from which point a *diminuendo* is in force.

At the end of this section, the first theme is again heard—D. C.— and ends at *Fine*.

SPRING BLOSSOMS
By ELIZABETH L. HOPSON

The rhythmical swing of this piece is suggestive of a gavotte, and it should be given the stately, dignified treatment of the old dance, setting the *tempo* at *moderato* and keeping strict time.

The pedal should be used very sparingly in the first section. Its use is clearly indicated and the player would do well to follow the markings exactly.

Apply plenty of tonal contrast, building up to *fortissimo* at measure 14. The second section is in F major, subdominant key, and is played a little faster, *un poco piu mosso*. Because of the dominant sustaining quality of this section, the pedal is used more freely. With the reëntrance of the first theme, drop back to the original *tempo* and keep it intact to the end—*Fine* at measure 16.

DANSE ANCIENNE
By FRANCISZEK ZACHARA

This interesting dance in ancient form opens with a theme in doubled *staccato* notes. It is most effective when played without pedal. The second section shows an interesting contrast between the voices. While the right hand continues with brittle *staccatos*, the left hand plays a series of two note slurs, with the first note of each pair accented. Properly performed the result is most attractive. The pedal should be used as indicated, that is, down on the first and released on the second note of each slur.

At measure 26 octaves for the left hand and chords for the right hand make the use of the forearm necessary. Be sure to observe all accents in this section and keep the *staccatos* crisp and brittle.

While the tonal level ranges from *piano* to *fortissimo*, the *tempo* should remain steady at all times, except for the ritards in measures 9 and 25.

JUNE WALTZ
By ARTHUR TRAVES GRANFIELD

This waltz, depicting the spirit of June, should be played lightly and gracefully, being sure to observe the long *legato* phrases in the right hand while the left hand plays a series of two note slurs as accompaniment.

The second theme, beginning with measure 19, consists of passage playing, partly chromatic and partly diatonic, which, by the way, is always a tricky form and calls for extra care in fingering. In this section be sure to observe the sustained basses (half notes).

The third section—the Trio—is in the subdominant key, the usual key for a trio, and should be played as expressively as possible.

The notes with the *sostenuto* signs should be strictly observed and played with intention. Note several changes of pace in this section, all clearly indicated.

The last two measures are played quite slowly, *lento*, after which the first theme is again heard in original *tempo*, and ends at measure 18—*Fine*.

GONDOLIER'S SONG
By EDUARD POLDINI

This piece is obviously in the style of a barcarolle, or boat song. A gentle but persistent six-eight swing depicts the swaying of the boat, while the gondolier, a baritone this time, sings *sotto voce*, in the left hand, against the accompanying chords in the right.

A modulation is shown at measure 23, and this time the song is heard a little louder, denoting the approaching gondolier. Note the *crescendo* beginning with measure 27.

Follow the expression marks, and give the imagination free play.

MOTO PERPETUO
By NICCOLÒ PAGANINI

This is probably the first piano arrangement of the famous *Moto Perpetuo* of Paganini. To his sensational skill on the violin, Paganini added more than a touch of showmanship, such as playing on one string after cutting the other three in full view of the audience. Great artist though he was, it was by no means a matter of "Art for Art's Sake" with him. He often raised the price of admission to his concerts, much to the wrath of his audiences, and as a result, the following once appeared in a humorous London newspaper.

"Who is it that will pay five guineas
To hear a tune of Paganini's
Echo answers, Pack-o-ninnies."

In all fairness however, it must be admitted that Paganini raised the standard of violin playing and pointed the way to its technical possibilities.

This arrangement has been cleverly done, and it will be an interesting addition to the pianist's repertoire, besides furnishing an excellent etude in finger development.

Learn it first at slow *tempo* with well articulated finger action. Later keep the fingers closer to the keys as speed develops and finally play it as fast as possible.

A DUTCH POODLE
By GLORIA MARSHALL

A Dutch Poodle is very short but very potent in technical development. In its twenty-eight measures there are opportunities for wrist *staccato*, forearm *staccato*, rotary motion (on the short broken triads) finger *legato* (passages in sixteenths) accents, and grace notes. It should be played "fast and snappy," as indicated in the text. Make a distinction between the ordinary accent and the heavy, wedge shaped accent—the latter, of course, is the stronger.

Play it without pedal and make it as humorous as possible.

TWO MINUETS
By W. A. MOZART

These two minuets, gems from the pen of Mozart, are excellent examples of the simple manner in which effects can be created by the master composer. Note the twelve measure period in the first *Minuet*. These extra measures, while remaining well within the conventional form of the minuet, give an entirely new flavor to an otherwise hackneyed form and the result is truly Mozartian—graceful simplicity. As with all music of this period, the player should keep ever in mind the tonal limitations of the keyboard instruments of that day (harpsichords and clavichords) and play accordingly: that is, the *fortes* less robust and the *pianos* more delicate than on instruments of to-day. Since both numbers are in the dance form, rhythm is, of course, uppermost. *Tempo*, too, is of utmost importance. Set the pace as indicated in the metronome mark, and keep it steady thereafter. In the second minuet make a noticeable contrast between *piano* and *forte*, and preserve a strict *legato* in the left hand, against careful phrasing in the right.

Both of these minutes are most carefully edited in detail; and it needs only an observance of the marks as given to approximate very closely the intention of the composer.

BLIND MAN'S BUFF
By ROBERT SCHUMANN

Another tune from another master, that is not so easy as it looks. The *staccatos* call for perfect control, a light and very close wrist action being necessary for proper resilience.

Note too, the many two note slurs, also the sustained notes in the right hand on the first beat of many measures. These sustained notes must be heard to sing ov the group of 16ths in the middle voice.

DOLLY'S LULLABY
By EDNA FRIDA PIETSCH

An easy but tuneful melody for the fir grader.

The melody remains in the right ha throughout while the left gets good pra tice in the drop, roll, attack while playi the two note slurs of the accompanim

As usual in the early grades, words a supplied to help the young pupil catch t proper atmosphere. It can also be done a song, as the melody lies in a singable ke

HOW DO YOU LIKE YOUR EGG
By J. H. PERRY

A little descriptive piece, showing t cackling of the hen as she struts about t barnyard.

Develops *staccato* in the left hand a *legato* in the right.

DANCE OF THE FAIRIES
By BERT R. ANTHONY

Dance of the Fairies should be play lightly and gracefully, in keeping with t title.

Wrist attack is suggested for the r peated *staccato* notes in the right hand. T left hand part is *legato* throughout and is important that this be observed. The fi finger groups in eighth notes in the treb part should be played with clean, artic lated finger *legato* so that each tone stan out clearly and distinctly.

The *tempo* is *moderato*, about 102 qua ter notes to the minutes.

AQUAPLANING
By ADA RICHTER

An excellent study for the right hand developing smoothness in passing the thum under.

It will be found advisable to practice th first, with rather high finger *legato* at slo *tempo*, later holding the fingers somewh closer as speed develops.

Play the left hand accompaniment in sustained manner and follow the marks dynamics as given.

The second section is a bit slower a phrasing is important throughout this se ond theme which is in the key of C maj

THE DUTCH TULIPS DANCE
By LILLIE A. HANSEN

Play this in typical Dutch dance fashi The first beat of each measure is heavi accented and is usually phrased into a thrown off on the second beat.

It makes a short but very tuneful pie of about grade one-and-a-half.

CHARMS OF A BYGONE DAY
By JACQUES WEISSHEYER

Although written in three-eight met this number is intended to be played minuet *tempo*.

Give to it the careful, precise treatm accorded the old fashioned dance which imitates. Keep a steady *tempo* through and try to follow closely the dynamic mar ings as shown.

It goes without saying that a sharp co trast between *staccato* and *legato* is im perative.

Through special arrangements with ASCAP (American Society of Composers, Authors, and Publishers) THE ETUDE MUSIC MAGAZINE will announce, in its issue for July, a gift portrait etching of a famous American composer, suitable for framing, which may be secured entirely without cost. Wait for this important announcement in THE ETUDE.

THE TEACHERS' ROUND TABLE

Conducted Monthly by

GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

...pping Pieces Too Quickly

If, as you advise, a pupil is allowed drop a piece after only two or ree weeks study, how is he to finish with any degree of polish, or ever ve anything suitable for public permance? I should expect to find myself in the predicament of THE ETUDE ader who wrote, "I have nothing at I can play well enough. My new udy and composition are not yet ished." How do you ever get a pupil ady for public performance, and w do you ever get them to keep up repertoire of any sort if only two three weeks are spent on each lection?

You also say, "The repetition ethod of practice is so utterly fule." How is one to perfect a piece, if is not repeated many, many times? ow gain speed? How develop the ind?—E. A. S., New Hampshire.

s is another instance in which I did ake myself clear. I humbly apologize! nly, some compositions must be studot only many weeks, but for months n years. I have found in my own as well as with pupils of all grades three weeks concentrated, intensive ce on one piece is about all anyone and without developing bad practice , which in a short time spoil the piece. ot better to drop it for a week before and ears become stale, returning to it ard with cleared perspective and zest? If you do this you will often nat the technical or musical problems seemed insurmountable the week , have solved themselves in surprispainless fashion. Give the subconscious a chance to work, and you will be shed at the result. It is frequently hat your swimming improves in the r (when you don't swim), and your ating in the summer (when you cerdo not skate). The time to notice the vement is, of course, the following n when you return to the sport; ! you are suddenly able to cut the s easily or swim the stroke perfectly which you had struggled so despair- . . . Which shows how efficiently quiet, staunch, old friend, Subcon-, works for you during the "off" n.

necessary, return again and again to piece—but give it a week's rest at r two or three week intervals. You stand much less chance of "getting of it—ruining it by over practice.

same holds good for repetitions of ilt motives or passages in practice. urse, speed, strength and endurance from the sweat of our noble brows, ou must admit that these can be ac- much more quickly by a thoughtful, gent approach. Do you honestly think person can concentrate perfectly afree or four repetitions? Why do more when each succeeding repetition tends played more mechanically and inac- ly? Muscles, economically employed, ed clearly by the mind, respond better if put through a course of senseless tion. Is it not more intelligent (and saving) to repeat a minimum number es intensively, and to follow this with al and mental rest, giving the subious time to groove the impressions ughly in your mind, than to repeat ssly and senselessly, hoping thereby to speed or power? . . .

e day, when I was a student, (a long ago!) a concert pianist came to our for a recital. In the morning he went e hall where he spent most of the day practicing. Several times I eavesdropped on him. He was one of the "repeat boys"; but I was horrified to hear that his playing of a passage was not nearly so good at the eightcenth repetition (yes, I counted 'em all!) as it had been at the third. He practiced like this for at least seven hours that day—with the concert in the evening yet to come. Is it necessary to say that his playing that night was not only inaccurate, but mediocre, that after a few years he just "petered out", and that he is now completely forgotten? For me, it was one of the best piano lessons I have ever had.

Trumpet versus Piano

My son, aged 14, has been taking lessons on the piano for about a year. He has made good progress for the time he has been studying, but he hates it, and when he has to practice, is a regular clock watcher. About six months ago, he started taking trumpet lessons and has done very well with it so far; likes it and is ahead in his school band. He has time for only one hour of practice a day and has been dividing it equally between the two.

Both teachers are pressing for more practice, and he wants to give up the piano, but his teacher insists that he should continue as she says the piano is the basis of all musical training and that she is sure he has talent if only he will stick to it. On the other hand, his trumpet teacher says it is a mistake to force him to take the piano and that if allowed to give it up now, he will eventually take it up again later on.—Undecided Mother, Maryland.

You have put me in a terrible spot! Even Solomon, I'm sure, would quake with fear at the dire consequences of any decision he might make in this case of piano versus trumpet. But boldly (come what may!) I decide in favor of the trumpet. Isn't the chief point at present to hold your boy's musical interest during the next year or two? Fourteen is a very dangerous age at which to "hate" the piano, and under the circumstances, I would not compel him to continue its study. But how lucky for him (and you) that he is interested in the trumpet; by all means let him explore its possibilities for awhile. In a year or two its limitations may irk him, and he may return to the piano. What difference does it make, so long as he loves music and wants to play, hear and *live* it?

Blessed are the parents whose children love music! And blessed too, are the children!

Parental Indifference

Recently I lost a talented pupil. I had used up-to-date material with her, as I always do—lovely teaching pieces, old familiar melodies arranged for beginners, and so on. I learned afterward that her parents wanted her to learn popular music—the popular songs of the day.

The mother would not coöperate in keeping the room quiet while the child practiced, or insist on her doing her practicing, or notify me when she was not coming for a lesson. Must teachers, who really try to teach music that will advance their pupils musically, "stoop" to teaching song hits? Do teachers in other parts of the country have a similar situation?—P. H., Oklahoma.

If you are a discriminating musician you will be able to find some popular music that you can use without blushing. Often in this column I have declared myself in favor of teaching song hits; I certainly do not consider it "stooping" to do this, if the material is wisely chosen and carefully arranged. Isn't it natural for active, healthy youngsters in their teens to want to express themselves in the vernacular, to talk the slang of the moment, to clothe themselves in the latest styles, to follow all the up-to-date fashions, in short, to *live* in the present? Well, why not then permit them to play some of the living music in which they find appeal and which strikes sympathetic notes in their souls? If they have the slightest artistic proclivity, they will soon be dissatisfied with such a diet, and it will be a very simple matter to lead them to more substantial food. And if they do not possess artistic gifts or inherent good taste then nothing can be done for them. The best you can hope for is to help them enjoy themselves in their own small, limited way, and pray that one or two may some day grow to love beautiful music. I feel that teachers are unwise when they adopt an uncompromising, "thumbs down" attitude toward popular music.

GUY MAIER

I do not think that you lost your pupil altogether because the material you gave her was unsatisfactory. It is only another of those cases which constantly confront music teachers and for which, alas, there is no solution—of parents refusing to take their share of the responsibility for their children's musical training. And have you noticed that such nit-wit parents usually shirk their duties all along the line?

Balanced Practice

I am twenty-six years old and I am studying music without a teacher. I had three years of piano study in childhood and believe my playing is about third or fourth grade. I have four hours daily to devote to music, and would greatly appreciate some advice as to how best to budget this time systematically. At present, I am working at several small pieces (a Bach invention, Chopin etude, and so on) doing a lot of sight reading and spending about an hour daily on ear training and harmony. Is it better to study several small pieces of different types, or one big one? Also, must one do scales, arpeggios, and so on, or is it permissible to use studies and selected passages from pieces for purposes of drill?—N. B. A., Colorado.

You made me chuckle when you called a Chopin etude a "small" piece, since any of those terrific studies loom as high up as Mt. Ararat to me! What you mean, don't you, is a "short" piece? Yes, I always advise students while they are working at well contrasted short pieces to "chew on" some long, difficult work even if it is hard to digest. But you must practice such a piece humbly, realising that it is beyond you, aspiringly hoping that the day will come when you will master it.

If you read this page regularly you will not need to be told again that I consider daily work on pure technic absolutely indispensable. In addition, you will of course need to extract many passages from your pieces for further technical work. I am not sure as to your present accomplishments, but out of the four daily hours I would advise one hour of technic, which could be balanced and budgeted as follows:

First two weeks: Tone exercises, five minutes; finger independence exercise (single hands), fifteen minutes; major or minor scales, ten minutes; an octave study (memorized), fifteen minutes; a miscellaneous study, fifteen minutes.

Second two weeks: Tone exercises, five minutes; chords, ten minutes; finger independence exercises (hands together), ten minutes; arpeggios (any kind!), fifteen minutes; a scale study (memorized), twenty minutes.

Third two weeks: Tone exercises, five minutes; chromatic scales, ten minutes; exercises in double thirds, sixths or octaves, ten minutes; an arpeggio study, twenty minutes; a miscellaneous study, fifteen minutes.

After the third two weeks, start the routine all over again—*ad infinitum!*

For technical material I suggest: Felton, "Progressive Piano Studies for the Grown-up Student"; Czerny, "Opus 299"; Czerny-Liebling, "Volume 1 or 2"; Philipp, "Complete School of Technic"; Doering, "Octaves Exercises and Etudes, Opus 24"; Cooke, "Mastering the Scales and Arpeggios."

How Soon Octaves

I have a nine year old piano pupil who can easily finish John M. Williams' "First Year at the Piano," this term, but some of the pieces have octaves; and I am asking your opinion about how soon a young pupil should play octaves. Can octaves injure the growing hand?—M. M., Georgia.

If, by octaves, you mean occasional chords which contain the octave stretch, every child should be encouraged to play these as soon as he is able to span them. Too many widely-spread chords, and all specialized octave practice should be postponed until the student is older—eleven or twelve years of age—and then only if the hands are large and well developed.

Technical Material

Please list any supplementary books of piano technic you recommend to go along with general instruction books in Grades I and II?—W. H. S., Pennsylvania.

Grade I: Robyn, "Technic Tales"; Thompson, "Guide to Scale and Arpeggio Playing"; D. G. Blake, "Keyboard Secrets."

Grade II: Thompson, "First Studies in Style"; Elizabeth Gest, "Third Book of Tones and Tunes."

Great Music at Popular Prices

How the "New Friends of Music" Triumphed

By I. A. HIRSCHMANN

A conference secured expressly for The Etude Music Magazine

By ROSE HEYLBUT

HORTENSE MONATH
Virtuoso Pianist

During the past few years, the name of I. A. Hirschmann has appeared repeatedly in connection with the fostering of worthy musical projects. Mr. Hirschmann is a nonprofessional; his business activities are concerned with the executive direction of one of the country's largest department stores, and he insists that his sole musical distinction lies in the fact that he "happens to love music." As an amateur, he has made such notable contributions to the cause of art, that The Etude has asked Mr. Hirschmann to talk of his activities, partly for the sake of their interest, and partly as a means of opening new channels of enterprise to other music lovers.—Editorial Note.

I. A. HIRSCHMANN
Store Executive

I HAPPEN TO LOVE MUSIC. I love to hear the best music, and, as long as I can remember, I have been seeking more opportunities of listening to it. To a certain extent, the normal facilities of a normal concert season provide such opportunities. Beyond a given point, however, one finds himself asked to compromise with the demands of the sort of professionalism which reduces music to the status of a routine. The American people have been limited in their opportunities for hearing the best, through the unfortunate attitude which holds that the more popular numbers will "take" better. We have had an artistic inferiority complex literally forced upon us. Europeans, it has been held, might listen respectfully to the great trios and quartets, but what America wanted was a rousing, good "show." You could expect *lieder* evenings in Vienna; but for Chicago and points west (or east, too, for that matter), it has been considered better business to intersperse the Schubert songs with ballads. In a generation or two America might be ready for the better things, but just now, sheer musical eminence is dangerous.

An attitude of this sort I believe to be hopelessly wrong. Experience shows that people will listen to all kinds of music but will prefer the best, provided they can find an opportunity of being exposed to it long enough and often enough. Similarly, the American people could be brought to choose their heroes from among the spiritual giants as well as from among the baseball stars and the boxing champions, if only they were permitted a chance to become acquainted with their work. There is nothing wrong with music, and there is nothing wrong with Americans; the bridge that connects them, however, needs "treatment." The form in which music has been presented to the American public might be revised. The effect of music has been stressed to the point where the music itself has almost been allowed to sink into secondary place.

For my own part, Beethoven makes me happy. Hearing his music does not make me better or wiser or more erudite or more profound; it makes me happier, quite as it makes me happier to look at trees.

Too Many Frills

TOO OFTEN DOES ONE FIND that music is treated less as a source of unalloyed enjoyment than as an agreeable means towards some entirely nonmusical end. People come to the concert hall to see each other, to be seen, to promenade the corridors during the intermissions, to exchange glib professional chatter. Equally often, too, artists plan their programs and regulate their deportment less for the purpose of giving pleasure through art than to count up the number of encores demanded of them, and to make "a success." This is not true with all artists. There are a few who do not compromise with music, but lamentably too few.

It has long been my earnest conviction that different methods might be used to bring music before the public, and this entirely for the sake of the music itself. Furthermore, it is believed that audiences are waiting to receive the best in music, also for its own sake.

A Momentous Experiment

OVER TEN YEARS AGO, when I was associated with L. Bamberger & Co., their Radio Station WOR was but a small affair. We had the sort of programs to which a small station could aspire, but wanted something better. We suggested putting the New York Philharmonic Orchestra on the air. The idea was ridiculed, of course. None of the great symphonic organizations had ever played over the radio; the public was held to be not yet ready for them. We, however, were lucky enough to find those who believed that what America lacked was not so much an appreciation of good music as a chance to hear it. WOR finally brought the Philharmonic to the radio public. The result of that venture started symphonic broadcasting throughout the United States. The Philharmonic broadcasts have maintained their position as the most popular programs throughout the land; other great orchestras have come before the microphones; and the American public has manifested a keen appreciation of these and an ardent desire for more.

There is much good music still to be heard. However, two major forms were until recently being buried deeper and deeper in neglect; chamber music and *lieder*. Entire concerts of chamber music and *lieder* were taboo because the public was believed to be not yet ready for them. Artists were advised to avoid them, and they did. I wanted very much to hear the great works myself. If there was no chance for me to hear them in the regular way, I decided to give them myself. At the very worst, it would be an experiment in giving good music; at the best, there might be others who felt as I did, and they might make such programs a success.

So during the winter just past I organized the New Friends of Music. Its purpose is to present the best in music, in the best and sincerest way; to make music rather than to give concerts. There were to be no committees, no teas, no patronesses; no undue extraneous publicity; no full dress promenades, no intermissions, no professionalism, no glamour, no encores, and no free passes to assure a full house. If the public did not care to come, we were quite content to let the empty seats tell the story, and to make music notwithstanding. On the other hand, there were to be sixteen Sunday evening concerts of great music, performed in the best spirit of music making, by the finest artists in their fields, regardless of whether they were "Big Names" or not.

That was the spirit in which the experiment was begun. As to practical ways and means, we hired a business manager who was as far outside the professional musical world as it was possible to find one. We engaged inexpensive desk room, and we rented a concert hall on sixteen Sunday evenings, for the period of time after the matinee concerts had ended and before the evening performances opened. Our concerts began at five-thirty and lasted until about seven. We scaled our prices from twenty-five cents to one dollar. Then we proceeded to the more interesting business of planning programs.

The entire musical conception was developed by the eminent pianist, Hortense Monath, assistant to Artur Schnabel in the United States. During this first year of its existence, she devoted the sixteen programs exclusively to Beethoven and Brahms. The works selected were chosen so as to make each concert a balanced whole, and to afford the hearers a well defined cross section of the significance of the composers. We engaged the artists and outlined the programs to them. With their coöperation we avoided duplication or monotony. Each program was varied, being built from a trio, occasionally a group or two of *lieder*, and a quartet or quintet. There were no intermissions and no encores. It is as illogical to follow up a serious rendition of a Beethoven quartet with an encore, as it would be to attempt to put on an extra act after the final curtain of "Hamlet."

Who Came to Scoff Remained to Enjoy

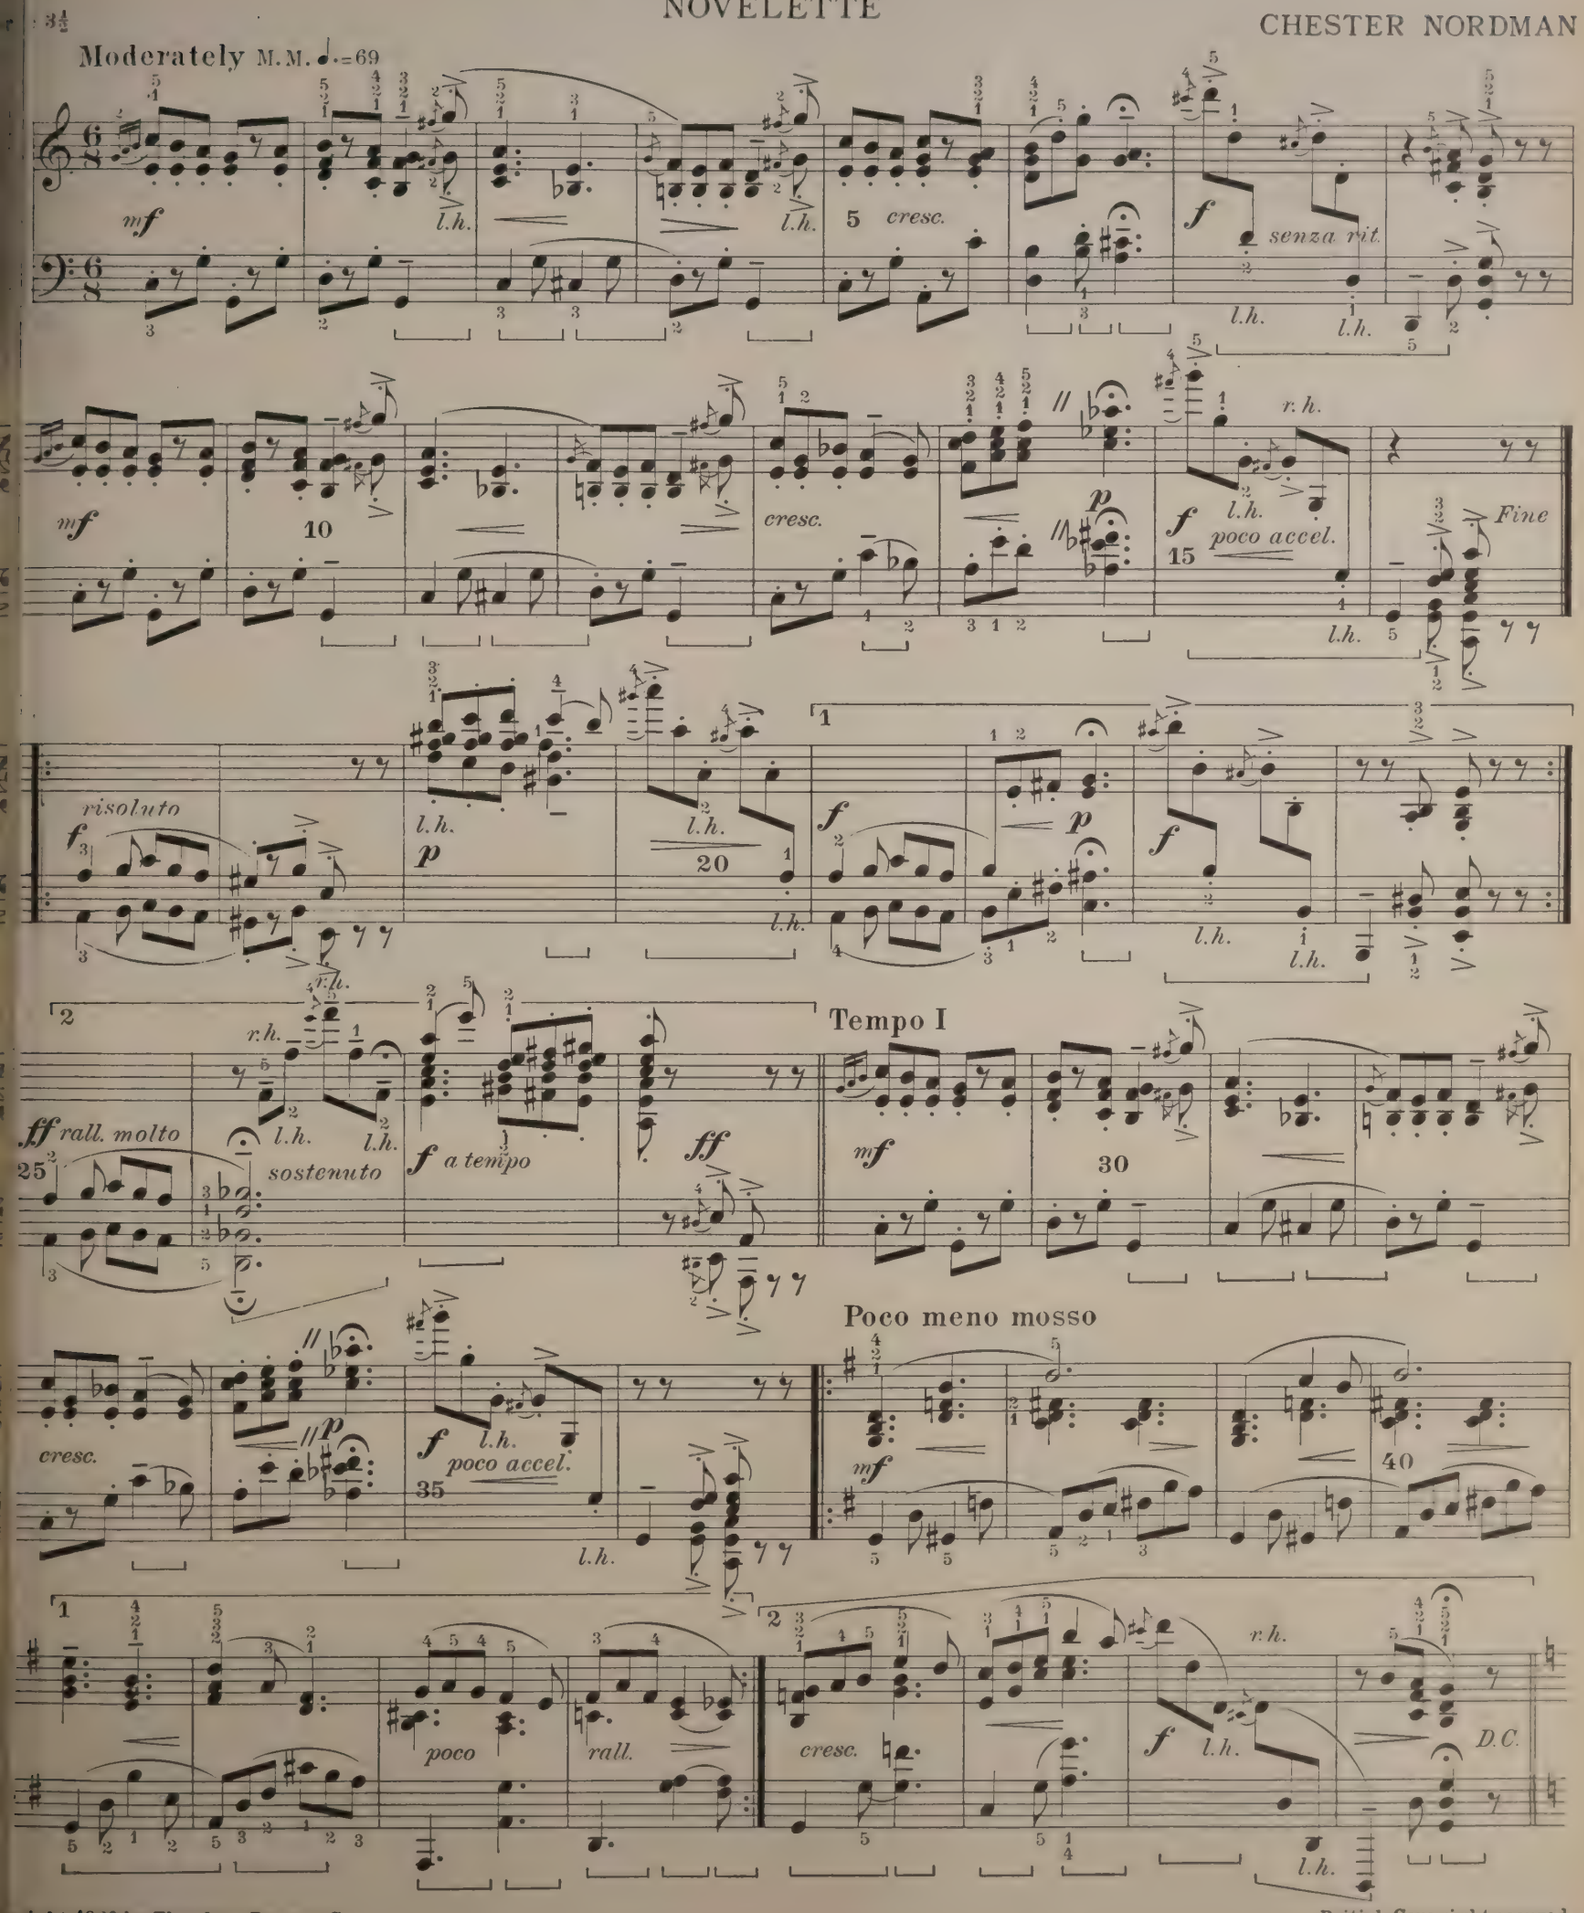
THIS, THEN, WAS THE PROGRAM of activity we announced to the public. Of course, people viewed it with skepticism. With popular musical fare to be had at all normal concerts—and on the radio, without admission charge—who would come to hear the sort of thing that the public is supposedly not ready for, until another generation or so has made it wiser? The answer is that the sixteen concerts were completely subscribed in advance, and after the second concert we had to sell standing room. When the "Quartet in C-sharp minor" of Beethoven was performed, the lobby was crowded with people who could not secure even standing admission. And the audience—a veritable cross section of American life, composed of Smiths and Cohens, of distinguished scientists, lawyers, and professors, and people to whom the minimum admission of twenty-five cents was a definite attraction—was entirely different from that of the fashionable concerts. Next year's series, to be devoted to Mozart, Schubert, and Schumann, is more than eighty percent subscribed now, in mid-May.

There has been a purposed delay speaking of the artists who performed our series, because the emphasis of the pr ject was entirely on Beethoven and Brahm and less upon performer values. This m not be taken to mean that our artists a considered in anything less than their i portant light. But names do not impress Artists are fortunate intermediaries betwe the intention of the composer and the pu lic. Among others, the Pro Arte, t Kolisch, the Musical Art, and the Gord quartets played for us; and our assistin artists included Artur Schnabel, Floren Easton, Emanuel List, and Elisabeth Schu mann, the last of whom was brought ov from Europe especially to sing for the Ne Friends of Music. Often people telephon our office, asking for discussion regardi the artists, and our answer was, "We real do not know much about the performers but we will gladly lend you a score, if yo wish it."

We like music and have neither time n inclination for the trappings surroundin concert giving. And the public came an enjoyed themselves, proving again that th people are eager to hear the best, sincerel presented, if only they can find the opportun ity. It was thrilling to observe the reverer concentration of the audience, which n merely came to the concerts, but actuall participated in them. Indeed, it worked a a spur to the artists, stimulating them t the finest performances of chamber musi I have ever heard.

Since the season's end, there have bee numerous requests from outlying cities, ask ing how the project was managed, an whether our group might not care to ex tend its activities beyond New York. It impossible for us to do this; and we hav no desire to work in distant communitie chiefly because our guiding spirits are no professional musicians, but plain amateurs with business duties that keep them prett well fixed in space.

The Simplicity of Success



THE FACTS OF HOW the New Friends o Music got under way are simple. The mos important factor was to cling tenaciously to the purpose of presenting good music i the sincerest, least professional way. would heartily urge other cities to try ou the idea for themselves. Working expense can be kept down by using cheap office quarters and by presenting the concert either in an inexpensive hall or at a time when the normal entertainment activities are having an intermission, and when spe cial terms may be made. The serious ex pense, of course, is the contractual fees o the artists, which must be reckoned in ad vance, and must be met. To protect one self at that end, it is advisable to map ou the concert course in advance, and to ge

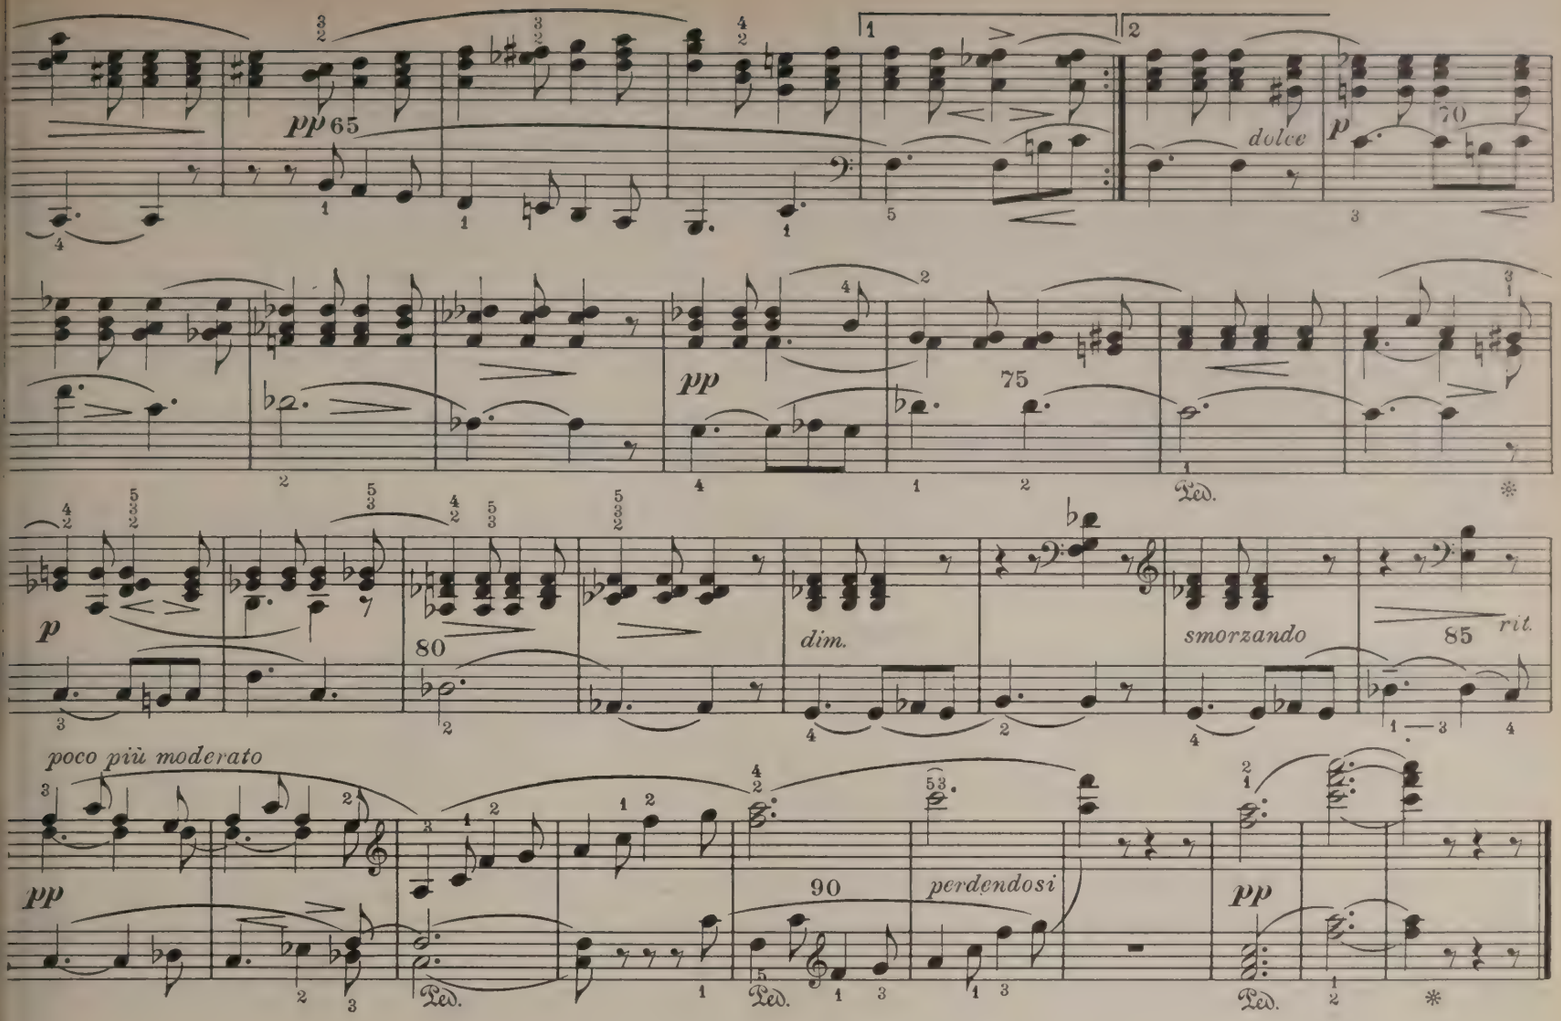
GONDOLIER'S SONG



CHANT DU GONDOLIER

Here Poldini, despite his Hungarian birth, shows his Italian background. There is an idea that in this day gondoliers, as they glide along the canals of Venice, sing only for *mancie* or tips. This, however, is not the case, as we heard them singing in the middle of the night when they, all alone, have paddled their gondolas through the inky waters. The left hand represents the singer and should have a vocal character throughout. Grade 3½.

MOTO PERPETUO

CONCERT - ALLEGRO

The meteoric violin virtuoso, Niccolo Paganini (1782-1840), whose sensational skill was such that the public credited him with demoniacal power, a few compositions played more today than during his life time. His "Witches Dance," and also his "Perpetual Motion," he is alleged to have play upon one string of the violin. In fact, at public performances he would, in spectacular fashion, take out a pair of scissors and cut three strings view of the audience and play on the remaining string. We believe this to be the first pianoforte arrangement of the "Moto Perpetuo," now so wid heard on the radio as played by various orchestral groups and soloists. Play it as fast as legato and good articulation will permit.

TUDE'S MUSICAL TOUR PROGRESSES

Negotiations for Musical Events are going forward steadily. Inquiries are flooding in from all over the United States

No more famous or historical landmark exists than George Washington's Home, "Mount Vernon," which you can easily visit on a Washington, D. C., stopover if you go B. & O.

At Niagara Falls, N. Y., is the famous "rock of ages" at the foot of the American Falls. You can stop over here if you travel New York Central.

Sights of this kind can be seen by those traveling from Boston on the Shore Line of the New Haven. Inland travelers will enjoy the true New England countryside and its beautiful scenery.

.ANS RE :OGRESSING!

'ERY day brings new and fascinating possibilities to the musical and amusement planning of this great trip. Few decisions have so far been final, but the following now seem assured.

n the Sunday afternoon of arrival we must have an event of sufficient flexibility to it everyone to enjoy it, without a specific starting time. It is therefore planned to the Metropolitan Museum of Art for whatever part of the afternoon your arrival may give you, after you are settled in your hotel. At the Museum are of course famous works of art, sculpture, paintings, etc., exhibits of early Americana, otian art and archaeology, enough for a dozen visits. But most esting of all to musicians will be a collection of more than a sand (this is a guess, there may be several thousands) rare nt and modern musical instruments from all over the world. re are instruments from China (you recall the recent article in E ETUDE describing Chinese instruments and music) from n, from Egypt, from Africa, and from both North and South rica. You could stay for hours and never get more than a ion of the picture which this musical treasure trove offers to dent or a teacher of music. You have all afternoon in which ee it—up until six o'clock. Then back to your hotel for a rest fe dinner, which will be followed by a symphony orchestra ert in the evening at which time (as now planned) you will elcomed by our Editor, Dr. James Francis Cooke, in an address Music and Travel". Dr. Cooke looks forward to seeing the ds whom he has made in these many years of editorship of E ETUDE and of active furthering of the cause of music to h he is devoted. He also wants to meet as many as possible e friends that he has made as Editor, but has never seen. efore there will be a brief reception at the theatre after the rmance. This will conclude the events for the first day. Deful? We think you will agree that it is.

n another day, it is definitely planned to take a motor coach tour e New York World's Fair grounds, which were opened last h with such acclaim. The buildings will not all be completed of se, but things will have advanced so far by that time as to make rip well worth the taking. The music of the Fair will have progressed sufntly, so that you will have something lk about or plan on for next year's cal Vacation Tour—which should second outstanding musical treat. r another morning or afternoon event, is a scheduled trip to the New York ic Library, where there are literally sands of musical manuscripts includ- 15th, 16th and 17th century originals uch famous composers as Handel, llet, Vivaldi, etc.

nother planned-for event which will (*Continued on Page* 409)

"The Etude Musical Vacation Tour will be welcomed by students and teachers everywhere as a stimulating and educational overture for the promising season of 1938-1939, which according to present indications should be a most active and profitable one. I am looking eagerly forward to greeting as many of our readers and friends as can arrange to grasp this opportunity to see the wonder city of the world under splendid auspices and at a very moderate rate."

—Dr. James Francis Cooke

WHY NOT PLAN TO COME ALONG?

YOU *must* go! There will be nothing in the average person's musical experience to equal it. Whether you come from the North, South, East or West, you can make this trip over roads or lines of superb scenic beauty. Those who travel by New York Central or New Haven will come in at the handsome Grand Central Station with its twinkling dome of starry lights and its exceptional summer decorations. The approach to New York by the New York Central has the unforgettable view of the Hudson River and the famous Palisades on the right for almost the entire trip down from Albany. Those who come by New Haven probably already know by heart the many spots of scenic beauty that they will enjoy both in Massachusetts and Connecticut, and finally the glimpses of suburban Westchester County as they cross the line into New York State. And those who arrive by Baltimore & Ohio will be taken in luxurious motor coaches from the railroad terminal in Jersey City (across the Hudson) to the B. & O. New York terminal which is just across the street from the Grand Central Station. Coming across the river, they will also enjoy that superb view of the New York skyline which is possible only from the deck of a ship, or from the top deck of one of the many ferry boats which scurry back and forth from the railroad terminals across the river. No matter which of these lines you choose, you will have a fitting opening to a perfect musical and amusement week in gay and famous New York.

Picture yourself arriving in New York around noontime Sunday from any one of the three railroads mentioned in this article; being met by courteous attendants and directed to the hotel of your choice. As now planned, there will be three such hotels recommended to you, each in a different price class. The price of your ticket will include whichever hotel you select, together with the amusement program, but no meals, unless specified. It is felt that most of those who attend, will prefer to do their own browsing among eating places recommended in a program of the week, than to be restricted in this direction in any way. This permits a flexibility so far as economy or lavishness is concerned which musicians with their varied incomes will particularly appreciate.

These hotels will be described in detail in next month's issue (July). They will provide a reasonable price range for three types of accommodations. The tickets themselves will not be available until about the middle of July. Since many theatres, exhibits and concert activities are just in process of planning at that time, the musical management will require the utmost flexibility to permit last moment program improvements (even after the final announcements in the August issue). However, the very care with which all these arrangements are being made should in itself assure you this will be a week that you cannot afford to miss. Make your plans accordingly!

MR. MARK BYRON, JR.
350 Madison Avenue, New York

Dear Sir:

I would like to go on Etude's Musical Vacation Tour in August and will be pleased to receive descriptive literature of same, without obligation on my part.

My party might include ..... persons

Shopping  for Charm

Travel Togs and Toiletries

I HAVE JUST HAD MODELLED for Etude Readers, an unlined, loosely woven, sheer wool coat of "Nistrella" cloth, which is pictured at the right. It is a three-quarter, box-type coat with the swanky bell sleeve. Small tucks outline the neck, making the coat fall into graceful fullness in the front. A single tuck on each side forms a sort of revere that is most slenderizing. The padding in the shoulders, over which the sleeves are smartly gathered, gives a chic "square" effect.

This coat is a fine one for travel, since it will complement a sports, afternoon or summer evening dress. It is light in weight, dark in color (blue or black) and beautifully tailored, with fine attention to detail in tucking and finish. It is one of those hard-to-find coats that will flatter most figures and so is made in sizes 34 to 42. It can also be had in the misses' sizes on special order. This coat is well worth the $17.95 that *B. Altman & Co.* (one of New York's better department stores) is charging for it.

I will be glad to see that your inquiry or order gets into the proper hands. Write to me at the Madison Avenue address shown at the end of this article.

YEARS AGO when traveling by "horseless carriage" was still an adventure, women went to great lengths to protect their complexions from the grime of dirt roads and biting winds—at 15 miles per hour. They wore huge hats with thick veils and goggles to keep these ravaging road-agents from the skin. They were as covered as are women kept in purdah; mere animated bundles of shapeless wrappings.

Although they do wear very much the same style of hats this season, our modern women do not swathe themselves in opaque veils, but they *do* protect their complexions just as carefully as did those of the Gibson Girl era. For although six-lane concrete roads have superseded dirt roads, the added speed of present day driving continues to stir up these tiny particles so harmful to the feminine complexion.

No woman of today ventures on a long trip of any kind without having prepared her skin carefully against wind and dust. On the night before she starts, she goes through her usual cleansing operations, following them with her favorite over-night cream. In the morning, she again cleanses her face thoroughly and applies a thin film of base cream. She completes her travel make-up in her usual way.

Harriet Hubbard Ayer has, in her varied line, a set of creams that will help you achieve the freshness that is the mark of the experienced traveller. For the first operation, Ayer's "Luxuria" Cream, a non-liquefying cleanser, whisks away all grime. Then a coating of "Skin and Tissue Cream" which if left on overnight will give that dewy, transparent freshness to the skin that is usually considered a perquisite of extreme youth. After the morning cleansing, a thin film of "Beautifying Face Cream", before applying rouge, will prevent coarsening of the skin by the elements and will keep your make-up fresh for hours. *Harriet Hubbard Ayer* has also created a powder for each type of skin, oily, dry and normal in seven flattering shades. I found three out of the seven that were flattering to me. The final touch to the whole ensemble is the use of the Ayer Pink or Ayer Red Lipstick, both of which are natural looking, transparent lip colorings. The pink is particularly fine for day-time wear, leaving the lips so near the perfect natural color that it is almost impossible to detect it, if used properly. The Ayer Red gives that added touch of color necessary to produce the same natural effect in the evening.

Mrs. MacFarlane of Harriet Hubbard Ayer, an authority on conservative cosmetics, if there ever was one, has promised me that she will send a sample box containing test-size tubes of the three mentioned creams and three types of powder to any Etude reader who would like this five to seven day trial supply.

Ask Mrs. M. S. MacFarlane, c/o Harriet Hubbard Ayer, 323 East 34th Street, New York City, with all confidence. If you will mention that you are an Etude reader she will send you the sample set.

WHAT would these same grandmothers of ours who wore the veils think, if they had been told that they needed four different combs for one head of hair? But they, of course, didn't live in an age of specialization as we do. We have specialists for this and specialists for that, but after all, isn't it worth it to see that appreciative glint in an admirer's eye, or the envious one in a competitor's?

You have doubtless wished that you could consistently enjoy that "every-hair-in-place" look which your hairdresser gives you. You *can* do this quite easily with a little home practice if you use the right combs.

In reading over a booklet called "Lovely Hair" (which I will send you if you want it) I find that there is a regular wardrobe of combs, each with its specific use. First, there is the very fine "dry shampoo" comb which removes the dirt your brush has loosened. After running the large dressing comb through your hair, you are ready for the ingenious "Dip-It" comb which holds, in scientifically-planned indentations, your favorite wave-set. It is shaped to go right into the bottle and to feed evenly to the teeth of the comb from these indentations. Finally, for your handbag as well as your dressing table, there is the "tail" comb shown herewith. This is the one your hairdresser manipulates with such uncanny skill, combing here and rolling there. You too can manipulate it easily and expertly after a short study of the diagrams in the above-mentioned booklet. With this comb wardrobe you will have the joy and comfort of knowing that, whether your itinerary calls for "formal or informal", your hair will be "dressed" without having to interrupt any of the planned hours by an unscheduled trip to the hairdresser

"Lovely Hair" is a booklet published by the *American Hard Rubber Company*, makers of "Ace" combs, of which nearly every woman in the world possesses at least one. Send me a note and I will pass the word on to send you this interesting and worthwhile brochure.

TO BE "COOL AS LETTUCE"* would seem the very epitome of achievement on hot days. This phrase does conjure up the green, perky leaves of a freshly sprinkled head of garden lettuce, now doesn't it?

But try as we may, after a strenuous day, we wilt just like a neglected head of lettuce, sometimes before the day has scarcely begun. And then we wonder how we will get through those last few hours.

This may be all right at home with the tub near at hand, but hardly the thing when one is traveling and wanting to do and see everything and still look one's best. So I suggest that immediately after your morning bath, you spray your person freely with a cooling eau de cologne, just as lettuce is sprinkled with water. This will keep you feeling cool and fresh for hours. An occasional dash of the same refreshant during the day will prolong this sense of coolness.

Whether you use the fresh-smelling *"4711" Classic* or the *Geranium Rose* with its subtle garden-in-June odor, you will bask in an aura that should make you feel fit during the entire day's activities.

Realizing the importance of the musician as a potential user of these odors, in travel, in work on the platform, and in personal use, *Ferd Muhlens, Inc.*, will be glad to send you a booklet describing these and other fascinating odors in the famous "4711" line, which odors are available almost anywhere in the United States and on the continent. Address Mr. Richard Stern. 25 West 45th Street, New York City.

* Smart Bonwit-Teller's current advertising phrase.

PARADOXICALLY ENOUGH, traveling time is usually a time of both hurry and relaxation. Since we travel mostly in the summer, hurry usually brings with it a more profuse perspiration, which means different things to different people. Frequent bathing, perfumes and what-not can only partially allay that something about which even your closest friends hesitate to speak. You yourself can only detect the after-effects on your clothes, and then the damage is past remedy for that particular time and dress.

One of the best ways to save yourself the embarrassment of ruined clothes and the even greater distress of a ruined reputation, through odors which you do not even recognize, but of which others are only-too-well aware, is to check the offender completely. Under-arm perspiration and its attendant disagreeable concomitants can be effectively stopped with *Non-spi,* in a harmless and sure way.

Non-spi is a harmless, amber-colored liquid in an attractive green-stoppered long necked bottle which can be kept right out on the dressing table. The stopper has a dual personality, for in spite of its attractiveness, it is the means of applying *Non-spi* to the under-arm, a clever idea which does away with the more messy means of application. If you will use *Non-spi* as directed on the bottle, you will find yourself enjoying this coming summer free from disagreeable under-arm odors.

If you cannot buy *Non-spi,* locally, I suggest that you send me a card and I will forward your inquiry to the proper person.

WHEN ABOUT TO MAKE A TRIP, long or short, I have found it helpful to refer to a check-list made many years ago. I keep a copy of this list in one of the pockets of each of my bags, so that all the necessary articles will be packed.

Most of the manufacturers today take much thought on the type of container in which their products are packed, so as to make the carrying of them more convenient. They make small sizes that take up a minimum of space, or that fit into a specially constructed, easy-to-pack kit, so that as long as the list may seem, it can all be fitted into one medium-sized bag.

The well-known house of *Yardley & Co.,* whose Lavender is known the world over, has added one more comfort to packing, by doing away with the necessity of packing your brilliantine spray which endangered everything else in your bag by leaking. They have created a silver-gray tube, capped in green, (see drawing) which holds their crystallized brilliantine and prevents its running out, should it become soft from exposure to excess heat. It has the clean, fresh smell of lavender which gives a faint aroma of the outdoors to your hair.

If your dealer does not carry this brilliantine, drop a line to Miss Marion Stoker, Yardley & Co., 620 Fifth Avenue, New York City, and she will be glad to tell you where you can buy it or she will furnish it direct.

I will send you a copy of the check-list on a card if you would like to have one. Address Theodora Van Doorn, Room 613, 350 Madison Avenue, New York City.

See you next month - Theodora Van Doorn

From $10 to $1,000 A Night

Helen Jepson ☆ Famed Opera and Movie Star— Tells ETUDE Readers of the Importance of Personal Appearance

By ANNABEL COMFORT

☆ *Beautiful Helen Jepson in two important operatic roles: as Margherita in "Faust" and as Violetta in "La Traviata".*

THE rise from an obscure chorus girl to opera star, from ten to a thousand dollars a performance, within the brief space of four years, the story of the career of Helen Jepson. Incredible, and especially in view of the general economic stress of the past few years! Yet, while the wails of men and women in virtually every walk of life fairly pierced the heavens, Helen Jepson's standing grew through her incessant work in music until it carried her to the Metropolitan Opera House.

The only plaintive note issuing from the lips of Miss Jepson is that the day is composed of but twenty-four hours. She jealously guards time, which to her is a precious element intended to be spent on work, and more work. Yet love of work is but one of the numerous factors contributing to her successful career. Charm, cheerfulness and vivaciousness are other elements. Beauty of mind, spirit, body and voice are the results. A flair for choosing smart clothes, and a fine conception of the way to wear them to the utmost advantage, are among the attributes in which this lady is few peers.

What have all these things to do with her singing? Nothing with just singing. However, they have a great deal to do with Helen Jepson's climb to fame, and with her maintaining this stellar position.

Miss Jepson dropped in at my New York studio before leaving for Hollywood for the Lux program broadcast. The afternoon was delightful, and Helen's sunny smile seemed to augment the spring sunshine. Her eyes wandered in the direction of Central Park, which faced the windows. "I'm so fond of walking around the reservoir," she remarked.

"How much do you walk?" I queried.

"At least two miles a day. It keeps me in trim; and, besides, I enjoy the walk." She then explained that long walks had helped her to reduce from one hundred and eighty pounds to her present weight of one hundred thirty. "I'm a stickler, too, for Swedish massage," she concluded, "and work—lots of work!"

Even when visiting her Catskill Mountain lodge, she works. "One needs to keep the body strong," she explained. "The rigors of voice practice, you know, make stern demands on the body."

"What about your appetite?" I asked. "Doesn't hard work increase it?"

"Yes," she replied, smilingly. "And, what is worse, I love to eat. But I'm careful. I must watch my weight."

Her experience in the "Goldwyn Follies," a recent motion picture hit, has taught her that Hollywood not only is critical of overweight but especially of weight which is unevenly distributed.

When the writer implied sympathetically that a career demands undue sacrifices, Miss Jepson hastily corrected with, "No, I never permit myself to believe that. The mere thought of sacrifice in connection with my music would produce in me negative reactions." Ever sympathetic toward others, she is unable to find time for indulgence in self-pity. Not a single moment of idleness enters her busy day.

Miss Jepson revealed that her sunny disposition, for which she is noted, is the result of mathematical calculation, that being cross is "a waste of time," and reminded me that her work requires an enormous amount of planning. Sitting in a chair, or crossing the room, or the slightest gesture of her hand easily indicated why this youthful star, who enjoys a reputation as a "fashion plate," has attained great heights. Neatness, too, environs her from head to toe. Her honey-blonde bobbed hair evidently receives adequate attention. As she talked her eyes sparkled, and there was a marked absence of overdone make-up. Naturally, these facts brought on discussion.

"I prefer only a reasonable amount of make-up on the street," she replied to my sly challenge, "and, surprising as it may seem, little on the concert stage. I watch my skin," she added, "for in technicolor pictures a good skin is essential."

In the morning she washes her face with soap and water, and at night applies a cleansing cream. Her hair receives hot oil treatments and ample brushing. She has beautiful hands, and her nails are brightly polished. Her hats—and "chic" is the word for them—are not too extreme. Tailored clothes are her preference.

Reverting to the subject of clothes, Miss Jepson said, "Regardless of how much care I use in selecting dresses, I always have a favorite gown, especially among evening clothes. That is the reason why I always duplicate certain evening models. My favorite, in turquoise, has had three editions."

She has many jewels, but prefers to wear costume jewelry, especially when on tour. Her shoe closet contains fifty various pairs. She believes in matching shoes to every gown she wears, and does not incline to using street shoes for the concert platform or concert shoes on the street. Fully conscious of the things that accentuate her personality, she chooses wisely and in excellent taste. Little wonder she has recently been selected as "The Best Dressed Woman in Opera," an honor not to be dismissed too lightly in considering the Miss Jepson of a decade ago, who catered to the clientele of an Akron, Ohio, shop, where she earned a meager livelihood at selling corsets.

More meager still was her existence when she subsequently enrolled at the Curtis Institute of Music in Philadelphia, to study voice with Horatio Connell. Here, on an allowance of forty dollars a month, and occasional food baskets from home, Miss Jepson struggled through, worked, and survived. Conditions notwithstanding, she was continually active, and always preferring to see the bright side of life. Being industrious and smart, she developed into a skillful seamstress. Thus she learned to design and make the best part of her wardrobe, including costumes, a talent which she practices to this day. In her graduate year she made her début with the Philadelphia Grand Opera Company, as *Nedda* in "I Pagliacci," and remained with the company until 1932.

An amusing incident occurred during her appearance in "Thaïs," at Montreal. The company was late in arriving for the performance. So Miss Jepson pinned several of the female stars into their ill-fitting costumes. During the (*Continued on Page* 411)

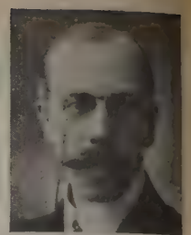
THE ETUDE HISTORICAL MUSICAL PORTRAIT SERIES

An Alphabetical Serial Collection of

THE WORLD'S BEST KNOWN MUSICIANS

This series which began in February, 1932, has included to date a total of 3388 celebrities. It will be continued alphabetically until the entire history of music is adequately covered. Start making a collection now. Nothing like this has ever hitherto been issued.

Etude readers desiring additional copies of this page and pages previously published are referred to the directions for securing them in the Publisher's Notes Department.



Friedrich Silcher—B. Schnaith, Württemberg, June 27, 1789; d. Tübingen, Aug. 26, 1860. Comp., tchr. Was mus. dir. at Univ. of Tübingen. Was especially famous as a writer of songs.

Rhéa Silberta—B. Pocahontas, Va. Comp., lecturer, singing tchr. Recital tours and lecture recitals. Her most famous song, *Yahrzeit*, has brought internat'l fame. Res., New York.

Alexander Siloti—B. Charkov, Russia, Oct. 10, 1863. Pianist, cond., comp. Pupil of Tschaikowsky, N. Rubinstein and Liszt. First U. S. tour, 1898. Former fac. mem., Juilliard Graduate School.

Alfred J. Silver—B. Windsor, Eng., Dec. 20, 1870. Comp., orgnst., cond., tchr. Orgnst. of var. churches in Lon. Was cond., Carmarthen (Wales) Chl. Soc. Orchl., piano, and org. works.

Homer Simmons—B. Evansville, Ind. Comp., pianist. Pupil of Paderewski, Respighi and Nadia Boulanger. Has appeared with orch. His works have been presented by major orchs.

Lyda Avirit Simmons—B. Arkadelphia, Arkansas, Sept. 27, 1883; d. Pine Bluff, Arkansas, March 19, 1934. Comp., pianist. Pupil of Seebaeck and Goetschius. Wrote beginners' methods, incl. "Middle C."

Frank Simon—B. Cincinnati, O. Band les., cornetist. Pupil of W. Kopp and W. Bellstedt. Was soloist with Sousa's Bd. Cond., ARMCO Concert Bd. Head, Band Dept., Cin. Cons. of Mus.

Herman Simon—B. Berlin, Jan. 26, 1896. Comp. Studied at the High School for Music in Berlin. Active in Berlin. Has written operas, masses, sacred and secular choruses.

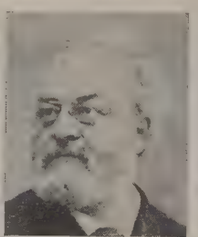
Bruce Simonds—B. Bridgeport, Conn. Pianist. Pupil of Horatio Parker, Harold Bauer, D'Indy and Matthay. Has appeared with Boston Symph. O., Phila., O. and other major orchs.

Matteo Simonelli—B. Rome. 17th century; died (?). Comp. Was maestro de cappella in Rome. Called by some the Palestrina of 17th century. Most famous pupil was Corelli.

Achille Simonetti—B. Turin, June 12, 1857. Comp., violinist. Pupil of Sivori. Dancla and Massenet. Was member of London Trio. European tours. Vln. and pia. pcs., and str. qts. D. London, Nov. 19, 1928.

Christopher Simpson—B. England, about 1610; d. about 1670. Comp., viola da gamba virtuoso. Wrote valuable works for his instrument, some of these going through nine editions.

Elizabeth Simpson—Comp., pianist, teacher, lecturer, writer. Has studied with some of the leading tchrs. of Europe. Lecturer at Univ. of Calif. Author of edu. wks. for children. Etude contbr.



Nikolaus Simrock—B. Mayence, Ger., 1752; d. Bonn, 1834. Music publr. From 1774-90, horn player in orch. at Bonn. In 1790 estbld. N. Simrock. Publd. many of Beethoven's first works.

Christian Sinding—B. Kongsberg, Norway, Jan. 11, 1856. Comp. Studied at Leipzig Cons. Considered the greatest Norwegian comp. since Grieg. Many large wks. and small miscl. pieces.

Edmund Singer—B. Totis, Hungary, Oct. 14, 1830; d. Stuttgart, Jan. 23, 1912. Comp., violinist, tchr., editor. Many successful tours. Was prof. at Stuttgart Cons. Wr. vln. pcs. and a method.

Otto Singer—B. Sora, Saxony, July 26, 1833; d. New York, Jan. 3, 1894. Comp., noted pianist. In 1873, asst.-cond., first May Festival, Cincinnati. Was tchr. in Cin. Coll. of Mus.

Leone Sinigaglia—B. Turin, Italy, Aug. 14, 1868. Comp. Studied in Bologna, Vienna and with Dvořák in Prague. Has written orchl. and ensemble works, songs and choruses. Res., Turin.

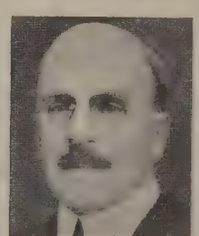
Charles A. Sink—B. Westernville, N. Y., July 4, 1879. Executive. Since 1927 pres., School of Music, Univ. of Mich. Pres., Ann Harbor May Festival. Nationally known in educational field.

Hans Sitt—B. Prague, Sept. 21, 1850; d. Leipzig, March 10, 1922. Comp., violinist, cond., teacher. In 1883 became tchr. at Leipzig Cons. Cond. various chl. groups in Leipzig. Many large works.

Alfred Sittard—B. Stuttgart, Nov. 4, 1878. Comp., organ virtuoso, cond. Fdr. and cond., excellent choirs in Hamburg and Dresden churches. Has written organ works and choral music.

Frederick Sittig—B. Utica, N. Y., 1877. Pianist. Studied at Utica Cons., and in Germany. For 14 years taught in Berlin. With daughter (violinist) and son (violoncellist), orgnzd. Sittig Trio.

Margaret Sittig—B. Berlin. Violinist. Pupil of Spiering, Auer and Carl Flesch. Debut, New York, 1915. Soloist with Phila. Orch. under Stokowski. Member of Sittig Trio. Many recitals.



Camillo Sivori—B. Genoa, Italy, Oct. 25, 1815; d. there Feb. 18, 1894. Famous violinist, comp. Pupil of Costa and Paganini. Made many tours. In 1846-8 toured U. S. Wrote violin works.

Emil Sjögren—B. Stockholm, June 15, 1853; d. there Mar. 3, 1918. Comp., organist. Studied at Stockholm Cons. and in Berlin. In 1884-85, toured Europe. Is famed for his fine songs.

Alexander Skibinsky — B. Russia. Violinist, comp., tchr. Pupil of Joachim, Sebald, Heermann and Ysaÿe. Many brilliant concert appearances. Maintains Phila. studio. Has wr. violin wks.

Charles Sanford Skilton—B. Northampton, Mass., Aug. 16, 1868. Comp., orgnst., cond. Since 1903, prof. at Univ. of Kansas, Lawrence. Orchl. works, org. pcs., choruses, songs.

David Dick Slater—B. Glasgow, Scotland. Comp., tchr. Studied in Glasgow and London. Since 1911, member of faculty, Toronto Cons. Formerly an orgnst. Has written songs and pia. pcs.

Gordon Archibald Slater—B. Harrogate, Eng., 1896. Comp., orgnst., cond. Lecturer at Leicester Univ. Coll. Cond. of many Chl. festivals. Org. works., piano pieces, songs.

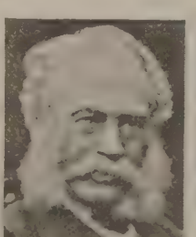
Josip Slavenski—B. Cakovec, May 11, 1896. Comp., tchr. Studied at Belgrade Cons., and in Budapest and Prague. His orchl. and chamber wks. have had public hearings. Has wr. also chor. and songs.

Ruth Slenczynski—B. Sacramento, Cal., Jan. 15, 1925. Remarkable child pianist. First appearance at 4, in Oakland, Cal. Studied with her father, and at Mills Col. First N. Y. recital, 1933.

Leo Slézak—B. Mährisch-Schönberg, Moravia, Aug. 18, 1876. Dram. tenor. For many years a member of Hofoper, Vienna. Amer. début at Metro. Opera H., 1909. Also noted as a lieder singer.

Nicolas Slonimsky—B. St. Petersburg, Apr. 15, 1894. Comp., cond., pianist, writer. Has been guest cond., Los Angeles Philh. O. Lecturer at Public Lib., Boston. Songs and piano pcs.

Alexander Smallens—B. St. Petersburg. Cond. Was asst.-cond., Boston Opera, and Phila. Or. Cond., Chicago Opera, 1919-22; Phila. Civic Opera, 1923-30. Radio concerts. Res., Phila.



John Smallman—B. England; d. Los Angeles, Calif., Dec. 19, 1937. Cond., orgnst., voice tchr. Was cond. of Oratorio Soc., Los Angeles. Co-author. "The Art of á Cappella Singing."

Antonio Smareglia—B. Pola, Istria, May 5, 1854; d. Grado, Apr. 15, 1929. Comp. Studied at Vienna Cons. and at Milan Cons. Was tchr. in Trieste Cons. Wrote operas, some well known in Germany.

George Thomas Smart—B. London, May 10, 1776; d. there Feb. 23, 1867. Comp., cond. Orig. mem. of London Philh. Soc.; cond., its concerts, 1813-44. Cond. mus. at coronation of William IV.

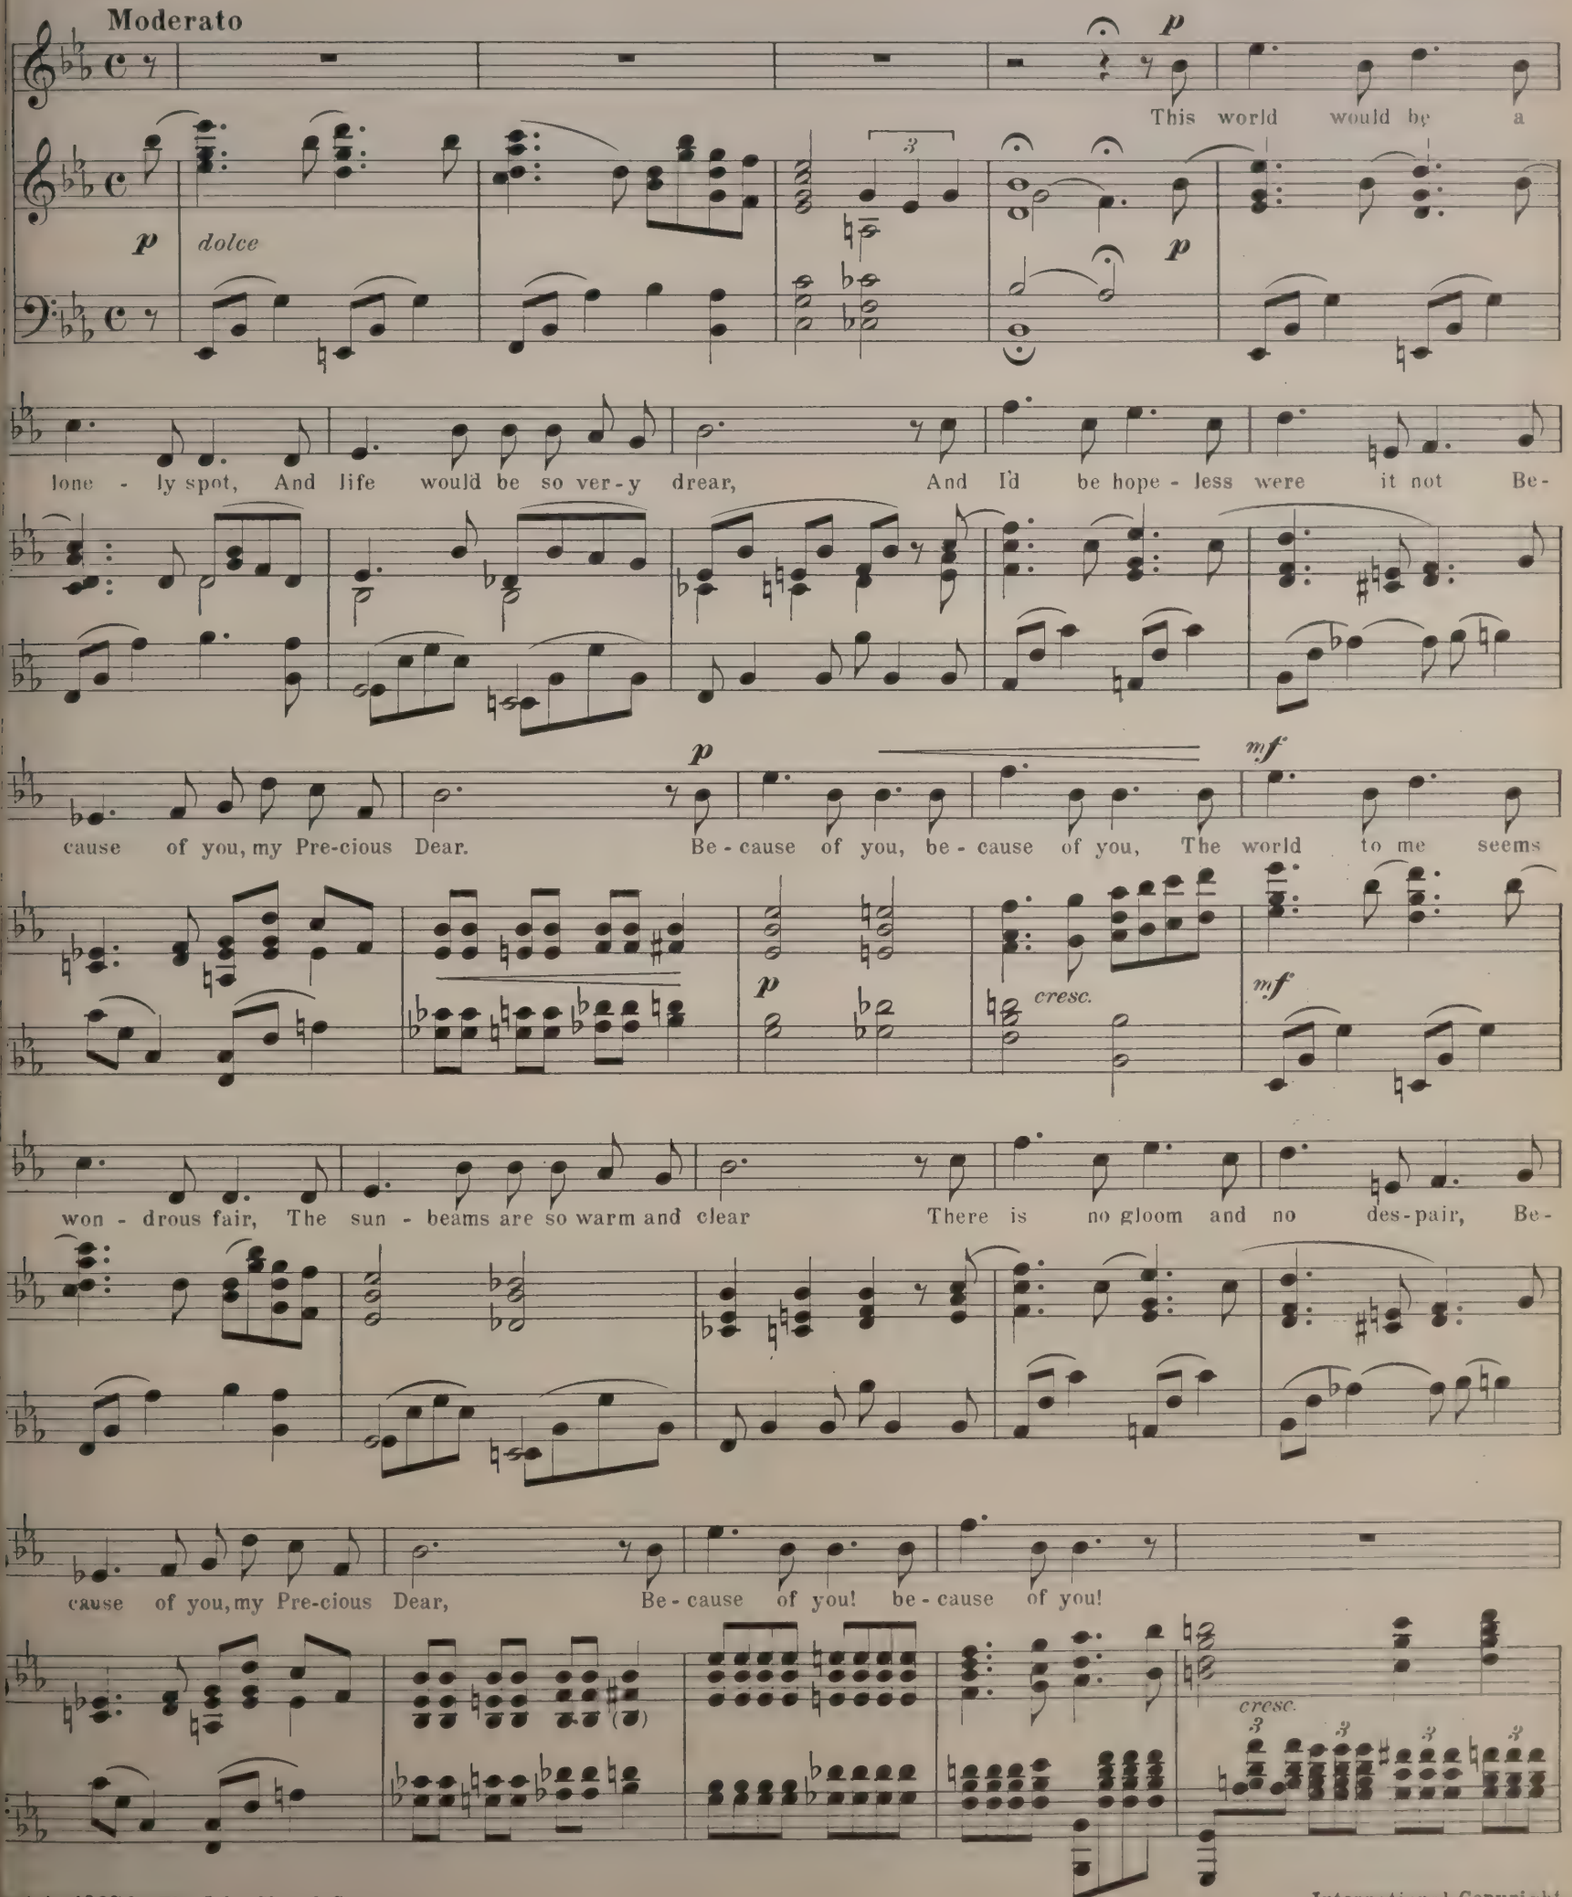
Henry Thomas Smart—B. London, Oct. 26, 1813; d. there, July 6, 1879. Comp., orgnst. Pupil of his father (Henry), and W. H. Kearns. Orgnst. of London churches. Many songs., pt.-songs, aths.

Bedřich Smetana—B. Leitomischl, Bohemia, Mar. 2, 1824; d. Prague, May 12, 1884. Comp., cond., pianist. Considered the father of Bohemian mus. Opera, "Bartered Bride," among many wks.

Jan Smeterlin—B. Bielsko, Poland, 1892. Pianist. Studied with Godowsky. Has appeared in prince. European cities. New York début, 1930. Has made solo appearances with major orchestras.

Alice Mary Smith—B. London, May 19, 1839; d. there Dec. 4, 1884. Comp. Pupil of Sterndale Bennett and G. A. Macfarren. Wrote orchl. and ensemble wks., pia. pcs. and songs.

Bernard Smith (called "Father Smith")—B. Germany about 1630; d. London, Feb. 20, 1708. Famous ct. org. builder to Queen Anne. In 1694 he enlarged the org in Westminster Abbey.



Clay Smith—B. Bainbridge, Ind., 1876; d. Chicago, July 18, 1930. Comp., trombonist. A pioneer in the Chautauqua; toured with own company. Wr. *Little Boy Sleepyhead* and other songs.

David Stanley Smith—B. Toledo, O., July 6, 1877. Comp., cond., tchr. In 1920 succd. Parker as head, Yale Sch. of Mus. Wr. also cond. Symph. O. and Oratorio Soc. there. Orchl. wks.

A Rhythm Band for Mothers

By SARAH SIMKINS

When "Mother" took to Triangle and Tambourine

THE FEDERAL MUSIC PROJECT has reached out in all directions in its field and among its unusual achievements is a rhythm band for mothers in the downtown East Side, Stuyvesant House section of New York City. The Project has sent THE ETUDE the following human and amusing description of the meetings of the band:

"I play in a band and now I am a person," says Mama Abramowitz, as she relaxes after rehearsal of the Mothers' Rhythm Band at Stuyvesant Neighborhood House. "I wash the dishes and clean the house and teach my children to be nice. I go to their plays and watch them shine. But now I play in a band myself, and I am a person."

"We play high class pieces same as my Izzie plays," explains Mrs. Markowitz, adding proudly, "Our band plays Schubert's *Rosamunde* and Bach's *Musette*."

"We play the new songs too—the ones our children hear at the movies and on the radio," chimed in Mrs. Cohen enthusiastically, "like *Little Old Lady* and *Pennies from Heaven*."

The Mothers' Rhythm Band at Stuyvesant House is one of three similar groups taught by WPA Federal Music Project teachers. These older women find it a source of relaxation and interest to come to class and to get completely away from their household duties and responsibilities. They look forward to this weekly meeting with their musically minded neighbors, they pride themselves on being on time and on never missing class except under the most dire emergency. Woe to any mother who is so unprofessional a musican as to plead a "a headache" or that "Johnnie has a toothache." If a woman's duties cannot be arranged so that she has two hours a week for herself—well, she just cannot stay in a Stuyvesant House Mothers' Band!

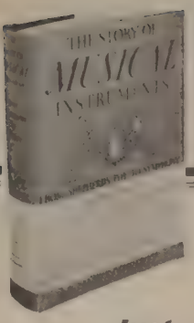
The mothers themselves requested the formation of this group. They had been coming to concerts where their children played in rhythm bands and finally they decided that perhaps life really did begin at forty, and that they wanted to have a chance for musical recreation too. There are twelve in the present class, ranging in years from thirty to sixty. They have a two-hour lesson every Tuesday at 1:30 P. M. They occasionally give concerts at the settlement house and they are especially proud when they "dress up" in costume.

A member of the band declared to her teacher: "It makes me feel that life is not yet over for me," and she added in Yiddish, "I thought my brains had dried up—but now I know that I can still learn new things."

Katinka Stollberg, the WPA Federal Music Project teacher, started the group with simple folk songs, building up to such things as Sousa's military marches and the Strauss waltzes. Miss Stollberg lets them choose their own songs in the beginning. Often these Jewish mothers request peasant songs they sang in their childhood, *The Peddler* or *Stenka Razin*. But, whatever tune they play on their cymbals, tambourines and drums, they go back to their household duties refreshed and happier for the experience of making music together.

Great Music at Popular Prices

(*Continued from Page 372*)



an idea of the support that may be expected, before any contracts are signed. I may say that our sixteen concerts ended with a very small deficit, notwithstanding the fact that the artists were paid adequate fees. Without their coöperation, however, we never could have launched our enterprise.

We did some newspaper advertising, of course, and in addition, made up our prospectus lists from among personal friends, serious music lovers, schools, organizations, civic groups, and the like. We met with encouraging response from the very outset. Everyone seemed interested in the dream idea of offering concerts that stressed nothing but the best, loftiest music, without frills or fanfare.

Smaller cities might do well to limit an effort of this kind to fewer than sixteen concerts. But the idea itself is enormously worth investigating. A first-hand acquaintanceship with the best music in the world, undertaken for no other motive than the sheer joy to be derived from it, is more than worth the experiment. And the result, I feel confident, will prove to others, as it has to us, that we have an affinity with the best. The truly beautiful in art always will have its followers.

* * * * *

"Interpretation demands something of the creative instinct. If you are a composer, you have an affinity with other composers. You can make contact with their imaginations, knowing something of their problems and their ideals. You can give their works color. *That is the most important thing for me in my pianoforte interpretations*—color. *So can you make music live. Without color, it is dead."*—Sergei Rachmaninoff.

Just out!
THE STORY OF
MUSICAL
INSTRUMENTS
by H. W. SCHWARTZ

THIS is the brilliant, dramatic story of the sixty-century evolution of musical instruments from Shepherd's Pipe to Symphony. It is filled with fascinating lore about instruments never before adequately chronicled.

DEEMS TAYLOR says: "I find it accurate, informative and so entertainingly written that it ought to have a very large lay public."

RUDY VALLEE says: "To understand the instruments that make our lovely and glowing orchestral colors possible, I cannot advise too strongly that you read this book. Certainly if you aspire to playing an instrument or leading an orchestra, it is priceless."

GLENN BURRS, editor of **Down Beat**, says: "Every amateur and professional musician should read it for it will give him a better understanding of his instrument."

Profusely illustrated with photos and line drawings. Price $3.50. At all booksellers. Published by DOUBLEDAY, DORAN—14 West 49th Street, New York

THE SINGER'S ETUDE

Edited for June by Eminent Specialists

It is the ambition of THE ETUDE to make this department a "Singer's Etude" complete in itself

The Diaphragm in its Relation to Breathing

By WILLIAM G. ARMSTRONG

THE AIR STORING CAPACITY of the lungs is subject to the enlargement of the chest cavity; and this cavity is enlarged by the lifting of the ribs and the descent of the diaphragm.

The diaphragm is a thin, fibrous muscle which forms a partition between the chest of the heart and lungs and the contents of the abdomen.

When at rest, the diaphragm is similar in shape to the upper part of a half circle, the curve being downward. Its upper surface supports the heart and lungs, while its under surface rests upon the liver, stomach, spleen, and kidneys. As a deep breath is taken the diaphragm descends and flattens and the ribs lift, so that the chest cavity is made deeper by the descent of the diaphragm and wider by the lifting of the ribs.

Many students seem to think "diaphragm" spells "correct breathing;" believing that a great protrusion of the abdominal wall under the breastbone signifies breath storage. This is quite erroneous; and the habit is a vicious one.

When fully inflated, the total air capacity of the lungs in an adult of average height is about two hundred eighty-two cubic inches, with the extreme descent of the diaphragm accounting for only twenty-five cubic inches of the total. When the diaphragm descends, it presses upon the organs of the abdominal cavity, the liver and stomach being thus forced downward nearly three inches.

The point we wish to make clear to the reader is that the diaphragm is responsible for all downward pressure and that a great protrusion of the abdominal wall under the breastbone is not due to breath storage but to a relaxed and stretched diaphragm pressing downward and forward upon the above mentioned organs of the abdomen; for, when this action of the diaphragm is in evidence, the chest is flattened and the ribs lowered, hence only the lower extremities of the lungs are inflated.

And So Control the Breath

WHILE THE DIAPHRAGM assists in the enlargement of the chest cavity, its true function is expulsion, which expulsion engages the whole muscular system of the abdomen. Hence it should not be viewed as *the* organ of inspiration, but as *the* organ of expiration, or expulsion. Now, as controlled expiration is the basic principle of correct singing, we must learn to control the upward expulsive action of this organ. To this end we advise practice of the following exercises:

1. Secure a stout walking stick.
2. Grasp the ends of the stick.
3. Standing erect, with heels touching; and, without bending the knees, throw the body forward as if intent upon touching the floor with the stick, and at the same time clear the lungs of air.
4. Raise the stick slowly up, over the head, and down back of the shoulders, and while doing this, fill the lungs slowly through the *dilated* nostrils.
5. While holding this position, allow the intaken air to escape between tightly compressed lips, making an effort to prolong expiration.

Explanation: the lower ribs are raised through the elevation of the arms; the upper chest is expanded through the back swing of the shoulders; and the diaphragm is caused to descend by the slowly intaken air; while holding the stick back of the shoulders retains expansion of the chest and so concentrates action in the diaphragm, whose upward expulsive action is resisted by the tightly compressed lips resisting the outgoing breath.

Exercise No. 2:

1. Stand with the back to the wall, heels, base of spine, shoulders and head touching the wall.
2. Raise the arms, and clasp the fingers back of the neck, bringing the elbows in contact with the wall.
3. While holding this position, take a deep breath through the dilated nostrils.
4. Holding the breath taken, inhale and exhale twenty-five times through the dilated nostrils (similar to panting), directing the inhaled air downward and backward toward the spine and being sure that action of the abdomen is *inward* with *expiration*—which it commonly is not.

Explanation: The chest is expanded as in the preceding exercise, and the lungs fully inflated by the deep breath taken, hence any further expansion will be downward, and as the only possible downward expansion is that caused by depression of the diaphragm, the short breaths taken on top of that one which has already filled the lungs, actuate the diaphragm downward with the inhalations, and upward with the exhalations. In this way we are enabled to single out the diaphragm for special development: a very important consideration, because in seventy-five per cent of cases the physical state of the diaphragm at the commencement of study is anything but conducive to vocal support and propulsion. Students cannot give too much attention to the poise of the body; they should see to it that, whether standing, sitting, or walking, the shoulders are back and down, the chest elevated, and the abdomen flattened. By cultivating this most desirable body poise, and practicing faithfully the above suggested exercises, there need be no thought as to whether we are breathing diaphragmatically or otherwise; for we will breathe but one way—correctly.

The Entire Body in Use

HOWEVER, WE MUST NOT be content with development of the organs of respiration; but, on the contrary, we must develop the physique generally, and especially the general muscular system; because whatever affects the muscular system affects, directly, the vocal ligaments which, in truth, are parts of the muscular system. Then again, muscles themselves, when tensed, have tone, which may be heard in an increased "roaring" in the ear pressed upon a pillow when the jaws are closed tightly and opened; so that there is little question about well developed muscles playing a part in general excellence of vocal tone.

There is a peculiar quality of sound—we cannot call it tone—which illustrates well the result of inattention to general physical development. The sound to which we have reference is a nonresonant, "hooty," breathy one, and is attributed directly to a lazy nervous system whose indecisive impulses cause a relative laziness in the muscular system generally, and in the muscular mechanism of the vocal apparatus and the vocal ligaments as parts of the general muscular system. In such cases, only too common, the vocal ligaments are poorly approximated, or drawn together, and only partially tensed; the soft palate, which should be highly arched, is relaxed and lowered; the epiglottis leans lazily over the larynx; the chest is flattened and the abdomen protruded; and the whole aspect from palate to abdomen is one of physical lassitude.

The result of this impossible combination is that laziness of the muscles which brings the vocal ligaments together, tenses them, and shortens their vibrating length for notes of higher pitch. This makes impossible the essential adjustments, hence the vocal ligaments are forc breath pressure to vibrate throughou whole range while adjusted for no low pitch; and this, together with th eral muscular relaxation, causes the s to be nonresonant, hollow, "hooty," breathy, the latter, due to the esca breath between the poorly approxi vocal ligaments.

A few minutes devoted night and r ing to a single exercise will tone u most relaxed muscular system:

1. Place a pillow on the floor, ab two feet from a heat radiator, or ot heavy article under which can be the toes of both stockinged feet.
2. Sitting on the pillow, and w the toes under the radiator, fold arms and draw them tightly to chest.
3. Hold these adjustments wh lowering the trunk and head to floor ten times, with the neck k stiff; or, in academic phraseology, down and sit up with the toes un the radiator. Increase the number movements as the muscles become a customed to the exercise. Cease t exercise when the abdominal musc say so—which they will.

A little enthusiasm will often work ders; so do this exercise enthusiastic bearing in mind that singing is a phy effort.

Lessons Through Listening

In Which the Young Singer Learned from Hearing the Great Artist

By EDWARD ELLSWORTH HIPSHER

ONE OF THE MASTERS of that school of song which gave to the world those superlative artists of an era now almost a legend, when asked for the secret of the *bel canto* style in song, replied:

"When the tone is permitted to produce itself, then the singing may be said to fill the requirements of our bel canto *method.* Bel canto *simply means 'beautiful song.' Anything which does not contribute to beauty of tone, beauty of phrase outline, and beauty of interpretation of the spirit of the words, is not a factor in* bel canto."

For a few moments let this oracle now be kept in mind; and, as we review some experiences of the past, let us try to discover some lessons which may be learned from his wisdom. And, as a prelude, let us fill our minds with a consciousness of beauty in itself. Let us meditate for just a moment on the most beautiful thing we ever saw, the most exquisite rose we ever smelled, the most beautiful thought we have read in literature, and especially the choicest of moments in which we listened to the allurements of song.

For a full half century we have listening to the elect of vocal artist all the world; and, along with the ecst of those experiences, we have learned them some of our most valuable les even as one of less brilliant talent.

In those earlier years it was the inc parable Patti who set the standard of beauty, to which none other could to hope for a near approach. To un take to duplicate the scintillating perfe of her scales and trills would have as audacious as to attempt to turn inf ingredients into a superbly lustrous st of perfectly matched oriental pearls. simply defied imitation. And yet to heard her in the prime of that superl voice and of her charmful art was to sess for all time an ideal that coul none other than an inspiration. Such fect relaxation of the vocal mechan such spontaneity of tone production, such elasticity of *coloratura* left in the ceptive mind a model towards which might be a lifelong striving. Her art came at once the perfect lesson to

gent and sympathetic student and r.

a successor to Patti, perhaps the one most nearly approximated her art was ; but, though hailed as the "Second " there was a world of difference in types of perfection; and so the er singer became another lesson to tudent. The Melba tone lacked some- of the type of brilliance which had so distinctive of Patti, and which ed the public to fill the halls for her erable "Farewells" till one waggish go critic included this choice morsel series of verses inscribed to the *Diva:*

are thee well, and this fond linnet
Wishes now the truth to tell,
Whenever there is money in it
He'll come round and 'Fare thee well.'"

there was a lusciousness that be- d to the Melba voice that the sensitive never could quite forget. So velvety both attack and release that the sensation created was most unusually delicious.

Then there was our own superb Nordica, with a tone of such silvery clarity as could never be forgotten. And what a student and worker! Whatever she essayed became the polished gem. In this half century of recollections, her *Jewel Song* in "Faust" is the only one to be recalled in which that long trill on middle line B, and its succeeding scale flight to the octave above were done with an equal brilliance, in which neither left the other in shadow. What pity that her triumphs as the Wagnerian heroines should have been so great a task for an organ of such fragile beauty, so that a brilliant career was inevitably abbreviated. Another lesson to the thoughtful!

And thus we close just a few reminiscences which may inspire some reader to listen to the great artist with a little more sympathetic ear turned towards the retention of memories which may serve as stimulants in the development of a better art as life and experiences ripen.

Establishing a Routine of Practice

By SARA HALBE

MANY TIMES have you heard a young student say, "Well, I don't know what o after I've had my lesson. Just go next week I guess and do all those y exercises he tells me to." This may d like an immature person talking and a student old enough to consider in a us manner the science of learning to . But it has happened in my experience older students have actually confessed *lo not know how to practice."*

a teacher can work with a student has a good natural voice the ideal is to give a short lesson every day. young voice student can be confidently ed to practice alone. If one, two, or three lessons a week are agreed upon art with, even then progress is at first slow, and often pupils and their fam- become discouraged. But where money lessons is scarce, and distance from the io or other occupations interfere with ideal short daily lesson, there still may ound a way to show the beginner how stablish a routine of vocal practice that enable him to grasp what the teacher ying to help him to accomplish.

t the lesson, we go through the breath- exercises, the loosening-up exercises, exercises for placement and perhaps the nciation of sentences, explaining why and as we go along. At the end of the on I write out a small order like a or's prescription, such as:

ry Day
:30 A.M. Breathing exercises in bed, before rising.
:40 A.M. Secondary breathing exercises as per explanation.
1. After breakfast. The syllable *tay,* on descending scale (fifteen minutes), beginning on A and going as high and low as is comfortable to the voice. Sing lightly on the breath!
2. Hum on *Mm,* lightly, each note of the descending scale as above.

After Working Hours
15 min.
1. Fifteen minutes of study of No. 1 in exercise book.
2. Recite poem (as selected) for enunciation.

This is changed, of course, each lesson, according to the pupil's needs; but the main idea is that I actually write down just what the pupil is to do each day before his next lesson. He returns the written slip and we quickly review what he has done and go on to something increasingly difficult. The actual result is that he not only has a clear idea of what he has to do, but he also has established a routine of practice. At the end of a season of study, whether it be six months or a year, both teacher and student feel sure of what has been accomplished. It avoids the heartache that often comes and teaches through the realization that the possessor of a really beautiful voice is allowing it to fall into decay because of the lack of a proper knowledge of the science and art of singing; and it leads him into a knowledge of the proper processes of practice.

Colloquialisms and Abridgements in Singing

By WILBUR ALONZA SKILES

HE VERNACULAR is usually spoken in at t two ways—the colloquial and the as- ously dignified. The dignified should be l by the singer. He, who speaks or sings ne dialect of his neighborhood, has many ual shortcomings, and one of his fore- t characteristics is sure to be his care- substitution of vowels." This quotation, n a valuable article, "Mend Your Speech Mar Your Song" (by Grace Grove, in E ETUDE for March, 1933), should be norized by many singers.

Whether one sings in his mother tongue, nother language, all colloquialisms and dgements should be eliminated. They merely signs of the singer's laziness. It nly as vowels are given in definite form that they are of any use in a language. Without articulative ability and agility, and, above all, a good understanding of the vowel system of the language in which one sings, adequate progress in singing is impossible. Vowels are not "subject to change without notice," nor to whimsical transmutations any more than are the characters of our shorthand category. Thus every vowel should be made perfect in sound and shape, to insure against colloquialisms, abridgements and, of course, mediocrity in song; because, no matter how perfect and beautiful the tone be, if the vowel enunciation and consonant articulation are impoverished by such shortcuts, all grace, poise, beauty and charm of the song will be lost.

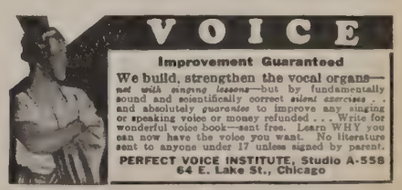
Earn A Teacher's Diploma
or
A Bachelor's Degree

Do You Ever Wonder

Why some teachers are more successful than others? Do you realize that those who hold the big jobs never cease to be students?

This is the age of specialization and the specialist is earning fully double or more the salary of the musician with only a general knowledge. Openings in the music field are growing very rapidly. More money is being spent every year for music.

Musicians who are using our Extension Courses as a means of going higher in their profession are making a great gain financially.



Prepare yourself for something better with one of the following courses. Study at your convenience by means of the extension method with a school of established reputation.

NORMAL PIANO, HARMONY, HISTORY OF MUSIC, ADVANCED COMPOSITION (credited towards the Bachelor's Degree), STUDENTS' PIANO, VOICE, PUBLIC SCHOOL MUSIC, EAR TRAINING and SIGHT SINGING, VIOLIN, CORNET, MANDOLIN, GUITAR, BANJO, REED ORGAN, TRUMPET, CLARINET, PIANO ACCORDION, SAXOPHONE and Choral Conducting.

Write for complete information. Check course in which you are interested. We will be glad to send sample lessons without obligation to you.

"It is highly desirable to want to aspire to leadership, but it is more important that one is worthy of leadership."—John Philip Sousa.

THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

Chorale Prelude Voluntaries

By CHARLES N. BOYD

THE CHIEF OBJECT of the organ voluntary in the church service is to prepare the minds of the congregation for the service which is to follow. As such, the voluntary is an integral part of the service, and should so be regarded by organist, clergyman and congregation. There is a story about Saint-Saëns, dating from the days when he was organist at the Madeleine. To one of the clergy who reproached him for the serious character of the organ preludes, and suggested a much lighter and more secular type, Saint-Saëns replied that "as soon as the service becomes like the opera I shall be ready to furnish appropriate music." That is the nub of the whole question—appropriate music.

Fortunately there is no lack of it for service preludes. The ancient plain song melodies have furnished themes for a great number of organ pieces which are appropriate for both Roman Catholic and Protestant churches. Guilmant wrote a number which are easily procurable and as a rule not difficult to play, and he is only one of many who have provided such organ compositions.

Of German Origin

THE EARLY GERMAN ORGANISTS were fond of basing organ pieces on chorale melodies, and from the sixteenth century onward the German organ literature is crowded with examples of this form of composition. Of course the culmination is Bach, to whom the chorale prelude made an especial appeal. One can easily imagine the devotion with which he treated those favorite melodies, such as *Deck thyself, dear soul.* His method was apparently to take from the hymn a stanza that appealed to him most strongly, and to make the prelude a meditation on that verse. Sometimes this policy has made Bach's treatment of the melody hard to understand, as in cases such as *Sleepers, wake, a voice is calling,* where Bach's music seems to have little in common with the title; but this prelude was not based on the first verse of the hymn. The variety, richness, and sympathy of Bach's preludes are known to only those who make them a special study.

Reger and Karg-Elert are two modern Germans who have been notably successful in writing chorale preludes, and each is represented by large groups of such compositions. The small group which closes the list of Brahms' compositions should never be omitted from any list of chorale preludes. But the main difficulty in using this music for organ voluntaries in average American churches is that the congregations do not know the chorale melodies, with the possible exception of *Ein feste burg;* and so, while the music may be churchly and appropriate, it lacks the d appeal which ensues when the famil words are recalled by the *cantus firm*

Coming to the modern hymn tunes English speaking people, we find a m less extensive class of resultant or music than that which is based u Gregorian melodies or chorales. Unf tunately, many of the composers who dertake to develop hymn tunes do so variation form, such as Spark's w known piece on *Jerusalem, the Gold* This form is more apt to lean towa concert music, and is not nearly so app priate for church service use as the t prelude based on the hymn melody. C English friends are beginning to accun late a fair repertory of true preludes, a some American composers are represent by publications in this class. It is to hoped that more of our serious musicia will be attracted to composition of t form. No service prelude can be m desirable than a well written piece ba on a hymn melody which is familiar to t congregation, and which makes a dou appeal, by both melody and words.

GREAT ORGAN IN BOSTON MUSIC HALL

This was the first organ of the grand type erected in the United States, and it was the most famous organ on our continent until the one in Cincinnati Music Hall challenged its supremacy. It stood in Boston Music Hall, which was the home of the famous Boston Symphony Orchestra till the modern Symphony Hall was built in 1900 and the historic old Hall demolished.

Doubling the Melody

SOME of the most charming effects in c chestral music are obtained by the playi of a melody in octaves by different instr ments. Haydn was partial to doubling violin melody with a bassoon an octa lower, to quote a classic example; and i numerable combinations of this sort a found in earlier and later composers. A equally good effect may be obtained organ music by the judicious use of t 16′ and 4′ couplers, and the study of th application is to be recommended. Even a two manual organ, it is possible, in pla ing a solo on one manual, to brighten by using the 4′ coupler to the accompan ing manual. On the other hand, a melo which is thin, or a solo stop which is t light, can be "backed up" by using 16-foot coupler on its own manual, or playing an octave lower than written a adding the four-foot coupler. A rich effe (which should not be overused) is obtain by using a soft manual stop with bo four foot and sixteen foot couplers draw on the same manual.

Leading Congregational Singing with the Organ

By MILTON R. GILSTRAP

MUCH THAT HAS BEEN WRITTEN on the subject of playing for church singing has entirely missed the main point to be considered; that is, the making of the singing itself more effective. The organ and the organist have no other work during the singing of congregational songs, than to help the singing, and the organ does this in two ways. First, it furnishes a background for the singing, and adds color, and in a measure harmony, that the voices cannot supply; and second, it supplies leadership for the singing. It is this leadership that we wish especially to consider.

Rhythm is of the utmost importance. Accurate time is generally essential; rhythm, always. Actually, the time markings were put in the music only to indicate the rhythm; and it is the rhythm, the regular, recurrent pulsations of the music, that give it life and vitality.

Hymn tunes fall generally in two classes of rhythm. The vigorous, energetic type is well illustrated by *O Come, All Ye Faithful,* and *A Mighty Fortress is Our God.* These call for a solid, vigorous rhythm, an unmistakable leadership; but a choppy touch is both unnecessary and unpleasant. Something approaching very close to legato can be used, but the separate chords must be distinct and plain. Above all, show no doubt or hesitation.

The More Tender Type

THE LOVELY Christmas carol, *Away in a Manger, No Crib For His Bed,* is a fine example of the gentler, swaying rhythm. It, and others like it, must also be played with certainty and precision, but without the "thump, *thump*" one has a tendency to use in the more energetic music. It will be found that a lighter rhythm is as effective for leading in its place, as a heavier rhythm.

Tempo is only a little less important tha rhythm. Some consider a fairly fast *temp* essential to life and vitality. In this th are mistaken. A satisfactory rhythm w give life to slower music. Most of the co gregation have untrained voices, and t rapid a *tempo* puts them at a disadvantag besides spoiling the effect of some of t grand old hymns, and detracting from th reverent attitude desirable in the churc It takes nice discernment to avoid playin too slowly, so that the singing drags spite of anything, and still not playin rapidly enough to damage the singin While maintaining his position of leade

...e must continually "feel out" his ...ation, and in a sense follow them, ... he is dominating their singing at ...e. The music must be, above all,

...Help; Do Not Disturb

...UCH VOLUME should one use? That ... mostly on the congregation. ... to carry above the singing, cer... but, for pity's sake, do not try to drown out the singing. You might succeed. One can not well sing while the organ is making so much noise he cannot hear his own voice.

Just a word, in closing, about registration. If some of your leading voices have a tendency to flat, use some of your more brilliant stops. It will help keep them up to pitch. And be careful with your mixtures and couplers. If you have a large crowd singing well, you can use them more liberally.

The Church Organist's Repertoire Index

By HOWARD VERNON RUSTIN

... common experience for an organ... have difficulty in recalling a certain ... that was last played. Not wishing ... at too often some date the music ... use. This plan works quite well ... has all sheet music. However, if ... music is in collections, one will be ...pt to find a number of pieces in ...r more different books. If a piece ...d in only one book, repetition is ...t to result.

... seldom wish to repeat oftener than ... year, and I have many collections, ...I simply dating my music quite un... ...tory and so evolved this so simple ...

...ure some 3 x 5 cards and start an ... Do not try to index all your music ... outset. Include pieces only as they ...ayed. It will be a surprise to find ...quickly the index will grow. And ...nvenient it at once becomes.

... out a card for each service, with ...e, hour, character if other than regular, and a list of numbers played. These "service" cards will of course be kept in chronological order. Now make out another card for each piece. The composer's name (last name first) should be in the upper left hand corner. The name of the composition and the opus number should be in the right hand corner. The rest of the face of the card should indicate the page and the volume where the music can be found. Any special note regarding the piece may also be recorded. The reverse side of the card should be reserved for the dates on which the number is played. These "composition" cards would best be filed alphabetically according to the composer's names. Then all the cards containing the same composer's name should be arranged similarly according to the name of the pieces.

Some may find the "service" index an unnecessary adjunct to the "composition" index, but most organists will find that its advantages will more than repay the few moments consumed in their preparation.

Tuners or Voicers

By CHARLES N. BOYD

ORGANISTS complain about the in... ...ent on which they have to play, and ... it as hopeless because of its tone, ...in reality a competent voicer might ...ch to remedy the conditions. Every ... pipe possesses some characteristic ...such as flute, string, diapason, reed, ... on, regardless of its quality.

...ortunately many organ tuners are not ...s, and pay little attention to the ...g of the pipes they tune. This con... persists indefinitely, from the instal... of the instrument. Every organ ... receive its final voicing in the room ...o occupy. If this is properly done, ...is a careful adjustment of the in... of each stop with a view to its ...g qualities, or to its use for solo ...ompaniment.

...oorly built pipe cannot be made into ...d toned example, but it can be made ...rrect interval and put in tune. An organ which may have been satisfactory at installation can also deteriorate through improper treatment. It is therefore important that the caretaker of the organ should be an able voicer as well as tuner. Such a person is able to maintain the relative intensity of the various stops and is often able to improve conditions materially.

Even a comparatively small organ is a complicated mechanism and should have proper care. There is no reason why an organist should put up with a silent key or be deprived of the use of one or more stops for months in succession. Such a condition on the home piano is unthinkable, to the musician at least, but rather common on church organs. The organist should not be backward in insisting that the instrument should be always in playable condition; and, for the sake of the congregation as well as himself, the organ should be kept in the best possible tonal repair.

Make Memory Your Servant

By D. R. ADAMSON

...ONDAY MORNING, try to recall the ... that were used the previous day, ...names and numbers, then try to play ...from memory. It is surprising how ...ingers will gravitate to the right ...s, if put to the test—but, do not do ...sting before the congregation.

...tinued practice of this sort, through ...eason, will give you a stock of hymns ...ou can play off, if not note perfect, ...st sufficiently accurately for ordinary ...ses.

...n, with the development of memory along these simple lines, comes the unfolding of ability along parallel lines.

Is it not ridiculous for a man, expecting the respect of his choir to have to hunt up a book, when suddenly asked to play *Auld Lang Syne?*

Can you recall, instantly, the names of all the members of your choir—last names, first names or both as needed?

Try going over them at a steady but increasing pace during your rest moments, while riding on trains, and at other odd times.

SHERWOOD Summer Courses Begin

JUNE 27th

Combine Vacation and Study in Cool, Lake-side Chicago

There's still time to enroll for these low cost summer courses under Sherwood's faculty of 75 artist-teachers!

With other ambitious students and teachers from all parts of the country you will study hard and accomplish much. But life won't be all work. You'll find time to enjoy the many cultural and recreational opportunities of this great lake-side metropolis . . . operas and symphonies "under the stars" at Ravinia and in Grant Park . . . land and water sports of all kinds . . . plays and art exhibitions . . . world-famous museums.

Private instruction in piano, voice, violin, organ, cello, wind instruments, theory, composition, dramatic art and dancing. Special short-term classes in 50 subjects, including piano normal class, teaching repertoire, class piano, master classes in violin and voice, public school music, conducting, theory, composition, microphone technique, and many others.

Dormitory accommodations. Certificates, diplomas and degrees awarded. Send for catalog and all-expense estimate.

SHERWOOD MUSIC SCHOOL

410 SOUTH MICHIGAN AVENUE, CHICAGO, ILLINOIS

Institutional Member of the National Association of Schools of Music

Cincinnati CONSERVATORY OF MUSIC

Established 1867

America's Oldest Independent School Devoted Exclusively to Music and Allied Arts

A complete school of Music, Dramatic Art and Dancing. Courses lead to degrees.

Registration:
September 8, 9, 10
Classes Begin: September 12

Special Students May Enter at Any Time.

ORGAN AND CHOIR QUESTIONS
Answered

By HENRY S. FRY, Mus. Doc.
Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. We have an organ in our church that has to be pumped until we are exhausted, and even then we can use but very few stops, as the instrument does not seem to hold wind. Would you advise getting an electric motor, and where can one be purchased? Or, what is the remedy?—G. E.

A. From your description it seems to us that what is required is the repairing of the bellows or installing new bellows equipment. The installation of an electric motor probably would not correct the trouble. With the bellows in good condition, a motor can be installed if desired.

Q. May I please have a list of names and addresses of Reed organ makers?—O.B.

A. We are sending you information by mail.

Q. Will you give your opinion of enclosed specifications "A", "B" and "C"? Suggestions and comments will be appreciated.

A. In specification "A" care will have to be exercised in selecting "Full Organ" ensemble, as four 2-2/3′ and four 2′ stops might produce an excess amount of upper work for an instrument of its size. We should prefer to have the Cornopean extended to include Clarion 4′. There seems to be a generous amount of flute tone with very little string tone. Why not eliminate one of the 8′ flutes and include a Vox Celeste to be used in connection with the proposed Salicional? In specification "B" we suggest the same extension of the Cornopean to include Clarion. We also feel that one independent pedal stop, at least, should be included. In specification "C", as you suggest a Swell to Pedal coupler will be useful, if space and expense will permit. We think this specification includes three ranks of pipes and a Pedal Bourdon of 12 pipes. The pedal department includes a Rohr Flute, which we cannot explain unless it indicates a separate set of pipes, or that part of the Gedeckt rank consists of Rohr Flute pipes. The 2-2/3′ and 2′ stops of Great and Pedal should be derived from the Salicional—not from the Diapason set. The latter arrangement would produce stops that would be too loud for upper work.

Q. I am thirty-seven years of age and have been studying organ for nearly two years, but have never had real piano training. I have studied sixty-six pieces, one of the last being Boëllman's "Suite Gothique." Do you think it is worth while for me to continue, at my age? Where can I get a two manual reed organ, with pedals, for my home, and what would be the cost? How much room would be required? Will you suggest some organ numbers for Palm Sunday and Easter—also prices?—M. C. R.

A. While, of course, real piano training would be an advantage, we see no reason why, under the circumstances you name, you should not continue your organ work. We are sending you information relative to organs by mail. For Palm Sunday you might use *Palm Branches*, by Faure; and *Pâques Fleures*, by Mailly. For Easter you might make a selection from the following: *Jubilate Deo*, by Silver; *Dawn*, by Jenkins; *Easter Spring Song*, by Edmundson; *Alleluia*, by Diggle; *Risen Christ*, and *A Short Postlude for Easter*, by Hosmer; or *Toccata on "He is Risen"* (Neander), by Candlyn.

Q. Is it practical to place an amplifier on the outside of our church, to amplify and throw outside the building the music of the chimes?—F. T.

A. Amplification of chimes is possible, and has been done in a number of churches. Information is being sent you by mail.

Q. Our church is interested in purchasing a small pipe organ. The church is not very large and space is limited. Will you furnish me with the names and addresses of builders of small pipe organs? Kindly suggest a good organ instruction book for a beginner on the organ.—L. A. M.

A. Information relative to builders of small pipe organs is being sent you by mail. For an instruction book we suggest "The Organ," by Stainer-Kraft.

Q. Will you give me a specification for a two manual organ to cost approximately $3,000? What would you suggest for $5,000? Would you recommend a straight organ? What would you consider a fair price for a rebuilt organ of ten sets of pipes and of fourteen sets of pipes?—E. W. R.

A. The following specifications can be built for approximately the figures you name:

$3,000

GREAT ORGAN

Open Diapason	8′	61 Pipes
Stopped Flute	8′	73 Notes
Dulciana	8′	85 Pipes
Flute	4′	73 Notes
Dulciana Octave	4′	73 Notes
Octave	4′	73 Pipes
Dulciana Twelfth	2-2/3′	61 Notes
Dulciana Fifteenth	2′	61 Notes

SWELL ORGAN

Bourdon	16′	97 P
Stopped Flute	8′	73 N
Salicional	8′	73 P
Vox Celeste	8′	61 P
Flute	4′	73 N
Salicet	4′	61 N
Flute Nazard	2-2/3′	61 N
Piccolo	2′	61 N
Cornopean	8′	73 P

PEDAL ORGAN

Bourdon	16′	44 P
Flute	8′	32 N
Bourdon Dolce	16′	32 N
Dolce Flute	8′	32 N
Dulciana	8′	32 N

$5,000

GREAT ORGAN

Open Diapason	8′	61 P
Dulciana	8′	85 P
Harmonic Flute	8′	85 P
Harmonic Flute	4′	73 N
Dulciana Octave	4′	73 N
Octave	4′	61 P
Dulciana Twelfth	2-2/3′	61 N
Dulciana Fifteenth	2′	61 N
Twelfth	2′	61 P
Fifteenth	2-2/3′	61 P

SWELL ORGAN

Bourdon	16′	97 P
Stopped Flute	8′	73 N
Salicional	8′	73 P
Vox Celeste	8′	61 P
Geigen Diapason	8′	85 P
Flute	4′	73 No
Geigen Octave	4′	73 No
Salicet	4′	61 No
Flute Nazard	2-2/3′	61 No
Piccolo	2′	61 No
Oboe (or Vox Humana)	8′	73 Pi
Trumpet	8′	73 Pi
Clarion	4′	73 Pi

PEDAL ORGAN

Open Diapason	16′	12 Pi
Bourdon	16′	44 Pi
Flute	8′	32 Not
Bourdon Dolce	16′	32 Not
Dolce Flute	8′	32 Not
Dulciana	8′	32 Not
Trumpet	8′	32 Not
Clarion	4′	32 Not

In the Great Organ of the latter specifica we suggest the addition of a mild string t stop—which can also be duplexed as an a tional pedal stop. We also recommend a se expression box for the Great Organ. T may be additional expense for these feat

We prefer a "straight" organ where en money is available to cover the cost, but w there is a comparatively small amount to be spent, we do not object to some uni tion and duplexing. Where these features included in above specifications the "Notes" is used instead of "Pipes." We can intelligently name an estimated price fo rebuilt organ, as we are not familiar with ditions as to the extent of the rebuilding so forth.

Q. Do you think fifteen years of age young to begin the study of the organ? I studied for six years and have had three y of harmony and composition with ear trai in school. Do you recommend pedal boards tached to the piano? Are they expensive? the custom of the organist to give his offe at the end of the service, or in monthly ments? Is it considered good taste to use Gedeckt 8′ with the Oboe? Also how is twelfth (2-2/3′) used? Our swell tremu affects the Great also—should that be so? W do you think of "The School of Organ Play by Barnes, for beginners? Would you rec mend anything else for beginners?—H. A. V

A. Fifteen years of age is not too yo to begin organ study, if the person has good piano training and has a facile fi technic. Pedal boards attached to a piano very useful, especially where an organ is always available. The expense will be the of the pedal board—secured from some or builder, plus the cost of installation, wh may vary. We suggest that the piano keybo be coupled to the pedals one octave lower. do not know of any particular custom in giving of the organist's offering. The use of Gedeckt with the Oboe is a matter of pre ence, and depends also on the quality of Oboe stop. The Twelfth stop produces an o tone, and is useful in ensemble combinati If a soft Flute Nazard, it can be used in c bination with other stops for solo effects. Swell tremolo should not be effective on Great, unless some of the stops are borro from the Swell. If Swell to Great couple "on," the tremolo, if used will be effective any Swell stops coupled to Great. While usually use "The Organ" by Stainer, for ginners, the work you mention is an excel one and we know of no reason why you sh not use it.

THE ACCORDION DEPARTMENT

The Accordion Glissando

By PIETRO DEIRO

As told to ElVera Collins

GLISSANDOS ON THE ACCORDION are quite effective, and may be perfected easily by a little concentrated practice. Many of the standard classics, as well as modern arrangements of the semiclassics and popular songs, contain *glissando* passages.

It is suggested that the student employ the use of the *glissando* only where it is indicated in the music; for, if exaggerated, it loses its effectiveness. Many professional orchestras and radio performers insert it according to their judgment when playing novelettes and popular songs.

Both in our practice and in our finished playing of the *glissando*, let us keep in mind its true definition; it is taken from the Italian word which means "sliding". When properly executed, the effect is a very brilliant scale played exclusively on the white keys. The beginning and ending note, or notes, may be on the black keys, but the actual sliding is done on the white keys.

The following practice material will be found helpful to those who wish to perfect the *glissando*. No accompaniment is to be played so the entire attention may be devoted to the right hand. Begin each exercise with the bellows in a closed position. Open them very gradually and evenly, using only the amount of air necessary to produce a smooth passage, as in this quotation from *Quick Silver* by Deiro.

Ex. 1

The single note *glissando* is begun with the finger bent into a definite hook, with the wrist raised higher than the normal position. The keys must not be pressed down to the full extent of the action, but only sufficiently to sound the *glissando* notes. As the hand ascends, the wrist resumes its normal position, giving impetus to the speed of the finger. When the *glissando* is climaxed by a chord (as shown in Ex. 1), the fingers required in playing the chord must be prepared, during the last half of the *glissando*, by spreading them into the intervals of this chord. *A piacere*, in the example, indicates that the speed of the *glissando* is at the liberty of the performer. The second finger is used for the single note *glissando* ascending, while the thumb is used for the descending. The actual gliding over the keys is done on the surface of the finger nail.

In the double note *glissando*,

Ex. 2

the third finger will be employed the same as in the single note *glissando*. The thumb, however, must be bent away from the hand in the ascending *glissando* and bent into the palm when descending. This is to avoid stubbing the thumb between the key which is depressed and the succeeding key which is still up.

If the double *glissando* begins with a comparatively long tone (first measure of Ex. 2.), the keys are struck with the normal action but must be slightly released before the *glissando* is begun, to avoid any cumbersome effect. In the second measure, both the thumb and third finger are pointed away from the wrist and, as the notes are quite short, the key action should be only sufficient to sound the two tones.

The triple note *glissando*

(*Continued on Page* 420)

FAMOUS AMERICAN ACCORDION PLAYERS FORM AN ASSOCIATION

Here is a group of famous players who met in New York, in March, and organized an Association. It includes several of our most famous players of the instrument. Top line (left to right): Gene Von Halberg, Joe Biviano; middle row, Anthony Galla-Rini, Charles Magnante, Pietro Deiro, and Charles Nunzio; bottom row, Pietro Frosini, Abe Goldman, and Sidney Dawson. Pietro Deiro, editor of the Accordion Department of The Etude Music Magazine, was elected president of the new organization.

THE VIOLINIST'S ETUDE

Edited by

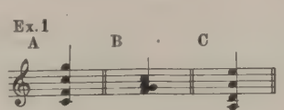
ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

The Hardanger Violin

By OTTO RINDLISBACHER

NORWAY HAS DEVELOPED not only a music peculiarly its own, with rare and ornamented themes that show the character of its people, their peculiarities and temperament, but also a number of odd instruments. One of the most popular is the Hardanger eight string violin, which is still played extensively by the peasant folk. Its music has an exquisite charm, which has tinged the work of most Scandinavian composers.



A. Front View of a Hardanger Violin. B. Side View of a Hardanger Violin.

The instrument originated in the district of Hardanger, from which it derives its name. Four of the strings are identical to those of an ordinary violin while four others are added beneath the fingerboard, where they were probably first placed as an experiment toward improving the tone. These strings vibrate in sympathy with the tones produced on the top strings.

The neck of the Hardanger violin is from one to two inches shorter than that of the usual violin, thus allowing a higher tuning of the upper strings, namely, G, C, F, C, as in Ex. 1A (reading downward), a comparative violin tuning, except that the fourth string is tuned one step higher. The under strings are tuned C, A, G, F, as at B. To adapt the regular violin for playing Hardanger music, tune it as at C.

Ex. 1

With this peculiar combination of tuning the most natural keys for perfect vibration are C and F, the under strings filling in the chords and harmony with natural sympathetic vibrations.

The people in the hinterland of Norway have led a more isolated existence than those in any other part of the country, and naturally they have retained many picturesque customs which have long since vanished from the more accessible parts. Though now found in all parts of the country, the instrument is confined more commonly to five districts—Hardanger, Hallingdal, Voss, Waldris and Telemarken.

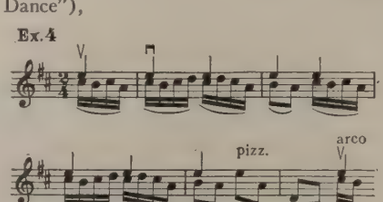
Mylnarguten, the world's greatest exponent of this class of music, lived in Telemarken. Ole Bull, one of the few to gain the confidence of Mylnarguten, and who was himself an expert player of the eight string Hardanger, was greatly influenced by the wizardry and fantastic execution of this mountain dweller. It is said that Ole Bull offered, in vain, large sums to induce Mylnarguten to accompany him on concert tours.

The *Slaatter*, or old original compositions, are of the fantastic or descriptive type, and have been handed down from generation to generation. Many of these pieces have the weird effect of the Scotch bagpipe intermingled with oriental strains, with turns, trills and embellishments added and built up on the melody until they eventually become the most important feature of Hardanger music. Odd numbers in measures almost become the rule rather than the exception. Many of the pieces have now been transcribed and published, playable on either a regular or Hardanger violin, as this *Springar* by Mosafinn.

Ex. 2

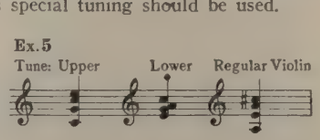
Disregard the special tuning and read the notes as in ordinary violin music.

One type of this music is known as "ghost" or "Spirit" dances; and for these pieces the tuning somewhat deviates from the conventional. This *Halling* by Hans Skutle is played with the tuning indicated for Example 2.



Ex. 3

In some instances the first string is tuned one step lower, the third a step higher, while the under strings are tuned to corresponding chords.



In the following *Halling* ("Ghost Dance"),

Ex. 4

this special tuning should be used.

Ex. 5

Some of the best players use a b from two to eight inches longer tha violin bow. Ole Bull was among those w preferred to use a long bow.

In the most mountainous, rock ribbed isolated sections, a sturdy Norseman sit for hours with his Hardanger, liste to the waterfalls, the singing birds or soft murmuring breezes through the pi interpreting in almost minute detail, symphony of nature. Or in his lo mountain hut, a dream of weird happ ings inspires him at any hour to another "spirit" melody to be preser and presented to subsequent generati

A peasant wedding is an occasion greatest importance, and festivities of last for several days. The wedding pa which goes to church, either on horseb or in vehicles, is always preceded by Hardanger fiddlers. After the church ce mony, the party in colorful costumes the district, returns to the bride's home further festivities, which often include s eral days and nights of dancing. Here Hardanger musicians and dancers al display their real talents. The skill a dexterity of the hilarious dancers usually stimulated by competitive conte and small prizes for the best execut of the Springdans and Halling. In danci the Halling it is not uncommon for dancer to leap to a height of eight nine feet from the floor and touch a b or other prize with both feet, and then return to the floor within a small mark circle.

Some years ago groups of Hardang violinists made successful concert tours America, and a number of recordings we taken. Just recently a special program the United States was broadcast fr Norway, in which their best players to part.

Once heard in the native mountain lan played on a beautifully carved and pe inlaid instrument, the listener will forev remember the old Hardanger violins a their music of such unusual charm.

Thus Norway has given to the musi world a unique instrument as well as t two great composers, Grieg and Sindi with their nationalistic individuality.

How to Buy a Violin

By FRANK W. HILL

SO YOU BOUGHT a violin! You just walked right in and asked for one and paid your money as if you were buying a loaf of bread. Well, it is too late to do anything about it now, but the next time ask your teacher's advice first. There are a number of points to be considered in the purchase of a violin, and expert advice is really necessary in order to assure the purchaser of receiving full value for the amount spent.

Where to Buy

IN ORDER TO SELECT a good violin you should deal with a violin firm or a music store of such size that the violin department is reliable and ably represented. The average small music store is more concerned with other lines of music, whereas the violin maker and the violin shop takes pride in both the quality of their instruments and the satisfaction of their customers, upon which their reputation is based.

Then there is also a distinctly personal element in dealing with the violin shop which imparts a pride of ownership and assurance of future interest. Naturally the firm should be a well established, reliable one. Curiously enough, a good violin dealer often seems reluctant to part with his instruments; and, as if they were pet dogs, he is interested in knowing about you as a customer, and if you will take good care of them. Another advantage of well known violin stores is that most of them are willing to accept, at any future time, and at its initial cost, a violin they have previously sold you, as part payment toward a better instrument.

Beware of the "friend" who has a violin to sell you at a "real bargain." You are not concerned with what he paid for the instrument. Market values change with the passing of years. We have yet to see an attic relic that was worth half the price asked. Such violins are always badly in need of repair and adjustment, and until this is done—by an experienced craftsman—th cannot be judged. There is also an o theory that an instrument, after having la in a dusty box for a few years, has great increased in value. Most dependable viol firms are glad to lend you two or thr instruments to try for a few days witho obligation; and, if they know your nee and tastes, they will coöperate so that be you and they will be more satisfied wi the final decision.

How Much Will it Cost?

OF COURSE the answer to this question d pends largely on how much money y wish to invest in your violin.

For a beginner we advise a violin priced no less than fifty to seventy-five dollars. ry obviously a two hundred dollar violin ll be inevitably more satisfying. There cheaper instruments available if finances thus limited. However, the beginning dent soon outgrows the tone quality of inferior violin and becomes dissatisfied th its tonal limitations. The best plan is procure a fair instrument, and to exange it for a better one as you make gress. Most violin firms are willing to cept monthly payments, if desired.

It might be well to mention here that a od bow is essential to good musical perrmance, regardless of how fine the violin ay be.

Selecting the Violin

OLINS ARE FINISHED in many different olors, ranging from a light yellow through brown and reddish brown almost to a ack and often to a brilliant red. You may ve a preference but not a choice. If you ve a particular aversion to a certain nish, start your selection by eliminating at one. The factor of color should be very refully considered because to play your iolin enthusiastically you must literally fall in love" with it, and this is difficult its color has no appeal to you.

Concerning the choice between an old iolin and a new, recently made instrument, ur advice is that, if a beginner, you buy a ew violin and leave the old models till you ecome more skilled and can judge tone for yourself. This, however, is more or less a matter of opinion, always remembering that old violins are usually more expensive.

And now for the most important factor: the quality of tone. First, you must know that, whereas a violin may have a good tone or a bad tone, there are different types of "good" tone. Is your need for a brilliant, loud quality or a subdued but sweet timbre? Do you prefer the round, mellow Italian tone or the rich, frank brilliance of the German models?

If you are a violinist, play the instrument not for five minutes but for several days, until you are familiar with all its whims and secrets. Listen to it played by someone else; compare it, if you choose, with other violins; hear it in a large room and a small room, and, if possible, hear it played by several persons, as each different touch changes the tone quality. A violin may have a fine tone which may be hard to produce. Then again a violin may seem very sensitive and "play" easily, but the tone may lack body and carrying power. A good instrument has an even tone quality on all strings and, if properly adjusted, it should respond easily to the bow, with no evidence of tightness or hardness.

Buying a violin should be an event in your musical career, whether it is your first instrument or whether you have owned several before. Enjoy the event as an interesting and educational undertaking; and, once you have your violin, take pride in it and be happy in its music and its beauty.

Violinists, in Varied Veins

By ARTHUR TROOSTWYK

A WISE old sage, many moons ago, broadcast to the world for its consideration the true assertion that a word to the wise s sufficient.

It is the wise violinist or player of a stringed instrument who refrains from doing this or that to his instrument in the hope that he will better it.

There have been probably thousands of widely advertised "improvements" upon almost every part of the violin, but it still remains as it was when it reached the climax of its evolution from the earlier types of its family.

If your instrument is to "sound":—

Do not fasten the chin-rest any tighter than is absolutely necessary. If the pressure from the chin-rest is too great it will result in the bending or breaking of the top and sides:—

Do not ever try to fit pegs yourself. If you do, the inevitable result will be that they will not fit, and the likelihood will be that the sides of the scroll will split:—

Do not put rosin on a peg to make it hold. Pegs with rosin on them can not be made to turn smoothly.

Do not neglect to make sure that the bridge is standing upright before tuning. If you neglect doing so, you will be obliged to buy many new bridges.

Do not, when a bridge breaks, go to a drug or department store and buy a five or ten cent bridge and think that you can fit it and obtain good tonal results. Take it to a repairer who will set the bridge in its proper place.

Do not think that a cheap string will serve the same purpose as one of better quality. It will not. There is just as much difference in the quality of gut strings as in the quality of broadcloth.

Do not use strings which are too heavy, under the impression that they will last longer, or will produce more tone. The extra strain applied to bring the string up to pitch is apt to snap it sooner than if the string were thin.

Do not imagine that anything in the nature of grotesque fittings will cause your violin to play by itself. Buy as good a violin, new or old, as you can afford. Practice, practice, and practice until mistakes become the exception. And do not worry because yours is not a Stradivarius. You will be able to play just as well, if you will remember that most of the great violinists, during their early years, played on much cheaper violins and this did not handicap their playing in later years.

Etude's Musical Tour Progresses

(*Continued from Page* 385)

be eagerly anticipated is a visit to the handsomest and largest music hall in the world—the Radio City Music Hall where guests will enjoy a magnificent stage show, a premiere performance of a leading motion picture, the famous ballet, and last and best of all, superb music by Erno Rapée and his symphony orchestra.

Negotiations are also under way for such events as a trip through Rockefeller Center, the "city within a city" which is one of America's most exceptional sights, a musical show in one of New York's great theatres, or possibly a Gilbert & Sullivan Operetta, if a performance is going on at that time. A special program of carillon music from the famed carillon of the beautiful Rockefeller-sponsored Riverside Church, and perhaps a trip through the Church itself or through Grant's Tomb, which is just opposite on Riverside Drive at one of the most picturesque spots on the Hudson River. You may also be guests at a big broadcast, depending upon what is available at that time.

Hence you may gather that this will be the event of events for a musical vacation in 1938. Send in the coupon and join the happy hundreds of musical enthusiasts and their families who will be taking this superb trip.

Master Piano Class

Conducted by

Moriz ROSENTHAL

September 7 to September 22

in the Summer School branch of the Franz Liszt Academy at No. 7 Eleventh Avenue, Longport, N. J.

● Mr. Rosenthal's Master Piano Classes will include ten sessions of two hours each. These periods are so arranged that those registering for the classes will have the major portion of each day free to enjoy the beauties of the Atlantic seacoast in early September. There will be dormitory accommodations offered at a very low fee. College credits with certificates will be granted.

Madame Hedwig Rosenthal, pupil of Leschetizki and Rosenthal, will accept voice students during this special pre-season Master School. **Dane Gordon** (pupil of Ysaye) will conduct a course in graded violin methods. **Dorothy Johnstone Baseler** will give instruction on the harp.
Assisting Mr. Rosenthal will be **Toska Tolces**, pupil of Emil Von Sauer and Rosenthal, Theory and Harmony; and **Constance Henry Beauer.**

SCHOLARSHIPS
Mr. Rosenthal will award one free scholarship, and some partial scholarships will be granted to a limited number of those who establish a meritorious rating.

VIOLIN QUESTIONS

Answered

By ROBERT BRAINE

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

Study in a Musical Center

R. F. B.—In order to fit yourself for playing in a first rank symphony orchestra, as a violinist or viola player, I would advise you to enter a good conservatory or college of music, in one of the larger American or European cities, and to study thoroughly under a good teacher. Also join the student's orchestra, which usually is a feature of such institutions. Such orchestras play from comparatively simple orchestral works up to full fledged symphonies, and they frequently play in public. When the advanced pupils play at public concerts, they are accompanied by the students' orchestras. If you develop into a first class violinist, you would have the opportunity of playing solos in public, accompanied by the student's orchestra, giving you additional valuable experience. I would also advise you to study the piano, and theory, harmony and composition. Thus you see that you would have to put in all your time in music study, but you must do this if you expect to become a first rate symphony orchestra musician.

A music student in one of the large cities, such as New York, Philadelphia, Boston, St. Louis or Cincinnati, has many opportunities to hear the best in musical programs by symphony orchestras and world famous artists. These may be heard, in many cases, at reduced (students') rates. Above all else, do not bury yourself in a small or moderately sized city, where very little good music can be heard. Try to live where you can hear the best music all the time.

An Effective Solo

H. T. Y.—A very effective and popular short number for violin solo is *L'Abeille* (*The Bee*), by François Schubert (not Franz Schubert). It is more difficult than it looks, but can be played by any violin pupil who has mastered the first part of Kreutzer.

To Clean the Violin

E. C. B. and H. A. H.—If you wipe the violin with a clean cloth after playing, the rosin will not accumulate on it. If this is not done the rosin dust will cake on the violin, and this will interfere with the tone. There are many violin cleaners on the market, good, bad and indifferent. If there is only a light layer of rosin dust, it can be removed by a preparation called "Liquid Veneer," sold at drug and paint stores. Read the directions on the bottle, and follow carefully. There is also a preparation recommended in the little book, "The Violin and How to Master It," which can be prepared by your druggist, as follows: Fine raw linseed oil, seven parts; oil of turpentine, one part; water, four parts. The bottle must be shaken vigorously, a little of the mixture poured on a cloth, and the violin rubbed lightly with it and then rubbed with a clean cloth. Sometimes the rosin is caked so thickly that cleaners of this kind will not do the work. In this case, powdered pumice stone must be used, rubbed lightly over the cleaner after it has been applied. Care must be taken not to rub so hard as to cut into the varnish and remove a part of it. In the case of valuable old violins which have become caked with rosin, I would strongly advise having a good violin repairer do the work.

Down Bow or Up

E. M. C.—I have seen the last chord of Kreisler's *Liebesfreud* played either up or down bow, according to the taste of the player. Personally I always play it with an up bow, and consider it more effective played in that manner.

A Violin With No Label

B. W.—As there is no label in your violin, and no other identifying marks on it, I am afraid it would be practically impossible for you to find out who made it. Your only course would be to send the violin to different violin dealers, makers and repairers, as they might have seen one like it. Still it is very doubtful if this plan would succeed, and it would cause you endless time, trouble and expense. The fact that the violin has pictures of girls, cupids, angels and animals on the sides and back does not mean that it is valuable; but it may be a good violin for all that.

Violoncello Study

P. H.—I am afraid it would take too much space in this department to explain the entire theory and practice of playing the violoncello. As you are a piano student, and want this knowledge only for theory and composition purposes, I would suggest that you get a good instruction book for the violoncello. Your music dealer no doubt can show you several works of this kind. The "Tutor for Violoncello," by Otto Langey would supply you all the information you require.

A Salzard Violin

C. P.—The François Salzard violins are of a good French make, mostly of the Stradivari model and generally with dark red varnish. They have good wood, and good tone qualities. At present day prices they might bring from $150 to $200 for good specimens.

Tones of Violin Wood

T. A.—The tops and backs of violins, after they have been finished, give certain tones when they are tapped, which can be distinguished by an acute ear. As you write, one authority states that top and back should each be tuned to the note F. Another authority directs that the top and back should be tuned one tone apart, the top to C and the back to D. This same authority contends that the violins of Stradivarius are always found to be a tone different in top and back—C and D respectively. Other authorities have different ideas on the subject, some advancing one set of theories and some another. You will find much attention given to this subject in modern books on violin making. If you are a violin maker, you might try making violins according to the theories of these differing authorities and see which you like the best.

Author's Name in Error

The name of the author of "Making Pupils' Recitals Fascinating," on Page 290 of The Etude for May, should have been Virginia E. Jobson and not Virginia B. Hobson. The Etude regrets this error.

FRETTED INSTRUMENTS DEPARTMENT

Edited by GEORGE C. KRICK

The Tremolo on Fretted Instruments

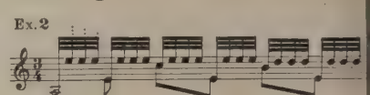
THE INSTRUMENTS played with a plectrum—mandolin, banjo and modern guitar—have one characteristic feature in common, the tremolo. This is produced by a rapid, alternating down and up movement of the plectrum, and its purpose is to prolong or sustain the tone in a manner similar to that which we are accustomed to associate with the violin or other bowed instruments. While it is impossible to equal the smooth effect obtained with a violin bow, the student should make an effort to approach it as nearly as possible. For mandolin, mandola or tenor banjo a small plectrum is most satisfactory, which should be pliable but not too much so. The guitar and mandocello require one of medium size. Both edges of the plectrum must be beveled and smooth, and it should be kept so with the aid of fine emery paper. A few drops of furniture polish, occasionally applied to the playing edge will help also to keep it in good condition. Hold the plectrum loosely between the thumb and first finger, as a too firm grip will interfere somewhat with the freedom of the stroke. A free flexible wrist motion is essential, with movement of the forearm restricted to a minimum. Please remember that the best tremolo can be obtained only by "rubbing" or "skimming" over the strings, using just the tip of the plectrum and taking care not to dip in too far between the strings.

If the instrument is equipped with a raised guard plate it is permissible to rest the end of the little finger lightly on top of this guard, and to move this finger along with the hand, as it must not be kept tightly in one spot. In some instances it is advisable for the beginner to count the number of strokes to be used in the tremolo, dividing the whole note into four groups of four sixteenths, and extending this to four groups of eight thirty-second notes. Just as soon as sufficient rapidity has been acquired and the ear has become accustomed to the correct musical beat, the counting of strokes should be discontinued. One must guard against swinging the plectrum too wide on either down or up stroke, and should always keep the width of the stroke to a minimum on either side of the string. This is especially recommended for single string tremolo on the banjo or guitar. When the tremolo is used on double stops, or chords of three or four notes, it is advisable to lower the wrist somewhat, so the plectrum will not miss either the lower or higher string on down or up stroke. Extreme rapidity is to be avoided, as a good tremolo depends more on smoothness and evenness of execution than excessive speed.

When to Use It

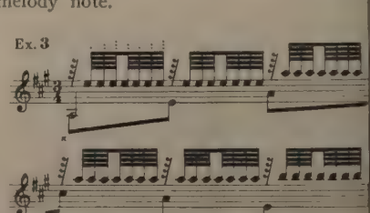
WHEN AND WHEN NOT to tremolo certain notes depends on the style of composition. Whole and half notes usually require the tremolo. In slow movements the quarter notes, eighths, and sometimes even sixteenths may be tremoloed. In marches or foxtrots it is often advisable to use an accented down stroke for half notes, especially if they happen to occur between two quarter notes. Experience and the good judgment of the player should guide him to choose the right way. One thing that is frequently overlooked or neglected by fretted instrument players is "phrasing." This is an important matter in the rendition of any composition. Throughout the phrase, usually marked with a slur, the tremolo should be continued without interruption, to the end, even when pass from one string to another. After a sli pause the tremolo begins the next phr and so on. Occasionally one finds the sa note repeated several times. In cases that kind, the tremolo may be continu but an accent at the beginning of e note is necessary, which is accomplis by a momentary increased pressure of thumb against the plectrum. One of most interesting and instructive volun teaching the use of the plectrum from m angles, is the "Plectrum Mechanism," Giuseppe Pettine. While this work originally published for mandolin, it c tains a great deal of information t should prove helpful also for players the tenor banjo or plectrum guitar.

Tremolo on Classic Guitar



ONE OF THE MOST beautiful effects obtain on the guitar is the right hand fing tremolo, the accompaniment being play simultaneously with the thumb. In look over the compositions of the old maste we find many passages where the melo note is repeated with first and secc finger. J. K. Mertz employs this meth in his *Fantasie Originale, Op. 65, No.* and several other operatic arrangemer

Ex. 1



He goes a step farther in his *Fanta on "Ernani,"* repeating the melody n with first, second and third fingers. Mert style of playing the guitar was quite diffe ent from the Italian and Spanish schoc and, judging from his compositions a arrangements, his right hand technic mu have been marvelous. The two finger ty tremolo can be found also in works Manuel Ferrer, Luis Romero and oth American guitarists. The Spanish guitari Vinas, and later on Tarrega, employed t tremolo as exemplified in the well kno *Recuerdos de la Alhambra,* popularized Andres Segovia.

Ex. 2

While the thumb strikes the accompan ing notes, the third, second and fi fingers, in the order given, play the me ody. This system seems to be the mo popular one at the present time, and it used by most of the prominent guitarist In rapidity of movement the tremolo William Foden, the American guitaris is said to excel all others. It is the neare approach to the *sostenuto* on the viol and is executed thus: thumb for bass, th first, second, third, second, first, secon third fingers for rapid repetition of t melody note.

Ex. 3

Ex. 3 shows the first measure of one the variations in his *Fantasia, Alice Whe*

Bands and Orchestras

(*Continued from Page 369*)

sed successively, they should be numbered. or the difficulty of following an endless ow of ·/. ·/. ·/. ·/. ·/. ·/. ·/. ·/. ·/. may be eadily understood.

Wind instrument parts in school music cores also need careful marking. There is eed for annotations regarding phrasing, lurring, articulations, and at times, breathng marks. A private teacher of clarinet ften will wisely mark with great care the olo which his pupil may be preparing for resentation in a contest. Is it not equally important that the clarinet part of an orhestration be well marked with technical ids? From the standpoint of the publisher, t might be well to have separate instrunental teachers mark the parts of the instrument at which they are expert. Of course, it is to be realized that this does not lighten the publisher's task or expenses, but it will be of great educational value and, in the long run, it will be beneficial to everyone concerned.

Keep the Drummer Busy

THERE IS A SURPRISING carelessness in the matter of percussion scores. These parts are often more poorly prepared and followed than any other orchestral parts. Some drum parts are seemingly arranged for one trap drummer who is at liberty to "fake" and fill in at his own pleasure. And school orchestras are often infested with willing but unskillful drummers. They should be kept fairly busy, if the music is adaptable, and their parts should be written out clearly. If a definite effect is desired from the drum section, it should be so clearly indicated that there is no need for guesswork or "faking."

A further point of improvement may be found in the comparative difficulty of parts. Parts should be of proportionate difficulty with the ability of the performers, which means that second and third parts should be less difficult than solo or first parts. Each player's part, however, should be interesting enough to challenge his best efforts, and yet not so difficult that he cannot achieve success and the satisfaction that comes with good performance. This calls for work on the part of the arranger, but the educative worth will compensate for such effort. It would be well to keep an evenly balanced orchestration; that is, there should not be an easy trumpet part combined with a difficult French horn score, and so on.

Clarinet and cornet parts always should be written for B-flat instruments, in music scores intended for school use. Few clarinet players have A instruments, and it is certainly better for them to read music in a somewhat difficult key than to compel them to transpose at sight the same music into the identically difficult key. While it might be well to provide both A and B-flat parts for clarinet, there is no need for A cornet scores, as that instrument is on its way to obsolescence, as far as ordinary usage is concerned.

There are those who hold that parts for French horns should be written without key signatures—with accidentals used throughout as needed. There might be justification for this stand if the players of the French horn were less intelligent than players of other instruments. However, he must be more in command of the key of the orchestral composition than other players, for the French horn player must voice his tones and hear them before he plays them. This knowledge of key and intervals will do more for him than the promiscuous use of accidentals.

The tenor clef has little place in printed music for the vast majority of school musicians. Ordinarily its purpose is to obviate the necessity for leger lines above the staff. But the hazards of additional lines are small compared with the use of an entirely new and different system of lines and spaces. For bassoon and trombone a high "G" is usually the limit and involves the use of but three additional lines. Any flute or piccolo player will attest to the fact that a facility in reading music above the staff is easily acquired. In the case of the violoncello the use of tenor clef is more readily justified, but the bass clef serves its purpose well unless the music is high enough to warrant the advantageous use of the treble clef.

Finally, any fear of regimentation of student musical expression is overcome by the wealth of educative hints possible through the medium of the printed score. Instrumental teachers can be of great help to their students by a careful selection of orchestrations and arrangements of the music they wish to have their players perform. They must look further than the first violin part, which is usually well written, and determine the merits of scores for other instruments in the orchestra.

Time spent in the careful presentation of the printed sign language of music is recovered by increased efficiency of rehearsals, increased learning, and better musical standards for the schools of our nation. It is indeed worthy of consideration in the musical advancement of our boys and girls.

"From $10.00 to $1,000 a Night"

(*Continued from Page 387*)

performance the singers began to squirm with discomfort. It seems that each time a star took a "high C" a pin stuck her in one place or another.

Miss Jepson now acquired an ambition to join the Metropolitan Opera Company. She found herself, however, thwarted at every turn; for economic conditions were unfavorable; so our heroine pocketed her pride and the year of 1934 found her in Rudy Vallee's radio chorus. Eager to find her place in life, she began carving for herself a radio career. Came an opportunity to be soloist with the Bamberger Little Symphony on Station WOR. Miss Jepson received only ten dollars for the work; and little did she dream that this eventful evening was to be the turning point in her vocal life. A prominent music critic had taken an interest in her performance on WOR, and he soon arranged a meeting with Paul Whiteman who engaged Miss Jepson for the Kraft Music Hall hour. This coast to coast program continued for thirty-nine weeks, with Miss Jepson gaining nationwide recognition. At the close of the season the name of Helen Jepson had become a household word; her voice, a standard about which critics might rave; and her future was now assured.

At last she made her Metropolitan Opera House début in the première of John Laurence Seymour's "In The Pasha's Garden." This fulfilled a life ambition. As *Marguerite* in "Faust" and as *Violetta* in "La Traviata," she also has sung with success.

From this point she rose with meteoric swiftness. Came concert tours, motion picture contracts, an extended engagement with Maxwell House Coffee's "Show Boat," and other top flight radio engagements. Her salary now had reached the thousand dollar bracket for a performance. Fortune, the companion of fame, made a spectacular entrance, and to-day Miss Jepson has at her command virtually every luxury a woman could desire.

Oh, yes, she is happily married to George Possell, a fine flutist and musician of the erstwhile New York Symphony Orchestra. They have a five year old daughter, for whose sake they obtained a rabbit farm in upstate New York. Their little daughter's devotion to the rabbits became so overwhelming that she influenced her parents to become rabbit fans. As a consequence, the grown up Jepson-Possell family has begun breeding a special strain of prize Angora rabbits, which they exhibit at important live stock shows.

Miss Jepson combines her singing with outdoor sports, including swimming and surf casting. Gardening is one of her pleasures; also, eating the vegetables she grows herself. One of her favorite dishes is duck eggs, which come from her upstate farm—a lodge in the Catskills.

She took especial pride in attending to the entire furnishing of her town house in New York City, attending to every purchase, from a can opener to the Knabe grand piano.

With every conceivable luxury at her disposal, Miss Jepson leads a simple home life. When on tour, she is in constant touch with her home, a spacious apartment, which is managed without the least semblance of ostentation. One of her characteristics is loyalty. She still sees her friends who "knew her when."

Asked for an explanation of her rapid rise to success, she replied, "I always go after what I want. And what I go after, I get." But if one were to analyze the reasons for her amazing triumph over adverse conditions, it would be necessary to take into consideration her meticulous care of things that are important. For example, she believes in meeting the "right people"; in accepting circumstances, and in reconciling herself to them; and in placing herself in the best managerial hands and readily abiding by the judgment of her directors. This attention to fine details explains conclusively why, when good fortune came, Helen Jepson was prepared.

* * * * *

"The argument of the homebodies, who give up a promising career because they think it cannot be successfully combined with marriage, is fallacious and easily disproved. I need quote only one name to upset that theory: Schumann-Heink. She had everything to give to the world, and she did it while she reared numerous children and became the beloved mother of America's doughboys. No one more homeloving could be found than this plain, unassuming, simple and humble artist, who always thought of 'the other fellow'!"—Kathryn Meisle.

EASY to Own— EASY to Play

It's new, it's thrilling, it's spectacular—a genuine 2½ octave DEAGAN marimba, embodying DEAGAN standards of quality and beauty, at the lowest price in history.

The DEAGAN STU-DETTE is your opportunity, at negligible cost, to *stimulate* the musical interest of your children, *develop* their musical talent. No instrument gives greater expression to musical abilities. None wins greater applause—or is easier to master.

There's fun for all the family in the DEAGAN STU-DETTE. Shall we send you particulars? . . . J. C. Deagan, Inc., Dept. E6, 1770 Berteau Ave., Chicago.

Peabody Conservatory

OTTO ORTMANN, Director
BALTIMORE, MD.

Recognized as the leading endowed musical conservatory of the country

Summer Session June 27th – August 6th

Staff of eminent European and American Masters including:

FRANK BIBB — FRANK GITTELSON — HOWARD R. THATCHER
WILMER BARTHOLOMEW — CARLOTTA HELLER — MABEL THOMAS
CHARLES COURBOIN — PASQUALE TALLARICO — REINALD WERRENRATH

Credits may be offered toward both the Peabody Teacher's Certificate and the B. Mus. Degree. By special arrangement with the Johns Hopkins University, credits in certain branches may be offered toward its B. S. Degree.

Tuition $20 to $35, according to study

Practice Pianos and Organs Available

Circulars Mailed — FREDERICK R. HUBER, Manager

Arrangements for classes now being made

Chicago Conservatory

Edgar Nelson, President — Edgar Brazelton, Dean
Robert Macdonald, Vice-President
O. E. Robinson, Public School Music — Loro Gooch, Manager

Chicago Conservatory was established in 1857. Among the distinguished faculty of 165 teachers are many who have received national acclaim • Thorough instruction in Piano, Voice, Violin, Cello, Organ, Public School Music, Dramatic Art, Special courses in Harmony, Counterpoint, Composition, Orchestration, Ear Training, and Normal Methods. Bachelor and Master of Music and Dramatic Art degrees.

SUMMER SESSIONS (*6 weeks each*) Major Term—June 27 / 3rd Term—August 8

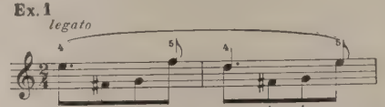
Technical Devices

The Slide

By MATHILDE BILBRO

YOUNG STUDENTS of music frequently grasp an idea with the eye and the mind more quickly than with the fingers.



They see exactly how a thing is to be done, and yet the fingers just refuse to carry on quickly and smoothly. There are fumbling hesitations, or jagged breaks in what are meant to be smooth *legato* passages. There are phrases comfortable to the eye, and distinctly uncomfortable to the hand.

In such cases we must apply certain technical devices to fit the individual hand. Through one such device, the same finger, without lifting, slides smoothly from a black key to an adjoining white key. The slide is not applied to two white keys, nor in passing from a white to a black key. Any finger may slide, but the third finger and the thumb are the ones most often employed.

This measure, in Example 1, though simple to read, would, without use of the slide, be prohibitive, or at least technically awkward, for any but a maturely developed hand.

The slide removes this difficulty and sustains the smooth *legato* indicated.

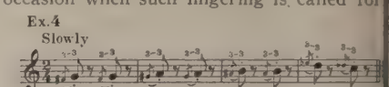
Ex. 1

Again, for a quick hand shift, the slide will sometimes produce a more definite crispness in playing *staccato*, as in this example.

Ex. 2

In this use of the third finger, the hand should be loosely half-closed, with the end of the turned in thumb resting upon, but not pressing, the last joint of the third finger. The wrist and entire arm should be so relaxed that the finger falls upon the key by weight, not by an emphasized stroke—as if a gull swooped down, lightly touched the water, and swiftly arose.

The same applies to the left hand, as in this example.



Ex. 3

While the slide should not supersede the general rule in fingering, it has its proper place as an effective technical expedient and in such cases facilitates smoothness.

Young children enjoy practicing the slide since, though technical, it is not taxing, and a bit of this practice prepares them for the occasion when such fingering is called for.

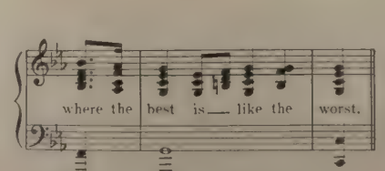
Ex. 4

They will easily play with a relaxed arm such small passages as shown in Example 4.

Music of Marching Men, to 1865

(*Continued from Page* 362)

of a home of the Trappist Brotherhood, where the author of the words was a self-imprisoned brother. This incident occurred in 1862, when General Morgan's cavalry was returning from a raid. The closing stanza of *Lorena* conveys the impression that the author might have been of a deeply religious nature. He speaks to Lorena of the eternal past, life ebbs out so fast, this life is but a small part of a greater future, here 'tis dust to dust, but there it is heart to heart.



Many songs of this period were popular on both sides. Such a song was *When This Cruel War Is Over,* written by Charles Carroll, lawyer, in the winter of 1861-62. In the sixth line of the first stanza the Union soldiers used the word "blue," while the Confederates used "gray." This song made a strong appeal on both sides, and it is said to have been sung every day in every camp and home. Its very great popularity with both the Blue and the Gray mystified musical critics. *When This Cruel War is Over* is a heroic love song expressing profound admiration by those at home for the defenders of the nation on the field of battle.

Maryland, My Maryland gives an account of the part this state has had in former wars and now calls her sons forth once again to battle for freedom. James R. Randall of Baltimore wrote the words which are sung to the old German tune of *Tannenbaum. Maryland, My Maryland* was first sung in the home of Miss Cary in Baltimore. Randall was in New Orleans in April, 1861, and wrote the song one night after hearing of the street fighting in his home city of Baltimore, where the first blood was shed in the Civil War.

And so ends this short tale of America's music of marching men up to 1865.

The Threshold of Music

(*Continued from Page* 364)

(This quotation is reproduced with permission of G. Schirmer, Inc., owner of its copyright.)

The ascending form of the scale occurs as an inner melody at the syllables "where east of Su-". The descending form of the scale is in the tune, accompanying the syllables "-ez, where the best."

Beethoven supplies us with an even terser illustration of the two forms of the scale packed into an eleven-note theme. You may know it, from his "Quartet in F Minor, Opus 95."

Ex. 10

(Part VI of this interesting series will appear in our July issue.)

QUESTION AND ANSWER DEPARTMENT

Conducted

By KARL W. GEHRKENS

Professor of School Music, Oberlin College
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

...s Long is a Hold?

...What shall I teach a pupil about the ...tion of a hold 𝄐 at the close of a section ...piano composition? In a German choral ...one add half the length of the original ...t?

Lunga pausa *and* poco pausa *are at the ...tion of the player or singer, I sup...*—A. N. M.

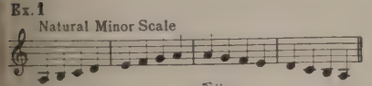
1. In general the hold is like any ...ce—it is a matter of *feeling*, rather than ...rithmetic. In other words, a player accel...es a phrase up to its climax, or lingers ...ingly on its highest note because something ...e of him feels that it is right thus. It is ...his mind so much as his intuition. Or...arily one does not count during a hold. ...prolongs the tone as long as may seem ...propriate, and when he *feels* that it has ...held long enough, one stops—or goes on. ...y times the feelings of different people do ...agree, hence an organist may hold the ...l tone too long for one—or release it too ...kly *for another*. "But which is right?" you ...uire anxiously. To which I reply: "Prob...y both." In other words, it is the taste of ...individual that must determine the mat...: and tastes differ, even among artists!

...n the case of the hold over the last note ...each line of a choral, we have a different ...uation. Here we have (originally) a great ...gregation led by the organist at the key...rd. If he wishes the holds different at the ...s of various lines he will throw the con...gation into confusion. So he holds each ...*nuta* in a certain choral the same length ...time; and the congregation, knowing that ...y will be able to count on this, sing with ...or and are able to begin each succeeding ...e at least approximately together.

"But what is this 'system'," you ask, "and ...w long shall we hold the *fermata* in a ...ral?" To which I reply again: "The system ...ries in the case of different chorals but it ...always the same within a given choral."

...In the old days the hold used to signify a ...t during which the congregation would ...ke a breath and prepare for singing the next ...e. In this case the organist often improvised ...tween lines. But as now interpreted the ...old at the end of each line means that the ...ne is held for a certain number of beats, ...at there are then a certain number of counts ...rest (for taking breath), and that the next ...e is then begun as nearly as possible to...ther, even though there is no leader to in...cate to us just where this point is.

2. Yes; but *lunga pausa* is ordinarily under...ood to mean a longer rest, while *poco pausa* ...uld naturally indicate a shorter one.

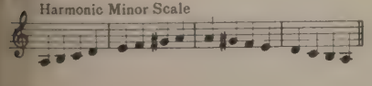


...he Three Forms of Minor Scale.

Q. Will you please explain the difference ...tween the Harmonic, Melodic, and the Mixed ...nor Scale? How is the best way to present ...m to a pupil?—Sr. M. F.

A. The three common forms of a minor ...ale are as follows: Original (or Natural), ...armonic, and Melodic. The original form

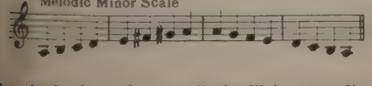
Ex.1



Natural Minor Scale

...as the same tones as the major scale of the ...ame signature; the harmonic form

Ex.2



Harmonic Minor Scale

...as all the tones the same except the seventh, ...which is a half-step higher than the corre...sponding tone in the relative major key; and ...the melodic form

Ex.3

Melodic Minor Scale

...has both six and seven "raised" in ascending ...but "lowered" again in descending. In other ...words, the descending form of the melodic is ...exactly like that of the original. In a sense ...this is a "mixed" form because you go up the ...scale one way and come down another, but it ...happens to be the regular way the melodic ...minor is used. However, if some other com...bination occurs, for example, ascending by ...way of the harmonic form and descending by ...way of the original, then the term "mixed ...form" is applied.

...If you are teaching a group of children to ...sing, the best way to present the minor mode ...is to have them learn a number of minor songs ...by rote. Then, in the fifth or sixth grade, place ...several of these songs on the board in ordinary ...notation and ask the pupils to sing the sylla...bles as they look at the notes. Now write the ...scale on the board and play it or have them ...sing it—several times. After this they should ...be ready to read at sight a simple song in the ...minor mode and from this point on it is merely ...a matter of practice.

In the case of a piano pupil, the method will be somewhat different, although it will be based on the same principle, namely, that before the minor scale as such is studied, the pupil should have had considerable experience in hearing, singing, and playing minor music.

Semistaccato.

Q. Have notes marked thus:

any special name? They have two contradictory marks, staccato *and* tenuto. *How are these notes played? And what is the difference between these notes and* staccato *notes?*—B. H.

A. Notes marked with a dot and a short dash are played half *staccato*. This is referred to as *semistaccato* or *demistaccato*. Sometimes the word *portamento* is used in referring to such an effect. Often there is a slur over several notes with dots over (or under) the individual notes. In all cases the effect is approximately the same: the tones are separated from one another but not sharply so; it is as though the notes were *eighths*, each eighth note being followed by an eighth rest, thus separating it from the next note but not sharply as in a real *staccato*.

***A Crown of Grace* by Brahms.**

Q. 1. In A Crown of Grace for Man, *by Brahms, should the bass note "a" in measure nine be sung natural or sharp? There is no sign before it.*

2. Do the many chromatic changes in this composition (such as E-sharp, first measure, bass; and E-natural, second measure, tenor) constitute false relations? Measure seven from the end is also a good example and with no intervening chord. There appear to be also parallel octaves here between the tenor and bass.

3. In O Praise the Name of the Lord *by Gretchaninoff, the music in measure 43 is identical to that in measure 4, although the former is in three-two and the latter in six-four. Should the amount of time allotted to each quarter note in these measures be equal to that of a quarter note in the four-four and five-four measures? It seems to throw things off balance to give the half notes only one beat in the three-two measures.*—E. L.

A. 1. I have asked my friend, Mr. Olaf Christiansen, to look up the score, and he informs me that the note is A-natural.

2. Yes.

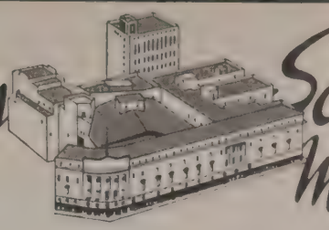
3. The quarter note has the same value throughout irrespective of the measure signature.

Orchestral Transcriptions.

Q. In the July, 1937, issue of THE ETUDE, *there appeared answers to my questions, regarding the "Second Hungarian Rhapsody," by Liszt. These answers gave me so much help that I venture to write again about the same composition.*

I recently had the pleasure of hearing this famous rhapsody played and I am sure I am safe in saying that the pianist did not follow, note for note, the written score of the music as edited by Joseffy. The thirty-second notes on page four were made to sound like the grace notes on the preceding page, and in the rapid sections from the fourth movement onward, the accent fell on F-sharp of the second beat. In short, the whole work sounded exactly as Stokowski accents it in his orchestration. The octave work had much the same effect as the octaves in the stirring conclusion.

Since I have found that even the average drawing-room audience is very willing to sit for ten or twelve minutes and listen to this glorious composition, my question is this: Should one disregard the written score and play as the orchestras do, and if so, is there an accepted edition of this manner of playing? This seems almost fantastic to me, as I had nearly ten years of music with a teacher who insisted that one must not deviate from the printed score! So I painstakingly memorized a famous composition only to find that I do not play it in the accepted manner. (I have also heard the Cortot record.) The same is true of many other compositions.



I have been spurred by the enthusiastic interest of people in the "Rhapsody," however, and I really wish to play it as nearly as possible like the artists do. I will be very grateful for any suggestions you may have to offer.

—Mrs. R. W. D.

A. In both the d'Albert and Joseffy editions, no accents are found in measures 213, 215, 217, and so on. Instead we find *pp* in both editions and Joseffy indicates *staccato* on all melody notes. I presume the reason the F-sharp's are accented at times is because, in the preceding measures 206, 207, 208, 209 powerful accents are found on the second beats. The lack of accents, the *pp*, and the *staccato* markings would lead one to believe Liszt preferred the measures without accents in contrast to the preceding part.

Changes of the kind to which you refer may sometimes be justifiable in the case of a transcription for orchestra. But in playing the piano, with its far more limited resources, I feel that it is in better taste to adhere pretty closely to the score.

Eastman School of Music

UNIVERSITY OF ROCHESTER

One of America's great institutions of music, the Eastman School offers courses in all branches of music—instrumental, choral, voice, theory, composition, harmony, education, languages, psychology, etc.—for the degrees of B.M., M.A. in Music, M.M. and Ph.D. in Music. Affiliation with the University of Rochester provides additional opportunities for study in the liberal arts and sciences.

MODERATE TUITION

Partly because of the endowment provided by George Eastman, the tuition and other expenses are moderate. Student Aid funds are available for qualified students.

COMPLETE FACILITIES

In physical equipment the School is unusually well supplied—a library of 35,000 volumes, 196 practice pianos, 18 organs, recording equipment, etc.

PERFORMANCES

Frequent opportunity for performance is provided by other regular concerts, recitals, and broadcasts by the Eastman Orchestra, band, ensembles and choruses.

PLACEMENT BUREAU

The School's Placement Bureau has had a gratifying success in securing professional and teaching positions for graduates and students.

SUMMER SESSION June 27-July 30, 1938
FALL SESSION Opens Sept. 20, 1938

Due to a strictly limited enrollment early registration is advised. For information and catalogs, address Arthur H. Larson, Secretary-Registrar, Eastman School of Music, Rochester, N. Y.

HOWARD HANSON, *Director* RAYMOND WILSON, *Ass't Director*

JUILLIARD SCHOOL OF MUSIC

ERNEST HUTCHESON, *President* OSCAR WAGNER, *Dean*

INSTITUTE OF MUSICAL ART

GEORGE A. WEDGE, *Acting Director*

Thorough instruction in all branches of musical education. Private lessons in all standard instruments, courses in theory and composition, normal courses for teachers, methods of group training for children, preparatory courses for children, extension courses, and many others.

Public School Music course leading to degree of Bachelor of Science with Major in Music.

Catalog on request.

120 Claremont Avenue, New York

GUSTAVE L. BECKER

Pupil of Moszkowski, Scharwenka and Rudorff. Former President New York State Music Teachers Association.

Pianist, Composer, Author and Teacher

"One of America's most gifted and experienced teachers." (Comment of a distinguished Educator. Name furnished on request.)

Offers a special summer course in theory and practice of piano playing, to young teachers and advanced students, so that teachers, busy during the rest of the year, may keep in touch with new methods and be helped in solving their own problems. Mr. Becker gives his personal attention to every pupil's particular aims and needs.

VOICE QUESTIONS

Answered

By FREDERICK W. WODELL

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

A Catarrhal Condition.

Q. I am a beginner in the study of voice. Six or seven months ago a catarrhal inflammation set up in my nose and throat. Now each time I sing, a harsh rasping is present, and my vocal power seems to be cut in half. I went to three physicians. The first gave me three types of sprays which did no good whatever. The second gave a gargle, with the same result. The third was a specialist familiar with treating singers. He could suggest nothing, since he was concerned with the throat from the standpoint of voice production only.

1. Please advise me as to my next step. Should I visit another physician?

2. Can you suggest any remedy?—A. E. C.

A. 1. We regret that you had not better fortune in your contact with physicians. However it is to be remembered that nasal catarrh is often a stubborn condition and cannot be disposed of in a few days, or even weeks. A general systemic upset may be involved, and a good general practitioner might be of use to you there.

2. Build up your strength by using food and drink, not to tickle your palate, but to contribute to your vitality. Take care of elimination, and get plenty of sleep and fresh air. Avoid excess of every sort. Each morning you might use a solution of salt and powdered boric acid, equal parts, a teaspoonful to a quart of warm water, as a nasal douche and gargle. This for cleansing. At night, just before retiring, you might add a few drops of the compound tincture of benzoin to a dish of very hot water, and inhale the steam through mouth and nostrils, being careful to avoid scalding any of the parts involved. This for healing. Ask your general practitioner to recommend a thoat specialist who is skilled in dealing with the throats of singers, and not averse to taking care of the patient in a general way. Undoubtedly there are such in the large city near which you reside.

When to Breathe

Q. About when to breathe in singing; are commas indications of places to breathe? If no rest is indicated in the music where the poem lines end, may not the singers properly take breath there? If there is no comma at the end of the hymn line, must the breath be held to carry through to the next comma? Would it be the same rule for ordinary hymns and for anthems; or do anthems need special arrangements for breathing? Thank you for the help your column gives. We have taken THE ETUDE *for many years.*—L. C.

A. Whether we sing hymns or anthems, the first requirement is that we shall "sing sense." To this end, as stated in detail in pp. 64-67 of "Choir and Chorus Conducting," by the writer, the singer must deliver the words as a good reader would do, yet not destroy the flow of the music. It is unnecessary to take breath at every comma. Imagine what doing so would make of the well known hymn line,

"There, with my Savior, brother, friend."

See the book just named for an extended treatment of the relation of words and music, punctuation, and phrasing, in various types of vocal composition.

The Feminine "Break"

Q. I am a girl twenty years old, and have received lessons from a reliable teacher. My voice range is from Middle C to high C-sharp. I have what is termed a "break" between E and F next above Middle C; also at the octave above. Practice has about overcome the lower break, but I am still troubled with the upper one, especially if tired.

(1) To what is this attributed, and can it be overcome entirely?

(2) I have heard a good many speak of the closed throat and open throat method of singing. What is the difference? Is the closed throat method out of date; also is either one easier, or more free to sing than the other? I am an enthusiastic reader of THE ETUDE, *and especially of the "Voice Questions Answered Department."*—N. A. S.

A. (1) Lack of skill. Yes, in most cases. Get your singing upon a right basis of breath control combined with freedom from rigidity, especially of tongue and jaw, particularly between the A above Middle C and the next E-flat up, and the upper "break" will be likely to disappear.

(2) William Shakespeare ("Art of Singing") says, "The throat, in its normal state is wide open. . . . The quiescent and entirely unrestrained condition of the back of the throat, in the instant before drinking, is that which should accompany every note we sing." Francesco Lamperti, teacher of many celebrated singers ("Art of Singing," translated by J. C. Griffith) says, "The principal qualities in the voice are two, the open and the closed." (Note that he writes of open and closed *qualities* of voice). He continues, "The pupil should use the open for daily study," (*Ah* as in the word *anima*) "in preference to the closed quality, because in it defects are more apparent . . . the emission of the high notes is rendered more easy, the notes become sweeter, and he does not fatigue his voice. . . . *Ah* is the vowel which more than all the others opens the throat, and so, when the pupil can vocalize with ease on *Ah*, he will find no difficulty in doing the same on other vowels." To avoid the "white" tone on the *Ah*, Lamperti says that the vowel should be formed (as it feels) "in the bottom of the throat."

Breath Control

Q. I had lessons last year. They relie some strain; but, when I sang with my teac and now, my throat feels tired, though sore. I sing scales and exercises ten to fift minutes daily, sometimes in soft voice, sometimes in loud. I am worried beca generally, not always, when I try to sing "high G," nothing but breath escapes, and sound will show for at least one second, then suddenly it will start. I cannot und stand having this happen on a note which easy to sing, or my having a tired throat do not force my voice, and when my thr begins to feel tired I stop singing and not resume for at least a day. If you th it necessary, will you give me some scales exercises? May I add that I read and en every article in THE ETUDE.—Miss Musical.

A. We think that your real trouble is lack of genuine control of the outgoing sing breath. This control means the power to s out the singing breath with some energy great slowness and steadiness, while at same time leaving the tongue and j absolutely free from rigidity. Stand with chest well up but without strain, and keep so while singing. Practice doing quick *la* with loose tongue, motionless, hanging j smiling eyes, on a monotone at easy mid pitches, while sending out the breath v slowly and steadily. End with breath in serve. Later do the same things on short sca and *arpeggi*. Next, do sustained tones, sca and *arpeggi*, on a rich, full *Ah*, while keepi the chest well up, and sending out the bre very slowly indeed. Again, and always, e with breath in reserve. You will find ge practice material in "101 Master Exercis by Alexander Hennemann. For a time, pract much in the long middle range of your voi Later use other vowels upon the same pla You can have an *Ah* throat sensation ev while singing *e* (feet).

Several Singing Problems

Q. I am a girl sixteen years old, not cle enough to a city to take vocal lessons. Ha been told I have an exceptional voice. range is from G below Middle C to D abo High C; with a plenty of power. I do glee cl work, along with solos. Have been singi such numbers as One fine day, *from "Mada Butterfly;"* Unforgotten Melody, *by Hay Wood; and* Spring's Awakening.

(1) Are these too difficult for an untrain voice?

(2) Please suggest some training books could use.

(3) Some solos I could use.

(4) Should I give up solo and glee club wo until able to take training?

(5) With its power and range, is my voi to be ranked with ordinary or extraordina voices?—Worried.

A. (1) In most cases, particularly the fir and third numbers.

(2) It is most difficult for a beginner "train" her own voice. How can she kno whether she is right by the sounds she mak diagnose the difficulty, if any, and chose remedy? Perhaps the safest and most helpf book of exercises and instructions we can su gest for your particular use is "The Art Singing," by William Shakespeare. Combi this with a little volume, "Common Sense a Singing," by J. B. Kennedy.

(3) *Sally Roses*, by Ida Bostelmann. *A So of Spring*, by Frederick W. Wodell. *Consid the Lilies*, by J. P. Scott; in D-flat.

(4) Unless you can be sure of singing wi physical ease, and musical quality of tone, would be wise not to sing very much un you can place yourself with a good teach

(5) On paper you have more than ordina range. But the real question is, how would t voice sound to a competent critic? Quality of greater importance than power and wi compass.

A Youthful Voice

Q. I am fourteen and will graduate th spring at fifteen. I have one goal—to sing grand opera. Unable to take lessons at preac I study myself, and am careful not to strai I am a soprano and my range is from B belo Middle C to high C-sharp, in even tones.

(1) At times my voice is very mature a lovely, but at other times it is distressing uncontrollable. What is the cause?

(2) Should I practice by myself? If so, wh are good exercises to use?

(3) How soon would it be advisable to sta serious study?

(4) With careful placement my tones from below high C to high C are full and sweet. h in ordinary song they are rather hard. Ho can I eliminate this?—D. D.

A. (1) Lack of skill. Possibly, on occasio unfavorable mental and physical conditions.

(2) See answer to "Worried."

(3) Depends upon your physical, menta emotional, musical, and vocal gifts and d velopment. Some young women are ready an earlier age than others. Consult a goo teacher.

(4) Wrong production must be made righ The vocalise may go well, but what about t use of words on the higher range? See answ to question number two by "Worried."

Sixteen Modern Etudes—Trumpet—Huber	.40
Twenty-Eight Miniature Etudes—Piano—Ketterer	.30

"Indispensable as My Shoes"

● A letter from an Etude admirer twelve thousand miles away from our desk contains the line

"I consider The Etude as indispensable as my shoes."

Such a remark is of course very flattering, but we know that what the reader has in mind is something far more comprehensive than the magazine itself. He has made a direct contact with a great source of musical information and supplies without which his musical work would be terribly handicapped. He learns thus, at first hand, of the new materials issued by the publishers of The Etude and those of practically all the other musical publishers and manufacturers of America. To cut off The Etude would be like cutting a water main or an electric cable. His activities would be reduced, or terminated immediately.

In June far-sighted teachers are planning and building for the opening of the new season in September and every page of The Etude for the next three months will be invaluable to them.

The Cover for This Month

The clever piano transcription of Paganini's "Moto perpetuo" appealed to our music editor for this issue of The Etude and thus a portrait of the man, who nearly one hundred years ago demonstrated such great wizardry on the violin as to cause some to attribute it to unearthly mystical powers, came to mind for Etude cover use. Because most reference works in English give an anglicized form of his first name, The Etude came very close to having this anglicized form, "Niccoli," appear under the portrait in contradiction to the lettering "Nicoli" as it appears on the tomb of Paganini, an illustration of which is in the lower left border of this month's cover. A little investigation brought to light the fact that in available copies of Paganini's autograph his name is written "Nicoli."

He was born in Genoa, October 27, 1782. His first playing experience was on a mandolin since his father, although but a humble shop keeper, was able to teach him to play. Nicoli showed such surprising ability that his father placed him in the hands of more able teachers giving him the advantage of violin instruction and some knowledge of the structure of music. He composed a sonata for the violin when he was only eight, and when he was only eleven he made his first public appearance.

In 1795 he studied with several music masters at Parma, one of these being Alessandra Rollo, famous violinist and composer, who later became maestro at La Scala and Professor of violin and viola at Milan Conservatory. It seems that Nicoli could not restrain himself to parental obedience and so in 1798 he "walked out" on his father and went on a concert tour by himself, playing at Pisa and other places. He got himself into trouble almost immediately and he lost everything, including his violin, through gambling. This was at Leghorn and only because a generous M. Levron placed a fine Joseph Guarnerius violin at his disposal was he able to fulfill engagements. Levron was so delighted with this sixteen year old young man's playing of the instrument that he made him a present of it. That very instrument is today the property of the city of Genoa and is on display in the Municipal Building. It was left by Paganini as a present to the city of his birth. In 1804 he returned home, spent a year in assiduous practice and from then on until 1827 he made numerous tours through Italy, his renown spreading from year to year.

Paganini's first concert tour out of Italy was in 1828 when he went to Vienna and there captured everyone, from the Emperor down, with his marvelous virtuosity. He enjoyed similar concert triumphs in Berlin in 1829, Paris in 1831, and in London in 1831. He stayed about a year in the British Isles, and in concert fees soon accumulated a fortune. The excited and somewhat dissolute life which he led began to tell on his health and a few years later he was compelled to spend most of his time in his villa at Parma. The winter of 1838 was spent in Paris, but it was disastrous, the climate being particularly hard on Paganini's chronic suffering of laryngeal phthisis. Financial losses also weighed heavily upon him and he was reduced to living with a friend in Marseilles for several months. In the winter of 1839-40 he turned to Nice in the hope that he would gain some relief there, but on May 27, 1840 his weakened and aggravated body gave up the struggle.

Paganini might have made a greater contribution to the literature of music through more serious and consistent effort as a composer, but his gifts in the creative field were neglected because of his unbridled worldliness. He did write several concertos, a number of caprices, and numerous variations on various themes. (Schumann and Liszt made piano transcriptions of some of his works.) It is as the artist violinist, however, that he gained a supremacy which no one has been able to challenge. He had many eccentricities and he did not hesitate to make an ostentatious display of his great technical abilities.

Despite his practice of fixing strings so that three would break and leave him but one to complete the major portion of a composition he brought forth at his pleasure superbly controlled tone qualities and he played with such musicianship and with such a full range of emotional coloring as to hold spellbound everyone in his audience, even including best musicians and musical authorities.

A Child's Journey

Rote Songs for Primary School Activities

By Ada Richter

Primary grade teachers are probably the greatest specialists among educators. Almost invariably they love their work, and the little ones intrusted in their care. Anything in the educational line that they think will interest their charges is eagerly examined.

Music is now considered indispensable in primary grade teaching, but one of the teacher's problems is to correlate it with other studies. Mrs. Richter is an experienced and highly successful teacher of little ones, and for this book she has made sixteen songs fascinating to children, each of which can be correlated with other primary grade activities.

The songs may be used as a continuity, or they may be sung separately. A simple piano accompaniment is provided, but the use of it is not essential as the little tunes are so rhythmic that they may be sung effectively without accompaniment.

In advance of publication copies of this unique book may be ordered at a special cash price of 35 cents, postpaid.

Fascinating Summer Reading for Music Folk

There may be individuals in some walks of life who can let several weeks, or even the whole summer, go by in idleness, entirely eliminating all thoughts of their business or profession, or putting forth any effort to work at the former or practice the latter.

This can hardly be said of music folks. If one plays the piano or some other musical instrument a certain amount of practice is almost essential. If one is a singer, it would be most unusual to learn that that individual had gone through a summer "without singing a note."

Indeed, many students of music either contract for, or themselves attempt, an intensive summer course in some feature of their study that they believe could be strengthened.

Even if a musician feels that a summer, or only a fortnight respite from year-around activities would be beneficial, few would fail to benefit by reading a good book or two on some musical topic during that period. Choose an interesting, entertaining book about music to tuck in your luggage and while away pleasant hours in its pages while resting mind and body from "the daily grind."

Here's a carefully selected list of really interesting books:

Musical Travelogues (Cooke) ($3.00)
From Song to Symphony (Mason) ($1.50)
Standard History of Music (Cooke) ($1.50)
Piano Music: Its Composers and Characteristics (Hamilton) ($2.00)
Talks About Beethoven Symphonies (Thomas and Stock) ($2.50)
Notturno. A Musical Novel (Schmidt) ($1.50)
History of Public School Music (Birge) ($2.00)
The First Violin. A Novel (Fothergill) ($1.50)
Your Voice and You (Rogers) ($1.75)
American Opera and Its Composers (Hipsher) ($3.50)
Great Men and Famous Musicians on the Art of Music (Cooke) ($2.25)
Musical Progress (Finck) ($2.00)
Old Fogy: His Opinions and Grotesques (Huneker) ($1.50)
Music and Morals (Haweis) ($2.25)

One String Solos

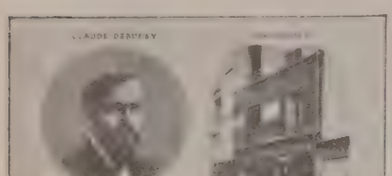
For Violin Beginners

By Kate La Rue Harper

Attractive melodies confined to one string at a time, story-texts and charming illustrations which appeal to the young child, and easy-to-understand charts which simplify finger positions are the outstanding features of this fascinating "work-play" book for little violinists.

A glimpse of the contents reveals such interesting titles as: *Lady Mouse, Bossy Cow, Lovely Spring, Wooden Soldiers, Little Doggie Mine, Circus Day is Here, Kitty Needs a Pill, Singing String, My Little Bed, Lazy Little Bug, Dainty Bluebird,* and *Little Drops of Rain.*

This book may be used as supplementary material with any elementary violin class method. Only three fingers and the open strings are employed. There are no accidentals in the violin part, although a variety of keys is offered. The A and D strings are given first because they have the same finger pattern; then follow the E and G strings.



As a convenience to classes, two separate books are provided, the violin part for the student and the piano part for the teacher or accompanist. The violin part may be ordered separately if desired. The advance of publication cash price for both books is 35 cents; violin part only, 15 cents; piano part, 20 cents; postpaid. Be sure to state which books are desired.

Reward Cards for Music Pupils

(Second Series)

Bizet	Gluck	Rimsky-Korsakow
Chaminade	Grieg	Rossini
Debussy	MacDowell	Rubinstein
Dvořák	Massenet	Saint-Saëns
Elgar	Moskowski	Sibelius
	Moussorgsky	

The interest created by the recent announcement in these notes of the forthcoming publication of a second set of *Reward Cards* to include the above composers, has been most encouraging, but not unexpected. For years piano teachers, school educators and those having in charge the activities of junior music clubs, have used the orignial set of 16 *Reward Cards* which includes:

Bach, Beethoven, Brahms, Chopin, Gounod, Handel, Haydn, Liszt, Mendelssohn, Mozart, Schubert, Schumann, Tschaikowsky, Verdi, Wagner and Weber.

These *Reward Cards*, as many of our regular readers know, are about the size of a U.S. Post Card, in fact, they also are published as *Music Post Cards* all ready for mailing. On the *Reward Cards*, however, the reverse side of the card, as shown in the illustration above, has a condensed biography of the composer, a facsimile of his manuscript and a reproduction of his signature.

The illustration shown cannot do full justice to the beauty of these *Reward Cards*, lithographed in the style of a water color painting. The Prize Card, which accompanies each set of *Reward Cards* is reproduced from steel engravings and contains the portraits of 8 great composers linked together by an artistic steel-engraved design and background. It usually is given after the student has received an entire set of 16 *Reward Cards*. There is space on the *Prize Card* for writing in the pupil's name and other data and for the teacher's signature.

The first series (with *Prize Card*) sells for 50 cents. In advance of publication orders may be placed for single sets of *Reward Cards* (*Second Series*) at the special cash price, 35 cents, postpaid. A *Prize Card* also will be supplied with each set of the second series.

Little Pieces from the Classic Masters

For Violin and Piano

***Compiled and Arranged by* Leopold J. Beer**

Everyone is aware of the phenomenal developments in the study of orchestral music in our schools all over the country, and of the increasing demand for violin players. New educational material for violinists is daily making its appearance and much good modern music is being written for the instrument. Useful material also is being culled from the compositions of the old writers of the 17th and 18th centuries.

The study of classic music is a firm foundation for better music appreciation. Children of the present day, growing up in the atmosphere of such music and mastering it, acquire an instinct for better taste. Later on they will be able better to understand and interpret the more difficult violin masterpieces. Not only young students, but older ones, too, in the early grades, should have the benefit of this collection of melodious music.

Little Pieces from the Classic Masters contains an abundance of excellent violin music from those earlier centuries, much of it little known at the present time, but all of it melodious and practical. The book was compiled by Prof. Leopold J. Beer, well-known Viennese teacher and composer, and contains ten selections from the following writers: L. Couperin (1630-1665), Purcell (1658-1695), Kuhnau (1667-1722), F. Couperin (1668-1733), Rameau (1683-1764), Bach (1685-1750), Handel (1685-1759), and Gluck (1714-1787). These numbers are all written in the first position, but those preferring third position fingering will find it beneath the notes.

Until publication, single copies of this valuable book are available at the special advance of publication cash price, 35 cents, postpaid.

The Etude Historical Musical Portrait Series

There are many uses to which this unusual series of biographical sketches, one installment of which will be found on another page of this issue, may be put. These "thumbnail" stories with pictures of musical celebrities have been appearing each month in THE ETUDE since February, 1932. If preserved and bound together in one volume when the series is finally completed, one would be the possessor of the most comprehensive picture-biography collection of musicians ever compiled. Nearly 3500 celebrities of past and present have been included in the series to date. Nothing comparable has hitherto been attempted.

If you have missed some pages from this series, or wish to compile a complete set, extra copies of each page are available and may be ordered at 5 cents each.

28 Miniature Etudes

A Book of Studies for the Third Grade Piano Student

***By* Ella Ketterer**

The mere mention of the forthcoming publication of a new piano instruction book, or piece of music, by Ella Ketterer, is sufficient to arouse the interest of piano teachers. Her helpful study books, *Adventures in Music Land* ($1.00) and *Adventures in Piano Technic* (75c) have have been used by many teachers, and her tuneful piano compositions, each of real educational value, are always enjoyed by young students.

In writing this book *Miss Ketterer* has endeavored to place in the hands of a student in the third year at the piano short melodious etudes covering various technical problems arising at that period of study.

Note the titles and the problems covered: *The Whirlpool* (triplets), *Prattle* (the trill), *Oriental Song* (syncopation), *The Giant* (left hand and pedal study), *Sunday Morning* (suspensions), *Up the Stairs* (broken thirds), *In Sprightly Mood* (rhythm), *The Bouncing Ball* (repeated notes), *Harp Song* (arpeggios), *Scamper!* (wrist study), *Run and Jump* (rapid passages divided between the hands), etc.

Copies may be ordered now of this interesting educational work at the special advance of publication cash price, 30 cents, postpaid, delivery to be made when work is published.

Grown-Up Beginner's Violin Book

***By* Maurits Kesnar**

Not so many years ago the belief was general that unless one started study at an early age he never would learn to play an instrument. Possibly this was because practically all systems of music education sought to train students for the virtuoso stage, and no pupil started out with the idea of becoming an acceptable amateur player.

Strange as it may seem, with the coming into our American homes of the mechanical devices—the phonograph, the player-piano and the radio—the love for good music has increased, and a keen interest has been created in many hitherto musicless homes. Grown-ups, who in their youth never gave music a thought, are now desirous of being able to play an instrument, or to sing.

Piano teachers were about the first to capitalize on this newly-created devotion to music, and the success of many of these pioneers has been especially noteworthy. Teachers of the violin, in many localities, also find themselves besieged by pupils anxious to learn to play the instrument, and these instructors are really more fortunately situated than are those of other instruments, as the violin more easily can be taught in classes, thus taking care of more students at a time.

The author of this work has achieved notable success in his own teaching and that he fully realizes the problems of violin teachers with older beginners, both in class and private teaching, is shown by his choice of material. Of course, all necessary exercises for the development of technic during the first year of study are given, but the really attractive feature of the book is the fine group of easy arrangements of famous melodies and of many little-known folk songs.

There is still time this month to secure a copy of this book, when published, at the special advance of publication cash price, 40 cents, postpaid. This offer is good only in the U.S.A. and Its Possessions.

Manual of Fugue

By* Preston Ware Orem, *Mus. Doc.

In the composition of both instrumental and choral music, especially in the larger forms, a knowledge of fugue is essential. Even if one doesn't hope to become a Bach, Beethoven, Mendelssohn or Wagner, the ability to recognize and analyze a piece of fugal writing is an accomplishment that means added music appreciation.

With some there is a disposition to regard such studies as counterpoint and fugue as dull, dry and uninteresting. And not without reason, when considering certain text books that treat these subjects as a sort of higher musical mathematics. Dr. Orem makes fugue a delightful means of making beautiful music, and he does it in the same breezy colloquial presentation of the subject that characterized his formerly published theory books: *Harmony Book for Beginners* ($1.25), *Theory and Composition of Music* ($1.25) and *The Art of Interweaving Melodies*—First Lessons in Counterpoint ($1.25).

This new book will cover all the various angles of fugue writing. There are ten chapters and an Epilogue. It will not be as large a volume as the above-mentioned text books but it will contain more text matter than the author's *Manual of Modulation* (40c).

In advance of publication orders for first-off-the-press copies of this work may be placed at the special cash price, 40 cents, postpaid.

Fourth Year at the Piano

***By* John M. Williams**

In music publishing, particularly when the publisher's editors must submit proofs for the author or composer to review or approve, even though he be in Europe or on the other side of the hemisphere, it is hard to measure in advance the length of time necessary for the consummating of all details before the completion of the work in published form. Such time-consuming conditions have made possible the continuing of the Fourth Year by John M. Williams another month on an advance of publication offer.

The material has all been selected and, true to Mr. Williams' policy of doing everything in his power to make each of his educational works supply the best and most useful material for the period of study designated, this book in its completed form is sure to delight the teachers waiting for it.

No copies will be shipped beyond the U. S. A. and Its Possessions. The price at which a single copy may be ordered in advance of publication is 50 cents, postpaid.

Play with Pleasure

An Album for the Grown-Up Piano Student

The title of this new book suggests at once two things; playing the piano for the pleasure of others, and playing for our own pleasure.

In the former case, we have to consider the tastes of our listeners; if these respond better to what is lively, we need music of a lively character; if there are older people present, the chances are that while they may enjoy light, lively selections, they have a yearning to hear also some of the melodies which were popular in their younger days.

If we put ourselves in the position of listeners, then we touch upon the second problem; that of playing for our own pleasure.

By being able to perform at will from the wealth of material contained in *Play with Pleasure*, we can please every taste, our own included. There is music from the class modern, and romantic schools, from gra and light opera, from the great symphonie as well as miscellaneous material of all kin and from all sources.

Neither time nor expense has been spar to make this book one of the most vari and interesting collections of piano mu ever published. It is not music intended f juvenile tastes, but music so arranged th adult players who have had only a yea study should be able to learn any of t numbers with little effort.

Single copies of this book at the speci advance of publication cash price of cents, postpaid, may now be ordered, to delivered on publication. Sales are restricte to the U. S. A. and Its Possessions.

Child's Own Book of Great Musicians

Brahms-Tschaikowsky-MacDowell

***By* Thomas Tapper**

There was a time, not so very long ago, when to ask a child, "Who were Brahms, MacDowell, and Tschaikowsky?" was to receive a blank stare of complete ignorance. Not so to-day; the school child who is not more or less posted on the better composers is the exception. Radios in almost every home have spread knowledge everywhere, so tha children can't help being well informed. Th best-known melodies of great composers ar now heard on the air so often that they ar unconsciously memorized and can be ident fied at will. And modern teachers now ger erally enhance interest in music study b telling their pupils more and more abou great composers.

As a result of this growing interest i music, and in response to insistent demands we are enlarging our group of the *Child Own Book of Great Musicians* series b adding three new booklets, devoted t Brahms, Tschaikowsky, and MacDowell— three master composers representing, respec tively, Germany, Russia, and America. A three of these composers earned their hig standing through hard work and only afte periods of discouragement. Their lives wer full of interesting incidents and experiences things that children remember and enjo hearing about. The main value of thes experiences lies in the fact that they hav to do with composers who made good. Chil dren, like the rest of us, are benefitted an inspired by examples of heroic accomplish ment.

Each booklet is accompanied by a packe of pictures, which the child cuts out an pastes in their correct places in the book The art cover insures an effort for greate neatness in the work, and so do the needl and cord supplied with each copy for bindin the book.

Although the regular retail price of eac booklet now published in the series is 2 cents, single copies of these three new book may now be ordered at the special advanc of publication price of 10 cents each, or 2 cents for the three, delivery to be mad when published.

Sixteen Modern Etudes

For the Advanced Trumpet Player

***By* John Huber**

The ambitious trumpeter will find in thi new volume of studies ample opportunity t develop flexibility of the lips, single and tripl tongueing, correct tone production, prope breathing, and general interpretative ability The book contains daily embrouchure drills exercises with special attention given to trip lets and chromatics, preparation for trills an mordents, rhythm and velocity studies Analytical notes and suggestions are give throughout to help the student overcome th technical difficulties which are encountered.

The author of this important book, Joh Huber, is well known both as a performer an teacher. He has taught in New York City and Philadelphia, and has appeared wit famous bands, theatre orchestras and wit the Philadelphia Symphony.

A single reference copy of this book may now be ordered in advance of publication a the special cash price of 40 cents, postpaid

Changes of Address

Now that the vacation season is on us and subscribers may wish THE ETUDE to follow them to their summer homes, please advise promptly of your change, giving both old and new addresses. We should have this advice at least four weeks before the change is made. It might be wise to inform us when you anticipate returning to your winter address and we will see that copies are sent as instructed and none will go astray.

Secure Fine Merchandise Through THE ETUDE *At No Cost*

Music lovers, everywhere, secure standard merchandise, handsome as well as practical, without any cash outlay. Here's how it is done. Talk to your musical friends and explain to them the advantage of having THE ETUDE visit them regularly every month throughout the year. The price is only $2.00 a year and no music lover could make an investment in music which would bring a greater return. Collect the $2.00 and send it to us, with the name of the subscriber, and we will give you one point credit toward any premium on our list.

The following are a few gifts which may appeal to you:

Eastman Camera—This is a genuine Eastman Brownie Junior Box Camera with a new design metal front. Takes fine pictures, size 2¼" x 3¼", using a roll film. Awarded for securing four subscriptions.

Garden Shears—A unique implement, that not only cuts clean, but holds the flower part of the stem as it is cut. Saves scratches, increases reach. Your reward for securing one subscription, not your own.

Correspondence Case—Has a gold-stamped long-grain linen binding and includes stationery, perpetual calendar and a paper knife. Size 6" x 7". Your reward for securing one subscription, not your own.

Address Book—A gold-stamped, long-grain linen Address Book with gilt edge, ruled pages, and alphabetically indexed. Size 6¾" x 5¼". Your reward for securing one subscription, not your own.

Flower Bowl—Essentially a Flower Bowl, this attractive reward also will serve very nicely as a center piece. The bowl itself is fluted crystal glass while the perforated cover, for holding cut flowers, is finished in chromium. Height, 5", Diameter, 5". Your reward for securing one subscription, not your own.

Ladies French Purse—Moire silk in black, brown or blue. Has a place for change as well as an extra compartment for bills. Size of purse 4" x 3½". Your reward for securing one subscription, not your own.

Lifetime Billfold—New, unique, exclusive style. In black or brown leather, one piece. No stiff stitched edges. Your reward for securing two subscriptions.

Send post card for *Premium Catalog* giving a complete list of all gifts offered by THE ETUDE.

A Bargain For Music Lovers

Help your musical friends, not familiar with THE ETUDE, to a greater appreciation of music.

During the months of June, July and August, we offer to non-subscribers for THE ETUDE, a special three months introductory subscription at a price of only 35 cents. Every music lover is thus given the opportunity, at little cost, to learn the value of THE ETUDE. With its fine departments, covering almost every phase of musical activity, there is something in each number of priceless interest to every music lover.

This offer is good only for the months of June, July and August. Orders will be filled as received. When issues are exhausted, no more subscriptions will be accepted and the offer cannot be extended after August 31, 1938.

Send your 35 cents in cash, money order or United States stamps *NOW*.

Canadian subscribers please send 10 cents additional covering Canadian postage. Foreign, 20 cents.

Swindlers!

Many fine men and women earn their living by securing subscriptions for magazines. But there also are many men and women who impose on music lovers, selling THE ETUDE, and other magazines, at ridiculously cut prices and then pocketing whatever they can collect, never sending the subscription to the publishers. Before paying money to any one, read carefully the contract, or receipt, offered you. Do not permit the agent to make changes in the contract, or receipt, which is provided by the publishers or magazine agency for *your* protection. The price of THE ETUDE is $2.00 a year, $3.50 for two years, in the United States. Help us to protect you!

World of Music

(*Continued from Page 354*)

ERNEST BLOCH'S "MACBETH," written in 1903 to 1909, with its libretto by Edmond Flegg and adhering closely to the Shakespeare drama, was revived on March 5th, at the Teatro San Carlo of Naples, before a capacity and elegant Neapolitan and foreign audience. The work had its première in 1910, at the *Opéra-Comique* of Paris.

DANIEL KARFUNKLE has been awarded the $100 prize in piano playing, offered by the second district of the New York State Federation of Women's Clubs.

THE SADLER'S WELLS company of London has given a series of performances of Wagner's "The Valkyrie," in English, to houses which vented "thunderclaps of applause," from seats at sixpence (twelve cents) each. Let the world, and America in particular, take note of how to make the great works for the musical stage popular.

A MONUMENT TO ENRICO CARUSO, one of the greatest tenors of all time, is reported to be about to be erected by the city of Venice, where he was born in 1873.

THE SOCIETY OF FRIENDS OF MUSIC of Vienna recenly celebrated its one hundred and twenty-fifth anniversary. Founded in 1812, by the initiative of Ignaz von Sonnleithner and Fanny von Arnstein, it opened a Conservatory in 1817 and organized concerts which have had such eminent leaders as Salieri, Hellmesberger, Hans Richter, Schalk and Furtwängler. Its library is perhaps the richest collection of music in all Europe.

EIDE NORENA won a distinct success as *Desdemona* in a recent production of Verdi's "Otello" at the Grand Opéra of Paris.

CARL PARRISH has won first place for a work by a Minnesota composer, in a competition sponsored by the Minnesota Federation of Music Clubs. The successful composition, *A Sarabande and Fugue*, was on the program of January 14th, of the Duluth Symphony Orchestra, with the composer conducting.

* * * * *

COMPETITIONS

THE AMERICAN SOCIETY OF THE ANCIENT INSTRUMENTS is offering a Prize of Five Hundred Dollars for a composition to require not less than fifteen minutes nor more than twenty-five minutes in its performance, and to be suitable for interpretation by this ensemble. The competition closes August 31, 1938; and full information may be had from Mr. Ben Stad, founder and director of the organization, 4331 Chestnut Street, Philadelphia, Pennsylvania.

A PRIZE OF ONE THOUSAND DOLLARS is offered by the Cincinnati May Festival Association, for a composition for a children's chorus of six hundred voices (to which an adult chorus may be added), with orchestra, or organ, or both. The work will be performed at the May Festival of 1939; entries close August 31, 1938; and full information may be had from the May Festival Association, 142 West Fourth Street, Cincinnati, Ohio.

ONE THOUSAND DOLLARS is the prize offered by *The Forum Magazine*, for a new American national anthem to displace the *Star Spangled Banner*. The new work should "suit the voice" and "challenge the American people to be alert to their liberties." The contest closes June 30th. Particulars from *The Forum Magazine*, 570 Lenox Avenue, New York City.

A PRIZE OF $500 is offered by G. Schirmer, Inc., for an unaccompanied choral composition dedicated to the New York World's Fair. The competition is open only to American composers, and the poem also must be by an American author. Entries close August 31st; and further particulars may be had from G. Schirmer, Inc., 3 East 43rd Street, New York City.

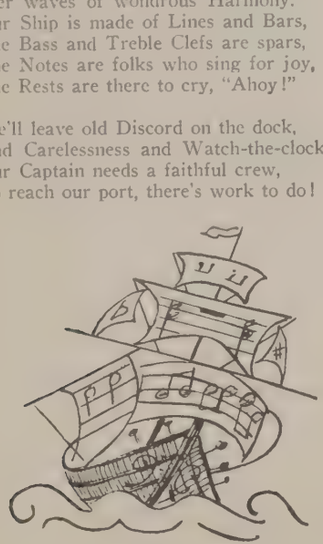
The Junior Etude

Edited by
ELIZABETH A. GEST



Our Ship of Joy

By Dale Laughlin

Our Music is a Ship of Joy
For every girl and every boy.
It sails the seas of Melody
O'er waves of wondrous Harmony.
Our Ship is made of Lines and Bars,
The Bass and Treble Clefs are spars,
The Notes are folks who sing for joy,
The Rests are there to cry, "Ahoy!"

We'll leave old Discord on the dock,
And Carelessness and Watch-the-clock!
Our Captain needs a faithful crew,
To reach our port, there's work to do!

Our Ship is beautiful and strong,
O'er Sharps and Flats, we speed along.
With Captain Rhythm in command,
We sail away to Fairyland!

Arpeggios and Scales we run,
And all the Chords and Tunes are fun!
So here we work and here we play!
Our Ship of Joy! It sails to-day!

Alice and the Magic Looking Glass

By Marjorie Knox

A LONG PANEL MIRROR hung near Alice's piano, but she had not discovered before that it was a magic mirror. As she was reviewing her piece for the coming recital she happened to glance at herself in the glass. "Oh! What a terrible position!" she exclaimed.

One end of her bench was near the keyboard, the other end far from it: of course she was sitting on the nearer end; her back was bent in a curve; she was holding her shoulders up—a horrible thing to do, as her teacher had told her over and over; her feet were twining themselves around the legs of the bench.

"Dear me!" she exclaimed again, "what a horrible position. Just suppose I had looked like that at the recital."

So she put her feet on the floor near the pedals; she relaxed her shoulders to their natural position; she straightened the bench; she took the curve out of her back—and what a change! "Now, maybe my playing will improve too, thanks to the magic mirror."

And it certainly did, for every one at the recital told her they had never heard her play so well.

Keeping Up With Champions

By HERMIA HARRIS FRASER

PLICK-PLACK! plick-plack! came the steady rhythm of the ping-pong ball on the long, green table in the basement playroom. In graceful, darting swerves the two boys opposed each other until twenty-one was reached by Nick.

"I've got that backhand curve at last!" Nick panted. "I've been at it all year, ever since the champion, Mr. Jarvis, laughed at my game and beat me twenty-one to three. I made up my mind then, that some day when he came here, I'd beat him with his own tricks."

Frankie sighed. "I certainly can't get those curving shoots!"

"I'll show you how I do those," Nick offered.

"Not now!" said Frankie. "I think I hear our car stopping outside. Mother is driving me to the studio for my music lesson."

As the boys raced upstairs, Nick asked insistently, "Won't you play a piece before you go?"

"Sure," agreed Frankie.

Soon everybody gathered in the living room to listen to Frankie; and he played very well indeed.

"I wish I could play as well as that," thought Nick to himself; but he said nothing.

Soon Frankie and his mother left and most of the young people returned to the basement for more rousing games of ping-pong. But Nick sat down on the piano stool, looking straight ahead. He didn't envy Frankie, but it seemed such a wonderful thing that a small, slight boy of thirteen could get such music out of a piano.

"Nick, oh, Nick! Come on down! Mr. Jarvis is here, and he's challenging our best player, and that is you," Pikey shouted from the basement.

"Oh boy! Mr. Jarvis!"

The long awaited chance had come; the chance to show off that backhand curve.

The dark, heavy man, thrusting out his jaw challengingly, faced the laughing youth.

Plick-plack went the white ball back and forth in trial. Nick won the serve. Then it was three points for the man, and one for the boy. The champion's smashing drives told. His score increased; fifteen to nine in his favor.

Now Nick had been playing possum. He wanted Mr. Jarvis to be overconfident. Nick began to answer hard drives with curving balls that just tipped the white edge. He returned trick for trick, only, being younger by far than the champion, he could get around the table faster. He had Mr. Jarvis puffing when the score became twenty all.

Now, either had to get two points to win.

"You've certainly improved! It's amazing!" cried Mr. Jarvis, his eyes twinkling. "Take this!" and he shot a mean one that Nick missed.

"I shall have to be cool!" Nick thought. "I just will not let him win!"

And he was cool. The next ball was his, and the next, and the next, though it grazed the net. Nick had beaten the champion.

But he did not feel so light hearted as he had expected. In the back of his mind, even while the gang congratulated him, was the picture of Frankie at the piano.

Then suddenly, the cloud lifted. Why, he had done it with ping-pong. He had beaten Mr. Jarvis by sheer dint of hard work and determination, by keeping at the game every spare minute. He could certainly do the same with music. Perhaps he would be able to perform as well as Frankie, the next time people asked him. Perhaps, if he practiced more than an hour a day, who knows, he might become a champion.

Woodland Sports

By GERTRUDE GREENHALGH WALKER

(Each number in the story refers to the degree of the scale, the tonic being mentioned each time)

ONE SATURDAY MORNING Jack and Bob started out for the woods, taking their lunch with them. But Bob had a few seeds and crumbs, also, and an extra little box, besides his lunch box.

"What is in the box, Bob?" asked Jack.

"That is what I shoot with. You'll soon see."

"What do you mean, a folding gun?" Bob continued, teasingly.

"No, of course not. I wouldn't shoot to kill—I like the birds and animals in the woods. Here's one already—keep still while I shoot him," said Bob, as he arranged his kodak. See that 6, 5, 3, 2 (key of C) squirrel?

Soon they came to a little brook, and Bob noticed a slight movement in a tree near by. He took some crumbs out of the 7, 6, 5 (key of C) and threw them on the ground. Then a chipmunk came near. "1, 7, 7, 6 (key of F) him, Jack, while I snap him. There, I caught him, and I'll say my kodak is a better 4, 2, 1, 6 (key of G) than one from which he could not escape."

Soon a 5, 1, 1 (key of E) came buzzing around. "Don't hurt it," exclaimed Bob, a 3, 6, 6 (key of G) will not hurt anyone unless in self-defense.

Then Bob saw an oriole's nest swaying above them. "Let me shoot his little bird's 2, 5, 4 (Key of A)," he said, as he pointed his camera at it.

As the afternoon began to 1, 3, 6, 7 (key of F) the boys began to get 3, 5, 4, 4, 2, 1 (key of D) out and started home.

"I guess you are right, Bob. I am glad you have taught me the old 3, 6, 3, 2, 7 (key of F), 'Live and let live.' Yes, and I learned my music lesson, too."

The Shame Flute

By Etta F. Gilbert

"Now, FRANZ have you finished your p tice time?" It was the voice of a Ger mother speaking many years ago in little city of Nuremberg.

"Not quite, my mother, but can't I out and play now?"

"No, no, my child! Have you forgo who stands in the market place to-d

"Oh, mother," pleaded Franz, "if I fi my practice may I go to the market pl Please mother!"

"A very good idea," said his mot "Perhaps you will profit by what you see. Now hurry to work, my Franz."

So little Franz went back to his sc and very soon with his lesson well d he hurried away to join his friends in market place. And what a sight met gaze. Young Friedrich Himmel who played false notes in last night's con stood on a high platform with his ha fastened tightly in a "Schandflote" Shame Flute. And there he must stand full view of the mocking crowd for

Shame flute for careless pupils

long afternoon. How he wished as he st there that he had practiced his part m carefully and how little Franz and all friends resolved never to stand in Fr rich Himmel's shoes if practicing wo save them.

In the museum at Nuremberg one still see the Shame Flute, so long the p ishment for lazy and careless musicia and who knows but what we can trace its use the success of many of Germa splendid musicians?

The Builder

By Frances Gorman Risser

I'M BUILDING a beautiful musical ho Foundations are scales, practiced SLO reënforced with cement of "exercise w "sight reading" and "count as I GO." F octaves and chords form the roof and walls; arpeggios, making the TOWE rise up toward the skies in gay patterns tone, like beacons in sunshine or SHO ERS. I'm building a house of melodi tones; I work on it ever so LONG; I don't mind that, for my musical hous lovely and sturdy and STRONG.

Music and Painting

By ANNETTE M. LINGELBACH

"I WISH I were a painter," exclaimed Teddy. "Painting is such fun."

"So is music," declared Miss Gay, "but in case you ever do decide to be a painter, your music study has already given you a little start in the painter's art."

"But how?" asked Teddy in amazement. "I never knew music had anything to do with painting."

"Music has something to do with everything in the world," explained Miss Gay, "especially with the arts. Pictures are silent music of the most beautiful type. Music and pictures speak a universal language that everyone can understand. Now, here are the steps you follow in common with both of them. In music study, you remember these four climbing steps to smooth musicianship and beautiful playing.

1. *You read your notes,* either aloud or silently.
2. *You write your notes,* with a large and clear hand.
3. *You play your notes,* with beauty, expression, rhythm and vim.
4. *You memorize your notes,* so thoroughly as to be able always to play them with ease, accuracy, coloring and meaning.

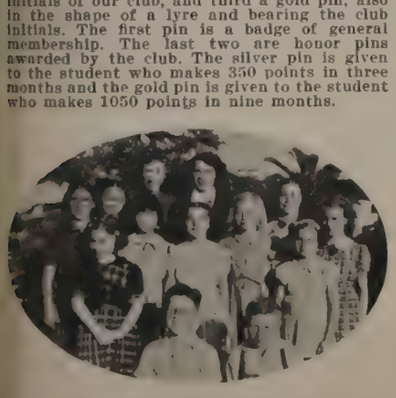
"Now, if you were a painter, here are the four points you would have to consider before taking your brush in hand.

1. The title, which tells what kind of a picture it is to be when it is finished.
2. The background.
3. The number and type of figures to be shown.
4. The colors to be used in painting the picture.

"If you remember all the pictures we have collected for our gallery of paintings with musical themes, Teddy, you can appreciate what a large field there is, showing children at the piano, grown up people playing all sorts of instruments, and famous musicians and composers in the familiar scenes we usually associate with them. A knowledge of musical history, which you are now studying, is necessary to every painter of musical pictures. If he paints a lady of mediæval times, and decides to show her playing a harp, he must first find out if harps were in the world at that time, and if so what they looked like in those days. Every little detail in a painting must be accurate and in its proper setting, just as every point of technic in a melody must be worked out to perfection."

"So you see, Teddy, to be a successful painter, it is often necessary to be a successful musician; showing you again that music study is never in vain, since it helps you in every bit of work you do in the world, as well as in every bit of pleasure you have in your everyday life."

Letter Box



DEAR JUNIOR ETUDE:

Since there have been so many interesting letters sent in to your club, we thought you would like to hear about ours.

The name of our club is the "Young Musicians' Study Club." It is seven years old, having been founded January 24, 1931. We have two aims upon which our club is founded, namely, "To promote progress in music study," and "To develop an appreciation of good music."

The dues are $1.20 a year, and are paid in monthly installments with which we buy honor pins.

We have three pins. First, in the shape of a baby grand piano. Second, a silver pin in the shape of a lyre, our club emblem, bearing the initials of our club, and third a gold pin, also in the shape of a lyre and bearing the club initials. The first pin is a badge of general membership. The last two are honor pins awarded by the club. The silver pin is given to the student who makes 350 points in three months and the gold pin is given to the student who makes 1050 points in nine months.

We make points by the amount of work accomplished. Each completed technical exercise, scale, chord or arpeggio, is worth ten points. Each reading piece, one point for each measure, and each memorized piece two points for each measure.

We cannot wear our pins unless our average is two plus or higher on our report cards which we receive evey six weeks.

At the club meetings, we have a business meeting. Then a program by members, followed by a study period, ending with refreshments. Frequently we have a studio recital to substitute for meetings.

The colors of the club are orchid and white and the emblem is the "lyre." Our motto is "Learn to do simple things well," from Robert Schumann. We have an impressive initiation service in which the new member is taught the meaning of our emblem. Our kodak picture is enclosed.

From your friend,
WILMA SIMMS, President.

N. B.—The above letter was received without address, but as it contains some original club ideas it is printed for the benefit of other clubs.

DEAR JUNIOR ETUDE:

While in Old Mexico last summer I had an interesting musical experience.

Upon our arrival in Monterey we rented an apartment. Like all buildings there, it looked more or less like a jail, as there were bars across the windows. We thought there must be many thieves in this country that we knew so little about.

Soon after turning out the lights that night we heard a noise outside our window. We saw two men in dark suits standing there. One had something that resembled a small saw, and was rubbing it as though he were greasing it.

We were frightened, but when the first musical note sounded from the violin, we understood that they were serenading us. The songs they sang were beautiful; and we were sorry we had not trusted them at first.

From your friend,
BARBARA ANN HALL (Age 10),
Arkansas.

??? Ask Another ???

1. How may the following—a quarter note, two eighth notes, a dotted eighth note, a sixteenth rest, two sixteenth notes, and an eighth rest, when added together, be expressed in one note.
2. What are the notes of the diminished seventh chord, key of D minor?
3. Who wrote the opera "Tannhäuser"?
4. When did Haydn die?
5. What is a triplet?
6. What major scale is the relative of the minor whose signature is six flats?
7. Did Handel write any symphonies?
8. What was Schumann's first name?
9. To which class of instruments does the piccolo belong?
10. What is the lowest tone playable on the violin?

(*Answers on this page*)

Answers to Ask Another

1, One whole note. 2, C-sharp, E, G, B-flat. 3, Wagner. 4, 1809. 5, The result of dividing one note into three notes of the next smaller time value. 6, G-flat. 7, No. 8, Robert. 9, Woodwind. 10, G below middle C.

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl, under sixteen years of age may compete, whether a subscriber or not, and whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.

Subject for story or essay this month, "Music out of doors." Must contain not more than one hundred and fifty words and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by June eighteenth. Names of prize winners and their contributions will appear in the November issue.

RULES

Put your name, age and class in which you enter on upper left corner of paper, and put your address on upper right corner. If your contribution takes more than one sheet of paper do this on each sheet. Write on one side of paper only.

Do not use typewriter and do not have anyone copy your work for you.

When schools or clubs compete, have a preliminary contest first and send in no more than two contributions from each class, A, B and C.

Competitors who do not comply with all of the above rules will not be considered.

My Favorite Composition
(Prize Winner)

MY FAVORITE composition is the second movement of the Beethoven "Sonata, Op. 49, No. 2," called *Tempo di Minuetto.* The sonata is the most perfect form of piano music.

This *Minuetto* is really in the *rondo* form and was written in Beethoven's early youth. Perhaps it was written for his little friends; and I think that is why I like it.

In this the main theme sings along joyously, followed by an episode introducing a second theme. Then with a return to the main theme it introduces a second secondary theme. Then it returns to use the first again, before it ends up with a coda. It is because I understand the form that I like this piece so well.

The *Minuetto* is both sweet and powerful and holds the attention of the listener as well as the performer. I will enjoy learning more of Beethoven's music.

HENRY WILLIAM PRATT (Age 10), Class C.
Massachusetts.

B-Natural Rhythm Band, Barry's Bay, Ontario

My Favorite Composition
(Prize Winner)

MY FAVORITE composition is the *Largo from "Xerxes,"* by Handel. Recently an initiation of the Honor Society was held in our school and the music teacher played this as the Honor Members, in their vestments, marched up the aisle carrying lighted candles. This beautiful ceremony was made more impressive by the magnificent chords of Handel's *Largo.* When at last the society members stood together on the stage, with their torches held high, the dignified, resounding chords reflected the light of victory on their faces, for these students had obtained the highest honor bestowed on any high school pupil.

After having seen this impressive service I was inspired to learn this *Largo* which has become my favorite composition.

SARA COBLE (Age 15), Class A.
North Carolina

BUGLE
BOW
L
KEY
LUTES
GUITARS
MANDOLINS

Prize Winners for March Puzzle:

Class A, Zana Webb (Age 15), Virginia.

Class B, Mary Katherine Bayless (Age 11), Texas.

Class C, Robert McCauley (Age 9), Ohio.

My Favorite Composition
(Prize Winner)

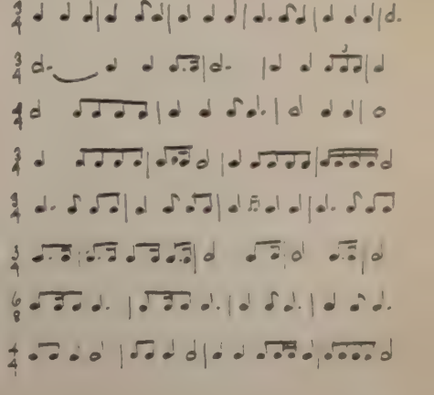
MY FAVORITE composition is the *Minuet in G,* by Beethoven. Often it brings the picture to my mind of a beautiful ballroom filled with graceful ladies and gentlemen in wigs and pompadours, gliding about the room to the lilting rhythm of the *Minuet.*

In his box the director is waving his baton. Up on the veranda couples are strolling back and forth, watching the women in their wide hoop skirts and the men in silk and lace and silver buckles sway to the rhythmic movement.

Much homage should be paid to Beethoven for his wonderful contribution to the "minuet world" in which his charming *Minuet in G* shall live and be loved for ever.

HELEN DAMBACH (Age 12), Class B,
Missouri.

Honorable Mention for March Essays:



Marjorie Nichols; Virginia True; Janet Hatcher; Dorothy Drake; Mary A. Coffin; Lee Howard; Erna Cooper; Betty Jane Cooper; Virgina Hough; Alice Rebello; Betty Feehery; Lois Weisbach; Eleanor C. Rosekrans; Rose Capodire; Mary Elise Semmer; Marjorie Metzgen; Anna Marie Solbach; Helen Irene Scholl; Phyllis Wyman; Sue Bell; Helen Politis; Mary Throop; Helen Hamilton; Hilton Denine; Ryra Smith; Helen Anderson; Franses Cristina; Arlene Jacques; Eloise Trometre; Elizabeth Seamans; Keiko Haga; Nancy Carlisle; Sylvia Trop; Mary Tonn.

Honorable Mention for March Puzzles:

Rita Elaine Scogna; Eloise Trometre; Hilda Anderson; Morris Manners; Mary Kathryn Kane; Drusilla Evans; Julia Jane Brooks; Nancy Wayne; Leonard Danielson; Jean Andrews; Leonie Dangoise; Louis A. Bonelli; Gloria Roth; Betty Macligan; Betty Jane Cooper; Theodore Wolfe; Mary Katherine Bayless; Fiorina Muratori; Janet Hatcher.

Rhythm Puzzle

Each of the following represents the rhythm of a well-known melody. How many of them can you identify?

Letters from Etude Friends

A Song of Jubilant Success

By A Very Adult Beginner

To The Etude:

Occasionally I notice an article in The Etude, by some prominent instructor of music, intended to encourage the "adult beginner," and that tells what may be accomplished in music by the would be pupil more than thirty years of age.

I would like to present a beginner's experience. I am part German, English, Yankee, and all American—born on a farm near Erie, Pennsylvania, and I am seventy-one years old. In 1923 I bought a second hand piano, of reliable make, which still retained a good tone. I could not play at all on it, but I knew the letters of the keyboard. I immediately sent for the three copies of The Etude that I saw advertised, and the "Adult Piano Beginner's Book," by Caroline Norcross. I soon subscribed for The Etude; and gradually I got "Album of Scales," "Album of Octaves," "Album of Arpeggios," and "Album of Trills"; succeeded later by Schubert's "Album" and Christiani's "Principles of Expression in Pianoforte Playing."

I read—yes, I study—every copy of my musical magazine. I could not sing by note, but by working on simple pieces, singing notes of instrumental studies and the songs, I can now learn all of some vocal selections without the instrument and can play many of the accompaniments. I could play all of them if my fingers had a little more stretch. I can play all of the music through grades three, four and four-and-a-half, after considerable practice; and I can play also many numbers from Schubert rather satisfactorily. I am now trying grade five. I took fourteen lessons, but not until 1926.

We live on a farm and I do the work that a farm woman usually does—practically without help. I studied beekeeping, take care of the honey and help at swarming seasons; and I also assist during the season for marketing strawberries—about three months.

It is evident that when the day's work is over, I am not fit mentally or physically for much progress; but my fingers and wrists are gradually becoming more flexible, my brain correlates better with the muscles, and imagination takes higher flights. The fingering is very much better, also there is more correct time and a better understanding of phrasing. I try very hard to concentrate when I play, but that is a difficult matter for a tired housekeeper; however, I notice improvement every day. I mentally study the more difficult phrases when working about the house, and the words and tunes of songs while churning.

Of almost greater value to me than being able to play a little is the enjoyment that comes from knowing more about music and musicians, the acquiring of a better appreciation of music, and the ability to talk with some intelligence to musical people. I have accomplished very little for the length of time that I have had my piano; but that is worth a great deal to me. I expect to practice, not merely to play, as long as I can see or sit at the piano.

But who would not enjoy music where the mocking birds sing hours at a time through the day and part of the night, where for weeks the air is filled with fragrance of orange blossoms and where roses bloom all the time?

—Mrs. Carrie G. Davidson (Texas).

The Tremolo on Fretted Instruments

(*Continued from Page* 410)

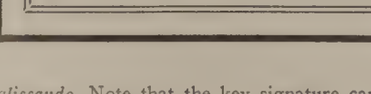
art Thou, and this type of tremolo is employed in a number of other arrangements of well known melodies by the same master.

For the proper execution of the three finger tremolo, evenness and smoothness of the finger action is essential. The third finger, being generally the weakest one, special exercises should be used to strengthen it. Excellent practice material for this purpose can be found in "Six Caprices, Op. 26," of Carcassi, *Etudes 2, 3, 4, 7, 13* from "Op. 50" of the same composer, the "six Capriccios," of Luigi Mozzani and "Preludes, Op. 83," of Mauro Giuliani.

The chapters on "Tremolo" in the Second Book of the "Foden Grande Method" and the "Albert School for Guitar" also contain examples, exercises and valuable hints in connection with this important phase of guitar technic. In the past few months there have been a number of letters containing questions regarding the tremolo, and it is hoped that the foregoing suggestions will prove helpful.

The Accordion Glissando

(*Continued from Page* 407)



Ex. 3

is always successful when aided by the wrist being raised slightly higher than the normal position. The thumb must be bent away from the hand and the two fingers curved in the direction opposite to the *glissando;* that is, the fingers bent into the palm in the ascending *glissando* and away from the palm descending. This is accomplished by pivoting the hand at the wrist. Like the single note *glissando,* the wrist resumes its normal position over the keyboard approximately half way up the *glissando.* Note that the key signature can be observed only on the given notes; the notes of the actual *glissando* can be played only on the white keys. In the second measure, move the thumb from C-sharp to D before the upward movement.

The chord *glissando*

Ex. 4

of four or five notes must have each finger prepared accordiing to the rules given for the preceding two and three tone figurations. The chord *glissando,* being heavier in character, must of necessity be more relaxed and slower in speed. Broadly speaking, the notes will occupy three quarters of their given time value, allowing the other quarter for the *glissando.* In this example, each half note chord will be given the time value of a dotted quarter note.

In the first chord, the thumb must slide from C-sharp to C-natural at the precise moment the *glissando* is begun. Give impetus to the *glissando* by beginning with the wrist high and finishing with the wrist low on the second chord, then raise it again immediately to prepare for the following *glissando.*

It is suggested that the single note *glissando* be perfected before advancing to the one of double notes. This, in turn, should be played perfectly, before the triple note is attempted. Tenseness of the finger muscles is to be avoided.

The best results will be obtained by slow practice at the beginning. Do not attempt to accomplish this feat during one practice period. It is best to practice it for a short period only, at the beginning, and then to resume regular practice studies. After a period, return to the *glissando* practice again. Always have in mind the note or notes upon which the *glissando* will end for that is your goal and should be sounded distinctly.

Pietro Deiro will be pleased to answer questions about accordion playing. Letters should be addressed to him in care of The Etude.

"A man who will not hear both sides of a question is dishonest."—Abraham Lincoln.

Next Month

A JULY ETUDE FESTIVAL OF INTEREST

Just the kind of issue that will hold your interest on the hottest day of July; and yet an issue filled with practical articles you will want to read over and over again

CARVE OUT YOUR OWN CAREER

Ferde Grofé, writer of some of the most successful orchestral music of the hour ("Grand Canyon Suite"; "Mississippi Suite"; and others), who made the phenomenal orchestration for George Gershwin's *Rhapsody in Blue*, tells his life story. And, oh my, what a story! You will be held by every word.

BIDU SAYAO

IMPORTANT PRACTICAL HELPS FOR THE VOCALIST

Isidore Luckstone, who accompanied practically all of the great singers of the late decades, and who has taught many famous vocalists, gives priceless advice to students of singing.

WOMEN IN ORCHESTRAS

A chair and stand in the ranks, or even the conductor's desk and baton of the symphony orchestra offer great and growing opportunities for women. Miss Frederique Petrides tells about the famous feminine symphonic organizations and conductors of the day.

MUSIC AND DANCING IN SIAM

"Bang!" go the cymbals; and "Bong!" go the gongs. The dancing girls are coming. The American composer, Lily Strickland, again opens the door to the mystic East and its music. Like her other articles, reflecting her years of residence in the Orient, this is alive with interest.

ART MEANS PREPARATION

The brilliant new Brazilian prima donna, Bidu Sayao, who made such a success at the Metropolitan this year, talks intimately to singing students about voice building. It is a practical, sensible article, with an exotic Latin-American flavor which will charm the reader.

OTHER INTERESTING ARTICLES and special features by distinguished teachers and musicians, PLUS 24 pages of interesting new music to play and sing.

Musical Books Reviewed

Getting Results with Schoo Bands

By Gerald R. Prescott and Lawrence W. Chidester

Of all the great number of books related the phenomenal school band movement America, which have appeared in recent yea we have seen none more practical than th one by Gerald R. Prescott and Lawrence W Chidester, entitled "Getting Results wi School Bands." The writers give the great revered Will Earhart, of Pittsburgh, full cred for the initiative which started this gre movement in which so many thousands young people are now so happily and profitab engaged. Mr. Earhart made his pioneer move Richmond, Indiana, in 1889. Since the Wor War the movement has advanced enormousl

The writers are convinced that by interes ing thousands more of children in music the public schools, the interests of the priva teacher of music, who is capable of carryi on the work started in public schools, will i evitably benefit. Chapter heads, such as "I citing Interest in Instrumental Music"; Five-Point Band Curriculum"; "Beginni Band Classes"; "The First Band"; "Section Rehearsals"; "Technic Classes"; "Solo ar Chamber Music Playing"; "The Summer Bar School"; "Schedule Making"; "The Ban Library"; and so on, all indicate the varie and practical nature of the volume. It is exce lently illustrated and documented and w become the daily pocket companion of bar teachers for years to come. One interestir aspect of the work is that Mr. Prescott had h training in the Middle West and Mr. Chidest in the East.

Medals Made of Stars

By Doris Meservey

Attractive medals may be made by stick ing gold or silver stars over colored star with the points alternated.

If the pupil has practiced his study, h usually is able to earn the first, or colore star in one lesson. Then by the next wee the ambitious student will be prepared t try for the rest of his "medal."

With this method the teacher can kee also the slower child encouraged by tellin him when he is almost ready for a sta The young pupil enjoys choosing the colo combinations of a medal, and he almost in variably matches the book covers. Th bright "Red Beginners' Book" presents very gay appearance when it is decorate with red and gold medals.

Another point in favor of this way o marking the books is that the parents ca follow the progress made at each lesson.

Curious Concert Notes

The elasticity of the English languag is shown by the following facsimile of a advertisement which appeared in a leadin magazine of the amusement field. Th word, concert, of course refers to the "afte show" given after a circus performance t comb in a few extra shekels. Wrestler are not ordinary concert attractions. In cidentally, a "clem" is a free fight for al in which pistols and anything handy ma be used. Some concert!

WRESTLER

Wanted for Concert

One who knows what it's all about, a man who will go out and dig up a towner who has some local following and color and not depend on using a box off props. Must be able to put on a show, beat up the tip and blow them off without starting a clem and getting pistol whipped by the natives. Want a man who is tough in the ring; not around the office wagon or cook house. To a man that can qualify will guarantee him he won't have to act as nurse maid to the boss' dog.

INVEST YOUR MUSIC MONEY WISELY

WHY IS the Bible the cheapest book in the world? Why can you purchase the complete works of Shakespeare at less than the cost of the latest novels?

The answer is simple—mass production; no royalties; constant demand.

By the same token you can buy Beethoven's "Moonlight Sonata"—15 pages of the world's best music—for only 15c. In the CENTURY EDITION.

Beautifully printed, carefully edited, the best of paper and workmanship throughout.

Think of it! Over 2,900 selections to choose from and none of them cost more than 15c. a copy. Century Sheet Music is truly dollar value for 15c.

TEACHERS who are today supplying their pupils' needs from the Century catalogue are making it possible for many parents to continue their children's musical education, and its low cost is likewise aiding them in their new student enrollment.

That's why we say, "Please Ask for Century Edition." You will get a new conception of your money's worth.

*2452 Valse Triste, Op. 44, G—4—5 Sibelius
*1697 Waltzing Doll (Poupee Val.), D—4 Poldini
2367 Waltz of the Flowers, D—4 Tschaikowsky
2747 Watching the Soldiers, G—1 Hopkins
2698 Wayside Chapel, F—3 Wilson-Grooms
455 Wedding March, C—5 Mendelssohn
2695 Whoop 'Er Up! (March) G—3—4 Wood

VIOLIN AND PIANO DUETS, 15¢ each

Each number has separate parts for Violin & Piano
A—1 to A—3 Very easy to medium
B—1 to B—3 Easy to difficult
C—1 to C—3 Medium to concert solos

1445 Arminta, Waltz, A—2 Greenwald
*2471 Barcarolle, (Simp.) A—3 Offenbach
1276 Bohemian Girl, Trans., A—3 Winner
1935 Cradle Song, A—2 Schumann
1625 Daisies and Lilies, Valse, A—2 Greenwald
*2104 Elegie (Melody), Op. 10, B—3 Massenet
1274 Evening Song, A—1 Vogt
2723 La Golondrina, B—2 or C—1 Serradell
*1833 Love's Greeting, B—2 Elgar
1458 Old Folks at Home, A—2 Foster
*2410 Orientale, B—3 Cui
1271 Romanza, A—1 Vogt
1265 Soldier's Song, A—2 Vogt
2176 Spring Song, A—3 or B—3 Mendelssohn
*1835 Swan, The, B—2 Saint-Saens
2497 Turkey In the Straw, A—3 or B—2 Grooms
*2080 Valse Bluette, B—2 Drigo

* These numbers cannot be sold in Canada.

The Century Catalogue contains over 2,900 compositions consisting of PIANO SOLOS—DUOS and TRIOS—VIOLIN and PIANO — DUOS — TRIOS and QUARTETS—SAXOPHONE and PIANO—MANDOLIN and GUITAR and VOCAL.

Ask your dealer for Century music, and if he can't supply you, send your order direct to us. Our complete catalogue will be mailed you FREE on request.

Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

MME. BLANCHE MARCHESI

MME. BLANCHE MARCHESI, daughter of Mathilde Marchesi, most famous voice teacher of the last century, and herself a for long famous singer and teacher in London, gave on March 29th, her seventy-fifth birthday, a song recital in historic Wigmore Hall. It is reported that Mme. Marchesi "demonstrated that, given normal circumstances, a properly trained voice will retain much of its beauty through life"; and that "her style must have reminded the elder generation of the great singers of the pre-war days."

THE FOURTH ANNUAL STATE MUSIC FESTIVAL of the stringed and fretted instruments was held on June 12th, at the Mosque Theater of Richmond, Virginia, under the leadership of Andy Ferry of Norfolk, Virginia.

DR. CHANNING LEFEBVRE played on May 4th his one thousandth recital on the organ of Old Trinity Church, New York.

DALIES FRANTZ, the enormously talented young American pianist, achieved fresh laurels, "for virtuoso technic and interpretative skill," at his recent Town Hall recital in New York.

"THE ABDUCTION FROM THE SERAGLIO," one of the most popular of Mozart's operas, in Europe, was given a spirited and vocally adequate production on the evening of April 6th, by the Juilliard Opera School, the first time that it had been heard in New York since performed in 1928 by the American Opera Company.

ARTURO TOSCANINI, having refused to conduct at Salzburg, and Bruno Walter, who resigned from the State Opera of Vienna when Austria was absorbed by Germany, are said to be working on a plan to create a movement that will rival Salzburg, probably with Versailles, France, as a favored location. Why not an American community become ambitious?

ROMAN TOTENBERG

FOUR VIOLIN CONCERTOS in one week were heard over the large networks of American radio during a single week of early March. The soloists were Efrem Zimbalist in the "Concerto for Violin" by Sibelius, with the New York Philharmonic-Symphony Orchestra; Roman Totenberg in the "Concerto in E major" on an All-Bach Program of the Eddy Brown String Orchestra, while on the same program, Brown and Totenberg played the "Concerto in D minor, for two violins"; and the thirteen year old prodigy, Arnold Belnick, in the "Concerto in B minor" of Saint-Saëns, with the Alexander Smallens Symphony Orchestra.

THE JOHANNESBURG MUSIC FESTIVAL (South Africa) in February-March, offered three operas—Gounod's "Faust"; Mozart's "Don Giovanni" and Nicolai's "Merry Wives of Windsor." Orchestral programs included the usual larger works of Beethoven, Brahms, Bax, Rimsky-Korsakoff, Dvořák and Wagner, with one concert devoted to Elgar and including the "Violin Concerto."

A "CONCERTO FOR PIANO AND ORCHESTRA," by Anton Bilotti, had its first public performance anywhere, when on the program of March 21st, of the National Orchestral Association at Carnegie Hall, New York, with the composer as soloist. Mr. Bilotti was born in New York, studied in Italy, and until recently lived in Paris.

THE FOURTH ANNUAL PENNSYLVANIA FOLK FESTIVAL, held at "Gray Towers," the picturesque castle and estate of the Music Department of Beaver College at Jenkintown, Philadelphia, on June 18th, opened with a choral work, "Songs of Remembrance," with its text by Harvey M. Watts, its musical setting by Johann M. Blose, and sung by the Strawbridge and Clothier Chorus under the direction of Dr. Herbert J. Tily.

R. NATHANIEL DETT'S oratorio, "The Ordering of Moses," had its first performance in New York when recently given by the Oratorio Society, with the coöperation of the Juilliard Orchestra, and with Albert Stoessel conducting.

"LE JONGLEUR DE NOTRE DAME," by Massenet, made famous to Parisian and American audiences of the last generation, by the volatile Mary Garden, was recently heard for the first time at historic La Scala of Milan, with a remarkable success.

BERNARD WAGENAAR'S "Triple Concerto for Flute, Harp and Violoncello" had its world première when on the program of March 18th of the Philadelphia Orchestra, with Eugene Ormandy conducting. The work was composed for Georges Barrère, Carlos Salzedo and Horace Britt; and this trio of artists were the soloists on the occasion mentioned.

FREE MUSIC FOR WEDDINGS is a provision made by the municipal government of Burtscheid, Germany. The town will provide "a musical program for all marriage celebrations, free of charge."

DANNY FULLER AND EVERETT O'BANNON, each five years old, not yet in school but pals and duo-fiddlers, recently won first place on an Amateur Show program given by the Elk's Lodge of Artesia, New Mexico.

"THE TALES OF HOFFMANN" by Offenbach has been banished from the State Opera House of Vienna. Thus may the works of perhaps the most popular light opera composer of all time be denied to the people of a nation by a misguided dictator.

A "CONCERTO FOR ORGAN AND ORCHESTRA" by Leo Sowerby had its world première when on the programs of April 22nd and 23rd of the Boston Symphony Orchestra, with Dr. Serge Koussevitzky conducting and with E. Power Biggs as soloist. Dr. Sowerby was a guest of the occasion.

MUSIC AND ELECTRICITY was the theme of a program and demonstration of the League of Composers of New York City on the evening of May 5th, at the Town Hall Club.

THE FIFTH ANNUAL BERKSHIRE SYMPHONIC FESTIVAL of the Boston Symphony Orchestra, with Serge Koussevitzky as conductor, will be held from August 4th to 14th, at "Tanglewood," the new Berkshire Hills retreat of the organization.

DR. CYRIL BRADLEY ROOTHAM, eminent British organist, for many years the organist and choirmaster of St. John's College, Cambridge, and conductor of the Cambridge University Musical Society, died on March 18th, at the age of sixty-two.

ERNEST BLOCH'S opera, "Macbeth," has had a revival at the San Carlo of Naples. It is now twenty-seven years since the work was heard at the Opéra-Comique of Paris.

THE RADIO SYMPHONIC ORCHESTRA of Bucarest, Roumania, lately gave the entire cycle of symphonies by Beethoven, on a series of programs conducted by Georges Enesco.

A FORTY-FOUR BELL CARILLON will peal forth from the Tower of the Sun on Treasure Island, during the Golden Gate International Exposition of 1939 in the heart of San Francisco. To be made in the famous old bell foundry of Gillett & Johnston, of Croydon, England, the carillon is a gift from Dr. Nathaniel Coulson, and after the World's Fair it will have a permanent home in the tower of Grace Cathedral of San Francisco. The largest bell will weigh six tons and, will be audible for five miles.

THE SAN CARLO OPERA COMPANY, with the redoubtable Fortune Gallo at the helm, sailed into New York's operatic port for a short season from May 5th to 15th, at the Center Theater. This was, incidentally, a celebration of the twenty-fifth anniversary of the first New York season of this company which has done a unique service in popularizing opera in America.

THE "CONCERTO IN B-FLAT," for piano and orchestra, by Isidor Achron, had its world première when on the program for December 9, 1937, of the Philharmonic-Symphony Orchestra of New York, with John Barbirolli conducting. It was also heard in Paris on April 3, 1938, at a concert of the Colonne Orchestra under Paul Paray. On each of these occasions the composer was soloist.

SIGMUND ROMBERG

THE LOS ANGELES CIVIC LIGHT OPERA ASSOCIATION presented a Romberg-Kern festival of four weeks beginning on May 16th, with "Blossom Time," "The Student Prince," and "Moon," by Sigmund Romberg, and "Rob by Jerome Kern, each filling a week re tively. The composers prepared their v for presentation. Why not a similar orga tion in every American community o sonable size?

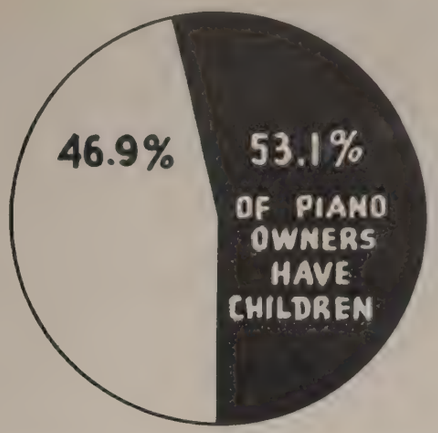
MUSIC STUDY IN MEXICO recei great impetus when, at the National gress of Music Education held late Mexico City, President Cardenas publ a decree making the teaching of music pulsory not only in the grammar and schools but also in the kindergartens.

SAUNDRA MAAZEL, five year old v ist, and daughter of Marvin Maazel widely known pianist, shared honors recent Los Angeles violin-piano recital her father, when she "played with poise amazing command of her instrument."

A NEW SCHUBERT WORK, the movement of a "Quartet in C minor," ported to have been discovered among archives of the Friends of Music of Vi

LUCIE STERN, widely known pi died in her Philadelphia home on May aged twenty-four. She first played in p at Riga, Russia, at the age of six; and studies were finished by six years of s under Josef Hofmann, at Philadelphia. début with the Philadelphia Orchestra made in 1925. In December last she retu from successes in London, Paris and Am dam.

THE CHICAGO SYMPHONY ORCH TRA, with Dr. Frederick Stock conduc lately offered two violin soloists in one w when Nathan Milstein played the "V Concerto in A minor" by Goldmark, Georges Enesco was heard in the "V Concerto in D major" by Mozart. E also led the orchestra in his own "Symp in E-flat."



HOPE TEMPLE

HOPE TEMPLE (in private life Mme. André Messager) died on May 10th at her home in London. The widow of André Messager, eminent French composer, under the *nom de plume* of "Hope Temple" she wrote many successful ballads, among which *My Lady's Bower* and *Auf Wiedersehn* became world famous. Mme. Messager was born in Du of English parents. With a decided me gift early apparent, at ten she prod quite original pieces.

OUT OF 4800 INTERVIEWED, 2235 DO NOT OWN PIANOS

OUT OF 2565 PIANO OWNERS, 1362 HAVE CHILDREN

The Piano and To-morrow

THE piano is now a little over two hundred and twenty-five years old. Preceded as it was by other keyboard instruments, it embraced a literature that had been developing for many centuries. The first keyboard string instruments came along in the early part of the fifteenth century (from 1400 to 1440). The art of playing upon the keyboard therefore goes back at least five centuries and antedates the discovery of America. In fact it reaches back almost to the days of the last crusades. Cristofori, the inventor of the piano, was a contemporary of Antonio Stradivari, the great violin maker. While Stradivari's work upon the violin was more in the nature of an evolution resulting from inspired craftsmanship, the work of Cristofori was definitely that of an inventor producing a new kind of instrument. The piano appeared first about 1700. The development of this instrument facilitated the growth of all musical art; and, from a purely practical standpoint, entirely apart from its artistic values, it remains the structural vertebrae of all musical accomplishment to this day. This is said with all due deference to the importance of all of the other instruments in the progress of music.

Up to about 1927 the employment of the piano showed an almost uninterrupted line of ascent in popular favor. Then came the days of world confusion; the varied conditions of the domestic economy, resulting in restricted living quarters in the great cities; and finally the radio, which many thought would annihilate all musical performance except that of the professionals. Some people could not conceive that the modern increase in leisure, the frantic stress of living conditions to-day, together with the unparalleled advertisement given to music by the radio, would combine to make the piano in the home more needful than ever; as it forms the easiest and shortest road to a musical knowledge of a practical and comprehensive type and supplements all other study of music through other instruments. Therefore recent investigations in this field must be of great interest to all musicians.

We have before us a sixty-five page survey of the piano markets of to-day, as prepared for the National Piano Manufacturers Association, by Lawrence H. Selz of Chicago. In the preparation of this brochure there was elaborate inquiry to ascertain what might be the possibilities of the instrument from a purely commercial standpoint.

As this survey is a kind of "straw vote," showing which way the winds of popular favor may be blowing, we are here publishing these comments for the information of those interested in the piano, from a home as well as from an educational standpoint.

Questionnaires were sent out to forty-eight hundred homes, and then individual investigators visited those homes and tabulated the facts secured. The communities visited included two western metropolitan cities (Chicago, Illinois; and St. Louis, Missouri); two cities in the 100,000—200,000 class (Springfield, Massachusetts; and Nashville, Tennessee); three cities of the 10,000 to 100,000 class (Elmira, New York; Waco, Texas; and Springfield, Ohio); four villages and small towns (Carroll, Iowa; North Platte, Nebraska; Huntsville, Alabama; and Waynesboro, Pennsylvania). The families were divided into the wealthiest people of the community (Class A); those of more than average income (Class B); those of the middle class (Class C); and those whose incomes were small and uncertain (Class D).

Taking the group as a whole it was found that 53.4% own pianos, while 46.6% do not. If the group selected is representative, this report would mean that there are now 5,865,296 families in America owning pianos. Our own estimate, judging from correspondence, from personal travel, and from a record of the number of pianos, is that this figure is far too conservative. In fact, we would be surprised if it should not be twenty-five percent greater.

The larger number of pianos is owned in Class A, but this number is strangely affected by localities. For instance, we find in towns of 20,000 ten percent more piano owners than there are in the great cities.

Fifty-six percent of the homes with children have pianos. Apart from economic restrictions, this proportion seems to us unfortunate. Unless this is an indication that the people of very slender means, which would prevent the purchase of a piano, are the families with the most children. However, fifty-six percent of the whole represents an enormous purchasing power.

There are three upright pianos for every grand in the country. Of course, this depends upon the family means. In the wealthy homes there are approximately two grands for every upright; while in the class of those with the least means, there are only two percent who own grand pianos of any description.

The average life of the piano in the home is seventeen years, according to this estimate. We know of many homes which have pianos which have been used for home study purposes for thirty to forty years, and which are still in fair condition. The life of a piano depends largely upon use. Like an automobile, it depends upon how many scale miles have been run upon it. There are thousands of pianos over ten years of age, which should be junked. They are dead pianos, because they are worn out or have been sub-

jected to playing and other conditions which have put them beyond practical use. As we have formerly said, an automobile over ten years old is entirely outmoded; but many families hold sentimentally to "mother's old piano" for years after it should have been cremated. The survey showed that eight percent of the pianos were from sixteen to thirty years old. In fact, the ratio of new pianos under fifteen years, to those over fifteen years, is only fifty-two to forty-eight.

Upon what basis do people buy new pianos? The survey shows that the principal reason is tone; then the reputation of the maker; then the style of the case; and last the price. We would suggest that the first consideration should be the reputation of a maker. Salesmen influenced two hundred and one sales out of the whole group selected, and the advice of musical friends and teachers influenced two hundred and sixty-five, which indicates that the musical folk do more toward sales than the dealers' sales force. Of 4210 families consulted, almost forty percent said that they would not purchase a piano without consulting a teacher.

Here is an interesting figure. Out of 1426 who had never owned pianos, twenty-three percent were considering their purchase. It was also found that out of the entire number of families interviewed, seven percent (768,859 families in the country as a whole) were considering immediately buying pianos. This is a most encouraging figure, indicating a probable advance which should be of immense interest to dealers, manufacturers and music educators.

How serious is the interest of the prospective purchaser? Nearly forty percent would like to learn in the first year. Forty-six percent would like children to receive group lessons; in fifty-seven percent of the families at least one member can play.

Do not discount the influence of style upon the purchaser. According to the survey, its influence is very great. The educational appeal rates higher than the cultural or the social appeal. According to this survey, magazines on the whole influence more sales than newspapers, and magazines influence five times as many sales as the radio.

The figures of this survey substantiate in general our experience over a period of many years. The permanent appeal and usefulness of the piano, however, is based upon the simple fact that the keyboard of the instrument enables the player to create with his ten fingers, the entire breadth of the tonal fabric in satisfying and delighting form. It may truthfully be said that this is possible with all keyboard instruments. The piano enables one to penetrate the structural beauties of the great orchestral and operatic works. Practically all singers and players of other instruments, are dependent upon it for accompaniments. In addition to all this is the enormous repertoire of the instrument, which is the glorious accumulation of centuries of creation by the greatest masters of music. The vastness of this priceless contribution to the art world, is hard to comprehend. Moreover, if one were to take away the piano, much of this marvelous music would be lost. For some inexplicable reason, many of the finest works which Bach, Haydn, Mozart, Beethoven, Liszt, Chopin, Debussy, Ravel, and even Stravinsky, have written for the piano, suffer greatly when attempts are made to translate them to the orchestra. Remember that remarkable piano passage in Stravinsky's "Petruschka?" The sonorous quality, the percussive quality, the staccato clarity, the legato continuity, as well as the myriad pedal effects, are piano, and nothing but piano; and no instrument of any type has yet been found to take its place.

For educational purposes as a gateway to music, where harmony and counterpoint are introduced as the pupil progresses, the piano is irreplaceable. In fact, as we have frequently pointed out, the study of the piano has long been obligatory in practically all European conservatories, no matter what other instrument is studied as a major subject.

The amazing increase in musical interest, due to the epochal activity in public schools, the talking machine and the radio, makes a playing knowledge of the piano more valuable than ever. We confidently predict a great advance in piano sales in the future and a corresponding increase in interest in piano study.

The Passing of a Genius

AT THE MOMENT of going to press we have learned the sad news of the passing of Dr. Preston Ware Orem, noted theorist and editor, and for many years the Music Critic of the Theodore Presser Company. Dr. Orem was a man of extraordinary mentality and unusual training. For years he sat side by side with the late Theodore Presser, learning from that great educator many of the principles of selecting desirable and important educational musical materials, which have been responsible for much of the success of this firm. Other activities and ill health led, some years ago, to his retirement from the Theodore Presser Company. He was, however, recently engaged in doing much special work for our interests. In this issue of THE ETUDE MUSIC MAGAZINE is presented an excellent and very readable article from his pen.

Owing to his long daily occupation as a music critic, Dr. Orem was compelled to neglect his very obvious gifts in the field of original musical composition. He unquestionably had talents which can only be described as very great, as is evidenced by his *Indian Rhapsody*, originally written for piano, but for a year played on tour, and with great success, by the Sousa Band. He had completed a suite in four parts, "Out of the West," and, at the time of his passing on May 26, 1938, was rehearsing it with the orchestra of a Philadelphia high school. Just at the end of the composition he fell from the conductor's stand and never regained consciousness, passing in action as he would wish.

Dr. Orem was splendidly grounded in the classics, with a deep fondness for Bach and Beethoven. He bore an almost uncanny resemblance to Beethoven, which was continually noted by visitors. He was abreast with the best modern music and recent technic of composition. His best known works are his "Harmony Book for Beginners," his "Theory and Composition of Music," and his "The Art of Interweaving Melodies," all theoretical books of great value, which have been very extensively used. As a teacher of harmony he assisted many composers with his very lucid and practical expositions of theoretical problems. He was an excellent organist and an able conductor; and for some years he directed the Presser Choral Society, in which he took a great interest.

Dr. Orem was an American of Scotch-English ancestry, brought up in Philadelphia. He was the first student to graduate from the University of Pennsylvania with the degree of Bachelor of Music. His degree of Doctor of Music was conferred by Ohio Northern University. He would never permit the publication of his birth date, but it is understood that he was seventy-three years of age.

His passing removes a distinguished and unusual figure from American musical activities; but he left in his books a valuable and lasting contribution to art and to musical education.

Carve Out Your Own Career

From a Conference with the Well Known Composer, Orchestral Arranger and Radio Conductor

FERDE GROFÉ

Secured Expressly for The Etude Music Magazine

By WILLIAM ROBERTS TILFORD

AS MR. GROFÉ'S ARTICLE is partly biographical, we may dispense with our customary introduction. He has carved out a very distinctive and unusual career himself—a career which reaches into many fields. His genial and magnetic personality will be felt throughout the following conference. Mr. Grofé has conducted with great success the Hollywood Bowl Orchestra, The Philadelphia Orchestra at a huge concert, in the Municipal Auditorium of Philadelphia, and the N. B. C. Symphony Orchestra. His concerts at Carnegie Hall have attracted vast crowds. His "Grand Canyon Suite," "Mississippi Suite" and "Tabloid Suite" have commanded the wide and enthusiastic attention of serious musicians and have been played with pronounced success by symphony orchestras here and abroad, including the Philharmonic Society Orchestra of London.—EDITORIAL NOTE.

ALMOST THE FIRST THING I remember is writing notes. It seems that all my life I have been writing notes. It was the first thing my mother taught me before I knew how to write English, and I owe all my musical beginnings to my mother who was a very fine musician indeed. I was born on March 27, 1892, down on the East Side of New York City, between First and Second Avenues, when that section of the great Metropolis was composed largely of Germans, or descendants of Germans. My name was really Ferdinand Rudolf von Grofé, as my father, a well known baritone and comedian with the famous 'Bostonians,' was born in Braunschweig, Germany, of French Huguenot abstraction. My mother played the violin, viola and violoncello in a ladies orchestra at Feltmann's Open Air Garden in Coney Island, to which the respectable German burghers, who had migrated to America, resorted for their Sunday relaxation.

When I was a very little boy, mother took me to Los Angeles, where she again engaged in musical life. Her father was the first violoncellist in the Los Angeles Symphony Orchestra, and he had previously played at the Metropolitan Opera House in New York, sitting at the same desk with Victor Herbert. When mother started me in the study of the piano and the violin, when I was five years of age, the first had me to write page after page of notes; and somehow I have loved to write notes ever since. Then we went over to Germany, where I studied piano and violin for three years at Leipzig and Wildbad, while my mother continued her studies on the violoncello with the great master Julius Klengel. She became a violoncellist of eminent ability.

A Life's Work Begun

AT FOURTEEN I went to work as a book binder, and later I worked in two iron foundries, in one of which I was the paymaster at a very youthful age. Then I became a truck driver in Los Angeles, when truck driving meant handling a pair of heavy horses in a city of three hundred thousand.

There was something in my blood, however, which drew me musicward. I wanted to do better and finer things, and something told me that it would be a long, hard climb, and that I must work very, very hard to reach my goal. I got jobs in a theater as a stagehand, as an usher, and in the checkroom. This, of course, was night work, and it enabled me to study the violin and piano in the daytime.

A cornet player in San Francisco got me a chance to play in northern California, in a Shasta County mining camp. He was a versatile and resourceful chap who, in addition to playing, gave dancing lessons and also ran a dyeing and cleaning establishment in which I helped him. My work consisted largely in putting the clothes in vats of gasoline, letting them soak, hanging them out on the line and then pressing them. It was honest work, however; and, as I was engaged in music at night, I was happy because I was earning money. I was sixteen years old and making fifteen dollars a week.

After a short time, however, my cornet playing friend took French leave and left me stranded with a big board bill to be paid. The resort was about as tough as a mining town could make it, and that is the superlative of toughness. But, with it all, the people had hearts; and when I announced, on signs which I painted myself, "A Grand Ball to be given by Prof. Ferdinand Rudolf von Grofé of Los Angeles and San Francisco," I made enough money to pay the musicians I had hired at five dollars each, and to leave a balance sufficient to cover my carfare to Sacramento, San Francisco and Los Angeles. When I got to the ticket office of the railroad I lacked twenty-five cents; but, after a scolding, the ticket agent went down in his own pocket for a quarter and I was on my way. I had no food, but a lady of the Travelers Aid in Fresno gave me twenty-five cents which I promptly invested in fruit, ham and eggs. This kept me going until I reached Los Angeles, where my family welcomed me.

In Symphonic Stride

IN 1909 MY GRANDFATHER secured me a position in the Los Angeles Symphony Orchestra under Harley Hamilton. I played the viola, which I had studied under my grandfather. I remained with this orchestra for ten years. My grandfather, who was not at all interested in having me become a professional musician, nevertheless taught me the brass instruments, commencing with the Peckhorn, as the upright E-flat alto horn was sometimes called by circus and other performers. He also insisted upon having me rehearse with him all the parts I had to play at the symphony concerts. He would play the violoncello parts, and I would play the viola parts with him. It was like a pair of actors reading their parts with all the other parts missing. It just did not make sense; but he insisted upon it.

Most of all, in those days I had to make a living; and, as the symphony orchestra income was not then adequate, I did all kinds of other musical work, playing in ballrooms and theaters. Some of my colleagues thought that this was menial; but, since I have later learned that Brahms, Dvořák and others also played for dancing in taverns, I have changed my opinions. A Jewish friend has told me a saying from the Talmud which I consider very wise: "Do not be ashamed of any labor, even the dirtiest; be ashamed of one thing only, namely idleness."

In the meantime Paul Whiteman, who also had played in a symphonic orchestra for some time, established his very distinctive kind of a band. He was playing in San Francisco and, to the disgust of my grandfather, who looked upon anything that savored of dance music as "shoo-fly" music, I went to San Francisco and joined the Whiteman band, playing the piano. This was during Christmas week of 1919. I played with Whiteman for twelve years, and in that time was solo violin, librarian, assistant conductor, arranger and copyist for the swift moving organization on its extensive and memorably successful tours. There is only one Paul Whiteman, and he is inimitable. His innovations have been so unusual that they have had an effect upon musical art here and abroad. Whiteman was not afraid to dare, and this, combined with his own experience in a symphonic orchestra, has resulted in the creation of a new style of musical composition.

FERDE GROFÉ

A New Field Is Entered

SO MANY CALLS CAME from the outside, for my services as an arranger, that in 1924 I retired from active playing. At the same time I made many piano roll records for the Ampico Company, and many phonograph records. During this period I met George Gershwin and became very much interested in his talent and pronounced melodic gifts. He was then working upon his famous *Rhapsody in Blue*, and it came to be my task to adapt the orchestral arrangement for the band. There has been a persistent rumor that I was largely responsible for the composition of the piece. I am anxious to make it clear that this is not so, because it is the result of his unusual genius. I advised with him in the selection of certain materials. The beautifully sustained melody in the latter part of the composition was not originally in the piece, but in another composition. I realized the rich sensuous charm of this theme, now so widely known, and advised him to insert it in the work. The instrumentation of the work is, of course, entirely mine; but that would have been impossible without the brilliant composition in the first place. I never altered his fundamental harmonies, merely made them practical for the instruments and wrote counter themes where necessary.

There is an impression that my employment of harmony is the result of self-study. This is true to a large extent, but I have studied harmony or harmonies all my life.

since my first lessons with my mother. Later I studied with Charles Pemberton of the University of Southern California, and still later I was for three years with Maestro Pietro Floridia in New York. Of course there is the academic idea that fine musicianship is impossible unless the student is cloistered for years with strict harmony and counterpoint. I wonder!

I am personally a believer in the value of academic study of the theory of music, including harmony and counterpoint and form. It regularizes your knowledge and provides you with convenient pigeonholes in which to place your learning. On the other hand we see thousands and thousands of students who go through this somewhat grueling experience and never write a note that any human being could willingly listen to with pleasure. But Wagner, Rimsky-Korsakoff and Elgar, with almost no instruction, produced immortal masterpieces. Yes, I know all the rules, but I confess that they are not of as much help to me as my own ear, when I am writing. One never consciously thinks of grammar, when talking and writing; and there are thousands of people who have never studied writing or the technic of languages, but who are real masters of English. How did they get it? By hearing fine models for years, a sense of good taste is formed; and to my mind this transcends all rules. This tells the composer when the melodies are balanced, when the parts blend, when the effect is as the Germans say *Wirkungsvoll* (effective).

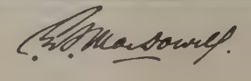
In learning a foreign language, while grammar is, of course, important, those who depend upon that alone rarely learn to speak the language itself. Think of the thousands of students who study French for one, two and three years in American educational institutions, and a few months after graduation are embarrassed when asked a question in French. On the other hand, American circus and vaudeville performers often come back from a tour of France, speaking colloquial French in a way which would surprise a language professor.

Very few people realize that one of the reasons why so many of the arrangements heard over the air are so effective is that they might be called "custom made." That is, they are made to fit the talents of a special group of men or instruments and might sound quite differently if played by another group. The arranger knows the special talents and training of the individual players, and he writes distinctive parts for each instrument in which the player's ability may be used to the best advantage. This may affect the color of the entire orchestration, as it determines the arranger in the difficult problem of assigning the melody and the main themes. In one group they might be most effective with the strings, while in another they might be more effective with the wood winds or even with the brass. In this the composer and the arranger must project his aural imagination and his experience ahead, so that he can hear in his "mind's ear" just the effect he desires to achieve. The one great law is, "Never to overarrange and always to keep the melody in mind so that it will not be lost or obscured." Another law of this modern treatment is to avoid as much as possible the "dum-dum-dum-dum" and "umpah" parts. Every voice in the counterpoint is made as melodic and fluent as possible.

The Arranger at Work

Of course, in arrangements intended to be printed the process is somewhat different. All parts are cued in so that the arrangement may be played by a number of different combinations, if certain instruments in a given group are missing. Brass instruments require a great deal of consideration. The horns seem to go well with almost all other instruments, but trombones are very tricky. In general, in writing the parts for the instruments the best plan is to make them as diatonic as possible, that is, to move to contiguous tones and avoid jumps or leaps. All these things are very important, as all conductors know. Andre Kostelanetz is reported to have a staff of six arrangers, each one a "stylist" who is particularly suitable for a special type of composition. The public does not appreciate the difficulty in producing an ideal effect over the air, nor what the radio has done to raise standards in this connection. The radio makes it possible for the conductor to remain at a distance and correct his own work, just as an artist might consider a painting. For instance, Mr. Kostelanetz makes it a practice, after a work has been rehearsed, to go to the control room where he can hear only the radio version. To this he listens many times, suggesting changes here and there, when necessary.

In this way each one of the "name" bands takes on a particular complexion. Eddy Duchin's band is known for his unique piano playing; Tom Dorsey's, for "swing"; while Paul Whiteman's Band is distinguished for the conductor's good taste, musical experience, and his insistence upon good intonation, brilliance and style.



The World Has Moved

Ever since the original Jazz band, the "Dixieland Jazz Band," a group of very original white players emanating from New Orleans about two decades ago, Jazz bands never have played the notes as written. All sorts of liberties in tempo, harmony and melody are taken; and the resulting risk of anything like a uniform excellence is obvious. One performance may be very interesting, while the next may be a mess of cacophony. Three consecutive doses of "swing" numbers is about all I am able to endure, and I am sure that the public will soon be of the same opinion. I was not

A Handsome Gift for Etude Readers

By special arrangement, ASCAP (American Society of Composers, Authors and Publishers), in consideration of the ideals of The Etude Music Magazine, has very kindly arranged to present to any reader applying to this office, a copy of this magnificent woodcut of Edward MacDowell, by Howard Simon, in 8 x 10 inches proportions, on fine handmade paper imported from China (10½ x 14½ inches), suitable for framing. This woodcut, we are informed by Mr. E. C. Mills, Chairman of ASCAP, is distinctly not for sale. It is published solely in the interests of American musical art, and the supply is limited; but so long as it lasts ASCAP will be glad to furnish one copy to each applicant, entirely without cost.

We cannot imagine a more beautiful picture for the music room or studio. The background is suggestive of MacDowell's "Woodland Sketches." The artist, Howard Simon, was born in 1903, in New York City; and he finished his studies at Julien's in Paris. His collections of woodcuts have attracted international attention and have been exhibited at the Metropolitan Museum of Art in New York, at the Victoria and Albert Museum of London, and in others of the most famous exhibitions in the great art centers of the world.

The picture was copyrighted in 1938 by ASCAP, and it is reproduced here in small size, by special permission of the Society. Address your applications to The Etude Music Magazine, ASCAP-MacDowell-Portrait-Gift, 1712 Chestnut Street, Philadelphia, Pennsylvania.

Righting the Left Hand

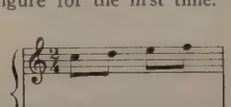
By **BERTHA M. TRIBULL**

Occasionally a left-handed pupil bec a problem to the instructor of pianc cause the pupil is left hand conscious instance, a small girl who was to her first work at the piano gravely infi me that she would not be able to us right hand, because she did everything her left hand and became a nervous if anyone insisted that she use her hand.

Imagine such talk from an eight old child, and the eliminating of her culty. I did. And years of experience taught me that the less said the bette this type of pupil.

I have found that a very reliable w help the left-handed pupil is by tea her to concentrate on the right hand out seeming to be doing anything unt From the beginning, the work is pla so that the right hand will take prece over the left. All first and second exercises and compositions are deliber chosen with a maximum of right work. Scale work is the only excepti this rule. This usually brings a que from the pupil as to why she is not her left hand as much as her right which she is told that the left han being used as often as needed. This s logical to the pupil and proves a sati tory explanation.

When the pupil becomes less cons of the left hand, studies and composi are added in which there are occas measures of left hand melody. And these the pupil progresses to longer hand melodies, arpeggios, and o studies. The left hand has become m another hand, never entirely neglected, the wrist and fingers kept active and ple by practicing scales, arpeggios, octaves.



This method may seem a trifle slow it has brought results. The pupil tioned has learned that both hands a equal importance in piano playing; she is far from becoming a nervous w because of the activity of her right h

Make a pupil right hand conscious, she will forget that she is left-handed least, when playing the piano.

The First Eighth Notes

By **GAYLORD ST. JOHN**

Beginners in piano, especially the you ones, apparently have difficulty in pla two eighth notes in one hand against quarter in the other, when they enco such a figure for the first time.

These suggestions may be helpfu overcoming this.

Impress the child with their being notes," *exactly* alike. Where one goes other goes also, so he must not omit nor make it even slightly different. twins always travel together.

This idea impresses the child mind makes it clear and interesting, with s factory results.

"Music is fundamental—one of the sources of life, health, strength and h ness."—Luther Burbank.

Art Means Preparation

By BIDU SAYAO

Famous Brazilian Prima Donna Soprano of The Metropolitan Opera Company

A Conference Secured Expressly for The Etude *Music Magazine*

By ROSE HEYLBUT

THE IMPORTANT QUESTION for every vocal student is, "How can I make a success of my art? This is at the same time the simplest and the most difficult question to answer. To tell such students that art means hard and faithful preparation is perhaps the most honest reply; but it is too vague to be applied without further explanation.

First of all, the young singer should realize that, although his art can be presented only as a smoothly unified whole, it really consists of two very separate parts—voice and musicianship. Both are equally necessary. Overemphasis of the one never can make up for deficiencies in the other.

The most wholesome way for the young singer to proceed is to concentrate first on voice. A pianist must have an instrument, before he can learn to manage it. The singer must build his own instrument before he can use it. Leave the songs, the arias, the acting, the gestures, and all the other necessary adjuncts of finished artistry, until the sheer mechanics of singing are in good order and under sure control. I have been studying singing for sixteen years, having begun at the unusually early age of fourteen. Such an early start for other youngsters is not recommended, but in my case the voice was there, and its training was begun. During the first four years, studying was devoted to scales and exercises exclusively. At the end of that period I was allowed to sing two or three simple songs; and I well remember the rapture it gave me to sing words instead of vowel sounds. But those four years of concentrated vocal study gave me a knowledge of my voice and a steady control over it that have been invaluable to my career.

Built on Simple Fundamentals

THE FOUNDATIONS OF SINGING, after all, have little to do with art. They depend upon muscular development and muscular control, like a sort of subtle gymnastics. It is wise for students to appreciate this fact, and to spare themselves the painful results of trying to plunge into art too soon. Singing depends upon the action of certain muscles, in the abdomen, the diaphragm, the throat, the neck, the face, and the cavities of the nose and mouth. The student should learn what these muscles are, and what the effect of their expansion and contraction is. A physiological chart can be of great assistance to the young singer, helping him to see exactly what he is trying to accomplish.

The greatest asset to the young singer is a teacher who understands the mechanism of good singing and who is also musical enough to hear the results of good singing in the pupil's work. The teacher must first explain the muscular requirements of good tone. Next, he listens sharply for the tone his pupil makes as the result of those explanations, and corrects the errors detected in the sound of the tone. Finally, then, he induces his pupil to associate the sound of a good tone with the physical sensations experienced in making it. By duplicating those sensations and repeating the good tone as the result of them, the pupil learns to control his technic. Instrumental students can be shown how to hold their hands and use their muscles; by watching the position of their fingers they learn how to control them. The singer has no such visual aid. He can arrive at his goal only by correlating sound with feeling. For that reason, progress must be made carefully and slowly. The singer is not sure of his technic until he can plot and plan his tones in advance.

BIDU SAYAO

As to musicianship, there should be a certain amount of specialization. One of the reasons for the present popularity of Wagnerian opera is the fact that these performances are so superbly sung by a group of singers who consecrate themselves to this work, and who sing nothing else. Instead of singing Puccini one night, Verdi the next, and Massenet the third, they remain with Wagner, enjoying the opportunity of deepening their interpretations, concentrating on them, feeling none of that need for tearing one's self in twain, which invariably follows a rapid change from one musical style to another.

The young singer should try, as soon as he can, to determine whether his forte lies in concert or in operatic work, and then should specialize in one thing until he is so sure of his ground that he can begin new work without feeling insecure in both fields. One may always be enlarging her artistic scope, of course; but one should have a firm, sure, controlled grasp of the old department before attempting to conquer the new. Too many loose ends tend to fray, and a firm artistic texture is never frayed.

The student's natural abilities should determine his field of specialization—not the question of glamour, engagements, or fees. The opera makes entirely different demands upon a singer from those of the concert platform. The singer who desires operatic work should first make sure of possessing true dramatic ability. It is a grave mistake to suppose that any good voice can make a success on the operatic stage. Here, the voice is only one of a number of factors which the artist must have at his command in order to move his audiences. The operatic singer must look the part, dress the part, not only act but feel the part. It is a pity that your talented young American artists have so few opportunities for operatic experience. What a splendid thing it would be if more touring opera troupes could be established? Or if the Government subsidized local opera houses all over the country, where this necessary experience could be had at the same time that the local audiences were made more familiar with the operatic art? Perhaps someone who is a student to-day may at some future time be in a position to help to bring these things about.

Mme. Sayao, who made her first American appearance two years ago, under the baton of Toscanini, and who is earning both critical praise and popular acclaim in her Metropolitan Opera performances, is one of the few natives of Brazil to carry music to the outside world. Mme. Sayao gives to readers of The Etude her own views on what makes for vocal eminence, and affords them a vivid glimpse of musical conditions in her own land.—EDITOR'S NOTE.

A Complete Master

I LEARNED AN IMMENSE amount of the theater from my second teacher, the great Jean de Reszke. I went to him at eighteen. Having gone to Paris to study, and heard that de Reszke was in Nice, I went immediately to see if he would teach me. He was an old man then and did little in the way of teaching any set or formal method. Instead, he made his pupils learn by imitation. And we did learn, simply by watching what de Reszke did and then trying to copy him. Lina Cavalieri often used to come to coach her rôles with him. Reynaldo Hahn, the composer, played the piano at these lessons, and de Reszke would go through entire operas, singing and acting all the parts, and even giving the illusion of a stage full of people, through his remarkable dramatic power. He often used to say that the singing alone does not conquer an audience; it is the complete illusion, created by singing plus stage ability, which builds art. When one left de Reszke, she had acquired a perception of style and taste.

I began as a concert singer, and progressed to the opera later. Personally, I find operatic work the less difficult of the two. Let us take an aria like the touching *Addio del passato*, from "La Traviata," as an example. When I sing this in the opera, I *am Violetta*. I behave as she would behave. I live in her surroundings and in her clothes. I use her gestures and her facial expression. I lift my handkerchief and sob. By these combined means, I convey to my audience the emotions that *Violetta* experienced at the moment of her breaking with the past. But suppose this same aria is sung on the concert platform? There is a bare stage and a big black piano, played by a gentleman in evening clothes. I, too, am dressed in a gown that has nothing to do with *Violetta*. I must hold myself erect and keep my hands still, as befits the concert hall. I must not sob or "make faces." I can only sing. And yet I must carry over to my audience exactly the same degree of emotional intensity as in the opera house. This, for me, is more difficult to do. There is no set rule about this art, of course. The singer who finds acting difficult will prefer to express herself through song alone. But for myself, I prefer the theater.

Operatic preparation is immensely important, and ought to be given a long, serious, and devoted preparation. Operatic performances will present a smoother finish, when the performers have enjoyed a more intensive preparation and a wider experience. As a hint to young performers, never act like a character; be that character. Never attempt any dramatic improvisations on the stage. The art of acting lies in calculating every least gesture in advance, and in controlling it in such a way as to make the result seem entirely spontaneous. Spontaneity, or improvisation,

on the stage always has a lack of sincerity. At first it was hard for me to believe this. I said to myself, "Now I am *Violetta*. Surely, she did not plan her gestures in advance. How could she, when she did not know what fate had in store for her? Thus, if *Violetta* herself was taken by surprise and acted accordingly, I will do the same." I have since learned to alter my opinion on this point. Certainly, I do not mean to make a performance mechanical, to imply that one must always make the same gesture in the same place, like an animated doll. That is deadening. Indeed, it is fortunately impossible to do that, because the human being is too responsive to slight changes in outside conditions (air, temperature, health, and so on) ever to repeat himself exactly. I do mean, however, that the effect of every moment of every scene must be prepared, calculated, studied, and rehearsed in advance—many times. Only in this way can the result seem natural and unstudied. The experienced artist knows exactly when he wishes to project an effect of passion, love, hate, anger, jealousy; he knows, too, exactly what looks and gestures to employ to secure those effects. He never leaves any effect to chance or to inspiration.

Just as the voice is built on a foundation of muscular mechanics, so is finished acting the result of careful gymnastic drill. The young singer must learn how to walk on a stage, how to turn, to seat himself, to face other people, to talk with them, to pick up objects, to dance. All this must be learned, and practiced, and controlled, so that one need never think about it during a performance. The singer, who is still conscious of his arms and hands and feet, gives exactly that impression to the audience. Thus, to return to our original question, the young singer who wants to make a success of his art will do well to forget about art for a while, and will concentrate on the many responsibilities of his preparation.

Music in a South American Realm

NOW I WOULD LIKE TO TELL you something of the musical life in my own country. I come from Brazil, which, for vastness and variations in nature, seems like an entire continent in itself. It is larger than the United States. We are still a young country, of course, yet we have made splendid progress along cultural lines. Music is our great enthusiasm. The great Teatro Municipal, in Rio di Janeiro, has a two month season of grand opera (during July and August, which are our winter months), and before that, another season of popular opera, when the prices are reduced and the younger artists are given a chance to show what they can do. Our Teatro Municipal is under governmental subvention. From May on, we have a season of great concerts, at which the finest soloists in the world are heard. Rio audiences are immensely eager to hear the great artists, fully able to judge of them, ready to shower a hearty Latin enthusiasm upon them, and to pay them perhaps the largest fees obtainable anywhere in South America.

It is a curious thing that we have far more women singers than men. Brazilians are not yet entirely convinced that singing is a good career for a man. This may be due perhaps to our system of education. While music is an integral part of the education of our young children, only the girls continue to study formally as they grow up. This is after the pattern of the European polite education for girls. Boys, who love music, continue to play and sing, of course, on their own initiative; and we have a notable degree of amateur musical interest. But the boys turn to more serious pursuits, as a rule, while the girls continue their studies of French, English, painting, and music. Thus it seems perfectly natural for the girls to remain with music when the question of a profession arises.

We have a great number of splendid instrumentalists, however, and we seem to excel in pianists, among whom I point to Guiomar Novaes as an outstanding example. Our best known composer is Villa-Lobos.

As for music study, there is not a city in all Brazil (and hardly a town or a village) that does not maintain a first rate conservatory, staffed by well trained instructors, mostly native born, but including many Europeans as well. The Conservatory at Rio di Janeiro is famous. I never studied there, having had but one private teacher until I went to de Reszke, but I do know that the standards are high.

I have toured the length and breadth of my own land (a trip across Brazil requiring three days more than a journey from here to Europe) and so know its musical conditions well. Once I found myself in a tiny town on the northern boundary, directly under the equator, and stifling under the worst heat I have ever felt. And there I found a flourishing musical conservatory. The natural and climatic conditions made life in that town almost primitive. The temperature was most unfavorable to music—instruments could not keep in tune, and performers could barely keep a grasp on keys and strings, for heat and moisture; and singing was all but impossible. Yet there was that conservatory, full of earnest young people devoting almost superhuman efforts to the mastery of the great art they loved. It made me think a bit ruefully of the complaints of hardships to which I have had to listen in the art capitals of the world. It touched me greatly, and I tried to give the best performance of which I was capable, to those ardent countrymen of mine, who will brave discomfort and inconvenience, so long as they can have the music which fills a so large place in their lives.

The Fatigue Demon

By ERNA BUCHEL KOEHLER

FATIGUE has a way of stealing upon the hard working music student and almost overpowering him before he is so much as aware of its demoniacal presence.

Fatigue, we are told, is in truth, a virus or poison that the body generates. Each time we become fatigued, the poison generating faculties within us are strengthened, and the body's resistance is lowered. Only sleep actually vanquishes the fatigue demon, and restores the fatigue ravished body.

Music students should guard zealously against fatigue. These suggestions will prove helpful.

1. Observe short rest periods during long practice hours.

2. Walk about the room, from time to time, or relax in a chair for a few moments.

3. Stand before an open window and breathe deeply.

4. A complete change of thought or work is helpful.

5. A drink of cool water, and bathing the hands, wrists and face, all are restful.

6. Eating a bit of chocolate or other sweet restores energy.

7. In more acute stages of fatigue, lie down and close the eyes for a few moments. If that is not possible, sit down, drop the head between the knees as one does when in fear of fainting. The blood rushing to the head is a great restorative.

Radio Flashes

By PAUL GIRARD

AN INTERESTING story of how radio programs are radiated over the air is given in connection with the construction of the new antenna of station WGY, the General Electric Outlet at Schenectady. One-half million pounds of steel, rising to a height greater than the Washington monument and resting on a small porcelain cone, is the description of the new antenna which supplies this station with greater clarity and strength, and permits it to be heard over a wider area. The insulator on which the great tower rests is barely twenty inches in diameter at the base, but tests have shown it capable of bearing up to 2,180,000 pounds pressure. The steel structure rises from this tiny focal point to a steel square of nine feet and maintains constant dimensions to the top of the 625-foot structure. The tower is held upright on the porcelain point by eight massive guy lines anchored at points from the base of the antenna. The entire steel tower, including the platforms and the ladder, acts as an antenna. The insulation of the "live" structure from the ground is accomplished by the porcelain cone. Although the tower occupies relatively little space, the complete antenna system covers some twenty acres of ground. Thirteen miles of copper ribbon, one inch wide and fifteen-thousandths of an inch thick, are buried under the ground, radiating from the base of the tower to a distance of six hundred and twenty-five feet.

Looking back over the broadcasts of the year, from the musicians of to-morrow, one remembers the many fine programs sponsored by the major music schools of the country; the Curtis Institute in Philadelphia, the Cincinnati Conservatory of Music, and the Eastman School of Music in Rochester. From all of these institutions weekly have come programs presenting chamber and orchestral ensembles, and also featuring advanced vocal students. The music selected has been chosen from the world's greatest masters, with an especial predilection for the works of Beethoven, Mozart, Brahms and Bach.

Further manifestation of what radio is doing to demonstrate to those back home, as well as to a whole nation, what musical groups are accomplishing in every part of the country, is found in programs like Columbia's Choral Quest series, heard Saturdays from 6:05 to 6:30 P. M., EDST. Here we have competing groups of young choruses, glee clubs, and so on, demonstrating their progress and ability, and unquestionably inciting better coördination and development. Recently, this program has presented the Symphonic Chorus of Ohio State University, the Bethany College Choir of Lindsborg, Kansas, the Mills College Choir from California, representative groups from the west coast and the east coast, from the northwest and from the deep south, from the middle west and from New England.

This getting together of universities and colleges, by way of the air, is further illustrated by the latest feature of Columbia's Musical Gazette program, heard Sundays from 8:30 to 9:00 P. M., EDST. Each week this program pays a tribute to leading collegiate publications; besides relating the history and highlights of the various journals; the "song-of-the-week," as selected by the editorial staffs of the collegiate magazines, is played and sung by the orchestra and vocalists. Through this procedure, Lyn Murray, who conducts this broadcast, states he expects to get an accurate cross check of collegiate sentiment on the "swing versus sweet" controversy, as expressed by the students themselves.

The significance of the microphone the artist was interestingly set forth Dr. Howard Hanson, The American co poser, who is director of the Eastm School of Music at Rochester, at the ti of the broadcast of his newly comple "Third Symphony," played by the N Symphony Orchestra under his own dir tion. "To stand beneath the microph and realize," he said, "that the progr literally was going everywhere by sh wave, was stimulating and inspiring. really get a bigger thrill out of the mic phone than I do from the audience. cause it represents the thousands and t of thousands who are hearing the perfo ance at home."

Paying tribute to the newly formed N Symphony Orchestra, the greatest org ization of its kind in America, Dr. H son said: "The virtuosity of the orche impressed me enormously. Every indivi player is a solo artist so far as capa is concerned. The whole orchestra ha brilliance that is unusual, the ability of string section is truly amazing. There feels that every man is a chamber mu player." In speaking of the work of ra Dr. Hanson stated that he feels it is only a medium for music, but it is p ticularly so for new music. "There i widespread interest in new music throu out the country, and this audience one listening to his "Third Symphon being played for the first time] is b reached for the first time in history means of radio."

There has been criticism for and aga the broadcasting set up of the NBC S phony Orchestra. Few probably realize work that the broadcasting of this org ization has entailed. From the orches first rehearsal, NBC'S corps of engin has been busy experimenting with e radio device and practice. To obtain fect transmission of the symphony's grams to every section of the Un States was their aim. Elaborate exp ments in acoustics and microphone pl ment were conducted in the huge st at Radio City, in New York, where the broadcasts originated. The studio's sorption and acoustical characteristics thoroughly checked, and allowances made for the deadening effect of the capa audiences of fourteen hundred persons tending. Echo time was checked and checked by an intricate device that duced certain tones at various levels. idea behind all this was to preserve upper and lower frequencies that what one New York critic terms, "gl and resonance. At each step in their periments, consultation with the most ical of the company's musical experts made by the NBC engineers. And fin higher fidelity recordings were which allowed for examination both part and in whole for any type of tortion. The work of assuring per transmission of the NBC Symphony chestra broadcasts did not end there. ever, for there was still the wide net to consider. Every night for weeks, cording to the NBC engineers, they tone signals at various levels of vo over the thousands of miles of wire prising the combined networks of the pany, in order to determine that there be a faithful transmission of the dyn range of the orchestra, and whethe not the richness of each individual in ment would be preserved. The th behind all this was, as Walter K NBC's Music Editor, has said, to pr the "Toscanini" touch in each of his b casts.

Women in Orchestras

Famous and Brilliant Conductors of the Fair Sex

By FREDERIQUE PETRIDES

FREDERIQUE PETRIDES

SIDNEY LANIER, the first eminent American in the last century to point out the orchestra as the logical outlet for the musically talented girl, should be alive to-day. He would no doubt rejoice in seeing women guest conductors and women instrumentalists in previously all masculine symphony orchestras—a procedure that was not in practice during his lifetime. In addition to this progress, he would also find more than seven hundred feminine musicians who play in at least twelve symphony or touring orchestras in our land.

These women orchestras are in New York, Chicago, Philadelphia, Cleveland, and in other centers from Boston, Massachusetts, to Long Beach, California. They have sprung up spontaneously and symbolize the American girl's determination to enter and stay in the orchestral field. They are earnest and spirited ventures and represent, according to an eminent music critic, one of the most important musical movements in recent years."

A European Beginning

ALTHOUGH WOMEN ORCHESTRAS are of European origin, nevertheless, there are more of them in present day America than in the Old World where this type of musical activity, including women conductors, can trace its professional past as far back as the seventeenth and eighteenth centuries.

Where did some of the early European women orchestras function and where did some of the old time women conductors live?

According to Samuel Pepys, a woman led an orchestra in the England of his time. This is what the famous chronicler said about her in his diary: "June 6, 1661: Called upon this morning by Lieutenant Lambert . . . and he and I went down by water to Greenwich . . . There we went and eat and drank and heard musique at the Globe and saw the simple motion that there is of a woman with a rod in her hands keeping time to the musique while it plays, which is simple methinks."

Next to Pepys' contemporary, one reads of women conductors in old Venice. Thus, in his "Histoire de la Musique" Felix Clément quotes an eighteenth century observer as follows: "I assure you that there is nothing quite as pleasant as to see a pretty young girl in a white gown, with a wreath in her hair, conduct the orchestra, beating time with all the grace and precision imaginable."

Clément's observer was referring to the conductor of one of the women orchestras in Venice after 1750. These ensembles were composed of musically trained orphan students and bore the names of the charitable institutions which were bringing up and educating the artists. The "Mendicanti" and the "Pieta" were the two most important units.

In 1774, Dr. Burney, author of "Music in France and Italy," heard the "Mendicanti" in a two hour concert given in his honor. "It was really curious to see, as well as to hear, every part of this excellent concert performed by females, violins, tenors, bases, harpsichords and double bass," he wrote. "The first violin was very well played by Antonia Cubli, of Greek extraction, the harpsichord sometimes by Francesca Rossi, *maestra del coro,* and sometimes by others."

Coming down to modern times, we find women orchestras in Vienna of the eighteen seventies. Most famed among these ensembles was the Vienna Ladies' Orchestra which visited America in 1871, and played a two week engagement at the old Steinway Hall in New York City. Josephine Weimlich was the conductor.

As was to be expected, the visiting Viennese orchestra scored a big success as a novelty in old New York. It played choice waltz music, also movements from light operas, and symphonies. It was composed of twenty players, most of whom "were on the bright side of twenty years of age, generally graceful and good looking, with sparkling eyes, flowing hair and nimble fingers."

Some Early Beginnings

AT THE TIME THE VIENNA LADIES ORCHESTRA made its American début, the piano was still the only favorite instrument for women in the New World. There were a very few female violinists and players of the other orchestral instruments, but no women conductors in the concert field. However, twenty-five years after Miss Weimlich had introduced her "ladies" to New York, two American women, Emma Steiner, a native of Baltimore, and Caroline Nichols, a native of Dedham, Massachusetts, already had emerged as orchestral leaders—Miss Steiner in the operatic field and Mrs. Nichols as the founder-conductor of the widely recognized Fadette Women's Orchestra of Boston.

Emma Steiner, composer, and the first American woman conductor of opera, died in New York in 1929. She began her public career as assistant musical director to Rice and Collier's "Iolanthe" Company, and led, during a period of thirty years, over six thousand performances of light and grand opera, including the "Mikado," "The Bohemian Girl" and "Mascot." In addition, she led in New York, on December 9, 1894, the famous Anton Seidl Orchestra of eighty musicians, in a program of her own compositions. It is said of her that Heinrich Conried, for whom she had served as musical director before he became manager of the Metropolitan Opera House in 1903, declared that he would gladly have appointed her conductor at the Metropolitan if only he had dared.

Caroline Nichols started her Fadette Women's Orchestra in Boston in 1888, that is, eight years after Sidney Lanier had effectively urged that the American girl start giving her serious consideration to the study of orchestral instruments, besides the piano. Her group, named after the cheer spreading heroine in George Sand's classic "La Petite Fadette," is said to have yielded over half a million dollars to the more than six hundred players in its payroll at one time or another between 1888 and 1920—the latter the year when it disbanded. Its repertory included symphonies, all the classical overtures, seventy-five grand operas, numerous salon pieces, and popular selections.

Throughout its existence, the Fadette Women's Orchestra gave no less than six thousand and sixty-three concerts in Lyceum courses in the United States and Canada, in concert halls, parks, summer resorts and also in first class vaudeville houses. In 1902, it started off as a major attraction on the Keith circuit and for about fifteen years toured each winter from coast to coast as a twenty-piece unit, returning in the summer for Boston engagements as an augmented ensemble of forty players.

Besides the "Fadette" and also a few units of the strictly popular music type, the gay nineties heard two more women orchestras: the Los Angeles Women's Symphony Orchestra and the New York Women's String Orchestra.

The Los Angeles Women's Symphony Orchestra, now in its forty-fifth year, is the oldest functioning organization of its kind in the world. Its first rehearsal was reported as follows in the Los Angeles "Examiner" of November 29, 1893: "Yesterday morning, a troop of young women

ANTONIA BRICO

EBBA SUNDSTROM

ETHEL LEGINSKA

came down the steps of Lawrence Hall on Fifth Street with a peculiar rapt and uplifted expression on each fine face. In their hands they carried music and also musical instruments, trombones, cornets, violins, cellos, which for the last two hours had been filling the neighbors of Fifth Street with notable music. These young women composed the Women's Orchestra which has been organized under the efficient leadership of Professor Harley Hamilton."

About three years following that rehearsal in Los Angeles, Carl Lachmund, a pianist, organized and launched his Women's String Orchestra in New York. His group lasted up to 1906.

The Dawn of Opportunity

THE ERA WHICH INTRODUCED the "Fadette" and the related units in Los Angeles and New York, held, few if any, professional opportunities for women in the orchestral field, symphonic or otherwise. As far as available records show, the dawn of the new century had found only one lone woman violinist in an American Symphony. The orchestra was the Buffalo Symphony Orchestra, and the player to be thus honored and favored was Nora Clench, "who sat at the first violin desk and fiddled with the best of her colleagues."

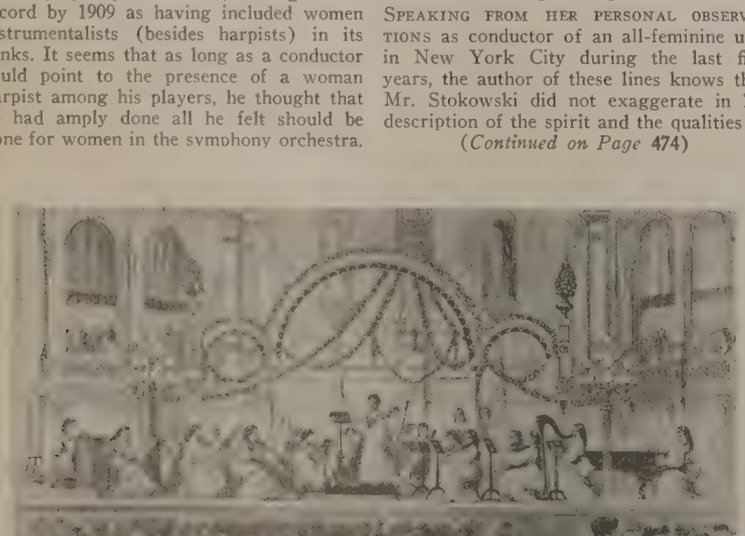
In 1903 when the powerful Musicians' Union in New York was affiliated with the American Federation of Labor, women were admitted into membership for the first time in the Local's history. The instituting of this precedent in the country's biggest musical center was greeted with enthusiasm by friends and apologists for women in orchestras. These believed that, thanks to the Union's new ruling, there no longer existed any organizational reasons why qualified female instrumentalists should not be employed "even in the best of orchestras in New York City."

Naturally, if those envisioned opportunities had materialized in New York, the new order would have gradually permeated other musical organizations in the country, in which case women orchestras would be rendered, in due course of time, unnecessary. However, Union card to the contrary, professional opportunities for feminine instrumentalists depended, as they still do, on the initiative of musical directors. And the latter were not conditioned as yet to ignore tradition and precedent in the orchestral field at large.

With the exception of the Buffalo Symphony Orchestra, one more unit, the Hartford Symphony Orchestra, had gone on record by 1909 as having included women instrumentalists (besides harpists) in its ranks. It seems that as long as a conductor could point to the presence of a woman harpist among his players, he thought that he had amply done all he felt should be done for women in the symphony orchestra.

In the meantime, the number of women instrumentalists kept increasing with the end of every scholastic session. Many of these must have been ideally suited for orchestral work. But where were the opportunities? They were nonexistent—a condition which spelled inevitable waste for so many talents, for so much ability. . . .

This waste of women in the world of music impelled Mr. Stokowski to say in 1916: "An incomprehensible blunder is being made in our exclusion of women from symphony orchestras. The particular spirit that women put into music, their kind of enthusiasm, and their devotion to anything they undertake, would be invaluable in the formation of symphony orchestras. In addition to their delight in their work, they are quick to get the meaning of a score, nimblewitted in taking in a new idea, and most conscientious about appointments, time and practice. When I think of women as I see them in the musical world, what they are capable of doing, their fine spirit, excellent technic, I realize what a splendid power we are letting go to waste in this country and in other countries, too."



Fortunately, the "waste" declared by Mr. Stokowski has been eliminated in later years. As a result, various symphony orchestras, including major ones like the San Francisco Symphony Orchestra, the Los Angeles Philharmonic Orchestra; and kindred organizations in Baltimore, Pittsburgh and Indianapolis, also are now employing women instrumentalists; though, so far, the percentage has been but small. At the same time, Ethel Leginska and Antonia Brico have appeared as guest conductors in the major orchestra field—Miss Leginska with the New York Symphony Orchestra and Miss Brico with the National Symphony Orchestra in Washington, D. C. Also, women have conducted WPA orchestras in various parts of the country; and, not so long ago, Nadia Boulanger, the internationally known French musician, directed, as guest, the Boston Symphony Orchestra.

When one pauses to consider these heartening postwar developments, it appears probable that, as time marches on, more and more women should find their way into symphony orchestras. But this probability is a matter of the future. Accordingly, it becomes self-evident that women orchestras still continue to fill a need. They furnish a necessary outlet and background for feminine aspirations in the symphonic field.

The Spirit Spreads

SPEAKING FROM HER PERSONAL OBSERVATIONS as conductor of an all-feminine unit in New York City during the last five years, the author of these lines knows that Mr. Stokowski did not exaggerate in his description of the spirit and the qualities of

The first pretentious orchestra of women to give concerts in America

Musicians of July Birth

By W. FRANCIS GATES

STRANGELY ENOUGH, this hot midsummer month has bequeathed to the world some of its most outstanding musical geniuses. On its second day was born Gluck, one of the greatest reformers of opera, in which he led one of the hottest musical feuds in all history. Then comes John Field, creator of the nocturne; and following him are Gustav Mahler, a leading orchestral conductor of his period and creator of stupendous symphonies; and the still later Ottorino Respighi and Alfredo Casella.

Of violinists we find Ole Olsen and Henri Wieniawski, giants of their day; and with them is Jakob Stainer, greatest of all German violin makers. Of singers there are Amalie Materna, Giulia Grisi, Therese Tietjens, and Pauline Viardot-Garcia, four among the most brilliant of the nineteenth century. Of pianists, Sophie Menter and Fannie Bloomfield-Zeisler remain two of the greatest of all time; to whom may be added Anna Mozart, the beloved sister "Nannerl" of the immortal composer.

To American music July has contributed Stephen Foster, the world's most original creator of folk songs; Theodore Presser, a leader among America's music publishers and philanthropists; such substantial pedagogs and composers as Arne Oldberg, W. H. Neidlinger, G. A. Grant-Schaefer, and Constantin von Sternberg; and one of her greatest of music critics, Richard Aldrich.

A Natal Chronology

1st—Johann Heinrich Pape (1789), Josef Alexander Pasternack (1881)

2nd—Christoph Willibald von Gluck (1714), Ludwig Schnorr von Carolsfeld (1836)

3rd—George Alfred Grant-Schafer (1872), Hans Kronold (1872), Christian August Pohlenz (1790), Theodore Presser (1848), Karl Schuricht (1880), William Wallace (1860)

4th—Joseph Adamowski (1862), Louis-Claude Daquin (1694), Stephen Collins Foster (1826), Emma Juch (1865), Hermann Kotzschmar (1829), Ole Olsen (1850)

Relaxation Is Mental

By HAROLD MYNNING

WITHOUT RELAXATION, spontaneous, effortless playing is impossible. Relaxation is first of the mind. One must first think relaxation before one can put it into practice.

In playing a scale, for instance, let your finger go with the key. So many piano students seem to think they have to push the key down with their finger and hold the finger back, too. The result is a tug of war, causing stiffness.

When the hand must be expanded to play octaves, chords, and so forth, stiff is apt to result. Relaxation then beco important. It will help you to get the i as it were, by proceeding in the follow manner away from the piano. Hold up hand and spread the fingers apart lik speaker about to silence an audience. W keeping the hand expanded, relax c pletely; then repeat the exercise a few ti

Teresa Carreño once said, "Relaxatio first mental, then physical."

THE MODERN BALLROOM

A glimpse of the famous Widener Ball of Philadelphia, when the music, furnished by Meyer Davis and his Orchestras, is reputed to have cost ten thousand dollars for one evening

Social Dancing and Its Music

By PRESTON WARE OREM

NOT LONG AGO, we overheard an intelligent young woman asked the question, would she, if the "bustle" were to come again into style, wear one? Her reply was in the negative. But, we wonder! Women, of all sorts and conditions, and men too, for that matter, are prone to follow the fashions, even such fashions as they may disapprove personally. There are fashions in art and there are decided fashions in music, youngest of the Arts. And the dance has its fashions, which music seems to follow most decidedly. And education? Yes, indeed! Another story, a tone one: a while ago we were in conversation with a bright young woman, an A. B. of a certain large midwestern university; and we learned that she was pursuing further studies with a view to a Master's Degree. We found that the young woman's leading subject was that of Comparative Religions. We demurred somewhat at this title, since we have always understood that the word *religio*, as used by Levy and other great classic writers, had reference solely to that intensive binding tie between man and his Maker, without connection with forms of faith or beliefs. We thought, but natural too, that this A. B. would be a student of Latin and Greek, only to find that she knew nothing of either language. We were assured, however, that the thesis to be submitted in connection with the major subject was to be on "Hell." Said the student, "So far I am at the Moslem Hell; I have not yet reached the Christian Hell." Our reply was "Look out! As the old hymn goes, you may be nearer there, perhaps, than you think." And then we found that the two coördinate subjects of this postulant for higher academic honors were, of all things, swimming and tap dancing.

Well, well! Such is modern education. But the dance, indeed, seems to be coming into its own. We have considered dancing always as a real part of education and indeed of history, but we are not so certain that it belongs in the university curriculum. Tap dancing now has become a generic name for a combination of steps, descended from the "buck and wing," the "soft shoe," and the "clog" of older days. These latter all grew up in the Negro minstrel of the pre-Civil War period and, later, the mastodon minstrels and vaudeville of the '90's and other sources; but all are now duly classified and codified, and, as changes the fashion of the dance, so changes the fashion of the music that accompanies it; and likewise changes the fashion of the wearing apparel. Let us see.

The Roots of an Art

FOR THE PRESENT we need not concern ourselves with kind, character or conditions—just the dance: whence, why, wherefore? The urge for self-expression through bodily motions and gestures is apparently as old as the human race itself. The best teacher of dancing, whom we ever knew personally, insisted that in any form of dancing the entire body should become involved. He had no use for dancing which, as he expressed it, "takes place all below the waist." This man was a deep thinker, besides knowing exhaustively the history of the dance. Now, since all about us moves in definite rhythms, the earth itself, the human body, and even the separate organs of the human body, it is a fair hypothesis that definiteness of rhythm, and all that goes with it, is arrived at and expressed through some form of dancing. And it is more than possible that, of the three elements of music—melody, rhythm, and harmony—rhythm is the oldest.

While this article is in no sense a history of dancing in general, nevertheless, we must revert to certain ancient references in order to establish a suitable background for our more modern researches into the subject.

We are told that emotion comes before logical thought, ritual acts before the enunciation of creeds or forms of belief. All primitive emotions seem to have found expression in terms of the dance. So history places dancing in the rank with all forms of primitive art: the use of words, painting, and music. Plato likens the dance to the "harmonious movement of the stars," and other early writers assure us that the "stars conform to the laws of coördinated movement." Hence, the first altars were erected to the Sun with their trappings typifying the other celestial bodies. Egyptian carvings of six thousand years ago depict various ritual dances. It is not difficult to imagine hero worship as the rhythm of beaten drums; but, in the most succinct history of the dance, it is difficult to dissociate ritual dancing, professional or exhibition dancing, and that which we call social dancing. The gilded youth of ancient Athens were wont to look upon dancing as an elegant and most desirable accomplishment. Mythology tells us that even Orpheus journeyed to Egypt that he might study its dances and thereby add to Hellenic proficiency.

But early dancing was not all joy. Dances of mourning were evidently a part of the religious group. It is a far cry, is it not, from such as these to the "blues" of to-day? *O tempora, o mores!* There is a psychological relation, nevertheless. And Plutarch tells us that, in Greece, military dancing was employed "to inflame courage." As things are going, we may ourselves need some of that before long. We learn that masks were worn in early dancing to identify character. Well, the pendulum of time swings backward and forward. May not these be the forerunners of the very heavy "make up" of the present? Mention of military dancing calls to mind the inspiring description in Thackeray's "Vanity Fair" of the grand ball in Brussels on the eve of the Battle of Waterloo, in 1815—truly a history making event.

An Ancient and Honorable Lineage

AS GREECE FOLLOWED EGYPT in dancing as well as in so many other things, so Rome followed Greece; but in the beginning there was no social dancing in Rome; at first, it was frowned upon. But, wherever it could do so, social dancing has followed and borrowed from both ceremonial and professional dancing. We can date stage dancing as far back as the Attic tragedies of Aeschylus (472 B. C.) and Euripides (who first separated the calling of the poet from that of the musician) and the comedies of Aristophanes. Therein we find the chorus functioning: not only singing, it comments upon the actions of the principal characters, but dancing also, and taking its part in the action of the drama. Not yet may we comment upon the actual music. It has not survived.

In the Scriptures, comments upon dancing are early. In Exodus, after the closing of the waters upon Pharoah and his host, we are told that "Miriam, the Prophetess, took a timbrel in her hand; and all the women went out after her with timbrels and with dances." The timbrel was the ancestor of the modern tambourine. The description of "David dancing before the Ark," in the book of Samuel, is vivid and inspiring. There are many similar allusions in the Psalms. The poetical paraphrase of the story of the beheading of John the Baptist, by Oscar Wilde, entitled "Salome," with music by Richard Strauss, does not call for special comment except to state that the famous *Dance of the Seven Veils* has its modern counterpart in the "strip-tease act" of to-day; and that this latter, to the minds of many, is not inartistic. Verily the pendulum doth swing! Berlioz, great authority on instrumentation, refers to the ancient cymbals, mentioned by the Psalmist. These were used evidently to mark the rhythms; although it is possible to tune them. They were small, some of them of about the same diameter as our own silver dollar.

With the early Middle Ages in Europe (from about 500 A. D. on) we have little to do. Knights in armor, women in steel cuirasses, with voluminous garments and towering headdresses, could have done but little dancing; while the peasantry had little time or opportunity for either joy or

festivity. Political and ecclesiastical movements there were, of course, but the Crusaders, for about two centuries, from 1100 A. D. on, found in the East, it [illegible] worthy foemen, much [illegible] music and dancing. Much that they brought back still endures, including music and musical instruments. Following the conquest of Constantinople by the Turks in 1453, however, came that remarkable period in Europe known as the Renaissance (the revival of Greek Art and Learning). This brought about the inception of opera as a successor to the Greek play; and with the opera came dancing and, of course, dance music. The dance, as established by the Greeks, seems to have been reproduced, at first the operas being based upon strictly classical subjects. And then society began taking notice. Curiously enough, in the history of the dance, we find the ballet (stage dancing) deriving its earlier steps from folk dancing and social dancing; and, later in turn, social dancing, where possible, borrowing from the stage and from the more formal ballet.

The Dance at Court

AND FROM THIS PERIOD ON the dance goes more definitely into written history. In 1462 King Rene of Provence (amateur musician, poet and patron of the arts) led a famous social and religious dance of the nobility on the eve of the feast of Corpus Christi. Ceremonial dancing in church was continued for some time after this period; in fact there are in evidence operatic attempts to revive it, even in this present day. In 1487, there were a professional ballet and social dancing at the wedding of Galeazzo, Duke of Milan, to Isabella of Aragon. And, in about the year 1682, a history of dancing appeared with data as to steps, written by one, Father Menestrier, a Jesuit priest.

And those more or less amiable Tudors, King Henry VIII and his daughter, Queen Elizabeth, never missed much. Both of them danced, both made music, both patronized the drama. Famous names crop up in this period. Francis Bacon wrote some of King Henry's plays; and the composer Henry Lawes (1595-1662) wrote the music, including the dances. And the great Ben Jonson collaborated. Then came the Shakespearean era; and were there instruments upon which to play these dances? O yes! The clavichord came into England in 1515 and virginals and spinets were in vogue some ten years later.

In France, Henri IV was another great patron of the dance. We come now into the period dealt with so vividly by the great French novelist, Dumas. Louis XIII, although described as a morose sort of individual, actually took part, personally, in ballets of somewhat sombre character: doubtless one of the early "blues" exponents. Louis XIV, however, danced and acted in all sorts of performances; and he, moreover, founded the National Ballet Academy. At this point it is of interest to note that one of the first of the great ballet dancers was Camargo (1661). From her time on, the ballet, which had been almost entirely derived from folk dancing and social dances, gradually emerged into an exact science.

Meanwhile, the courtiers of the 16th and 17th centuries identified and cultivated certain social dances, some of which lasted for many years. And the music for these dances began to play an important part. It is a curious fact that composers of the preclassic and classic periods began very soon the idealization of the rhythms of these dances; just as later on Chopin and others idealized the waltz.

Let us consider some of these older social dances. The *gavotte* first presents itself. Originally a very old folk dance, the *gavotte* was adopted socially, only to languish and to be revived later by Marie Antoinette. At the behest of the Queen, Gluck wrote special music. His gavottes still live, notably the one transcribed by Brahms. This dance had at first a simple step to the rhythm,

Ex. 1

After the French Revolution, it was again revived. A very beautiful idealization appears in Thomas' "Mignon."

The *allemande* (German, by its name) was a dance of movement, one of those in which the partner is turned with raised hand. Both Bach and Handel idealized this dance with its rhythm,

Ex. 2

in moderate tempo. Its comic counterpart was the *Tardion,* done always in "blackface." This latter seems to belong to the minstrels so dear to our boyhood; but it is by no means new.

The *sarabande,*

Ex. 3

comes from France, through Spain, being probably a solo dance, with much movement of the arms, of Moorish origin. It is mentioned by Cervantes, author of "Don Quixote."

The *volte,*

Ex. 4

is the immediate ancestor of the *valse.*

The *bourrée* was a great favorite of the celebrated Queen, Marguerite of Valois, a beautiful and talented woman. This lady is said to have had very lovely ankles which the skipping steps of this dance seem to have revealed to perfection. Its rhythm,

Ex. 5

coming, as a folk dance, from Auvergne, originally its offspring, although done with a shorter skirt and at a more rapid pace, is the *polka.* Anent the length of skirts, we have a theory of our own, which shall be advanced later.

The *passepied* (brawl, in English) is a dance, as of Watteau "Shepherds and Shepherdesses," with or without the passing from one to another of torches, or *flambeaux.* Its rhythm is

Ex. 6

The *courante* is an elegant social dance, a great favorite with Louis XIV. Its rhythm is

Ex. 7

with variations and ornamentation. The best dancers spent years of practice on this number.

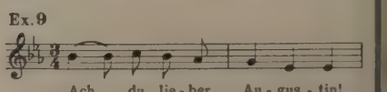
The *pavane* seems to have been invented by Hernando Cortez (famous Spanish explorer) after his return from South America. It was a stately dance of the nobility, with the men in light armor and the women in brocade. It is done in double time, w ornamental passage work.

The *menuet* has a long history; in fa it is still with us. Gradually developin from a folk dance into a social functio in idealized form it found itself in t sonatas of Haydn, Mozart and Beetho and even in the symphonies of the two fi mentioned. Always in moderate triple tim it preserves a rather stately pace.

The *gigue* is just a "jig": old and pe sistent, still with us.

The *ballet* has taken from all of t above and gone on by itself; the mode social dances have taken from them, in measure; but more from folk dancing.

We have a strong personal feeling th the fine arts reflect in large measure t manners and morals of the periods in whic examples of them are created; and we a not alone in this. Certainly dancing mu be included; likewise costume and manne of attire. And then we have a theory our own that the feminine skirt has a l to do with variations in the dance. We ha always giggled at the "call-down" of t engaged young man in Dickens' "O Mutual Friend" for his remark as to pett coats: "We all know they're there!" T day, they are not there; and the dance h changed. In the latter part of the 19 Century, the formal ballet languished for time; and the kneelength skirts with frou-frou of lace petticoats descended the floor. Then we had the Skirt Danc done to a sort of a slow *schottische,* modern *gavotte,*



Ex. 8

Society eventually took this to itself. Th stage dancing relapsed into the grotesq with versions of the old clog dance of t Lancashire Mills. Skirts went up agai and in came the high kick, borrowed fro the can-can of France of the '70's and t days of Offenbach. Finally, skirts disa peared and "tights" (or fleshings) follow them. And so what? Society seems not have decided.

But we have been getting ahead of o story. To return, educational institutio both in America and abroad, have be fostering in their physical culture depar ments the tendency toward folk dancin This we believe wise. Many beautiful n tional dances have been discovered and r stored. We trust that, in due time, t will have its definite effect upon soci dancing. It is, to-day, sorely in need something. Let us go farther back. Possib the most universal of all dances is t *waltz.* It burst upon the days of t *quadrille* and other "square dances," d rived from the older *contra dances,* the *Roger de Coverley,* the *Virginia Reel,* a others, like a thunderclap: "round dancing as opposed to "square dancing." The wal (French, *valse; German, walzer*) comes us from Germany. It is not of Frenc origin, as sometimes stated. It seems have emerged from the Bavarian folk dan (the *Laendler*). Its introduction as a soci dance was much opposed in some quarter The Czar Paul, for instance, opposed it immodest. Its rhythm is well known, course, but it may be stated that as far bac as 1670 it was danced to the tune,

Ex. 9

Later on, the poet, Lord Byron (178 1824), criticized its music severely; b then, although a contemporary, he probab never heard Weber's waltz, in his *Invit tion to the Dance,* the first work of its kin Besides, curiously enough, the Engli composers never could write waltzes. B Johann Strauss, Sr. (1804-1849), with l lesser contemporaries, Gungl, Lanner a

IS THIS THE OLDEST UPRIGHT PIANO?

The Hochschule für Musik, of Berlin, has recently acquired this ancient instrument, made by Mattias Mueller, in Vienna. It was discovered in a second hand shop of Florence, Italy; and it is believed to be one of the very first upright pianos made.

mportant Practical Helps for the Vocalist

By the Distinguished Voice Teacher and Accompanist

ISIDORE LUCKSTONE

An Interview Secured Expressly for The Etude *Music Magazine*

By ELISE LATHROP

ISIDORE LUCKSTONE

VHEN, AFTER MANY YEARS of touring as well as playing at their New York recitals for some the greatest artists heard in this country ingers, violinists, and violoncellists—I ided to travel no longer but to devote time to teaching singing, there were wanting criticisms. Although for years h teaching had been my chief work enever I remained in New York for any gth of time, these critics demanded why accompanist should think himself qual- d to give singing lessons. My answer is t "Certainly he should not do so, if he is ely an accompanist." But, speaking for self, I can truthfully say that during all se years that I had been a member of musical profession, and had been before public, I had made a close study of the ice. I had been associated with most of great artists of my time, with Mme. mbrich, Nordica, Scalchi, Italo Campanini, Campanari, Kreisler, and Gerardy, name but a few. I also sang, myself, and d appeared in concerts, although I knew at my voice was not remarkable.

I believe that most of our great singers ve been born with all the innate requirements of the art, in addition to wonderful ices. The greatest artists among them, h as Sembrich and Jean De Reszke, wever, did not depend solely upon unual vocal equipment but entered deeply to the study of voice and the art. Because their natural talents, too many of those fted with voices do not feel it necessary devote much time to intensive study. hey make reputations as successful artists, hen lacking correct vocal methods and her virtues and, notwithstanding these fficiencies, become outstanding. This is injurious in its effects upon budding artists, ho feel that they too can succeed without uch study. Particularly is this detrimental those who are lacking in great natural fts. Temperament, dramatic understanding, musicianship, with imagination and intelligence added, will result in the great rtist.

Correct emission of tone never can be nveyed through printed words. No one an learn to sing from books. Nevertheless, ithout going into the subject of voice aining, there are certain suggestions, the sult of long experience, which may prove value.

Avoid Physical Mannerisms

NEVER SHOULD ONE STIFFEN the neck, make aces, or let the mouth be pinched, when nging. The singer should appear as though elling a story. She *is* telling a story, if he is really giving the full meaning of the oem. There must be no cramping of the hands or wrists. Every member of the body must be free and relaxed.

One should be very careful about the eyes. There should be no looking at any individual member of the audience; nor should the singer stare down at the floor, nor up at the ceiling. Rather she should look above and beyond the audience. Under no circumstances should eyeglasses or spectacles be worn on the stage, no matter how nearsighted one may be; for, with glasses on, one's face will not look natural to the audience, nor can proper facial expression be shown. Then the eyes should be kept open when singing, otherwise much expression is lost.

Songs and arias should be learned by heart, or it is impossible for the singer to show real emotion. But, so that one may not through nervousness forget the words, a small booklet, in which the words are printed, or written in large script, may be held in the hands, but with no intention of actually using it. Only under absolute necessity should it be consulted. Under no condition should a sheet of music be held before an audience; for, if a singer is nervous, at least at first, the corners of a sheet of music will probably tremble noticeably, and this will be found to distract or amuse the audience.

The Unconscious Mannerism

THE SAME THING is true if one carries flowers, or has them pinned to her gown. The hands may tremble from nervousness, and perhaps the body may tremble as well; this will make the flowers quiver; and it must be remembered that, if anything of the sort happens, most of the audience will become too fascinated in watching to listen with attention.

One should not allow himself or herself to get into bad habits of posture or gesture. A singer of some reputation was at one time studying with the writer, and when she first began singing it was noticed that after a few measures one hand flew to her heart. Probably in some song she had thought this an appropriate gesture.

She was asked to stop and was questioned, "Why do you put your hand on your heart?"

She looked puzzled for a moment and then explained that she had not realized that she did so. The song was begun again. In a moment back went the hand to her heart; and this was often repeated. It took time and persistence to overcome this mannerism.

This incident furnishes one good reason for practicing before a long mirror and watching to see what tricks of facial expression or gesture may have been picked up.

A pupil who was advised to practice thus, remonstrated, "Oh, but I don't like to watch myself when I'm singing. I look so queer. I just hate to see myself."

"My dear young lady," I told her, "if you really 'look queer' to yourself, how do you suppose you look to your audience?"

Of course the answer to her objection is that one must not "look queer" at all. There must be proper study to have a pleasant expression, or perhaps it is better to say an expression that is suited to the music that is being interpreted. There must be practice before a mirror, with a smile, an affable manner, a relaxed pose, and with the idea of being the same as when facing an audience. One should say to herself, "I have sung before many audiences, but never before one so sympathetic."

To dwell too much upon expression would be almost impossible. A singer, who was coaching for a concert, is recalled. His song, an Irish one, repeated from time to time the words, "Oh, the dear little girl!" He sang it solemnly, with no sentiment at all, and I struggled to get some feeling into his voice and manner. On the occasion he did sing those words fairly well, but all effect was lost when immediately after singing them (and they were supposed to be light, cajoling, and affectionate), his face instantly became solemn, as he waited to see what the audience thought of it.

The Singer at Ease

NOR SHOULD THE SINGER move about too much on the stage. While never standing rigid, too much motion is another distraction. There comes to mind the amusement once secretly derived from watching a tenor. In his song the words, "I love you!" were thrice repeated. He sang them first to those in the audience on his right; the second, to those directly facing him; the third, to those on his left. The one he loved, therefore, must have jumped about considerably. But surely one does not think of a love song as addressed to each one in an assemblage. It must be done as if addressed to the one person adored, who is not present.

Loud singing, producing a momentary but questionable effect, should never be in one's mind; for volume of tone is intended mainly to represent fervor, or dramatic power, in response to the poetic demands. With few exceptions, every youthful aspirant thinks it necessary to show ample strength. He does not realize that quality should outclass quantity. He strives too much for physical sounds. Finesse is more or less neglected, or even unknown. If strength alone is required, the real strong man—wrestler, pugilist, or piano mover would gladly compete. Sandow would, in such a case, have made a great impression.

Some Exaggerated Eccentricities

A VOCALIST OFTEN HOLDS on to a high note for "gallery" effect, without regard to musical construction. One should never allow a tone to represent a pause, when the phrase calls only for a retard. It is permitted under certain conditions, but as an exception.

In the following instance the pause is not only allowed but even expected. The celebrated tenor of days gone by, Tamagno, when singing the well known aria *Di quella pira* from "Il Trovatore," held on to a high C. It was a wonderful tone, full and resonant, and seemingly without end. It always "brought down the house," although his voice throughout the entire range was not particularly attractive. In this case Tamagno did no violence to the music, because effects produced by such prolonged holding of high tones are occasionally permissible, according to tradition, in Italian operas of the nineteenth century.

In contradistinction, Jean De Reszke, when singing *Salut demeure, chaste et pure* from "Faust," took an uncalled for liberty in which no one but he would have dared to

indulge. He omitted the high C that Gounod inserted at the end of the aria, and replaced it with an A-flat. This innovation probably was never attempted by any other tenor of note. Yet his art was so wonderful, and the rendition so beautiful, that the momentary surprise and disappointment at the change was followed by the greatest admiration, thus proving again how artistic taste and expression are always superior to amplitude or height of tone. He made the change because he evidently did not believe his extremely high tone attractive in quality.

Another example, but of rashness which should be a warning to young singers, returns to memory. A certain soprano of some reputation was singing the aria, *Ah, fors è lui,* from "La Traviata," and singing it well. But she felt that she must sing a high E-flat at the end, to which her voice was not always quite equal. The result was that she broke on it. How much better not to attempt a high note just beyond one's ability, and especially one which after all is not essential to the composition, than to ruin an otherwise excellent performance.

For the young student, the great necessity is to be able to hear. If one can hear pitch, and can hear the proper quality of tone, then, with practice, the desired results should be obtainable. Unquestionably it is only the favored few who can do without guidance in acquiring vocal technic and development. And no one is able to reach the highest point of achievement without correct supervision. A long time ago a renowned contralto rather boasted that she had never had a regular singing lesson in her life. She had a very beautiful vocal organ, quite unusual indeed, but gradually she displayed vocal faults not found in the true artist. She was generally successful with her audiences, but not with critics.

"They Have Ears But Hear Not"

IT IS SURPRISING, however, how many people never learn to hear. A young singer, just arrived from European study, was astonished when told that she sang flat. On being asked to repeat the phrase, she again flatted. When told of this deficiency, she quite indignantly snapped, "But that is impossible! I never sing flat. People would have told me before this had I done so."

"Come here," I bade her, and she stood close beside me at the piano. A tone was struck, and a moment waited, and she was asked to sing it. She did so, again flat, "Listen!" she was admonished, as the note on the piano was repeated. This time she heard the difference in pitch, for herself. "Extraordinary!" she exclaimed. "That is the first time I have ever sung below pitch!"

Of course that was not the case; it simply meant that her ear was untrained; she had not learned to listen to herself, and had not been told to do so.

Nevertheless, the fact remains that audiences, and even music critics, are not always so acutely conscious of pitch. There comes to mind the first appearance here of a well known European singer. As his accompanist, I was made most uncomfortable on that occasion, for he sang approximately a sixteenth of a tone flat throughout his recital. On the next day a press report from one of our foremost critics said, after taking exception to several points, that "at least his intonation was impeccable." Such critics do not themselves hear correctly.

The greatest artist, whether because of indisposition or some other cause, may occasionally sing a note or phrase sharp or flat—nervousness usually accounts for the former—but that is another matter. When one sings continuously off key, it is due to one of two things: faulty tone production, or some physiological defect; usually the former.

In 1925 I became head of the vocal department of the School of Education, of New York University. At that time the authorities had decided that it would be a good plan to have a course in music appreciation and in song repertoire. Lecture is hardly the name for the sessions in this course, as they are really explanatory recitals. In the first half of them, compositions from the twelfth to the seventeenth century are discussed and illustrated, with a brief history of vocal music of the period. The latter half is devoted to more modern compositions. There is no attempt, during this course, to give a history of music in general. There would not be time for that; and, besides, the course treats of vocal music in interpretation only.

During the sessions great songs of all nationalities are discussed and illustrated, the songs chosen for illustration being usually sung in the languages in which they were written, such as French, German, Italian, Spanish, and occasionally we have had a group of Scandinavian songs in those languages. Of course we have songs in English.

Demonstration in Teaching

TO ILLUSTRATE THESE SONGS they are sung either by professionals or by the students themselves. For another feature, my assistant, my son Harold, and I appear on the stage together, and take turns, one in singing, say, in French, making mistakes common in the pronunciation of students or even professional singers, whereupon the other one criticises and gives the correct pronunciation. There is also criticism of phrasing, accents, and so on. We find this quite stimulating and productive of good results with the students, who often would be too self-conscious or uncomfortable if they were the ones to be criticised for too many faults.

Toward the latter part of the season, students are required to make out a number of song recital programs, which are then criticised as to the arrangement of songs; whether those chosen are too much of the same character of not sufficient merit to be presented on a program, and so on. This feature of the course, too, is really helpful. Programs are also divided into classes; the *bel canto* program, the dramatic, the modern, and so on. In the lecture recitals we cover some eighteen or twenty songs each time, thus taking up between two hundred and two hundred and fifty songs during the course.

At present, since there is much discussion as to the merits of opera in English, my opinion is often asked. To which there is but one answer: it depends! First, if operas written in any foreign language are to be well presented in English, the translations must be good, and there are as yet few really good ones. Then, does one of the great German songs, for instance, really sound just as well in English as in the language in which it was written? And is it actually possible to translate well a French text into our so different language?

The argument that works sung in English will interest the audience more, because they will understand the words, see me hardly any argument at all. One but ask, "Do you understand all the of an English chorus, or even quartette?"

On the whole, I would be inclined t "Wait until Americans are writing songs and operas in English. Then means sing them in English, the lan in which they are written; and if should be translated into French or man, say, and sung in those languag France and Germany, why, that woo fine.

AN OPERATIC DISCOVERY

A new Metropolitan star, Amri Galli-Campi, an American girl born in Scranton, Pennsylvania, of Italian-German ancestry, made her début before ten thousand people in Cleveland, with the Metropolitan Opera Company of New York, when she sang the rôle of Gilda in Verdi's "Rigoletto." Miss Galli-Campi, in addition to being a prima donna, has written, composed and orchestrated a grand opera. She is a pianist of ability, an expert swimmer, and paid for part of her education by serving as a life guard. Only a short time ago she was singing in a church quartet in Scranton at five dollars a Sunday.

Fifty Years Ago This Mo

NEALLY STEVENS, one of America's y feminine pianists who had been espe favored by Liszt, wrote for THE E under the theme of "Gossip About ters, Old and Young":

"I am often asked to relate some ane of Liszt.

"What is there new to be said o *Meister?* His great genius and his beau nature are so universally known and I I recall this instance of his boun generosity and kindness, which I be has never reached the public, and it only one of everyday occurrences.

"I was dining one day with Liszt– that dear little dining-room; how disti I see it now, plain and neat, the s table at which I have had so many ch ing hours, and the weird etching that on the wall, of a belfry tower full of and owls. As we were finishing our re I saw through the open door a poor P girl, who was in the Master's class, deprecatingly into the *salon.* Liszt saw too, and rising, went to her and bro her to the table, and gave her a glas wine with the same courtesy he would shown a countess.

"I know of a very amusing anecdote cerning Dr. Von Bülow. For once the ratic little Doctor was the victim o own caprice. Bülow is excessively fo the ballet, and while conducting an o one night, he was so charmed with dancers that he invited the entire *corp ballet* to a supper, and gave orders t steward of his hotel that they should whatever viand most pleased their a ished palates. From *première* dow *coryphie* they all ordered lobsters, w are tremendously dear in Germany, an his spasm of enthusiasm Bülow paid n three hundred dollars, a small fortun Hanover. The matter made quite a stir in local circles.

"Theodore Kullak is known chiefly the greatest teacher of the pianoforte, absolute master of piano didactics. To him about his teaching is one thing, al severely critical, often cross and sarca with untiring vigilance over the fault his pupils, one would fancy he had no e ence outside of his study. But to see K after he has had a few glasses of ch pagne is quite another thing. He is sparkling, witty and interesting in con sation. I was dining with him, one when Moszkowski was among the gu At the table also sat a young lady, was soon to make her début, and dreading the terror of stage fright.

"Several amusing anecdotes were rel *apropos* of this subject, and Moszkow in his inimitable manner, told the laughable one of a pianist who, being overcome with stage fright, and findin he seated himself to play, that he was far from the keyboard, instead of dra his chair nearer, seized the piano wi frantic clutch and tried to pull it to

"Speaking of Moszkowski, he is on the most charming of men. He is si larly modest, and seems not to realize great reputation, evidences of which alw fill him with wonder. I recollect an epi which will illustrate his childlike na

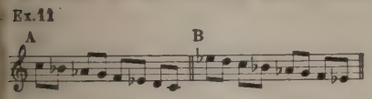
The Threshold of Music

Triads, and How They are Put Together—Continued



By LAWRENCE ABBOTT
Assistant to Dr. Walter Damrosch

This article is the fifth in a series on "The Doorstep of Harmony." The first appeared in The Etude *for January, and an article will appear each month hereafter.*

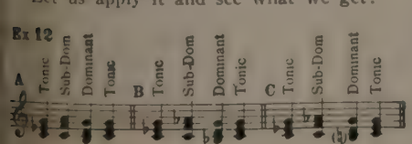
THE EXISTENCE OF THREE VARIATIONS of the minor scale may lead some to suppose that minor sic is purely artificial. Not at all! Music the minor mode can trace its ancestry ck to nature and the overtones, just as major music.

For one proof of this, turn back to the art of overtones in Chapter I of this ies. It will be found that the 6th, 7th, 9th, 10th, 11th and 12th notes of the rmonic series are, note for note, the same the ascending melodic scale of G Minor. For another proof, turn to the descend- melodic scale of C Minor in Chapter . Again, it will be found that its notes e exactly the same as those of the scale E-flat major—notes which, it will be membered, are based directly on the ertones. The only difference is that the C inor scale begins and ends two notes wer, on what would be the sixth note of e E-flat scale. Because this descending rsion of the minor scale can thus trace lineage through the major scale and gle call notes to the natural harmonics, is known as the Natural Minor Scale.

Ex.11

In "A" we have the Natural Minor cale of C; and at "B" the Major Scale of -flat.

The same thing will be found true in very other key. Every major scale holds second job, being also the natural minor cale of a neighboring minor key. For example, the white keys (which form the major scale of C) also form the natural inor scale of A.



When we set music down on paper, narking sharps or flats at the beginning of ach line, as a signature to show the key, ve do not need to use a separate set of ignatures for the minor keys. For we can nake the major ones do double duty—hree flats doubling for E-flat Major and C minor; one sharp, for G major and E inor, and so forth—simply because the ame signature serves for both the major cale and the related natural minor scale.

We speak of C minor as being the rela- ive minor of E-flat major, E minor, the relative minor of G; A, the relative minor of C, and so forth.

It will be recalled that we constructed our first major scale from the notes of three chords: the tonic, dominant and subdominant major triads. (See Chapter III.) Simple logic tells us that this process can be reversed. Given the notes of the major scale, we can build from them patterns of thirds, starting with the first, fourth and fifth notes of the scale, and thus construct tonic, dominant and subdominant triads. This process can be applied equally well to the three variations of the minor scale.

Let us apply it and see what we get:

Ex.12

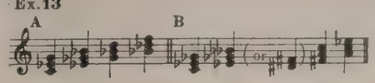
A gives the notes of the Ascending Melodic Minor; B, of the Descending (Natural) Minor; and C, of the Harmonic Minor.

The first two sets of chords sound somewhat queer and archaic. Certainly the third set appears to be more normal. The scale represented by the third set—the harmonic minor scale—is the basis of most minor music, while the melodic minor scales are used chiefly as a means of avoiding awkward melody.

Can the harmonic and melodic versions of the scale meet peaceably in the same piece of music? Or do they clash? When used judiciously by composers, and not brought into too close proximity, they can get along together quite harmoniously—but if both versions try to monopolize the same measure, a decided warring of tones results.

The excerpt from Gershwin's *Rhapsody in Blue,* quoted in Chapter IV, is an example of what happens when a composer uses both melodic and harmonic scales simultaneously. The "blues" idiom is a strange mixture of major and minor, but in this particular excerpt the minor predominates; so we may consider for the moment the quoted measures to be in A-flat minor. In both the first and third measures the melody lands on G-flat (which belongs to the melodic minor) in its descent, while the harmony sticks stubbornly to G-natural (of the harmonic minor scale), resulting in a bold effect of warring tones. This simultaneous use of two different scales is the cause of the diminished octave at these two points.

But we must leave for the present the sad eyed minor triad and its equally sombre domain, the minor scale, so that we may continue our explorations.



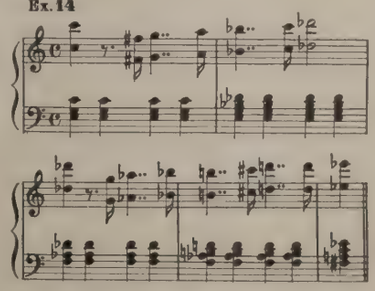
The Stormy Chord—the Diminished Triad

WE STILL HAVE TWO TRIADS ahead of us, the diminished and the augmented. Both these triads are creatures of a far different breed than the major and minor triads. Lacking the restful perfect fifth of the major and minor chords, they are distinctly restless. While the major and minor triads gave us a sense of security and a feeling that we were on solid ground, the diminished and augmented chords produce just the opposite effect. We find ourselves in treacherous quicksand, with no secure footing. Neither of these two chords has any top or bottom. Either of them may be turned upside down, only to disclose that it still sounds as if it were rightside up. From any angle, it remains exactly the same, like the man in the advertisement whose eyes are constantly fixed on yours. It seems to belong to no particular key. These two chords make a strange pair, in fact.

The diminished triad creates an ominous effect, suggesting the wailing of wind, the coming of a storm, or some strange inward excitement. Its make up baffles identification. We can drop off the lowest note of a diminished triad and supplant it with another a minor third above the uppermost one, and repeat this process over and over; yet the chord seems unchanged in effect.

A minor chord sounds changed at each level; but a diminished chord remains the same

Ex.13

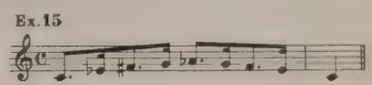


What is more, the diminished triad tricks us into losing our bearings completely, so that we have no feeling as to where the home key and the tonic chord lie. This peculiarity of the chord makes it an invaluable aid to composers in switching music from one key into another without making the change seem like an awkward transition.

The diminished triad appears in music far less frequently than its variation, the somewhat more elaborate diminished seventh (one of those country houses with an added wing). We shall explain this chord more fully later. For now, it is enough to say that it contains a fourth note, making it an endless chain of linked together minor thirds.

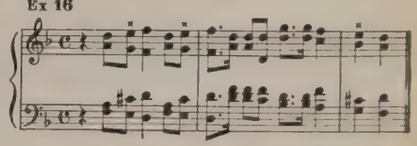
A good illustration of the diminished chord's strange personality occurs in Gounod's opera, "Romeo and Juliet," during the scene in which *Tybalt* and *Mercutio* are engaged in swordplay. This passage reveals both the stormy nature of the chord and its convenience as a gangplank for stepping from one key into another.

Ex.14



Between the C major triad in the first measure and the D-flat major triad in the third measure, the diminished seventh chord in the second measure forms as nice a link as you please. The fourth and fifth measures are harmonized in diminished chords, too, in keeping with the excitement of the battle.

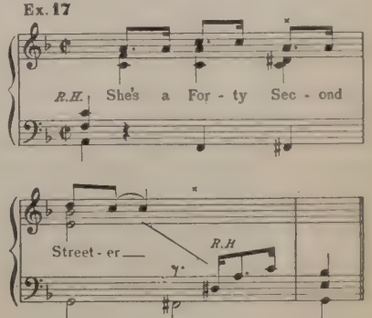
Diminished chords have been constant aids to operatic climax, both before and since the time of Gounod. When the dread statue walks in on *Don Giovanni,* in the last act of Mozart's opera, diminished chords thunder from the orchestra pit. When *Amneris,* mad with jealousy, rushes upon the stage to denounce *Rhadames* in "Aïda" (Act III), and when *King Mark* bursts in upon the two lovers, "Tristan and Isolde" (Act II), diminished harmonies again do their valiant work of adding to the excitement. Verdi and Wagner were writing almost a century later than Mozart, but the much worked diminished seventh chord was still considered as serviceable as ever.



A melodic use of the diminished triad occurs in the sinister motive of sorcery in Wagner's "Parsifal." This motive succeeds in attaining an effect of ominousness through the course of its melody. The first three notes trace the outline of a diminished triad:

Ex.15

Diminished chords do not always imply that trouble is brewing. Sometimes they appear in subordinate rôles, sandwiched in between chords of a less disturbing character. In Mendelssohn's oratorio, "St. Paul," for instance, they can be quite harmless:

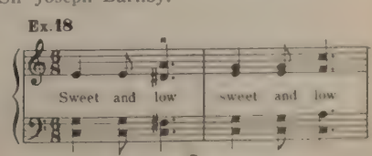


Ex.16

The three diminished chords, marked with x's, are all triads.

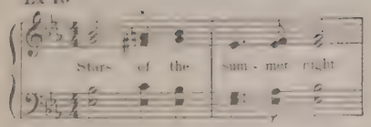
We can skip from Mendelssohn to modern jazz and find diminished chords sandwiched in, in very similar fashion, as in *"She's a Latin from Manhattan,* by Harry Warren.

Ex.17



This quotation from *She's a Latin from Manhattan* is here reproduced with the permission of its publisher, M. Witmark & Sons.

The x's mark the two appearances of the diminished chord. It is used here for variety and to spice up the harmony. Its restlessness keeps the music "on the go." As a matter of fact, this use of the diminished chord has become so common that it tends to sound trite, and we are more apt to applaud the composer who prefers to sidestep the obvious by harmonizing his music some other way.



Such uses of diminished harmonies often amount to ornamentation. The diminished chord has such a distinctive sound that its occasional use adds richness to a piece of music. It has become a favorite device in "close harmony," as in *Sweet and Low* by Sir Joseph Barnby.

Ex.18

Also in *Stars of the Summer Night,* by Isaac B. Woodbury.

Ex. 19

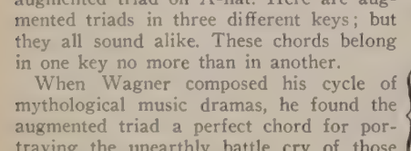
These are diminished sevenths, of course. Triads would sound too thin for a fully satisfying "barber shop" effect.

There is no such thing as a diminished scale. A diminished chord, unlike a major or minor chord, never can be the tonic of anything; it is as restless as the sea.

The Eerie Chord—the Augmented Triad

MUCH THAT HAS BEEN SAID about the diminished triad applies equally well to the augmented triad. Like the diminished chord, it has no beginning and no end. It is shifty. It belongs to no key and simply wanders through space.

The notes of the augmented triad are less close together than those of the diminished triad. For that reason it has a more open sound; it takes us to a more rarefied atmosphere. It sets us floating helplessly through clouds or strange darknesses, where all is void and chaos. After augmented harmonies, a return to major or minor is like a rift in the clouds, a sight once more of pleasant fields and houses, a return to the solid, substantial earth.



Ex. 20

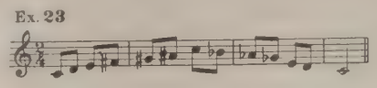
"A" is an augmented triad on C; "B," an augmented triad on E; and "C," an augmented triad on A-flat. Here are augmented triads in three different keys; but they all sound alike. These chords belong in one key no more than in another.

When Wagner composed his cycle of mythological music dramas, he found the augmented triad a perfect chord for portraying the unearthly battle cry of those weird sisters, the *Valkyries.*

Ex. 21

Another famous use of the augmented triad is the music that accompanies the entrance of *Cio-Cio-San* in the opening act of "Madama Butterfly"—a theme of haunting, ethereal beauty.

Ex. 22



The augmented chords occur in the second and fourth measures. As will be recalled by those who have heard the opera, the four-note phrase is repeated over and over, a tone higher each time, until it has climbed to G-flat.

The Sorcerer's Apprentice by Dukas is one of the earlier orchestral works to use augmented chords for eerie effects, in this particular case heightening the illusion of the supernatural as the music describes the magic incantations which bring to life the sorcerer's broomstick.

Corresponding to the augmented triad is an augmented scale—called the whole tone scale because every interval is a whole tone. This scale is just as eerie as its triad, and just as chaotic. It is seldom used—and then only for special effects.

Ex. 23

Historians tell us that the first authentic use of the whole tone scale was made by the Russian composer Dargomijsky in his opera, "The Stone Guest," composed about seventy years ago. (*Mozart had used it, about a century earlier, in the close of the characteristically whimsical Cadenza of the violin solo as it terminates the Adagio of his "Dorfmusikanten Serenade."—H.*) In more recent times the whole tone scale has been associated with Debussy, who was its frequent champion. Here is a brief quotation from one of his three images for piano, *Reflets dans l'Eau,* in which this unusual scale gives a rippling, shimmering effect.

Ex. 24

With the augmented chord, our voyage in exploration of triads has been completed. We have discovered four different kinds: major, minor, diminished, and augmented—each with its own distinctive sound and mood. Now for the next step. How are these triads used?

In modern harmony the composer uses any or all of them pretty much as he desires—just as the modern painter uses color as he pleases, putting streaks of purple on a cow or dabs of green in a sunset, if those colors happen to strike his artistic fancy. But the painter who is less steeped in modernism believes in approximating on his canvas the colors of nature—and in nature skies are blue, grass is green, and snow is white. So with music. The harmony of the ballad singer, the light opera score, the dance tune, and the classic symphonies and sonatas, always follows certain natural laws. There are certain definite places, for instance, where each of the four kinds of triads is most at home. What these places are and the part they play in music we shall now try to discover.

Making Two Part Inventions Interesting

By Nell V. Mellichamp

IN TEACHING Bach's "Two Part Inventions," the use of two pianos may prove of immense advantage, particularly when presenting them for the first time.

From the beginning have the student play the second voice at one piano, the teacher the first voice at another piano, by phrases. Then exchange parts and work slowly in like manner. Thus the two voices become quite individual.

Hearing both voices at once trains the ear to listen for both; and playing only one part secures accuracy in notation, fingering and phrasing.

RECENT RECORD RELEASES

By PETER HUGH REED

ALTHOUGH more people are to-day investigating unfamiliar music than ever before, there are still a number who decline to give ear to any that is not familiar or labelled great by the critics. A correspondent writes us that he considers "one of the great virtues of the phonograph is the fact that one can hold himself to the absolute best, the music he knows he should respond to, and if he does not warm up to it, he can know it is his fault." The impression implied is that he feels he should listen only to music that is labelled "great." His is not only an unfortunate attitude toward music, but also a mistaken one. For, as one critic pertinently remarked recently, "If you insist on everything you hear being great, you miss a lot of music that is truly worth hearing."

The artistry of Kirsten Flagstad has not been perpetuated on records better than in her performance of Beethoven's dramatic scene, *Ah, Perfido!* The work is a concert *aria,* which Beethoven wrote in his middle twenties when he was making an extensive study of Italian, with the idea of writing an Italian opera. It is conceived in the grand manner, with a dramatic recitative and an expressive *cantabile* section to which is added a final *allegro.* The influence of Mozart and Gluck is much in evidence, the *aria* itself recalling the familiar air of *Orpheus.* In the recitative, the singer upbraids her lover for his faithlessness, but concludes by declaring that as she has lived for him, so she will die for him. Mme. Flagstad, with the assistance of the Philadelphia Orchestra, under the direction of Eugene Ormandy, emerges with triumphant honors in this recording (Victor set M-439). There is only one word that fits it—magnificent.

One of the finest choral recordings to be brought forward is that of Carl Philipp Emanuel Bach's *Magnificat,* which is sung with spirit and expression by the University of Pennsylvania Choral Society, under the direction of Harl McDonald. This work, composed the year prior to the death of Carl's illustrious father, makes use of only five verses from the *Magnificat* liturgy—Nos. 1 and 2 on the first record side, 9 and 10 on the second side, and No. 5 on the third and fourth sides. That Bach's son inherited some of his father's mastery of counterpoint is evidenced here. The work is a stirring and richly rewarding one. A contralto solo occupies the second part of the recording (Victor set M-444).

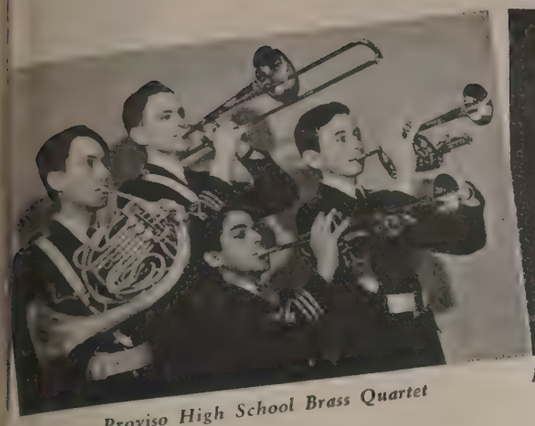
Yella Pessl, the harpsichordist, has recorded Bach's "Fifth" and "Sixth English Suites" (Victor set M-443). Miss Pessl plays this music with fine linear clarity and resiliency, and employs the resources of her instrument without exaggeration. Bach's "English Suites" are among his finest keyboard works. This is a first recording of the "Fifth Suite," but not of the "Sixth." Miss Pessl has that rare quality of making us feel that she is thoroughly enjoying herself in her performances, and for that reason she is most satisfying in repetition. We unreservedly recommend to all admirers of Bach her latest contribution to the phonograph.

In a recent New York recital Joseph Szigeti, the eminent violinist, played Mozart's *Divertimento in B-flat major* (K. 287) in conjunction with an instrumental ensemble, setting forth the elaborate first violin part in the manner of a featured violin in a concerto. Although this work was not intended to be interpreted in this manner, there can be small objection to Szigeti's performance on stylistic groun

The English composer Lord Berners h been termed a musical humorist. In the c cerpts from his ballet "The Triumph Neptune" (Columbia set X-92), played Sir Thomas Beecham and the London Ph harmonic Orchestra, we have some high individualized ballet music, replete with welcome sparkle and wit. On Colum record 69154D, Walter Goehr, with the of the London Philharmonic, gives adm able performances of the *Dance of Young Maidens* from Borodin's "Prin Igor," and of Moussorgsky's song *Gop* in an arrangement by Liadoff.

Oyanguren, the guitarist, is equally su cessful in classical or in virtuoso pieces his chosen instrument. His playing is ch acterized by exceptional evenness, imp cable technic, and a true Latin warmth a color. In a group of pieces by the celebra eighteenth century guitarist and lut Francois Campion, Oyanguren plays w animation and spontaneity. (Colum 17110D). A most welcome little disc!

Georges Thill, the French tenor, is he to advantage in three songs by Cé Franck, *Nocturne, Le Mariage des Ro* and *S'il est un charmant gazon,* Colum disc 9142-M. Thill's manly vigor is a w come respite in music which is too of sentimentalized. Kerstin Thorborg is li wise heard to advantage in Mahler's m ing song, *To the World I Am Lost.* T record, made during an actual performa in Vienna has the Vienna Philharmo Orchestra, under Bruno Walter's sy pathetic direction, behind the singer.



A modern symphony of great power a strength is the "Symphony in F minor" the English composer, Vaughan Willia and it is played by the British Broadca ing Orchestra, under the direction of composer (Victor album M-440). The w is said to reflect a protest "on the way world is going to-day." Although this mu may seem somewhat abstruse in an ini hearing, it will, we believe, prove a stir lating experience in subsequent auditio In our estimation, it is a great score t deserves to be known. The recording o fully captures its power and vitality.

Among single disc recordings recei issued are some interesting excerpts fr Honegger's greatest score, "Le Roi Dav (Columbia disc 68937D), performed by Swiss Romand Chorus; Mozart's charm *Rondo in C* for violin and orchestra (373), competently performed by Jean Pe gnet (Columbia 69125D); Brahms' *Acade Festival Overture* in an excellent read by the Vienna Philharmonic Orchestra der Bruno Walter's guidance; and an el trically re-recorded disc of the late Enr Caruso containing his inimitable perfor ances of Franck's *La Procession* and Faur *Les Rameaux* (Victor 14744).

Piano recordings which readers of T ETUDE will find of interest, both for stu and enjoyment, include Egon Petri's bea fully revealing performance of Buso profound *Fantasia,* dedicated to the mem of the composer's father, a composit founded on a Bach chorale which reve Busoni as a great musical poet. Also Pet performance of Sgambati's familiar arran ment of Gluck's *Melodie* from "Orphe coupled with the pianist's own arranger of a Bach *Minuet* (Columbia 69153 and lastly there is Arthur Rubinstein's mirable performances of Rachmanino *Prelude in C-sharp minor* and Schube *Minuet and Trio* from "Sonata, Opus which should prove excellent models piano students.

Solo and Ensemble Work

A Modern School Training Ground

A GREAT DEAL has been propounded about the value of solo and chamber music participation, and yet it is a e of musical activity in our school m which can hardly be overempha- l. The manifold advantages of this field udent participation mark this work as spensable; what better source of mu- experience, training, enjoyment and tice stimuli could there be? We can agree that its unusual opportunities ide directors and student organizations e the means for the best in musical elopment.

he mere participation in daily band and hestra rehearsals and concerts allows a limited training for the individual er, and this is especially true in the of second, third and fourth chair ers. While these rehearsals and con- s are perhaps the most essential part e music program, they are by no means sole end, and certainly should not repre- the total program of training for our ic departments. Solo and ensemble k not only properly rounds out this gram, but the additional training and et for community and school service is luable.

ull band and orchestra rehearsals, by essity, exact the greatest demands upon chair players. These young students often the most capable musicians of the anization; and, due to their position, receive more attention than the others the same instrumental group. It follows naturally that they develop musically and technically far in excess of the remaining players. What of the second violins, violas, string basses, the third and fourth horns, alto and bass clarinets, second and third clarinets, third trombones and other "minor" voices? Usually they stumble along, basses and horns submerged in their daily routine of "um-pahs," subject to cases of "heart failure" when called upon for execution of a unison solo of eighth- or sixteenth-notes, the very same notes tossed off so nonchalantly by the first chair players. These are the students who need solo and ensemble experience, who need the stimulus and thrill that comes with being a member of a string or wood wind chamber music group.

The growth in leadership and personality of school youngsters through solo recognition and ensemble participation is truly amazing. Beyond the additional training is the personal satisfaction which cannot be duplicated through the medium of full band or orchestra. In the latter, one's performance is too often but a minute part of the whole; whereas ensemble and solo requirements place responsibility on the individual for an important and separate part.

It is not to be inferred, of course, that each player's part is of less importance in full band or orchestra than it is in the chamber music group. It is obvious, however, that a greater responsibility must be assumed by each individual of the small ensemble, for he is without the support of others playing the same part. It is this added responsibility and emphasis on individual performance that has such beneficial effect.

The various performance elements, such as tonality, intonation, blend, balance, attack, phrasing, rhythm and interpretation —so necessary for worth while band and orchestra performance—can be worked out in greater detail, and will receive such close attention in the small ensemble that with sufficient experience these factors become a fundamental part of the student's musical equipment and are automatically used with greater perfection during full band and orchestra participation.

Problem of Rehearsal Time

WITH REALIZATION of the values of solo and ensemble participation, we must face the problems incident to the working out of such an opportunity for our students. Perhaps the most stubborn obstacle to building a solo ensemble schedule is that of rehearsal time. In many school systems the music department has not as yet been accorded the recognition which warrants the scheduling of a solo ensemble program on the regular school curriculum. On the other hand, there are many schools which provide a definite time in the daily music schedule for this work; and usually it is combined with the sectional rehearsal drill, or given attention at the times when students are assigned practice hours.

A glimpse into the writer's personal experience at Hobart, Indiana, may give ideas as to how this first problem may be solved; although it is likely that it is being met in much the same manner in many communities. The plan for the organization and administration of our solo ensemble program was based on the rules governing the national band and orchestra contests. This set up gave each student the opportunity to participate in two events: he might play in one ensemble group and in addition perform in the solo division; or, if he so desired, he might be a member of two ensembles, provided that each was of different instrumentation.

My daily program as director was well taken up with teaching and with rehearsals after school hours, and I could scarcely find time to work with the various ensembles as well as the numerous prospective virtuosi. In order to maintain the intense interest and enthusiasm shown by students for this program, and yet not overburden my full schedule, a plan was inaugurated whereby the services of our student leaders were enlisted. These students were chosen after careful deliberation and an eye to their qualifications of musicianship, leadership, tact, and ability to work effectively with their fellow students. In most instances these leaders were the first chair players of the band or orchestra.

It might appear from casual judgment that this would be quite an impossible situation, but it proved far from such. The

By DR. JOHN THOMPSON

Analysis of Piano appearing in the Music Secti of this Issue

SUMMER TWILIGHT
By J. IMHOFF

To open this midsummer offering of THE ETUDE music, the editor has chosen Mr. Imhoff's composition entitled *Summer Twilight*. Play this music, which is in the style of a nocturne, at moderate *tempo* and with a good singing tone. The treatment should be elastic and at the same time free from exaggerated *rubato*.

The melody has its beginning in the right hand in double notes and is subject to constant tonal gradation. The player should keep in mind the fact that the melody line constantly changes in "thickness."

The second section, in G minor, beginning at measure 17, grows in animation. Examine the structure of the left hand and be sure to give proper significance to the bass, in measures 17, 19, 25, 27, and so on.

The Trio section, beginning with measure 33, is in the key of A-flat major. The melody here lies in the low register and calls for good *sostenuto*. Note that the considerable tonal climax builds from measure 41 and culminates in measure 45.

Phrase and pedal marks are of vital importance, as in other lyric pieces. Be particularly careful, therefore, to observe all such indications as given.

IN SYLVAN SHADOWS
By HUGH F. BRYSON

Establish a swinging six-eight rhythm at the very beginning of this composition, and hold to it throughout. Let the tonal painting depict both lights and shadows, remembering the old saw that contrast is the primary law of all art.

In order to give proper importance and significance to the *staccato* chords appearing on the first beat of many measures during the course of the first theme, use the pedal with care and discretion. Follow the markings exactly as given.

The first section of this piece is in the key of E-flat major, while the second section (measure 33), lies in the key of A-flat major, the subdominant key.

Mr. Bryson has written this number in lyric style; so, remembering this, do not allow the active accompaniment of the left hand to detract, at any time, from the importance of the theme.

FRAGMENT FROM "SONATA, No. 7"
By W. A. MOZART

In learning this fragment from Mozart it would be well to treat it first as an exercise, and to set out to master it from its mechanical, or technical side. Only after it can be played cleanly and fluently without any effort, can one hope to give it the coloring of delicate lights and shades so necessary to produce the Mozartian effect intended.

Pedal sparingly—in fact, "when in doubt, do not pedal," is the best possible advice.

Do not allow the *fortes* to be too robust. Keep ever in mind the tonal limitations of the harpsichord for which this music was composed. Delicacy, sparkle, grace, and refinement, are the watch words in interpreting this piece from a great master whose works are as fresh to-day as when they were written.

BY MOONLIT WATERS
By GEROGE S. SCHULER

The short four-measure *Introduction* which opens this piece may be played *ad lib*, so far as *tempo* is concerned. After the pause on the seventh chord with the augmented fifth (E-sharp), the melody proper begins. Be sure to make a rhythmical distinction between the triplet figures of the right hand and the left hand, which contain a dotted eighth followed by a sixteenth.

This is frankly a salon piece and should be treated accordingly.

Both *tempo* and meter change at measure 21. Here the mood is capricious, the meter four-four, and the melody alternates between the low voice of the right hand and the upper or soprano voice.

Octaves are introduced in measure 38. Observe too, the heavy wedge shaped accent marks shown in this section. Both *tempo* and dynamic marks are given and should be followed closely.

THE BUSY BEE
By FREDERICK A. WILLIAMS

Designed as a recital piece, *The Busy Bee* becomes an etude for busy fingers when played up to *tempo*.

Preserve an even *legato* so as to produce a drone effect in keeping with the title.

Beginning with measure five, accented notes pick out the hidden theme, usually the upper note of the figure. While this effect is marked for only the first four measures, it is intended to be applied throughout the piece. The use of the pedal is also continued, as indicated in the first two measures of the theme; that is, down on the first beat and released on the third eighth.

Frequent applications of *crescendo* and *diminuendo* add considerably to the buzzing effect and may be applied more or less *ad lib*.

Practice at first rather slowly with cleanly articulated finger *legato*. As speed develops, keep the fingers closer and closer to the keys until the minimum amount of motion is employed.

IRISH REEL
By THOMAS F. DUNHILL

This reel is typically Irish in character, meter and tonality.

Especially interesting is the scale used; that is, A, B, C, D, E, G, A. Play it over a few times to get the "feel" of the general tonality used as a basis for the melody.

As a further experiment, play the Scotch scale—C, D, E, G, A, C. Then compare the two and note the difference. To continue the experiment, think over several Irish and Scotch melodies, and see if you cannot trace the use of both scales.

The phrasing is of vital importance in this number. Follow the curved lines exactly as shown in the right hand. Note that the left hand supplies a persistent *staccato* accompaniment, which contrasts with the right hand part.

This number should be of great interest to teachers and pupils alike.

THE OLD WOODEN CLOCK
By BERT R. ANTHONY

The title of this piece immediately suggests to us that the *tempo* must be meticulously even. The ticking of the old clock is established in the *Introduction* and must be maintained throughout all its measures. The melody obviously moves from one hand to the other, the chords in either hand always forming the accompaniment.

As indicated in the text, this piece should be played softly and sweetly. Give as much resonance as possible to the dotted half notes and try to offset the severity of the *tempo* by varying the tonal value of the melody notes.

ON THE MIDWAY
By VICTOR RENTON

Try to inject into this piece the carnival spirit suggested by its title.

While it is marked *alla breve*—which means two counts to the measure and one count to each half note—it would be well to learn it first at slower *tempo*, counting it in four-four measure—one count to each quarter note.

Keep a crisp, crackling *staccato* in the right hand part as indicated, and play *leggiero*, lightly.

The pianistic figure in measures 11 and 12 is quite easy to perform, if fingered as marked. Divided between the hands, it lies quite comfortably under the fingers.

In the second section, beginning with measure 37, the grace notes in the right hand should be flicked into the following principal notes cleanly and sharply.

Pedal as marked and make of this number a jolly and colorful addition to the recital repertoire.

PRELUDE, OP. 28, NO. 4
By FREDERIC CHOPIN

All music instructors agree that one of the most difficult things in all music to teach is the matter of style. Each composer, as well as each musical era, has a definite style, a knowledge and sympathetic understanding of which is absolutely essential to proper interpretation.

Style, however, is such a delicate and fragile thing that it will not bear the handling of mere words, and because of this it is almost impossible to explain adequately. In the last analysis, much must be left to the performer's intuition. Certain helpful hints may be given the pupil however; and, in the case of Chopin, it is suggested that an outline of Polish history be read.

This master had a deep and sympathetic love for his native Poland, and the woes of this unhappy land left their mark on many of his compositions. A feeling of the deepest dejection, amounting almost to despair, is conveyed in this short number, which carries a musical message more potent than that to be found on many pages written by average composers. This feeling is accentuated by the persistent tonal descent found both in the melody and in the accompanying harmonies.

A WOODLAND STORY
By EULA LINDFORS

This little piece is in the descriptive style and tells a story of dancing elves who, interrupted for a time by the approach of two gnomes, later resume the dance after the dreaded gnomes have passed on.

As indicated in the text, this music should be played fast and with lightness.

The opening theme consists of a broken triad (D minor), divided between the hands, and this figure is used to depict the dancing elves.

At measure 13 the two gnomes make an appearance—the first gnome indicated by a dominant seventh chord which resolves (measure 14) into G minor; and the second gnome by a seventh chord (m 15) which resolves into D mino right hand figures in eighth notes the scampering of the elves to hide nearby bushes.

The second section is played at *tempo* and conveys the idea of a co tion between the two gnomes while on stumps. As shown in the te gnomes pass on in measures 31 a after which the elves resume the and continue until the rooster crows ure 47), announcing the approach of which is bed time for all good Thence they scamper away (las measures) as fast as possible, and the last note is played (*pianissim* an elf is in sight.

IN FAR-AWAY JAPAN
By MICHAEL AARON

This little piece should intrigue the first grader. The melody has a oriental flavor; and this, together w words which accompany the tune nitely place it in the Far East.

Aside from its interest as a piec number also affords valuable prac passing the second finger over the

Make a sharp distinction betwee *cato* and *legato* phrases. The ter *moderato*, while tonally the music i or less on the quiet side, ranging does between *piano* and *mezzoforte*

GLAD AND GAY
By HELEN CRAMM

This little number could be used tively as a study in melody playi in phrasing.

The words should prove useful i ing the performer catch the proper phere—and the piece can be used a song.

The first section is in the key major, and the second is in the subdo key, B-flat major. The first ther appears (measure 33) in the form *Coda*, and the piece ends on an asc scale in the right hand, which ru an accented chord of the tonic.

JOLLY SAILOR
By ADA RICHTER

Here is a tune, not only jolly, but clever as well. The first two line practice in melody playing for t hand, while the right hand supplies a accompaniment.

Words are supplied and, by sing melody an octave higher than it is the music will be found to lie in a fortable register and to be quite si

The last line, marked *Con spirito* spirit), is a clever adaptation *Sailor's Hornpipe*, and as such it coats a very valuable finger exer well as adds atmosphere to the piec

Many young musical Jack Tars w extra time to their practice periods assigned this piece.

TOBOGGAN RIDE
By HUGH ARNOLD

The toboggan rides up and dow keyboard on broken triads, divided b the hands. Since no span greater seventh is used, the piece lies mos fortably under the fingers and gives lent practice in developing the rolling and graceful release as the broken figures pass from one hand to the

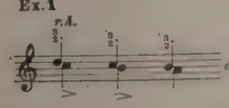
Meanwhile, may I offer a sug...n which may or may not be helpful? ...please remember, you are trying it ...n your own responsibility. I am not ... found guilty if it does not work.

... chief causes for stiffness are 1. ex...ely contracted approach to the key... viz: the setting in motion of groups ...uscles unnecessarily pulling against ...other, and 2. "keybedding," rigidly ...g down the keys, or pressing them ...playing. The remedy for this, prop...applied, is simple. It consists of con...ating intently on the principle of ...ding" release, comprised of 1. poised ...ation, as the arm and hand, held over ...n the key, prepare to play; 2. the ...on of a second's exertion necessary ...ove down the key; 3. instantaneous ...elease as the arm bounds to the lap.

1. poised relaxation, is meant hold...he arm and hand "in one piece," like ...sely jointed paint brush, with the ... tip held away from the body or ... to it—whichever is most comfortable ...ting as lightly and freely as possible, ...with the wrist high, medium or low ...chever way feels easiest), the finger ...ngers gently touching the key tops. ...r a few seconds pause, to sense thor...ly the floating quality of the elbow ...ome practically simultaneously 2. the playing and 3. the rebound. Constant thinking of bouncing or lightly flinging up the arm as the tones are played gives the maximum of efficiency with the minimum of effort. Naturally, after the arm is thrown up it falls to the lap. At first this action is difficult to rationalize; but what happens is that the sudden upward push of the arm sends the key down, and of course it instantly bounces back. Soft or loud tones depend on the speed of the thrust and release, that is, if you want a loud tone, fling your arm up suddenly and swiftly.

When the arm drops to the lap, be sure to rest *completely* for some time before playing again, shoulders down, upper arm and elbow hanging limply, fingers and hand "dead." Then lift the arm again very lazily, poise it gently (floating elbow tip) over the next tone; wait on it a relaxed second or two (paint brush), then play it by suddenly bounding in the air again. The exercise should be tried at first with hands separately (third fingers only) then hands together playing in thirds on white keys (left hand, C; right hand, E, and so on), gradually adding more tones. Practice only *p* and *pp* for a long time.

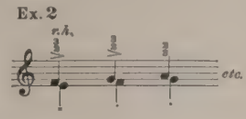
This is, of course, only a beginning. Later it may be applied to diminished seventh and other chords with four or five tones in each hand; lost motion is avoided by not bounding to the lap, but leaping lightly and directly over the next tones to be played.



This is the simplest and most useful relaxation exercise I know. I can assure my correspondents that for stiffness, soreness, fatigue and "pains," I do not know its equal. But it must be practiced very sparingly for only a few minutes several times a day; and above all, thoughtfully. In other words, the careful, poised preparation and complete "letting go" in the lap take up so much time that it is possible to play only a few tones or chords in the space of five minutes.

Grace Notes

I am perplexed about the grace note in modern music. As a child I was taught to play it on the beat, as in classical music; now I am told that in modern music the grace note is played before the beat. Has there been a change in this, in the last twenty-five years? Or is there a difference between American and European interpretations? My present teacher has a European background. But I particularly want to know how to teach the grace note to beginners on the piano. —Miss F. B., Michigan.



Beginners and intermediate students always should be required to play a rapid grace note before the beat, otherwise (as we all know) confusion thrice confounded results with the players having the "daylights" scared out of them whenever a grace note approaches. Teachers make a grave mistake in not showing the pupils that the grace note and the principal note itself must be felt together as *one* impulse, and not as two separate entities. To do this I assign the following exercise:

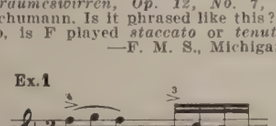
Ex.1

The seconds are played exactly together, but the top tone is instantly released (*staccato*) while the bottom is held. This can soon be changed to a true grace note—and it will then be played without awkwardness. Practice the exercise ascending also:

Ex.2

For advanced players, the rules for rapid grace notes are extremely flexible. Much of Bach and other early classic composers sounds more gracious if the grace note is played on the beat. In romantic and modern music grace notes are usually played before the beat.

Memorizing Again



How does one learn to memorize? I do not seem to be able to, although other things, such as lectures, shorthand, and so on, seem to stick in my mind.—I. B., Louisiana.

You are one of many persons without naturally retentive memory; like Topsy, their minds "just growed". The older they become the more they depend on this faculty. Which may be satisfactory for facts, figures and fancies, but certainly is not adequate for music. The longer they rely on this lazy, easy going faculty the shakier and faultier their musical performance becomes. In December, 1936, I went into detail here on the processes of pianistic memory, and I sincerely hope you have hung on to your back issues. On account of the number and scope of questions submitted to this department, I am sorry that it is impossible to answer any which have been recently considered.

A Phrasing Problem

Please tell me how to phrase *Traumeswirren, Op. 12, No. 7*, by Schumann. Is it phrased like this? If so, is F played *staccato* or *tenuto*? —F. M. S., Michigan.

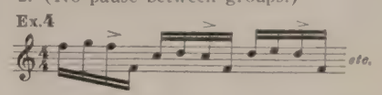
Ex.1

To quibble about phrasing in this case, is beside the point. Since the piece goes as fast as the wind, what purpose will any fine distinctions serve? Better discuss how to practice in order to play it as clearly and as easily as possible! This requires proper balance of rotary forearm and articulative finger freedom, and it is no easy task. If the first sixteenth in each figure is too strongly accented or played with too much arm, the next tone will not be heard, and the third (a repetition of the first) will not sound, because the awkward use of the arm prevents the first from being released quickly enough to insure its repetition. Therefore it is necessary to practice thus:

Ex.2

playing the mordent very fast (with as little arm movement as possible) taking care to accent the last tone; the low F's played by a rotative movement toward the thumb; at the rests, the relaxed arm and fingers are ready for the group which follows:

Other helpful ways are:



1. (No accent; long pause between groups.)

Ex.3

2. (No pause between groups.)

Ex.4

3. (Longer pause after each low F.)

Ex.5

Thirty-second notes are used in 1 and 3 to emphasize the necessity for playing each impulse as swiftly as possible. Be sure to relax completely at each rest.

A Year of Juvenile Theorizing

May I ask your advice regarding a precocious and very talented five year old beginner. I hear many teachers advocate a year of "theorizing"; that is, establishment of musical background by listening and appreciation lessons, ear training, rhythm drills, original melodies, chord harmonization of simple melodies, and so on, before actually attacking the keyboard for technical foundation with hand position finger exercises, scales, learning of notes and reading of pieces.—A. J. W., California.

Any child who gives evidence of musical talent may be led directly to the piano at the age of four—in fact, the sooner the better. Short periods at the keyboard must of course be supplemented by class or private training in the subjects you mention.

Octave Fingering

I should like to have your opinion on the subject of fingering in octave passages. Is there any real advantage in using the fourth finger on black keys—I mean of course, in *legato* passages?—A. M. S., Washington.

The fourth finger (and sometimes even the third) should be used on white or black keys to obtain the smoothness required in slow *legato* octaves. In brilliant or rapid octave passages, however, power and endurance are lessened if the fourth finger is used too often on black keys.

Expense a Consideration

I have a girl nine years of age who has studied two years on piano. She is finishing Grade IV of Mathews' "Standard Graded Course"; has had all scales and arpeggios, and many pieces, and she memorizes easily. What material should I give to make the most of her evident talent with the *least expense*?—O. W. C., Michigan.

She is now ready for a volume of selected miscellaneous works of Chopin. The publishers of The Etude will gladly help you choose a good, reasonable one. Also give her some Beethoven sonatas from Book I (two volume edition). These, with one of the early Czerny-Liebling books ought to last a long while. This prescription, I am sure, gives your gifted girl all the necessary vitamins (and then some!) at low cost.

Music and Dancing In Siam

Quaint and Curious Arts of a Far Eastern Kingdom

By LILY STRICKLAND

IT IS ONLY FAIR TO SIAM and to the reader that you bear with me while we take a brief glimpse into Siam's past; for it is the past that has made possible the development of the unique and fascinating music and dancing that is an authentic expression of this people. In order to comprehend with intelligent sympathy any people's art, we must know something of the elements that have gone into the making of the people. To see a Siamese dance, and to hear its music, are not enough to enable us to evaluate that particular musical form rightly.

Siam is an independent kingdom, having a population of 9,831,000 people; with four distinct regional aspects, and with a climate distinguished for its monsoons and hot and cold seasons. Its products are common to tropical countries, as is its flora. In its jungles roam wild elephants, tigers, leopards, rhinoceri and many lesser beasts. Even as the Siamese forests are filled with colorful and luxuriant flowers and trees, and a great variety of animals, so is the country itself filled with varied races. Siamese, Chinese, Indians, Annamites, Laos, and Burmese rub elbows, adding individual touches of picturesqueness to the composite picture.

The several races and religions live in apparent amity, for the Siamese are a peaceful, cheerful, and, as a rule, a kindly people. In the majority of faces we see the high cheekbones, flat noses, oblique eyes and broad lips that proclaim Asiatic and Mongolian ancestry. Europeans and Americans, while present, are of course in the minority and have no part in our story. The national costume of the Siamese is a development of the *panung*, similar in style to the *sarong* of Burma and the *dhoti* of India. It is a length of cloth worn as a sort of skirt, by both sexes. This garment, worn with or without the addition of a jacket and scarf, runs a wide range of colors; and, even when brilliant in shade, it seems somehow harmonious and becoming to this people of dark skins.

Religious Dances

THE CHIEF RELIGION of Siam is Buddhism, although Mohammedanism, Animism, Hinduism and other faiths exist in varying numbers. The Buddhism of Siam has been influenced by Hindu Brahaminism; and, perhaps for that reason, the majority of Siamese dances are based on Hindu myths.

Religious festivals and holidays are celebrated with elaborate plays, dances and music; and these occasions are regarded as a very important part of Siamese life. Owing to the fact that it is customary for every Buddhist man to enter the priesthood for a stated period, before taking up civic life, there is a bond of sympathy between priests and laymen and between religious celebrations and the people.

The Siamese, who established their first capitol in 575 A.D. and gradually developed into a kingdom, did not have their first real King until 1350 A.D. The people were not always as peaceful and law-abiding as they are now. They began as predatory invaders; but, having finally conquered or been ceded their territory, they settled down.

For many years Siam waged wars on her borders. France and Britain, after various contests, settled her border disputes by annexing unto themselves Burma, Annam, Cochin China and Tonking. The matter of Siamese independence was not definitely arranged until 1896, when it was ratified by the Anglo-French Convention.

Siam's literary background is enriched by myths and legends, the beloved embroidery of the East that lends so much color, romance and drama to their stories. The various literary influences that came into Siam, from China, India and Cambodia, were absorbed into a composite literature that is now Siam's own. In religious literature, the Life of Buddha and the Buddhist Canons are the Bibles, the "law and the gospel." To quote an author in the National Geographic Magazine, "the architecture, drawing, music and dancing of Siam reveal them as true artists, faithful to old Indo-Chinese conceptions. The influence of the ancient Khmer builders is reflected in all Siamese as well as Cambodian temples." So in building up an indigenous art, literature, or musical mode, they have borrowed from older countries as other civilizations have often done.

Political Problems

ANGKOR, THE MAGNIFICENT ancient city of Cambodia, was not ceded to the French until 1907. At one time it was the greatest city in Asia. The marvelous sculpture was shaped by loving hands, and those vanished creators in stone made the beautiful dancing girls, the Apsaras, whose costumes and headdresses are faithfully copied in the sacred dances of the Cambodian Ballet and of Siam's semireligious dances.

No one knows what strange influence prompted the people of Angkor to desert their great city, but they departed so silently and secretly that history has no record of their exodus. Perhaps some of them floated down the Menkong river or crossed the jungles into present day Siam, to leave forever an impression of their music and dancing upon the people. But the Brahminic influence that pervaded Angkor at one time still pervades the dances of Siam. The Khmers, who apparently were Hindus, left their imprint for all time in that vast deserted city of Angkor, and its spirit emanated and touched the concepts of a later people.

Siam was not a racial entity until the XIIIth Century; and by then Angkor, though still flourishing, had begun its decadence; so it seems that some of its old glory entered into the dances of Siam. In the dancing girl of Siam of to-day we see a living replica of the old stone images that still grace the walls of Angkor Vat, and we see the same legends in pantomime that inspired the creators to perpetuate the story of the Ramayana and to endow the Apsara with immortality.

The Ramayana, an epic poem of twenty-five thousand verses, written by the Hindu sage, Valmiki, centuries ago, is the book from which the libretti of the dances of Siam are taken. It tells of the mythical beginning of life; of battles of gods and demons; and of the warfare of monkeys against the evil spirits of Ceylon. The Apsaras, celestial dancers, rose from the ocean of time; they married the Ghandhawars, or celestial musicians, and from their union came the monkeys. Hence Hanuman, the monkey general, always figures conspicuously as a soloist in the Siamese dances.

The Monkey God Dances

THE LEGENDS OF THE RAMAYANA are acted in pantomime by male and female dancers.

Behold! The Hero, the Heroine, and the Monkey General

The frozen attitudes of the old da girls at Angkor are copied by the Siamese dancers. Their costumes ar same in style; only jewels, brocades, and satins replace the stone costun the sculptured Apsaras. The Si dancers seem to have almost the faces, for they are artificially wh with rice powder, and they appear to the same half closed eyes and enig expressions. The tiaras on the heads images, shaped like pagoda-tops, ar models for the Siamese girl-dancers dresses. The winglike epaulettes, sta stiffly from the shoulders of the da simulate the wings of a dolphin as images. The stiff sheaths of the t bound skirts mold the bodies of the d and heighten the effect of fantastic p ing that seems characteristic of C dian and Siamese dancing.

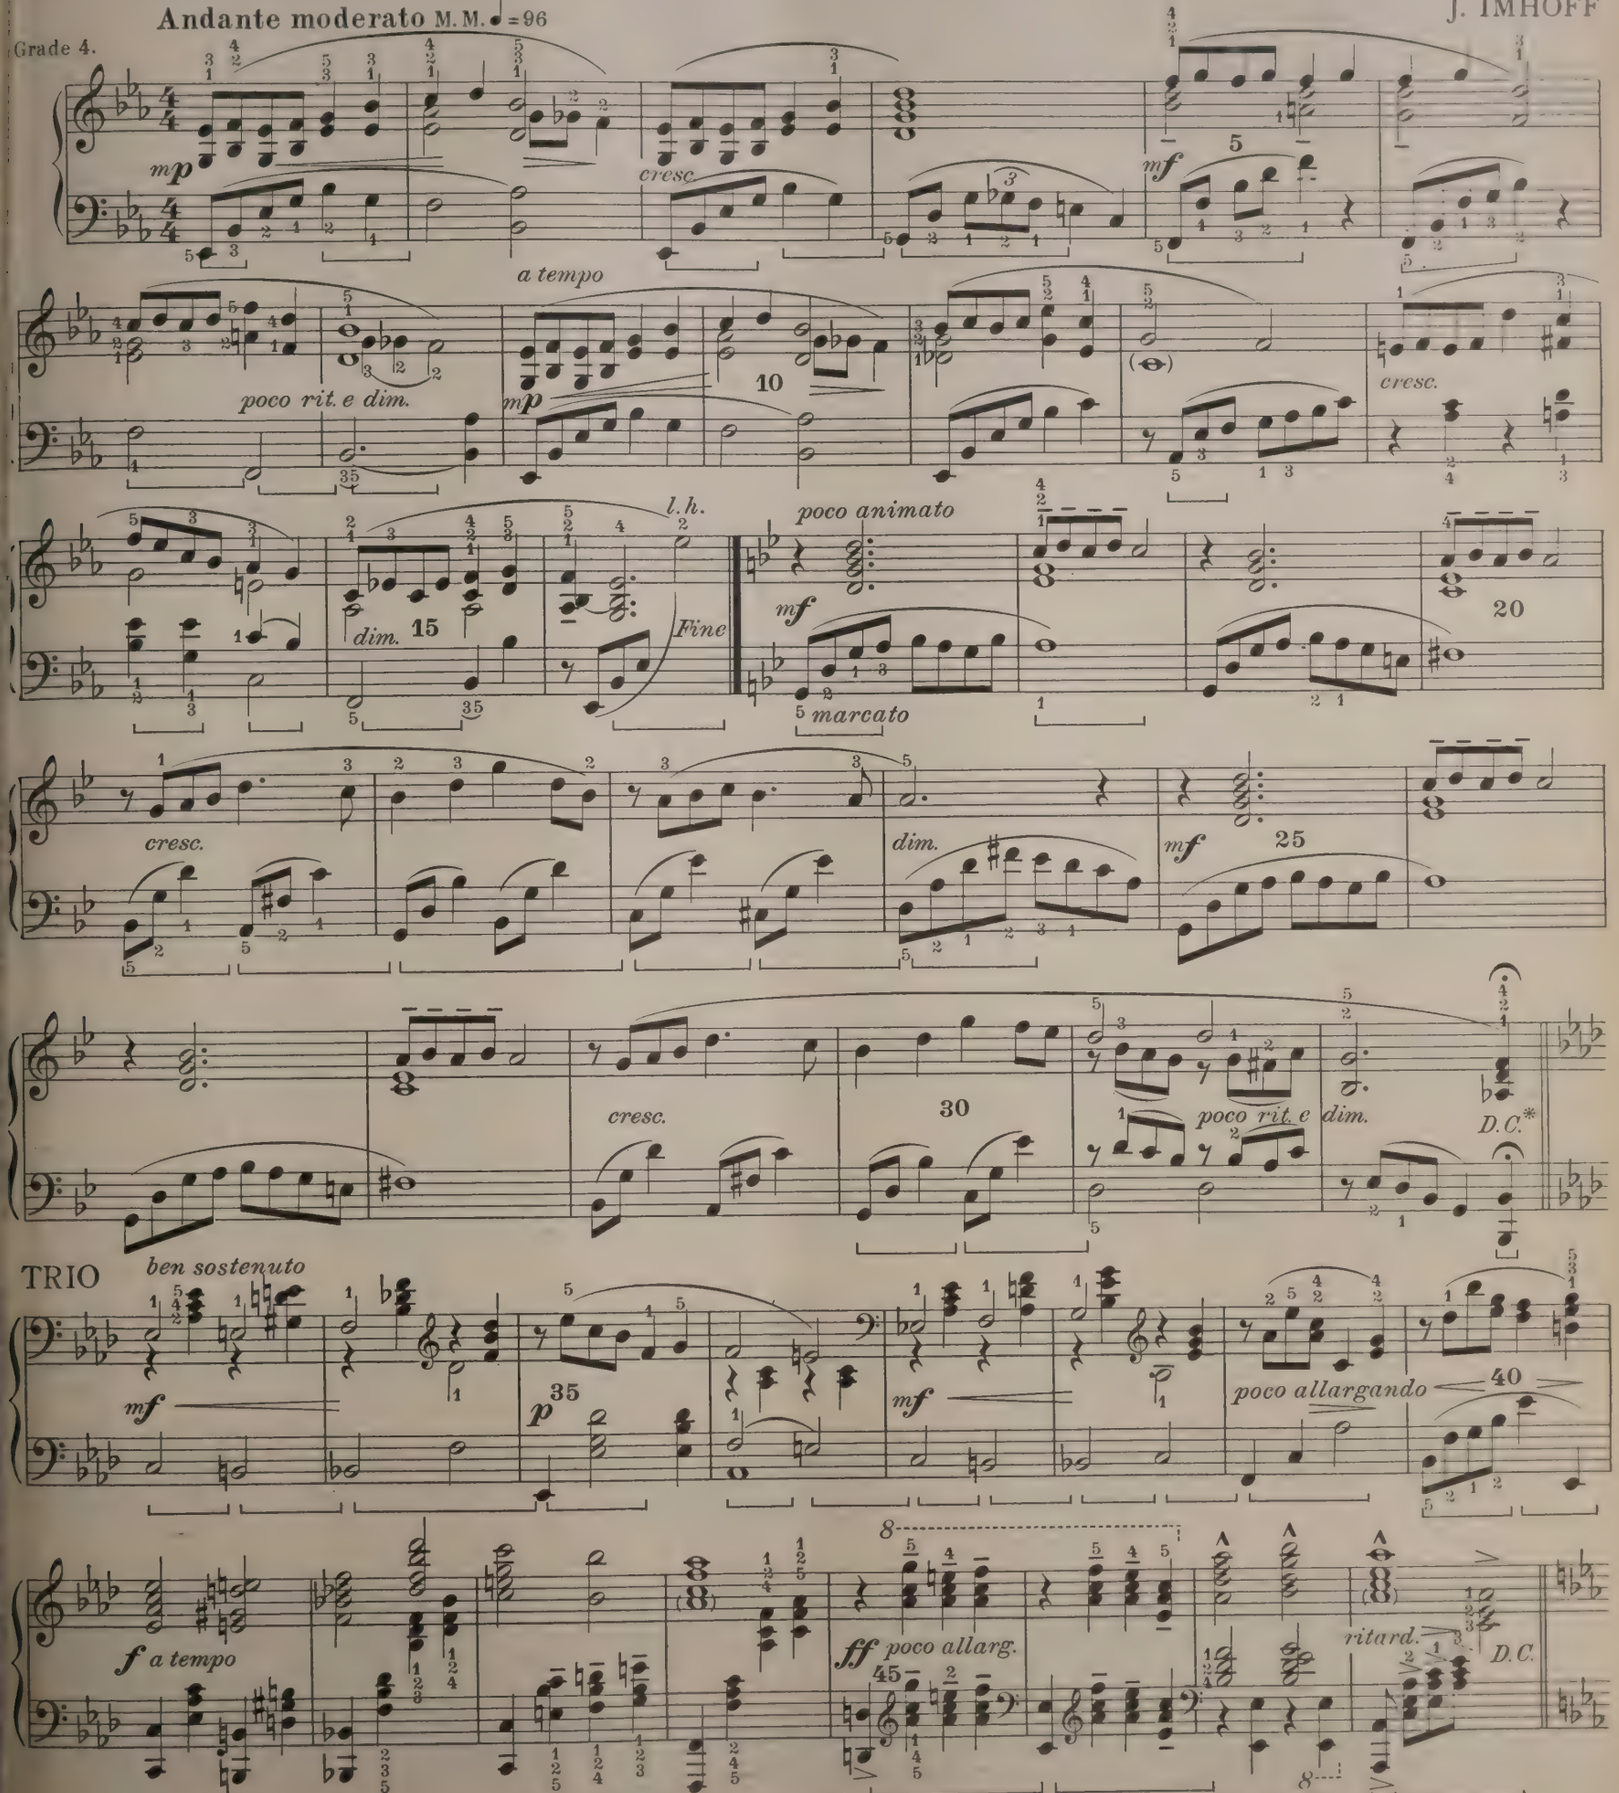
In every dance based on the Rama Hanuman, the Monkey-God figures hero. His impersonator wears a m mask and assumes weird and unn postures. The Queen, Sita, or an A appears as a soloist, prettily courted young warrior. The stories are tc pantomime, to music, and are beau acted and danced. Classic dances su these are both dramatic and gracefu are the result of an arduous syste training. The dancers enter their prof at an early age and are put thro rigorous course before they are allov take their place in the compani dancers. The dancer's art exacts an rate and intricate ritual of movemer pose. There is no swift flight of mov as in the western dance, but the g swaying, and rhythmic posturing that nates the Siamese dance form.

The costumes, masks, and headd all elaborate in construction, are ca made in accordance with traditional No smallest detail is overlooked i making of dance costumes, for the Si standard demands equal care in of costumes and interpretation o dances. Because of this care in n everything right, all Siamese dance authentic presentations of a traditio has been lovingly preserved.

An Eastern Orchestra

AN ORCHESTRAL ACCOMPANIMENT of Si dances is sometimes quite elaborate. are several varieties of gongs, in gra size, that are suspended in a wooden and played upon by a man who sits the frame. The *Khong-yai* and the *K Lek* are two popular varieties of the instrument. The *Ranat*, or *Harmonic* too frequently in evidence, as it is too ern to be interesting. There are drums of all sizes and shapes, the fa being the *Taphone*, a handdrum; the *Pote*, a small handdrum; the *Song* drum of narrow cylindrical shape *Thone*, a vase-shaped handdrum; ar *Klong-Khek* and *Klong-Yai*, kettle beaten with sticks. There are various mens of the violin family; and the *P* the *Peechawar*, both popular wind i ments. There are primitive organli struments, similar in tone to the C *Cheng*, and there are xylophones of mese influence, and bells, rattles, and But the brass and percussion instru almost drown out the strings and . . .

(*Continued on Page* 488)



SUMMER TWILIGHT

Although wholly original, there is a flavor of Benjamin Godard about this very useful piece. The broad *ben sostenuto* section will have a particular appeal to students in this grade, especially the fortissimo climax marked *poco allargando*.

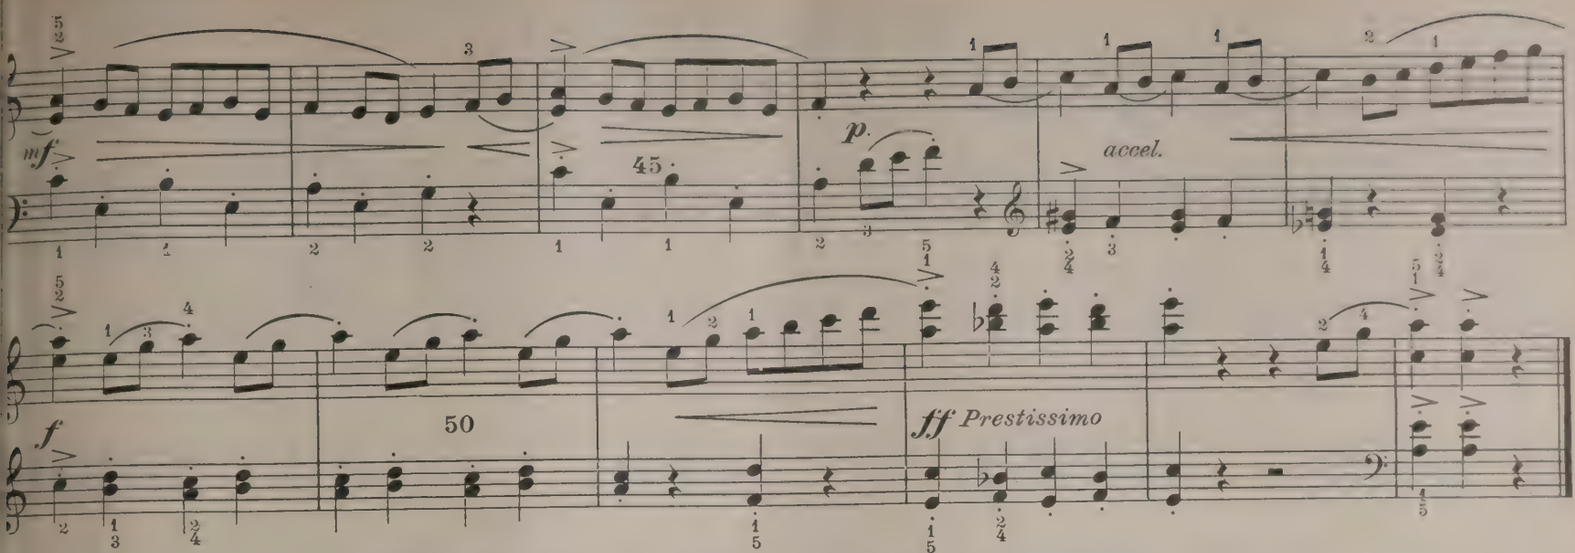
IRISH REEL



Few composers of elementary teaching material in England enjoy the wide popularity of Thomas F. Dunhill, who was born in London in 1[illegible]. His development is likely to be contrapuntal, rather than harmonic, as is indicated in this "cute" Irish reel, with its characteristic lilt. Grade [illegible]

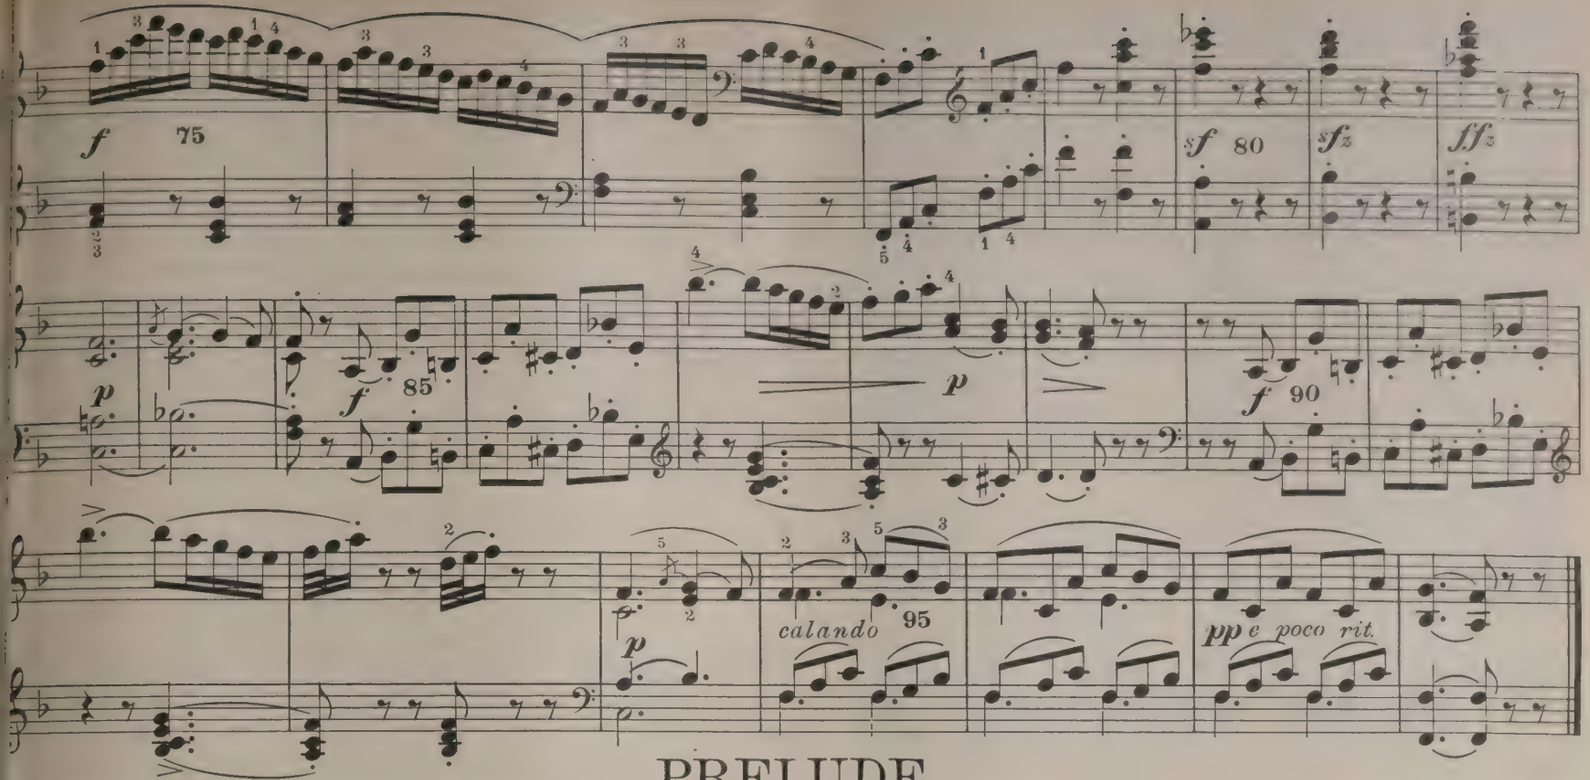
FRAGMENT FROM SONATA No. 7



Clear and sharp as a Dürer etching is this very fluent fragment from the sonata, opus 7, of the great Austrian genius, W. A. Mozart. When Mozart appeared in public playing his works of this type they were said to be as new and revolutionary to European ears of that day as might be the works of Stravinsky and De Falla to-day. PRELUDE

This prelude is like a song of sorrow coming from the soul of the young Pole, forever mourning the tragic injustice done to his native land. Note at in the right hand there is only a single line of notes. Yet this melody is entirely dependent upon the exquisite harmonic background in the ft hand part, and upon the manipulation of this accompaniment much of the beauty of the work depends. Watch the expression marks very refully, but do not exaggerate them in a mawkish manner. Grade 3.

NEW ATTRACTIONS SCHEDULED FOR TOUR

International Music Festival To Be Included

WHILE letters have been pouring in from every section of the country from readers of THE ETUDE who are planning to come to New York on the Musical Vacation Tour, the arrangement of the week's program has been progressing rapidly. The program, as it has been planned thus far, is herewith presented. At this early date it is impossible to give complete details of every event, and minor changes may be made later. We have, however, received extraordinary coöperation from everyone connected with the tour, and you may be sure of having a wonderful trip.

PROGRAM

Seven Days and Six Nights in New York

August 1938		
Sunday 21st	Aft	International Music Festival—Ukrainian Day.
	Eve	Symphony Orchestra concert and soloist. Welcome by Dr. James Francis Cooke, Editor of THE ETUDE, who will also comment on the program.
Monday 22nd	Morn	Motor coach tour of upper Manhattan, via Fifth Avenue, to Rockefeller Center, Cathedrals of St. Patrick and St. John the Divine, Central Park, Columbia University, Metropolitan Museum of Art, George Washington Bridge; via Riverside Drive to tomb of General U. S. Grant and Times Square.
	Aft	International Music Festival—Pan-American Day.
	Eve	Guided tour behind the scenes at N.B.C. studios.
Tuesday 23rd	Morn	Open for shopping.
	Aft	Motor coach tour of Long Island, including visits to the site of 1939 World's Fair, where many buildings are nearing completion, and to Jones Beach for ocean bathing. Suits and dressing rooms are not included.
	Eve	Musical show on a marine stage near the bay shore.
Wednesday 24th	Morn	Guided tour of Rockefeller Center—Radio City, including a visit to Observation Roof on top of R.C.A. Building.
	Aft	Matinee theatre performance—drama.
	Eve	International Music Festival—Jugoslavian Day.
Thursday 25th	Morn	Open for shopping.
	Aft	Stage scenes from Georges Bizet's grand opera "Carmen" and motion picture at Radio City Music Hall.
	Eve	Musical show with ballet—Randall's Island Stadium.
Friday 26th	Morn	International Music Festival—Czechoslovakian Day.
	Aft	Motor coach tour of lower Manhattan, including Washington Square, the Bowery, Chinatown, City Hall, lower Broadway, visit to the Aquarium, the East Side foreign quarters and the Empire State Building.
	Eve	Symphony orchestra and grand opera chorus, with soloists.
Saturday 27th	Morn	Exhibition of ancient musical instruments, with lecture.
	Noon	Lunch in the Rainbow Room, on the 65th floor of the R.C.A Building.
	Aft	Exhibition of ancient music manuscripts.
	Eve	Symphonic band concert, conducted by Giuseppe Creatore.

Meals included only where specified.
Program subject to change without notice.
Money will be refunded only on presentation of tickets for performances not given.

Best news of all is that the International Music Festival, commemorating the 100th anniversary of the birth of Georges Bizet, will be held in the air conditioned grand ballroom of the Hotel Astor, from Saturday, August 13th to Saturday, August 27th inclusive.

We have been assured that eminent musicians from all parts of the world will take part in this Festival, presenting a new program every hour from ten in the morning to eleven at night. Each day the music and musicians of a different country will be featured, and a group of folk dancers, appearing in native costume, will present a program of its nation's traditional folk songs and dances, to the accompaniment of native instruments. So important is this unprecedented event, and of such interest will be the programs, that four visits to the Festival have been included in the tour.

For the first evening in New York, a symphony concert has been arranged, with Eugene Plotnikoff conducting. Mr. Plotnikoff, the only musician in this country to have played with Tschaikowsky's Orchestra, is noted throughout Europe and the United States for his distinguished conducting of opera. The soloist for the evening has not yet been selected. Before the concert, Dr. James Francis Cooke, editor of THE ETUDE, will welcome the visitors to New York and comment on the evening's program.

Monday evening will be filled by a trip behind the scenes at the N.B.C. studios to see how the wheels of a radio broadcast go round.

The highspot of Tuesday's entertainment will be a motor (*Continued on page 478*)

Rockefeller Center as it appears from Fifth Avenue.

WHAT IT WILL COST YOU

(excluding meals)

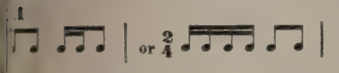
Social Dancing and Its Music

(*Continued from Page 432*)

y, started a line of waltz composers orth while. But the greatest was Strauss, Jr. Time was when nearly oncert of the orchestra of the late re Thomas closed with a Strauss And why not? The term, waltz, means "to turn"; hence it was al- "duet dance." Edouard Strauss in- the pace as



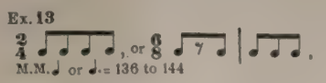
10

M. ♩. = 76

nna it has been slower; and in n (late '90's) much slower: Wit- *S-w-e-et D-r-e-e-e-a-m-l-a-a-nd Fay* ."

l that ilk. But we must leave the It had served its purpose; but it will ack; and then our young people will rouble. No more purposeless shuffling For a time the polka (of Bohemian was the companion of the waltz; s vogue was much shorter. In 1840, er, it was a stage sensation. Its naive yous step merged readily into the and it shows its traces in other . Its rhythm is,

1



inlaender); and its pace is about,

c.12

I.M. ♩. = 108

polka mazurka has always had its , but chiefly in the ballet: see the pelia" of Delibes and "La Czarina" by ie. At the turn of the century, mas- ading as the *three step*, it had some e as a social dance; but to very poor c. Then came the *two step* which ed out almost everything else, includ- the waltz: the *two step*, which could anced to marches of the *Honeymoon* or to Sousa's marches, or to rag time ie *Georgia Camp Meeting* style. Rag is just syncopation. The *two step* sur- d for some time. Early in this century as supplanted by the *one step*, which, urn, really merged into the *fox trot;* there we are! And, as side issues, we had the *tango*, the *rhumba* and "what- " These latter are really not Spanish at they are of Gipsy origin, transplanted South America and later returned to n. Members of the Spanish aristocracy ot even allow their daughters to learn . To recapitulate: the *two step* started "shuffling" (two steps to either side, feet flat, the knees bent); the *three step* inued it; the *one step* shuffled forward back, in the manner of the *tango;* the *trot* continued with variations. And we but little farther on. The modern night seems to confine the shuffling to a very ed area. And the music? It has gone rag time to jazz, which is the same more so and with "sour" harmonies. thence to swing which is practically rovisation, and very much out of tune, at. And the rhythms: for the *one step,*

Ex. 13

for the fox trot,

Ex. 14

and faster.

The *blues* have the pace of a very slow *fox trot;* and the *tango* moves to a rhythm of

Ex. 15

Our own choice, out of all social dancing, would be a rather *slow waltz.*

Ex 16

♩ = 63-69

to the music of Waldteufel (1837-1920).

No work of art (?), produced by a committee, ever attained permanence. In making the dances of to-day one fellow, not a musician, "picks out a tune with one finger"; another "harmonizes" this (save the mark!); and still another "scores" it. May we not hope for better things?

Volumes have been written about the ballet: The classical French ballet, with its toe dancing as exemplified by Elsler, Taglione and Genee, has relaxed somewhat in its restriction; the Russian ballet (Pavlowa) still flourishes, dramatic and picturesque. Various individualists — Isadora Duncan, Ruth St. Denis, and others—have developed styles and customs of their own; all pantomimic, of course. Personally, however, we do not care for the slapping about of overdeveloped bare feet; nor can we approve of falling into extraordinarily angular poses, and the making of hideous grimaces to the pounding of such drums as never were.

A part of America was slow in taking up dancing. In the early days of New England, it was frowned upon; and in some cases prohibited. In other parts of the country, it seems to have been imported as a matter of course. But in Revolutionary times, even in Boston, we find Gen. George Washington dancing for three hours with a certain Mrs. Greene. In Philadelphia, at the inauguration of Washington as President, a bevy of young society ladies danced before him a minuet, written and taught by one Duport, a French dancing teacher of the day.

And, as to our own knowledge of dancing, is it merely encyclopædic; or, as the law courts put it, can we "qualify as a witness"? In our own modest way, we think we can. We danced in our childhood; we studied with three generations of the same family of teachers in our native city; we studied with others; in our youth we played for ballroom dancing; we had some professional stage experience, besides conducting for stage dancing; moreover, we play a "mean saxophone."

* * * * *

Where Even the Servants Must Be Musical

In looking over the English newspapers one finds again and again, advertisements reading after this fashion:

"Wanted, a billing clerk, in a small town. One who can play the flute preferred." And from this printed cry of to-day for the proper mingling of the practical and artistic, one may turn to good old Mr. Pepy's famous diary, and see with what felicitation he records the engagement of a new servant who can take part in the music of the family by the upraising of a fine tenor voice!

HARMONY

Is Your Next Step

Towards Pre-eminence in Music

A practical knowledge of Harmony—the Grammar of Music—will immeasurably widen your musical horizon. It will open up many new and bigger opportunities to you—*a higher standing and recognition, and greatly increased financial returns from your work.*

Musical authorities and representative musical publications emphasize the necessity of a knowledge of Harmony in an adequate musical education.

Thousands of musicians and teachers have found the University Extension Conservatory Course in Harmony to be a real and highly profitable investment. The course has been prepared by authorities of world-wide recognition—Mr. Adolph Rosenbecker and Dr. Daniel Protheroe—and is given under the personal direction of highly qualified experts.

Each lesson is clear, thorough and correct; not the mere mechanical application of rules, but an interesting, intelligent and thoroughly practical method. A written examination on each lesson, in addition to ample original work throughout the course, will develop your knowledge and firmly fix the important principles in your mind.

Qualify for Higher Positions in Music

If you feel that you have gone as far as your present musical training will take you; if you are ambitious to make further progress, enjoy greater recognition, and increasing financial returns, then you owe it to yourself to find out what this great Musical Organization has to offer you. At a very small cost and with no interference with your regular work, you can quickly and easily qualify for higher and more profitable positions in the musical world. Our amazingly simple and easy Extension Method of teaching the higher branches of music has stood the test of 35 successful years and has made enthusiastic friends all over the world.

Send for Free Sample Lessons

We want you to know how interesting and valuable the training of the University Extension Conservatory will be to you. We want you to be the judge—without any risk or obligation whatever on your part.

Return the Coupon and we will send you a number of sample assignments of any of the Conservatory Courses in which you are interested, for your examination—ABSOLUTELY FREE.

These Sample Assignments will prove to you why University Extension Conservatory Courses have gained and held such a high place in the Musical world, and have meant so much in real money and recognition to so many ambitious musicians. Send for them today.

THE SINGER'S ETUDE

Edited for July by Eminent Specialists

It is the ambition of THE ETUDE to make this department a "Singer's Etude" complete in itself

How to Test Forward Tone in Song and Speech

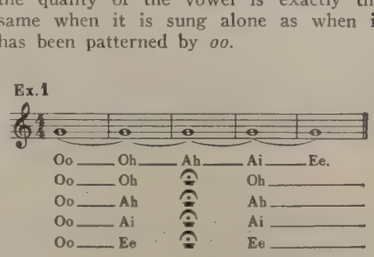
By CLEMENT ANTROBUS HARRIS

TO ANYONE ACQUAINTED with what may be called the vernacular of the singing school and the elocution class, the term, "forward tone" is a very familiar one. But it is not all teachers who can explain why the tone should be brought forward; and even if this be learned from a book, the student may not always be sure whether he is producing a forward tone or not. Hence, to some readers a word of explanation and an "acid test" of forward tone may be of service.

The pitch of a sound in the human voice is determined by the rate of vibration of the vocal cords in the larynx or "Adam's Apple." But at this point the sound is purely instrumental. That is to say, it has no vowel (unless the difference in *timbre* between one instrument and another can be called a vowel: a very interesting question which there is not space here to discuss). Vowels are formed entirely by the shape of the oral cavities.

A Common Error

ALL SOUNDS OF FIXED PITCH are produced by a vibrating column, not a rushing current, of air. Hence to argue, as is often done, that nasal tone is not produced in the nose because it is not produced by singing through the nose, is a fallacy. That it is not the result of singing through the nose is very easily proved by holding the nose between the fingers, while singing. No sound of definite pitch is produced by a current of air passing through a pipe. A flute player does not blow through his instrument, but across the column of air in it, thereby setting the column of air into vibration. Similarly, the wind from the bellows of an organ does not go through the pipes. Nasal tone is produced by so directing the current of air from the lungs that it sets the column of air in the nasal cavities into vibration. And just as, if we stop up one end of an organ pipe, the pitch will be lowered an octave and the tone become softer in quality; so if, while producing a nasal tone we hold the nose, we shall intensify the nasality. By bringing the voice forward we avoid this nasal quality.



And there is another reason for a forward tone. The roof of the mouth, just behind the upper front teeth, is hard—indeed, its technical name is the "hard palate." Vibrating against this, the tone will be bright and resonant. But at the back, the roof of the mouth is much less resistant—it is technically called the "soft palate." Tone directed against this will be muffled and have no carrying power.

Now, fortunately for mankind, there is a vowel which cannot be produced at the back of the mouth. Consequently it cannot be sung with a nasal or blanketed tone. This is the very familiar *oo*. But care must be taken that the vowel sung is *oo* and not merely something rather like it. To produce a true *oo*, the lips must be formed into a funnel. I do not like to say that they must be pouted, but the expression gives a correct idea. You cannot smile and sing a true *oo* at the same time.

Nevertheless, *oo* has its serious disadvantages. It allows of little variation of tone, because it cannot be sounded very loudly. I have sometimes told choir boys that they might shout as loudly as they liked, if only they shouted to *oo!* Moreover, all languages contain many other vowels which must be as correctly pronounced as *oo*, if the words are to be intelligible. Some singers approximate all vowels to *oo*, because of its beauty of tone. But this is a great mistake; it is unnecessary and reduces every song to a mere *solfeggio*.

These disadvantages can be avoided and the advantages retained by learning to sing all vowels with the same placing of the voice as is necessary for the production of *oo*. The position of the tongue and shape of the lips will of course be different, but the resonance must be the same. And the best way in which to attain this sameness is to sing a prolonged note beginning with *oo* and gradually—*very* gradually—to change to each of the other vowels in turn. This may be done conveniently by taking the vowels in what may be called their natural ascending order; or to use a technically correct term, from gravity to acuteness. After this the pattern vowel may be changed to the desired one without any intermediate sounds. Then still later it should be sung without even *oo* before it, as represented by the vowels following the rests in the musical example below. In doing this, great care should be taken that the quality of the vowel is exactly the same when it is sung alone as when it has been patterned by *oo*.

Ex. 1

When each vowel has been mastered to a single note, it should be sung repeatedly to a short phrase. After this it should be sung to a whole *solfeggio*—say one by Concone. Owing to sameness of quality, the exact point of change from one vowel to another, as in the first exercise given above, should be almost imperceptible. I have made a choir of boys change from *oo* to *oh* and *ah* without knowing that they had done so, by telling them to sing *oo* with the mouth shaped like a pig's snout (the youthful mind likes graphic illustrations); then to make the mouth round, like that of a codfish, and then wide, like a flat fish.

An Infallible Test

AFTER GIVING HIMSELF the pattern tone, the student will soon acquire the power to detect any departure from forward production. Nevertheless, when a difficult passage is being practiced, the home student may at times feel some uncertainty as to whether his production is always as forward as it should be. And it is the main object of this article to give him the means of confidently reassuring himself.

All that need be done is to sing the passage, as to which there is doubt, and, while doing so, to hold the nose a moment, then release it, then hold and release again. If the production is purely forward throughout, this procedure will make no perceptible difference to the tone. If, on the other hand, a backward tone is being produced, the closing and opening of the nasal orifice will affect it at once, and very perceptibly: the tone will wobble between slightly nasal and very nasal.

"Why not hold the nose the whole time?" may be asked. The answer is, because if a slight nasality is present, it would in this case be uniform and might pass unnoticed by an inexperienced observer, whereas a repeated change from pure tone to nasality and the reverse is very noticeable indeed. Therefore, at first it is better to close and open the orifice two or three times. Later on, when confident differentiation between true and false tone has been acquired, the nose may be held for a whole passage. By doing this, the student will apply to himself a very severe test. If he can sing a long passage with the nose held, and without any nasal tone resulting, he may rest assured that his production is commendably forward. He will, of course, have to breathe through the mouth, instead of correctly through the organ provided for that purpose, but only temporarily.

On the Speaker's Rostrum

FORWARD TONE IS JUST AS NECESSARY in speech as in song, and for exactly the same reasons. A backward, throaty tone does not carry. It is also unpleasant and has the grave disadvantage of frequently causing catarrh. People sometimes wo[rry] why ministers of religion, who speak [much] or chiefly, one day a week, suffer so [little] from "clerical sore throat"; while ac[tors] who speak every night, and sometim[es] a matinee, much more rarely suffer [from] it. The reason is that the actor has le[arned] to speak in the front of the mouth, an[d the] cleric too often has not. Elocutionists [tell us] in the habit of telling their pupils to [look] at someone at the back of the hall in w[hom] they are speaking, and to direct [their] voices to that person. One of the [most] successful teachers of children I k[now] adopted another plan with the same [object] pose. She gave each child a small, [soft] ball, and told the child to throw the [ball] as far forward as possible, just at [the] moment of beginning to recite, and to [try] to make the voice follow the ball.

And the same test is applicable to sp[eech] as to song. Let the student read fir[st a] sentence or two and then a whole [page] with the nose closed. If the closing [does] not affect the tone, he may rest assu[red] that he is leaving the nasal cavities [and] the soft palate where, in singing and sp[eak]ing, they ought to be—among the un[em]ployed.

Forward production is as necessary f[or] a medical as from an artistic point of v[iew]. After a patient has paid his or her f[irst] visit to the great throat specialist, and [on] the last time (Heaven be thanked!), [the] doctor has told his victim to sing *ah,* [and] while he dips his little round brush—[like] a miniature sweep's broom—into some v[ery] distinctly astringent fluid and rams it d[own] his patient's throat, telling him to conti[nue] singing *ah;* and when he has prodde[d] about—after he has done all this, and [after] shaking his patient's hand—he will [tell] him to go to see Mr. So-and-So, the e[mi]nent elocutionist, who will teach him [to] speak in front of his mouth and not [at] the back of it. And so is the simplicity [of] great art acquired.

"Acting" the Song

By LESLIE E. DUNKIN

A SUCCESSFUL singer is an actor in melody. Almost anybody can hum a tune so that others can understand what it is. It requires, however, a sincere natural actor to sing the song so that others can hear and feel what it is.

The first thing to be done is for the singer to get entirely away from himself. He is not to sing himself and his personal feelings, no matter how real they may have been before starting his preparations. He is to sing the song and its real meaning for the listeners.

One of the best ways for the singer to forget himself is to become intensely interested in the song. The second step is to become familiar with the melody for the words of the song. Humming can be used at this point, or a repetition of the words, so they can be memorized at the sa[me] time. No singer can be a real actor, [unless] he has to make a special effort to th[ink] about the various notes in the melody [or] about any other part of the music its[elf]. The melody must have become alm[ost] second nature for the singer. This sa[me] should be true of the words to be us[ed]. They need to come from the singer's l[ips] without any special thought about th[em].

The third step is to become familiar w[ith] the background and spirit of the words [of] the song. They are more than so ma[ny] words to match the notes in the mus[ic]. These words have an important story [to] tell, or picture to present. What is [the] story of the song? From what point [of] view is this story being presented? Wh[at] is the purpose of the word picture? H[ow]

is the actor trying to gain that purpose through the words of the song? These, and many similar questions with their answers, will help to open the complete picture of the song to the singer.

The fourth step is for the singer to think himself into the background and spirit of the words. For the time being, he will cease to be himself. He will be the main character or spirit of the song. This effort should completely remove him from himself. To do this will wipe out the last vestige of self-consciousness. Mechanical formality will be removed. He will try to forget even that he is a singer, to sing a certain group of words to certain notes.

The singer is now ready to be a real natural actor. He is acting the words of the song in the melody. The mechanical and well trained singer has become a vital throbbing actor presenting the drama of the song. This is not done by movements and actions. It is accomplished by the singer's voice. His voice is not singing a melody, nor is it speaking so many words to music. The singer has become a voice actor, presenting the thought of the song in its original background and spirit. In this way, the trained singer becomes the desired artist.

How *The Lost Chord* Came to be Composed

By R. S. WELSH

THE DRAMATIC circumstances under which Sir Arthur Sullivan came to compose *The Lost Chord,* perhaps one of the most popular songs of the last century, will no doubt deepen its value and significance for the many who have come to know and love it.

In 1876 Sullivan's brother Fred, to whom he was deeply attached, fell ill, and lingered for three weeks before he died. During those three weeks Arthur kept a ceaseless vigil, night and day, at the bedside of his failing brother. One night, when the end was drawing near, he came across some verses of Adelaide Proctor's which several years before he had tried to set to music, but without much satisfaction to himself. In the stillness of that night, with a vision of the inevitability of Death and Eternity before his mind, he softly repeated the words to himself:

Seated one day at the organ,
I was weary and ill at ease,
And my fingers wandered idly
Over the noisy keys;
I know not what I was playing
Or what I was dreaming then,
But I struck one chord of music,
Like the sound of a great Amen.

It flooded the crimson twilight
Like the close of an Angel's Psalm,
And it lay on my fevered spirit
With a touch of infinite calm.
It quieted pain and sorrow
Like love overcoming strife,
It seemed the harmonious echo
From our discordant life.

It linked all perplexed meanings
Into one perfect peace,
It trembled away into silence
As if it were loth to cease;
I have sought, but I seek it vainly,
That one lost chord divine,
Which came from the soul of the organ,
And enter'd into mine.

It may be that Death's bright Angel
Will speak in that chord again;
It may be that only in Heav'n
I shall hear that grand Amen.

As if the words struck a magical note in the composer's soul, his creative genius responded with freedom and spontaneity; and immediately his inner vision conceived their musical equivalent. Taking up an odd piece of music paper, he traced out the melody which seemed, like the poem, to lie on his fevered spirit with a touch of infinite calm. Even if in the cold light of day it were to prove but an idle dream born of a strained mind awaiting the dread approach of Death, it at least would help to charm away the slow hours of waiting.

And so the pen of the master was not laid down until the score of *The Lost Chord* was complete. Its appeal was soon realized by the publishers to whom it was sent, and within a short time it rose to heights of fame of which Sullivan had not dreamed when composing it.

Getting Rid of the Tremolo

By NEIL BOARDMAN

STUDENTS OF SINGING, whose voices lie in the lower ranges, as well as those sopranos known as "dramatic," are more often than not pestered by that involuntary quivering of the vocal chords which produces the highly undesirable tremolo. And Clara Cluck, of Silly Symphony fame, is the only prima donna of the modern musical world who can get by with that doubtful vocal ornament.

The tremolo occurs when too much air is released from the lungs at one time, thus causing the vocal chords to *shake* rather than to *vibrate.* Weakness of the muscles in the diaphragm, as well as the inability properly to control them, is often responsible for this fault, especially in the beginner. Sometimes, however, the tremolo remains even after the muscles have been strengthened and put under control by the proper physical exercise. When this happens, the following vocal exercise will prove effective.

Practice with the pure tone—that is, the "boy soprano" tone, without overtones. Beginning with one of the vowels, an octave above middle C, slowly descend the diatonic scale, to middle C. Of necessity, the tone will sound unfinished; the fact that it does so is proof that the exercise is being done correctly. Care should of course be taken to keep the voice on perfect pitch.

By beginning on a descending scale, the singer is more apt to get the idea of the practice; after that, he may ascend, and vary the exercise as he sees fit, using all the vowels. One for whom the tremolo is a serious problem ought to dispense with all other practice for a few days, or even a week; and after returning to normal singing, he will find it useful to employ the pure tone whenever he strikes a note particularly susceptible to tremolo production.

Besides helping the student to get rid of a nasty vocal habit, this exercise will lead to a clean attack in all his singing.

THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

The Organist as Salesman of Proper Music Service

By HENRY C. HAMILTON

WITHOUT DOUBT ALL ORGANISTS have, at some time or other, questioned whether their playing is appreciated. They feel that the apparent indifference of the Sunday congregation is something to endure, but not to inspire. The genuine pearls of organ literature, are considered lost, trodden under foot, metaphorically speaking, as they are cast before—well, we know what we would like to call some hearers. And the paste jewels, in the form of sugary inanities, played on "fancy" stops, by inferior organists, "go over big" with the shallow minded. Yet, after many years at the console, if the organist be open minded, fair, and above all, human, he must admit there are two sides to this, as to every other question.

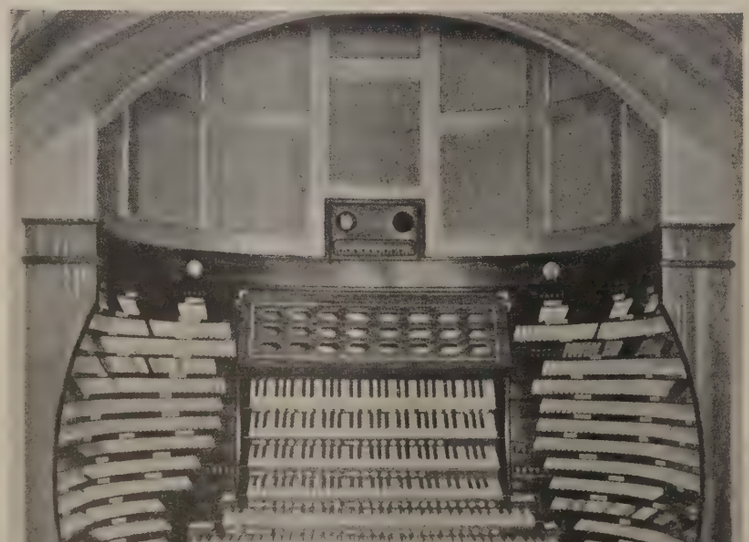
First, he will realize that, while he may be a specialist in his chosen line, yet the most of the great public are not in his class. Even with the immense field now covered by broadcasting, still the vast majority of people are not yet, as a whole, musically minded—in the highest sense. While it is true that the classics may now be heard daily over the air, the indubitable fact remains that the great multitude do not tune in here. The less admirable type of music, if indeed it deserves the name of music at all, smites the ear wherever we turn, even in homes of supposed culture. Young people, at the most impressionable time of life, are being fed six days a week—sometimes seven—on froth and husks. Many of them are as ignorant of real music as a Hottentot. And their elders are little better. Pep has been exalted as the watchword of the present day; to be dull is to be more shunned than any sin in the Decalogue.

What of the Congregation?

WHEN THESE PEOPLE attend church, what will be their attitude toward the music heard there? Will they be tired of the week's whirl and gladly listen to something different? Or will the virus of unrest, injected for six days make the less "peppy" music of the sanctuary seem unspeakably boresome?

Now dullness is not a synonym for virtue, any more than black clothes spell Christianity. But so long as we are in the flesh, even the most brilliant minds are not continually producing master works. Genius itself has been known to nod at times; to deny this would be fetichism, not loyalty. And from even acknowledged master works the organist can profitably expend considerable time and thought in sifting—for church purposes. A fine toothed comb, and even a pruning knife, are often advisable, too; though purists may recoil here with horror. However, the organist of reflection, one who truly wishes to promote the cause of good music, will sooner or later come to this wise and also charitable conclusion, that music was made for man, much more than man for music.

A very large number of people will respond to good music, if the organist will bear in mind a few important facts. First, the public attitude. When a salesman approaches a prospective customer, he, if wise, first "sizes up" the buyer to be. Character reading should be classed as one of the fine arts—and it is the one least frequently mastered. To interest the customer is the first care of the merchant. Often an article, not consciously desired in the first place, is eventually bought—why? Use your powers of observation; or recall some canvasser; and you have the answer.



Now the organist is, shall we say, a salesman? The spirit of the missionary lives in most of us, in a variety of forms. We wish to see others embrace our standards. And this is particularly true when we consider purveyors of the fine arts; for one's mental and spiritual output is not so easily grasped as a peck of potatoes or a side of bacon. The organist must be prepared to meet the people along the lines of the fairly obvious.

The Field Is Large

IT IS TO THIS LARGE CLASS of listeners that we, as organists, are giving of our best, Sunday after Sunday. What do the people care for the classics—as such? To them Mozart and Beethoven are only names, whereas Babe Ruth and Max Baer—everybody knows of them. From some jazzy orchestra, from some baseball or prize fight broadcast, from some announcer extolling the merits of this or that tooth paste or tobacco, from things least calculated to put the listener in a spiritual or even receptive mood, a number turn out to church. With the echoes of that just recently heard still in their ears, they take a pew, in their Sunday best.

The organist is playing. Does he interest them? Nine times out of ten he does not. Some players—the most reprehensible class—seem just to mark time for a couple of minutes, till the preacher appears. Others, to please the crowd, lower the standard of legitimate organ playing by transcriptions ofttimes worse than the original. Then there are the stodgy ones; they form a class that aim to preserve dignity by a type of playing uniformly drab.

But there is another class, those who sincerely wish to raise the standard of appreciation. Unfortunately they do much to kill their own objective. This last ty organist is usually a well trained, meaning individual; but, alas, not al gifted with human understanding and pathy. He has studied the master works has passed his examinations creditably interpretations may be, traditionally, most approved. He is an able executan one could gainsay his adequate tec And yet he is not fostering a greater for good music among his hearers; under his ministrations, the popularit the organ, as an instrument, is not creasing.

Console of the great organ in the Municipal Auditorium of Atlantic City, New Jersey, designed by Senator Emerson L. Richards. It and the great organ in the Wanamaker Store of Philadelphia rank as the largest two organs in the world.

The One Composer Disciple

PERHAPS HE IS A BACH ENTHUSIAST, he would gladly see all become even a is. More than that, he determines they do so. And so, Sunday after Sunday, diet is Bach. To him it has become a of religion. Bach is preëminently the poser for the organ, so Bach it must will be. The contrapuntal pills of the master are the only things which he, Doc., will prescribe for those musi halt, lame and blind. With what res Perhaps he finds it discreet, in cours time, to accept another situation. He le behind him few converts, and still fe regrets, but hopes that where he is g the people will be more musical.

Now, Bach needs no defense; his gr ness has not been fully summarized yet. But the genius of Bach reveals it in more than one way, and organists sh not remain blind to the fact. Contrapu music is admittedly the most puzzling a novice to follow; and yet it is the la and more complicated works of this na we hear from organists who specializ the old Cantor of Leipzig.

Then, too, as most of us have some h or peculiarity, even genius is not imm A composer will at times, consciously not, repeat himself, either in a mel phrase or some harmonic progression. Bach's organ writing shows certain m nerisms, which become apparent sooner later. Why do we not hear Bach in other more genial moods—the *Air for the String; My Heart Ever Faithful;* an cerpt from the "Christmas Oratorio"; some of the exquisitely dainty bits from several suites?

Or the organist may be a worshipper Mendelssohn or Guilmant, two more re masters of organ literature with a ticular taste for the sonata form. Both classic models and in high repute am the discerning. But the sonata as a wh even as the prelude and fugue, invites crimination. There is much that the hearer will not understand; though, if played, he will put up with the obscure dry parts for the sake of some delici sweetmeats of melody which serve a cooling draught in the desert.

Or again, the player may incline to more modern school—perhaps the ultr which seems to ignore melody. Some o may be interesting to study, for those like puzzles in sound. But who goes church to study? The great majority there to "take in" the music—if they

th brings us to the practical issue: we present to the people things standaccording to the best canons of art, and e same time acceptable to the great ught?

Rewards to the Faithful

IT CAN AND IS BEING DONE, by those nists who have recognized the probstudied the human viewpoint, and enl sympathetically, into the attitude of unversed multitude.

ow the first human reaction to music is ugh rhythm; in fact, a sense of time is found to be stronger than the ear's inct for tune. The wise organist will not by music which has pulse; indeed he give the matter more than a passing ght; for the organ lacks natural accent, rolific source of the lifeless playing often rd in church.

ut, while rhythm is fundamental, the an's most immediate appeal is, in a very sense, through tone color. This is apent at once, and even the most obtuse ner may be captivated, if only motarily, by a pretty sounding stop. Varied istration, however, minus worth while s, is not to be commended; such a sceding being the refuge of the dilette. But now, entering the realm of mel, plus harmonic dress and effective istration, we have unlocked a gateway ough which all, save the tone deaf, may er into wider and still wider appreciaThe world has not grown tired of melody —except in the case of a few ultrasophisticates; and we suspect even they have their favorite "tunes." Now, since melody carries this universal appeal, why not every organist institute a hunt for still more tunes? It proves a fascinating occupation, and no bloodshed attaches to the hunt. While many protest that they wish to hear only those tunes which are already familiar, it is no less true that multitudes eagerly drink in everything that is different.

Where Hidden Treasures Lie

AND THERE ARE MELODIC MINES in existence, scarcely tapped; melodies merry as sunshine, haunting as moonlight, unfathomable in charm. Many of Handel's arias, in his scarcely known oratorios, are well worth arrangement as organ solos. The symphonies and string quartets of Haydn, Mozart, Mendelssohn and Schubert overflow with melodies, particularly in the shorter movements. Many of these, in their entirety, are scarcely suitable for church purposes, but the development sections may, with care, be omitted. This shortening need not do violence to the composition; indeed, quite a few classics, judiciously abbreviated, will gain popularity more quickly than if presented with all the middle sections and repeats. (We are here considering the church service more than the concert room.) Yet this is but the fringe. The reflective organist will think of many other avenues in which to pursue his quest.

(*Continued in the next issue of* THE ETUDE.)

To Get the Most From A Choir

By DAVID R. ADAMSON

THE AVERAGE CHOIR may be anything, from a scant dozen singers with more or less of instrumental pport to a half hundred well organized d highly trained singers with intelligent d adequate leadership. But, in almost ery case, the group is capable of produc more gratifying results, and here is the cret.

"Dear Old Father Bach" once remarked, obably with a twinkle in his eye, and may in both of them, that, to be a good orist, all that is necessary is "to play the ght note, at the right time, in the right ay." Easy, is it not? But that is all there to it. And directing a choir is just as mple. All one has to do is to "Know what wants to do," to "Want to do the correct ing," and to "Make it perfectly clear to choir just what he wants to do."

Three R's of Rehearsals

ET US CONSIDER these three points in rerse order.

"Make it perfectly clear to the choir just hat is wanted to be done." Most of us ke it for granted that we do this and are ite surprised when some of the singers, r from following the explanation of some e point, are not even quite sure as to hich page has been under discussion.

Take very little—or less—for granted. The intelligence of the choir may be up standard, but their concentration on the roblem in hand is apt to be subnormal. hether the difficulty be a matter of pitch, time values, of tone quality, or of attack, ncentrate on that one thing and so exain it that the untrained member can unrstand both you and it. To make a casual ference to a desired *crescendo* does but tle good; but, let the choir be shown on hat note to begin, and on which note the imax shall be reached, and the chances e that a satisfactory *crescendo* will be hieved.

Then, too, apart from the technical problems, it is good policy to let the choir know just what is wanted to be done. If the anthem has some particular bearing on the service, or must be ready for some particular date, or is so topical that the words must be clearly understood; tell this to the choir, with emphasis. It will function more intelligently. If the choirmaster will work on the assumption that the members are not mind readers, and that they will know his wishes only as he makes them clearly known, and that some time will be required for them to become familiar with his wishes and to learn to carry them out; all will be well, or at least better than it was.

More Rungs in the Ladder to Olympus

AND NOW TO THAT SECOND POINT: "Want to do the correct thing." This ties in so closely with the director's training and wishes, that we will not make so bold as to offer advice. To be a leader at all, the choir director must have his own ideas and stick to them. To be worthy to be a leader, these ideas must be, in the main, correct.

Here we come to that third point in our reversed order: "Know what you want to do." Just what do you wish to accomplish in the first anthem to be rehearsed tonight? Will it be right notes and values, clear enunciation, or a fine *crescendo* on page three; or are you just going to rehearse? Is the next anthem to be rehearsed for its cultural or cohesive value? A "cohesive" anthem (may its tribe improve!) is one which not only sticks together itself but also helps the choir to do likewise. Be thankful for cohesive anthems, also fairly liberal with them.

Objectives will, of course, vary with different organizations; and they also will vary with different anthems; but, if both the leader and the choir know just what is to be done, all may at least work intelligently.

Women In Orchestras

(*Continued from Page* 430)

American women instrumentalists. If her group is conceded to be a well-knit, healthy and an effectively functioning musical venture, considerable credit for this record is due to the spirit and competence with which her players serve the Orchestrette Classique. Moreover, this writer believes that her observations should coincide with those of similarly engaged men and women conductors in this special field. These leaders also must have identical reasons to be thankful to the players in their respective women orchestras.

Now, what and where are the women orchestras in the noncommercial field? Those among them that are known to be active, as these lines are written, come as follows in a chronological order of their inception:

1893: *The Woman's Symphony Orchestra,* of Los Angeles; conductor, Mr. James K. Guthrie since the season of 1937-38.

1921: *The Women's Symphony Orchestra,* of Philadelphia; organized by Mabel Swint Ewer; conductor, Mr. J. W. F. Leman.

1925: (a) *The Woman's Symphony Orchestra,* of Chicago; conductor, Frank St. Leger.

(b) The Long Beach, California, *Woman's Symphony Orchestra;* conductor, Eva Anderson.

1933: *The Orchestrette Classique,* of New York City; Frederique Petrides, conductor.

1934: (a) *The Women' Symphony Orchestra,* of New York; Antonia Brico, conductor.

(b) *The Portland (Oregon) Woman's Symphony Orchestra;* Miss D'Zama Murielle, conductor.

1935: (a) *The Pittsburgh Woman's Symphony Orchestra;* Carl Simonis, conductor.

(b) *The Cleveland Women's Symphony Orchestra;* conductor, Mr. Hyman Schandler.

1936: (a) *The Commonwealth Women's Orchestra,* of Boston, the only WPA project of its kind; conductor, Mr. Solomon Branslavsky.

(b) *The Stockton (California) Sinfonietta.* Conductor, Virginia L. Short.

(c) *The Baltimore Women's String Orchestra;* conductor, Stephen Deak.

1937: (a) *The Women's Orchestra,* of Mason City, Iowa; conductor unknown.

(b) The *St. Louis Women's Symphony Orchestra;* Edith Gordon, conductor.

(c) The *Woman's Symphony Orchestra,* of Minneapolis; conductor, Harry Anderson.

Women's orchestras, date of organization unknown:

(a) *Orchestra of the Union of Feminine Musical Artists,* of Paris; Mlle. Juliette Forer, conductor.

(b) *Berlin Women's Chamber Orchestra (Berliner Frauen-Kammerorchester)*; Gertrude-Ilse Tilsen, conductor.

The list here given does not include, of course, smaller groups. Neither does it include Ethel Leginka's Women's Symphony Orchestra (1925), of Boston, nor her National Woman's Symphony Orchestra (1932); both of which disbanded years ago, after being among the first postwar organizations to focus major attention on women as symphonic players. The Woman's Symphony Orchestra of Boston, especially, held during its existence a place in the limelight somewhat analogous to that enjoyed nowadays by three of the more widely known ensembles of their type—*The Women's Symphony Orchestras,* of Philadelphia, Chicago, and New York.

For seventeen years The Woman's Symphony Orchestra, of Philadelphia, with a membership of seventy, has given an average of ten concerts each season in Philadelphia and on tour. These have been in the nature of symphonic, educational, and popular programs. Its leader, J. W. F. Leman, received his experience and training in the world famous Philadelphia Orchestra, of which he was for years a prominent member.

The Women's Symphony Orchestra, of New York, has three Carnegie Hall seasons to its credit. It is composed of eighty-six players and took its initial bow in Town Hall in February, 1935, attracting immediate attention to its existence. Antonia Brico, its founder, is a graduate from the Master School of Conducting of the Berlin State Academy of Music.

Known to radio listeners in the country through past broadcasts of some open air concerts, the Woman's Symphony Orchestra of Chicago, is heard regularly in the course of each season by music lovers in the city of its activities. It is composed of some seventy-five players and functioned from 1928 to 1937 under the baton of Ebba Sundstrom, who has been succeeded by Frank St. Leger.

The resourcefulness, enthusiasm, and the do but never die spirit with which these three organizations, as well as the one in Los Angeles, have carried on, are characteristic traits of all the noncommercially engaged women orchestras. In fact, whether widely known or not, whether formidable in size or otherwise, each unit in this special field unfolds through its work a beautiful record of enthusiastic persistence and of devotion to the cause of music. Naturally, this record cannot but help to increase the ranks of those who rejoice in any and all opportunities given to women players and conductors in the realm of symphonic music.

Carve Out Your Own Career

(*Continued from Page* 426)

born a barbarian, nor choose to be one.

The virtuosity of modern players in symphonic and 'name' orchestras would astound both Wagner and Berlioz, if they could hear them. Even in the last ten or fifteen years, this has increased amazingly. If the group of performers in Vienna, who told Wagner, after repeated rehearsals, that his "Tristan and Isolde" would have to be abandoned because it was impossibly difficult, could hear some of the performances of our modern "name" bands, the shock would make their hair stand on end. Few such efficient wind instrument performers existed then. Only a few years ago trumpet players thought any notes above G and A difficult. Now many of them think nothing of sounding high C and high D.

Musical creation in America is daily soaring to new heights; and, more than this, it is becoming distinctively American, reflecting the dynamic industrial power of our country, our virile pioneer spirit, our inherent love for liberty, our sense of appreciation of the limitless beauty and grandeur of our country, our quaint humor, and our lofty ideals of life. Music in America surely has a magnificent future."

Organ and Choir Questions Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. I am organist and director of music in a country church with a two manual organ of very limited registration. The choir consists of twenty voices—six sopranos, five altos, four tenors and five basses. The organ being placed at a difficult angle makes it necessary to seat the choir as in the enclosed sketch. What is the correct registration for playing of hymns and so forth? For soprano solos? For tenor solos? I have studied with two teachers—the first taught me to play the soprano and alto with the right hand, the tenor only with the left hand and the bass as written. The second one taught me to play full chords with the right and left hands and all low pedal notes. Which is correct?—P. B. T.

A. For playing hymns for congregational singing we should think you could use full organ. For accompanying solos, the registration depends on the passage being played, amount of tone required and so forth. We prefer the first teacher's method of playing hymns, though the second may have suggested the low pedal notes because of the small instrument. Your arrangement for seating the choir is rather unusual in that the sopranos are placed back of the altos. We suggest reversing the arrangement—putting sopranos on front row and altos on second row. If your seating will not accommodate them as we suggest, we advise putting as many sopranos as possible on the first row and seating the remaining ones on the second row at the organ end. The tenors and basses can be seated as in your sketch.

Q. We have recently introduced a processional in our church. I have tried to get the young people to march to the music instead of just walking. They practice as I tell them, but it seems to me that they enter too slowly on Sunday morning. Is there any rule as to how fast they should walk and how far apart they should be?—A. G. S.

A. It is not necessary to keep in time with the music, for a processional. If the choir members attempt to keep time it will be best to have music of a rhythmic character suitable for such use. The pace and distance apart are subject to the desires of the particular church. If the choir is large the spacing can be smaller than if the choir is small and the procession is to be made impressive by not appearing to be too short.

Q. Our choir sings a "Call to Worship" right after the Prelude. They come in during the playing of the Prelude and sit down, remaining seated for the "Call to Worship." We have been told that it is correct to stand for this. Is there a right or wrong way, or is it a matter of preference?—E. J.

A. Unless you have a processional of the choir, we suggest that they come in before the Prelude, so as not to disturb the playing. They can then be seated and remain seated or stand for the "Call to Worship," that being a matter for decision of the church authorities. In any event the sitting or standing should be decided by the particular church.

Q. How much (approximately) does it cost to run a one manual pipe organ for one hour? The organ has eight stops—Dulciana 8', Open Diapason 8', Flute 8', Flute Harmonic 8', Principal 4', Bourdon 16', Tremolo and Pedal coupler. Which stops should be used for accompanying a choir of forty children? For soloists? For Organ solos? Will you please send me the names (and cost) of Masses for Catholic Church use?—T. S.

A. We cannot tell you the cost of power for the organ, but it would be very little; we should think not over ten cents per hour. The stops to be used for accompanying a children's choir will depend on the amount of tone necessary and character of the music. Try Dulciana, Flute 8' and Flute Harmonic 4', with Pedal Bourdon and coupler. If this is not sufficient, add Open Diapason or Principal, or both. The stops to be used for accompanying soloists will depend also on the character of the music, amount of tone desired, and so forth. For organ solos you can use Dulciana or Flute 8', or both, for soft effects, and this brightened with Harmonic Flute 4' if desired. For louder passages use Full Organ. A list of Masses suitable for Catholic Church services, with prices, is being sent you by mail.

Q. Enclosed you will find specification of the organ on which I play. I would like to have an 8' Salicional stop added to the Swell organ as well as a soft 4' Flute. There is no room for these stops in the Swell box, unless other stops are removed or a new Swell box built. Would it be possible to move the Violina 8' and the Cornet Mixture outside the box? Would there be enough wind pressure for the additions? Do you recommend chimes? Can they be played from the pedals as well as the manuals? The tremulant affects both Great and Swell manuals. Should this be so? I sometimes use the Cornet Mixture as a solo stop, for the fundamental tone is the most prominent, while the two other ranks seem to give it a little "spice." Is this proper? The organ cost $7,000. Is not that price a little high for an instrument of its size? What is your opinion of a church music committee advising scant use of B[ell] for church services? I delight in playing B[ell] and see no reason for this request, unless committee is ignorant or uninformed: Is possible to get the specification or any in[for]mation about the Salt Lake Tabernacle org[an]? Can you give me the title and composer of theme music for the Philadelphia Symph[ony] Orchestra broadcasts over the C. B. S. cha[in]—H. W. [illegible]

A. We do not advise moving the Viol and Cornet Mixture outside the Swell box, doing so is likely to throw them "out of b[a]lance" with the stops enclosed. Would you h[ave] room to unify your Bourdon set of pi[pes] (Swell), securing from it your Stopped Di[a]pason and 4' Flute—thus affecting some sav[ing] of space? Your organ builder can advise [you] as to the adequacy of the wind supply for [the] additions. The installation of chimes is entir[ely] a matter of preference. They can be pla[yed] from pedals as well as manuals, if so arrang[ed]. Your specification does not indicate duplexi[ng] so we should think the Swell tremulant sho[uld] not be effective on the Great organ stops. Un[der] the circumstances you mention, we see [no] objection to a sparing use of the Cornet M[ix]ture as a solo stop, although we are not part[ial] to such use. The price you mention is not l[ow] for an instrument of that size built at [the] time, although there may have been conditi[ons] existing with which we are not familiar [and] which may have affected the price. There pr[ob]ably are many places where the playing of B[ell] is not appreciated. Your music committee m[ay] be influenced by such conditions, unfortun[ately] though it may be. We suggest that you wr[ite] Austin Organs Inc., Hartford, Connecticut, [for] specifications of the organ in Salt Lake C[ity] Tabernacle, as the Austin Organ Company built the organ some years ago, and the pres[ent] Austin firm is furnishing a new console [for] the instrument. The "Signature" music for [the] broadcasts of the Philadelphia Orchestra o[ver] the C. B. S. Chain was written especially [for] that use, by Dr. Harl McDonald.

Q. Will you please give me the price of [an] organ built according to the enclosed stop l[ist] by the Estey Organ Corporation with 61 k[eys] manuals, and a forty-four key pedal clav[ier]. Are there any stops, couplers, and so fo[rth] that you would add or subtract? Please g[ive] me the addresses of the Wurlitzer, Skinn[er], Estey and Wicks Organ Corporations. Wo[uld] you consider buying a ———— Orga[n]? Is the Fife 1' useful as a Great organ sto[p]? Should the Tremulant be used with woodwi[nd] stops? Does the Pedal organ ever include st[ops] of 32' or 64' pitch? What are the specificati[ons] of the Atlantic City organ—the largest in t[he] world? Is the tremulant more convenient a[s a] coupler or as a stop? Does the Estey Org[an] Corporation make "horseshoe" consoles? Wh[at] is a knee swell? Are they ever used on p[ipe] organs?—P. M.

A. We are taking it for granted, from t[he] character of the specification, that you ha[ve] in mind a unit organ, which we do not consi[der] ideal for a large instrument. Your ensem[ble] effects would have to be very carefully select[ed]. Your Great Organ includes four 16' stops, a[nd] if all were used in the ensemble a muddy effe[ct] would likely be present. Your Swell Organ co[n]tains an 8' Bourdon, and an 8' Liebli[ch] Gedeckt, as well as a Bourdon 4' and a Stopp[ed] Diapason 4'. We wonder whether these 8' a[nd] 4' stops are not duplicates. We do not und[er]stand seven Expression pedals—Great, Swe[ll], Choir, Solo, Box 1 and Box 2. There is no poi[nt] to having more expression pedals than expr[es]sion boxes, except having duplicate peda[ls] might make it more convenient to reach certain one than another in a different lo[ca]tion, both controlling the same expressi[on] shades. We cannot give you the price of t[he] instrument, and suggest that you communica[te] directly with the Estey Organ Corporati[on]. We have never heard of a 44 key Pedal Clav[ier] and do not think it practical. The address[es] you ask for are as follows: The Rudol[ph] Wurlitzer Company, North Tonawanda, N[ew] York; Aeolian-Skinner Company, 677 Fif[th] Avenue, New York; Ernest M. Skinner a[nd] Son Company, 234 Broadway, Methuen, Ma[s]sachusetts; Estey Organ Corporation, Bratt[le]boro, Vermont, and Wicks Pipe Organ Co[m]pany, Highland, Illinois. Your question re[la]tive to ———— touches upon a matt[er] of principle in our Editorial Department, [in] that we do not recommend any one manufa[c]turer of any particular instrument or type [of] instrument. There might be occasional u[se] found for a Fife 1'. The Tremulant can be us[ed] with woodwind stops, if the effect is goo[d]. Many pedal organs include 32' stops and ve[ry] occasionally a 64' stop—the latter usually [a] subsultant. The specification of the Atlantic C[ity] organ is too extensive to be included in th[ese] columns. On competent authority it contai[ns] 32,913 pipes, which makes it one of the t[en] largest instruments in the world. We presu[me] by "coupler or stop" you mean "tablet or dra[w] knob." The choice for use in controlling t[he] Tremulant would be a matter of personal pr[e]ference. We suggest that you ask the Est[ey] Organ Corporation in reference to "horsesho[e]" console. Knee swells are used to make [a] *crescendo* and to produce "full organ" on re[ed] organs. They are not generally used on pi[pe] organs.

SCHOOL OF MUSIC
OF THE UNIVERSITY OF MICHIGAN
Complete curricula leading to degrees in all branches of Music. Faculty of distinguished artist teachers. Concerts and May Festival by world's greatest artists and organizations in Hill Auditorium seating 5,000. Chorus of 350; student symphony orchestras, glee clubs, bands, etc. Recitals each week on $75,000 organ.
Fall term opens September 26.

A Musical Calendar

By LAURA M. CHRISTIANI

"THIS is pedaling month," announces a large and attractively colored poster in our studio waiting room. Nearby is our "musical calendar," another poster giving the outline of special study subjects for the entire school year.

The calendar may be planned to suit the individual needs or wishes of the teacher; this outline is offered only as a suggestion.

September—Time Values
October—Know Your Instrument
November—Dynamics
December—Rhythm
January—Pedaling
February—Tone Quality
March—Public Performance and Stage Deportment
April—Phrasing
May—Interpretation

Each month's subject becomes the general theme for all studio activities, such as music clubs, as well as a special subject for discussion and illustration in the lessons. The posters cause much interest and questioning among the students, with consequent gleaning of valuable information. They may be made to look very attractive, by anyone having even a little artistic ability along this line.

For our observance of "Rhythm Month" our studio presented a rhythm band playlet, charged admission and sent the proceeds, after deducting expenses, to the MacDowell Colony.

* * *

"Fill your soul with the beauty of a wonderful vista, a glorious painting, a noble deed, an inspiring poem, and then play your Chopin nocturne. If you do not note a difference, you had better give up music as a profession. You will never become an instrument of the Almighty in the higher sense."—Guiomar Novaes.

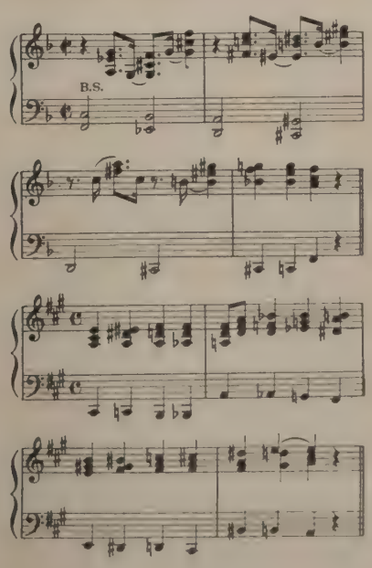
THE ACCORDION DEPARTMENT

Unusual Accordion Passages

By PIETRO DEIRO
As told to ElVera Collins

THE EXCERPTS from "Chanticleer," which accompany this article, present a few features which will interest accordionists. A recent question, directed to this column, asked how rapidly repeated bass notes could be produced when it was impossible to employ the use of the bellows shake, due to the nature of the music being played by the right hand.

Excerpt from "Chanticleer"
Symphonic Overture



(In the second measure the last two notes for the left hand should be fingered 2 3 instead of 3 2. The next to last chord of measure 4, right hand, should have, added to it, an "A" in the second space of the staff.)

The third measure of the excerpt answers this question. It shows a bass solo which is part of a clarion call. Although the notes are repeated, they would lose their effect if the bellows shake were employed. The distinct repetition of the notes is produced by alternating the second and third fingers.

Another interesting feature occurs at the beginning of the fourth measure. Accordionists know that each bass is duplicated within a short distance on the bass keyboard; but few take advantage of the fact when fingering a tricky bass solo. The first bass in the fourth measure is B. The notes preceding it are G and A, so the fourth finger naturally falls on the B, which is a counterbass in front of G. This B must be held throughout the entire measure and for the first count of the following measure, after which a bass solo begins on B-flat. In order to be ready to begin this bass solo it is advisable to reach from the B counterbass over to the B fundamental bass with the second finger, then immediately to change to the third finger so the second finger will be free to play B-flat (A-sharp), counterbass in front of F-sharp, as the first note of the solo. Be careful not to release the B counterbass until after the B fundamental button is depressed, as there should be no difference in the tone while the change is being made.

The question often arises as to whether it is possible to produce unusual chords on the accordion. The fifth measure of the excerpt shows a group of such chords. The first four measures of the *andante cantabile* movement also show some interesting effects produced by combining single basses into chords. Notice that the sign ✪ indicates that both register switches should be removed so that the low octaves are removed. Closer harmony is possible when the register switches are off.

The following examples of Modern Harmonic Progressions present a few ideas to show the scope and possibilities of the accordion. They are taken from the text book "Chord Study, Progressions and Modulations."

Accordionists will be surprised at how many unusual chords and other harmonic effects they can produce if they will but take the time to study the most interesting part of the accordion—the bass section.

YOURS TO ENJOY THROUGHOUT YOUR LIFE

• Fortunate indeed are those whose musical accomplishments include mastery of the accordion. No instrument is more satisfying; none responds so completely to every musical mood. Here are the full effects of a mighty orchestra—an endless variety of tonal combinations—yours to command and enjoy for the rest of your life. . . . And when you choose the 1938 BRINDISI, you enjoy the added satisfaction of an instrument that offers professional quality at a price within easy reach of the amateur. That is why we say—

THE VIOLINIST'S ETUDE

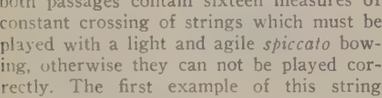
Edited by

ROBERT BRAINE

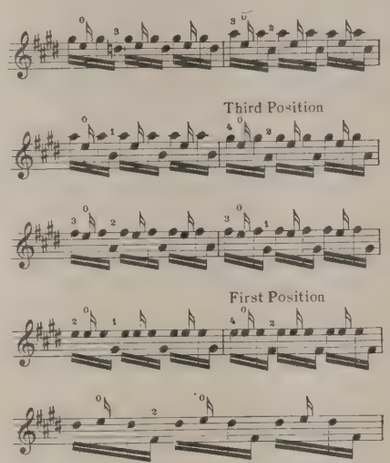
It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

Bach's Preludio in E, for Violin

By MARION G. OSGOOD

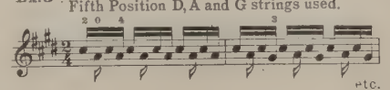


IN THE BACH ALBUM containing the six sonatas composed for violin alone, there is none more fascinating as a study in rapid fingering and bowing than the *Preludio in E major,* which is the sixth number in the album, Edition Peters. It begins thus.—



Ex. 1

The piece is difficult enough as a whole—depending as it does upon clean and rapid execution, with steady endurance—yet the most difficult and puzzling portions are the sixteen measures which begin at letter A (first page,) and at letter E (second page). However, as the manner of playing both is the same, if the first example is mastered the other one offers no serious difficulty; both passages contain sixteen measures of constant crossing of strings which must be played with a light and agile *spiccato* bowing, otherwise they can not be played correctly. The first example of this string crossing occurs on the E, A and D strings;



Ex. 2 Fifth Position

the second example on the A, D and G strings.

Ex. 3 Fifth Position D, A and G strings used.

Although the notes in these passages do not run above the first position, still to facilitate the alternate use of the three strings the higher positions must necessarily be used. Bach wrote an *ossia* substitute under the staff for these puzzling passages, but these are used only for those pupils in early grades who dare not attempt the more difficult notation.

To gain mastery over this *Prelude,* requiring as it does an elastic, somewhat "bouncing" bow, slow practice, using only the lower part of the bow, is best. The bow should leave the string after each contact. The arm is used during this early practice as the bowing is near the heel, but just as soon as possible the stroke should be made more from the middle of the bow, with a combination of forearm and wrist motion. As the work becomes familiar and the *tempo* gains somewhat in speed, less of the bow is needed, and thus comes the beginning of an even, good, though slow *saltato,* for which the middle part of the bow (or a little above the middle part, depending upon the kind of bow used, as well as upon the kind of hand holding it) is necessary. After this preparation, begins the natural, never forced, increase in speed, with even less bow used and with the wrist perfectly flexible. While most of the *Prelude* may now seem to go well, the trick of playing those specially trying measures, which must have a light, even *spiccato,* seems to elude the student persistently. At this point he is liable to experience a sense of nervous tension which brings impatience; this tends to stiffen the muscles of hands and arm to such an extent that he lays down the violin in despair.

A peculiar thing is that the final mastery of this *Prelude,* "bad" measures and all, comes suddenly. All at once the knowledge of "how to do it" descends upon the student in a glad surprise. After long and dreary trying a day arrives when—presto! the piece has "come." Yesterday he may feel as if it would be the better part of wisdom to lay aside Bach's *Prelude* and never again attempt it; to-day he takes up his violin, and somehow scarcely without trying he gets the gentle little wrist movement which had been the one and only thing he hitherto had lacked—and the piece plays itself, as

A "LIFE" PORTRAIT OF MENUHIN'S HANDS

This so interesting portrait is reproduced with the permission of "Life" Magazine. It shows definitely the position of the hand when playing, of this superlative young virtuoso.

it were, with a seeming of effortless ease.

Of course the secret of all pure *spiccato* is the flexible movement from the wrist in the measures here alluded to, however the hand should feel control, at the same time being reposeful. Contact with the strings becomes close, the hair of the bow seeming hardly to leave the strings during these sixteen measures. The action becomes practically effortless. The trick once mastered remains mastered. It is never lost.

As to the Care of Stringed Instruments

By FASSETT EDWARDS, M. D.

THOSE WHO PLAY the violin, violoncello, viola or bass must follow certain rules, in order to get the best tone and most pleasure out of the instrument. One of the most needful of all such attentive acts is to keep the instrument clean. Inasmuch as the writer is a violoncellist, perhaps his thoughts will center especially about that weighty instrument, although what is to be said here will in every sense be equally applicable to all instruments of the viol family.

The Virtue of Cleanliness

JUST WHAT IS MEANT by cleanliness? To some the word will imply a certain amount of light and careless attention; whereas to others, particularly to those who really care much for a fine instrument, the word cleanliness will mean that always the instrument will shine with the delicate gloss which seems to come only from affectionate rubbing, lightly, with clean, soft fabrics. Then the varnish will appear in all its warm glory, and will be always a source of infinite pleasure to its proud owner.

In order that this discussion may be definitely helpful, the writer will be specific. Each time before an instrument is used—and even more particularly after any use—it should be lightly yet thoroughly cleansed of all loose resin and dust. The instrument will sound better and will vibrate freer for this loving touch. All resin should be kept from accumulating under the bridge, the spot where it always falls as it is rubbed off the bow. It is a mark of indifferent carelessness to see a spruce top whitened, and it suggests that the poor instrument is akin to an unkempt child. Such cleansing takes but a minute and may be done with the clean handkerchief from your pocket, presuming that it is free of dust. Some prefer to employ a piece of heavy, soft silk, although dust free old linen is quite as good. Starched linen will scratch glossy varnish.

The Fingerboard

THE FINGERBOARD must be kept free of the grease and worn skin which will attach to it from use. In order that the string shall press fully and evenly on the ebony, the wood must be devoid of dust particles, and be shining smooth. As the top of the instrument is wiped clean, the same cloth should be put beneath the strings at the bridge and run up and down over the fingerboard.

It is very easy to imagine what a tiny bit of dust can do when lying tucked under the angle the string makes when stopped. It will choke to an appreciable extent the rich, strong vibration which should be inherent in the string. Also it will damp and alter the pitch of the note fingered. This may seem to be a negligible trifle, but the fact of good tone or poor is essentially a matter of what might be called slight trifles, which in reality are extremely weighty. Remember that we are always seeking that singing tone quality heard in instruments of worth, which it is quite certain are kept in perfect condition. The writer once had the unique privilege of examining the two violins—a Stradivarius and a Guarnerius—owned and used by the eminent violinist, Heifetz. They were as immaculate as a new pin.

It is hardly fair to expect that your instrument, even though it be a Stradivarius, will sing, if its proper cleanliness is neglected. Often friends are heard to make some such remark as this, "The old fiddle doesn't sound as well as usual to-night. Must be the weather." Weather, my eye! The most probable thing of all is that the instrument is in need of the loving touch, to be cleaned, the bridge straightened, the bow hair at proper tension, not too heavily resined, the strings new enough to be smooth and capable of giving good tone, the fingerboard spotless.

The Bridge

THERE ARE CERTAIN other matters, however, that do not quite fall within the category of simple cleanliness. One of the most important of these is that the bridge must be of proper width, height, weight, thickness and density. There is not space here to go into details, besides the bridge is a highly personal job, anyway. Suffice it to say, the higher the bridge the more brilliant and loud will be the tone; and

also be rough, as a rule. The instru- will be harder to play and slower to nd. Strings riding close to a finger- d—because of a low bridge—will tend ve out weak tones, which are often "fuzzy." The string does not stand enough to have sufficient space in h to vibrate under the bow. This is tter of readily understood mechanics. he weight of a bridge will affect the me of tone. This is easily demonstrated weighting a bridge with a mute. Con- ently, the bridge should not be over- k or too dense. Dense wood weighs e than spongy wood, and in comparison latter will afford a brighter tone. But ain instruments of very vibratory char- will often furnish a sweeter tone ity, more agreeable to the average er, if the bridge is not too light or ll. Again, this depends to very large ree upon the particular instrument and matter for expert judgment and atten- by your violin maker. Few performers sufficiently trained to exercise good gment in the matter of bridges.

One may fancy that the various little cuts l attachment in the design of a bridge there merely for artistic effect. If you nk that such is the case, take your knife l cut away the center pendant, leaving oval hole. Try the instrument and you ll sense a different tone. Now trim off the side pendants, and still more difference will be noted. These amputations have wrought a marked change in the tonal quality—and not for the better. The writer has cut up literally scores of bridges in making these interesting experiments. During a prolonged stay in Germany such research really was not expensive.

There is not a little fallacy about the age of violin wood for bridges. It is probable that any wood, attic seasoned (dried without artificial heat) for five years, is about as good as it ever will be. Yet there does come a difference after a well fitted bridge has been played in, for a year. Some physical change apparently takes place in the cellulous fibers of the bridge, whereby vibrations are carried more amply down the feet into the top of the instrument; and so the tone is better than in a bridge more recently fitted. A new bridge will require at least two weeks' use, to sound reasonably well. However, unless one is an exceptional workman, with keen eyesight, it is advisable not to attempt to adjust one's own bridges. It is a highly important task, one requiring skill and patience. If a violin maker is not at hand, it will pay to seek the best one available, even at some small cost. The result will amply justify the added expense.

(*Continued in the August issue of* THE ETUDE MUSIC MAGAZINE.)

Will Your Child Be a Talented Musician?

By LILLIAN PAKAN

A MUSICAL HOME, where parents or er members of the family are musicians, e child develops his ear for music through environment. Where there are no musi- ns in the home the child may also have good ear and may be trained by study. The beginner can make better progress d learn the fundamentals of violin play- g more quickly when he has the guidance, terest and encouragement of one or both his parents. A beginner, practicing by mself, may become discouraged and his lent may not have a chance to assert self. It usually is the mother's duty to sten to the child and to guide him in his usic, as the father generally does not ave the time.

A good plan is for the mother to attend e lessons with him and learn all of the sson but the actual playing of the violin erself. Later in the day, if the father has e time or will take the time to listen, let e child show and tell him everything he an remember of his lesson, and when he as finished teaching father what he learned, nother may recall what she learned at the sson, and what the child may have for- otten to mention. This is a splendid way encourage the child, for it seems to be uman nature with a child as well as an dult, to like to show what he can do. If hat the child plays is far from promising, not discourage him; gently help him play it in the right way.

The mother should listen to the daily ractice and not compel the child to do his sson by force or friction. Picture yourself the child's place and encourage and treat im in the manner you would like if you ere he. If there is any friction between he parent and child, the child becomes dis- ouraged and natural talents are lost. The orrect positions of the violin and the bow- g arm and wrist are difficult to master, nd the child is in need of kind and gentle uidance and not continuous nagging on the art of the mother, regarding the various ositions. In the beginning the child's arm ill tire quickly, and ten or fifteen minutes at a time are all he can endure. Do not have him practice when he is fatigued.

The teacher sounds the string individually, and the child with his back turned to the teacher names the strings for his first lesson in ear training. The child usually tells the difference between the E and A strings, but the mother, in doing this at home, should not become discouraged if he has difficulty at first in detecting the difference between the D and G strings. If she will play the game of sounding strings with him every day, he will soon know the difference.

After the child has been instructed in holding the violin in the right position, and holding and manipulating the bow by whole, half and quarter length bowing exercises on the open strings, the next step is to find the B, C and D on the A string. Here is where the mother can help the child over a mountain if she will sound these notes at the piano, as the child plays them on the A string. If the mother is not acquainted with the piano, she should study the piano so that she can play his music with him every day until he plays the notes very nearly in tune without the assistance of the piano. Later she can play the accompaniment for him. The child should also practice the lesson without the sounding of the notes at the piano to train the ear to find the pitch unguided. In time it will be found that he can tell with his back turned to the piano, any note that may be sounded within the range of the violin.

Listen with your child to finished artists on the radio, or better still, go with him to see and hear them play. Be a subscriber of The Etude Music Magazine and read together with your child the articles regarding the violin. Gradually teach him to assume the responsibilities of his music. Guide him in carefulness and personal discipline. Let it be a matter of honor to prepare for his teacher all that he is instructed to do.

These are the stepping stones to good musicianship and talent.

* * * * *

"Inasmuch as jazz is to-day listened to as frequently as it is danced to, serious musicians may be tempted to do for it what Strauss and Chopin did for the waltz.—William Walton.

LEHTO HAND MADE SUPER VIOLINS
Best Since Stradivari
I built my violins all by HAND, like Stradivari did, out of the finest, old wood money can buy. My varnish is the result of life-long tireless research and rivals the varnishes of the Cremona Masters. Beautiful in appearance, magnificent in tone—the kind of violin you have longed to own—For all artists. Descriptive catalog free.
JOHN G. LEHTO, *Master Violin Maker*
935-14TH, SAN PEDRO, CAL.

DISSATISFIED WITH YOUR VIOLIN?
Is the tone too harsh? Too shrill? Too dull or too weak? Would you like this faulty tone permanently eliminated and replaced by a voice that is resonant, sweet, and clear as a bell? Then WRITE ME TODAY—ask about my guaranteed low-cost Revoicing Service, with a free shipping box easy to pack. No charge for minor repairs or adjustments! Scores of Etude violinists are smiling these days over faulty violins that I have Revoiced for them.
If you prefer to buy another violin, ask about the FRASER—unsurpassed in beauty and tonal qualities.
CHELSEA FRASER, 2025 STARKE, SAGINAW, MICH.

New Attractions Scheduled For Tour

(*Continued from page* 453)

coach tour of Long Island, through the 1939 World's Fair grounds, to Jones Beach, for ocean bathing. Jones Beach, with its more than a mile of shore front, is a magnificent example of the New York State Park System. In the evening Fortune Gallo and his San Carlo Opera Company will present one of the light operas from the great stage set on the waters of Oyster Bay.

A tour of Rockefeller Center, including a visit to the observation roof, will be followed Wednesday by a theater matinee, of which a choice is still to be made.

Special arrangements have been made with the management of Radio City Music Hall to present, as part of the stage show on Thursday, scenes from "Carmen." Included in the program will be the Music Hall Glee Club, the world-famous Rockettes, the full Corps de Ballet, as well as distinguished soloists. In the evening visitors will go to Randalls Island which lies in the East River, between Manhattan and Queens, and where the Tri-borough bridge converges. Here there will be a musical show with ballet in the open air stadium.

Planned for Friday evening, following an afternoon tour of lower New York, is an opera performance given in concert form, a method of opera presentation which has of late years become extremely popular.

On Saturday, following a luncheon in the Rainbow Room on the 65th floor of the R.C.A. Building, there will be an exhibition of ancient musical instruments, with a lecture by Dr. Curt Sachs of New York University.

Saturday night the week will be concluded with a symphonic band concert conducted by the world famous Giuseppe Creatore.

If you plan to come on the tour, please fill in the coupon on page 454 and forward it as soon as possible. It is essential that we know exactly how many to expect so that the necessary reservations can be made.

Shopping For Charm

(*Continued from page* 456)

(115-135 lbs.) and small (100-115 lbs.) $4.95. Matching cap—75¢. White rubber shoe with colored cross strap and matching enamel wood heel in red, navy, coral, turquoise and all-white. Very smart—$1.75 pair. When ordering state size (3, 4, 5, 6, 7, 8). You will also like Kleinert's one-piece Jacquard crepe rubber suit (bottom—left of center) with adjustable bras, halter neck, in an all-over floral pattern of black and white, red and white or blue on blue. Large, medium, small. —$2.50. Cap to match—75¢.

Best's Pique Bathing Suit—(bottom—extreme left), jersey lined, daintily colored flowers on white background, dressmaker style, square neck, shirred bodice, corseted waistline, sizes 12-18, $5.95. Over the suit is a full length, short sleeved, beautifully tailored waffle pique beachcoat, sizes small, medium and large, $5.00.

Best's Smartly Tailored Printed Cotton Shirtwaist Dress—(bottom—extreme right), white flowers on navy background, white woven belt, white buttons; washable. Fresh and summery for wear to and from the beach. Sizes 12-20, $5.95.

Extra Work for the Waiting Room Pupils

By NELLE S. SCALES

MUSIC TEACHERS who have a studio away from school buildings, or who teach after school hours, are faced with a problem that others do not have—that of one or more pupils in the waiting room while another is having a lesson. During a recent summer, the writer faced this situation; but it turned out to be an opportunity instead of a problem.

During this summer lessons were taught at home instead of in the school building. There were two groups of country children who made the trip together for lessons. Naturally, one or more had to wait. These pupils were from beginners to third grade, and all were bright, eager children. They could easily have amused themselves with the newspapers, magazines, books, and games that are fixtures on the porch, but it was not enough that they merely "amuse" themselves; it was desired to have them to learn something in those extra hours. Then the problem was how to get them to do it without their feeling that they were doing extra work.

First, some of the magazines were replaced with back copies of The Etude Music Magazine, and Musical America, and a prize of a copy of sheet music was offered for the best scrap book handed in at the end of the term. Then some of the games were replaced with Allegrando and Great Composers, both of which may be procured through the publishers of THE ETUDE. They liked them very much, particularly when there were more than two waiting. As added practice for the game, Allegrando, a line or two of music sometimes would be written on the blackboard—just the meter signature with notes and rests—for them to copy and to put in the bars, giving an apple or an extra glass of lemonade to all who did it correctly. Needless to say they soon were very proficient.

Two or three of them were noticed to be fond of jigsaw puzzles; that inspired another idea. Pictures of famous composers were cut from the cover of THE ETUDE; and these were pasted on heavy white cardboard, a short biography and a part of the most famous composition of each were printed on the back; these were then cut up in jigsaw style. They were much preferred to the meaningless ones the pupils had had before.

When the summer lessons were finished, all had learned a great deal more of time and notation than they would have gotten with the lesson period alone; all had learned some biography; all could recognize on sight the pictures of the composers used, and several had interesting scrap books. They were unanimous in saying they were sorry the summer term was over.

VIOLIN QUESTIONS

Answered

By ROBERT BRAINE

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

A Beginner Out of Tune

H. E. M.—Every violin pupil plays out of tune at first, and it is often a long struggle to get him to correct this worst of faults—bad intonation. Have the pupil constantly to study scales and arpeggi in all keys, also have him to sing simple melodies. Correct him continually if he plays out of tune. Memory work on the violin will help. The fact that he has improved in intonation recently, should encourage you and him. Pupils who are hopelessly "tone deaf" do not improve.

Cannot Identify

D. E.—I am afraid it would be like hunting for the proverbial "needle in the haystack," to try to figure out who made your violin, from the description you send. One would have to see the violin to make an even respectable guess as to its origin. Your only hope would be to send the violin to a large dealer in old violins. It is possible that such a dealer, at some time, might have seen a violin with ornamentation like yours, and so be familiar with the maker's identity.

A Supposed Stainer

N. C. W. 1.—Jacobus Stainer was the greatest violin maker of Germany. His violins formerly sold at very high prices; but of late years they have decreased in price, as violins made by the great Italian makers, such as Stradivarius, Guarnerius, Bergonzi, and Amati have supplanted them in popularity. I do not know a single violinist of the present day who uses a Stainer violin for concert purposes. 2. A translation of the label in your supposed Stainer violin would be: "Jacobus Stainer (made) this violin in Absam, near Innsbruck in the year 1729." 3. I am inclined to think your violin is only a copy of a Stainer, as the Stainer labels are printed on paper and not on a thin sheet of wood as you describe. Nor is the word "Stainer," in genuine instruments, ever stenciled on the back. There are hundreds of thousands of imitation Stainers scattered all over the world. Many of these imitations have been made in the past fifty years. A fine Stainer would probably sell for from $1,500 to $2,000, at present day prices. You will have to show the violin to an expert to learn if it is a genuine Stainer. No one can judge a violin from a written description. He must actually see the instument.

The Da Salo Model

R. W. R.—There are some mistakes in the spelling of the label in your Da Salo violin. The correct label is as follows "Gasparo da Salo. Brescia (a town in Italy) 1550-1612." Some authorities consider Da Salo the creator of the modern violin. His instruments are large in size and have very large F holes. The varnish is of a deep yellow or dark brown of fine quality. You will have to submit your violin to an expert to find out if it is genuine. The expert will fix the probable value. No one can judge a violin from a written description.

To Give an Opinion

G. S.—If you will reflect a little, you will see how impossible it would be for me to attempt to give any opinion on your young son's violin playing, or whether he is receiving proper instruction, unless I could hear him play, and could listen in on some of his lessons. No one can possibly judge a pupil's talent and progress, when he has never seen the pupil, or heard him play. About the only thing you can do under the circumstances is to take the boy to several first rate violin teachers, have him play for them, and have them examine him. They will give you a truthful opinion about his talent, and whether he is being properly taught or not. As you live a short distance from New York city, you could take him there.

Keep Your Violin in Tune

F. H. D.—1. I could not possibly put a value on your Stainer and Amati violins, without seeing them. Violins by the most eminent makers vary considerably in quality and price, as some are superior to others. Write to a dealer in old violins, and he can furnish you quotations on old instruments. 2. In order to keep the violins in good condition, keep them locked up in substantial cases, and the cases on a shelf in a dry closet in a room with an even temperature. 3. Keep the violins in tune, and do not slacken the strings.

Teaching a Left-Handed Boy

W. L. C.—Your best course in the case of the nine year old left-handed boy, who intends to study the violin, would be to take him to an experienced violin teacher and have him take a few months lessons. There are degrees of left-handedness, you know. Some left-handed people are only slightly so and can use the right hand almost as well as the left. In Germany many children are taught to be ambidextrous; that is, to use the right and left hands alternately, so that they can use both almost equally well. There have been cases of artists, cartoonists, penmen and others, who, through some accident have been deprived of th[e] of the right hand, but who, through dil[i] practice, learned to do their right hand equally well with the left. In my own [te] teaching I have found it the best plan, [w] a pupil is only slightly left-handed, to [te] the violin in the usual manner, holdin[g] bow in the right hand. If he is left-hand[ed] a degree where it seems impossible for [him] to bow with the right hand, there is no[w] to do but to have him bow with the left [h]. This can be done with surprising skill by [te] left-handed children. The teacher will ex[a]ment and find out which course is the be[st]

Cannot Judge Blindly

D. S. E.—There is nothing in the inf[or]tion you send about your violin, which m[a]it possible for me to give even a guess whether it is an original or not. An e[x]would have to actually see and examine violin, in order to judge it intelligently.

Defining the Word, "Fiddle"

W. F. B.—Fiddle, from the German *F*[i]is colloquial for the word violin. It is n[ot] used in a slang sense. If you will look fo[r] word "fiddle" in Webster's Unabridged [dic]tionary you will find its full derivation.

Keep the Nails Trimmed

H. de C.—The fingers of the left han[d] violin playing, should fall perpendicularl[y] the strings, contacting the fingerboard o[n] tip of the finger. You ask if the new "[Man]darin" style of trimming the finger nails, w[hich] has come into vogue with some of the [pi]curists, will interfere with correct violin fi[n]ing. As I understand it, the "Mandarin" calls for long pointed finger nails. The Ch[i]are greatly addicted to long finger nai[ls] have seen Chinese in Chinatown, San F[ran]cisco, who let their nails grow nearly an [inch] beyond the tip of the fingers. I hardly ne[ed] say that these long nails would not do a[t] for fingering the strings of the violin. [They] would dig into and scratch the strings. [The] finger nails of the left hand must be n[ot] trimmed, so that they do not strike the st[rings] of the violin.

It is thus evident that the fashionable [way] who wishes to play the violin must choos[e be]tween good violin playing, and the "mand[arin]" style of trimming her finger nails.

The Vibrato in First Position

H. F. C.—In performing the *vibrato* in [the] first position, the thumb of the left hand [sup]ports the neck of the violin very lightly. [For] the neck of the violin must not be tig[htly] gripped between thumb and forefinger. [You] would find a few lessons on the *vibrato* a g[reat] help.

An Easy Concerto

H. G.—Having completed the "Concert[o] A minor," by Accolay, you might take up n[ext] the "Third Pupil's Concerto, Op. 12," by S[itt]. This is a melodious composition and is effe[ctive] for public performance.

Selecting a Teacher

L. C.—I do not know any violin teacher [in] your city, but there must be some, since [you] say that some of your friends have m[ade] rapid progress in their violin lessons. [The] best course would seem to be to consult [your] musical friends as to their teachers, and [to] ask them to recommend someone. Do not tr[y to] do anything in the way of violin study u[ntil] you choose a teacher. He will advise yo[u as] to the proper studies, how long you sh[ould] practice and so on. By all means choos[e a] teacher who has turned out successful pu[pils]. This is the whole secret of securing a co[m]tent teacher.

A Talented Seven Year Old

J. C.—From your description, your l[ittle] seven year old pupil must have an excel[lent] talent for violin playing. As you wish to h[ave] her play for an experienced critic, you m[ight] take her to one of the largest cities in T[exas] and have her to play for the leading violin[ists] there. If, at any time, you visit Los Ang[eles] or San Francisco, you might take the c[hild] with you and get the opinions of leading [vio]linists in those cities. The studies you [are] using with her are excellent. For little s[ix] to encourage her, you might give her; [Op.] Easy Fantasias on Celebrated Melodies, [Op.] 86," by Charles Dancla; "6 Airs Varies, [Op.] 89," also by Dancla. These have pleasing p[iano] accompaniments. Also the publishers of [THE] ETUDE would be glad to send you on req[uest] a gratis copy of, "A Guide to New Teachers [in] Teaching the Violin." This contains lists [of] easy and moderately difficult compositions [for] the violin.

A Violoncello by Pillement

C. A. J.—Your violoncello was made in M[ire]court, France, by F. Pillement, Sr. I can[not] find any details of the life of this maker [in] any text book on the instrument. If you [can] write to a dealer in old string instruments [he] may know something of this maker.

CHOIR MUSIC

WHETHER YOUR CHURCH MUSIC ACTIVITIES ARE WITH A MODEST VOLUNTEER CHOIR, A CATHEDRAL CHOIR, OR ANY CHURCH SINGING GROUP RATING BETWEEN THESE, OUR SERVICE WILL PROVE A CONVENIENCE FOR YOUR FINDING SUITABLE SELECTIONS.

Single copies cheerfully sent for examination, with return privileges. You may name the individual anthems, anthem books, or cantatas you wish to inspect, or you may simply tell us to charge and send to you, for examination, music to meet the needs you describe to us.

CATHEDRAL CHOIR
A Collection of Distinctive Anthems For Chorus Choir of Mixed Voices

Experienced choirs with a large active membership, and having a quartet of proficient soloists, will find in this book a rich repertoire. The anthems, however, are not exceptionally difficult. Selections for this book have been made almost entirely from the writings of the foremost contemporary composers.

Price, 60 cents

VOICES OF PRAISE
Anthem Collection

Singable, churchly anthems eminently well suited for use by volunteer choirs, but which at the same time avoid the triteness that keeps many easy-to-sing anthems out of the repertoire of proficient organizations.

Price, 35 cents $3. a Dozen, Not Pstpd.

POPULAR CHOIR COLLECTION

The choir presenting one or two anthems for two services a Sunday will find of much value to its repertoire the 15 highly satisfying offerings in this excellent collection of not-too-difficult anthems.

Price, 35 cents $3. a Dozen, Not Pstpd.

ANTHEM REPERTOIRE

Christmas, Palm Sunday, Easter and the general services of the Evangelical churches are covered with very good anthems in the contents of this collection which numbers 23 listings, including several sentences and responses.

Price, 35 cents $3. a Dozen, Not Pstpd.

THE VOLUNTEER CHOIR
Anthem Collection

15 anthems and 6 useful short sentences and responses that may be used over and over again without risk of trying a congregation. While impressive to listeners, these anthems are not difficult to sing.

Price, 35 cents $3. a Dozen, Not Pstpd.

YOUNG PEOPLE'S CHOIR BOOK
For Three-Part Mixed Voices (S.A.B.)

Worthwhile sacred choruses for choirs made up of singers of high school age. The baritone parts are of moderate range and may be sung by both tenors and basses.

Price, 60 cents

JUNIOR COLLECTION OF ANTHEMS

23 selections, chiefly two-part. Some may be done in unison.

Price, 50 cents

Bands and Orchestras

(*Continued from Page 437*)

records of these same ensembles at the various state and national contests speak for themselves; and my share in these performances went no farther than a selection of the music and supervision of their work. The plan succeeded with surprising efficiency and practicality.

As part of the plan, I purchased the music, or at least supervised its purchase, distributed parts and conducted the rehearsals. These rehearsals were held either before school, after school, in the evenings, on Saturdays, or in some instances (though infrequently) during the regular school day. Following the first rehearsal, a conference was held with the student leader, and problems pertinent to perfection of the selections were discussed. *Tempo,* breathing, phrasing, and other points which might be stumbling blocks, were noted and blue penciled on the score.

After such a meeting the student leader assumed full charge of his or her ensemble. The members of each ensemble group were given to understand that their respective leader was in complete charge, and that his decisions as to rehearsal and performance were to be fully respected. Of course it was necessary, upon occasion, to call in the student leader and advise him as to improvement of his teaching technic.

Rehearsals were scheduled at hours which were most convenient to everyone concerned, and usually consisted of periods of one hour and a half, with one rehearsal per week. The members of each ensemble were expected to work over their individual parts at times other than that scheduled for ensemble meeting. Assignments to various ensembles were made with a view to distributing the better players, and preventing their concentration where they would do the least good. Thus a higher standard was reached by each ensemble and added confidence and assurance were established. Occasionally I visited the various groups to offer suggestions and advice for general improvement.

New Experience—New Interest

THE MOST SALIENT benefit of these rehearsals was the definite change of attitude among the members of the ensembles. Students, whose interest in band and orchestra had been lukewarm, suddenly were imbued with enthusiasm and thrilled with the new experience. Latent abilities in student leaders blossomed forth, and it was soon found that these same students could ably take charge of their respective sectional rehearsals. In addition, the entire band and orchestra began to sound better; the inner voices came through; and these second and third players performed with more confidence and improved musicianship.

In pursuance of this program through the school term, we decided to present a few public recitals. In the spring a series of solo and chamber music recitals was presented with free admission. The tremendous interest shown by the student body in general, and by the school patrons, was enlightening and gratifying. This enthusiasm grew to the extent that during my last two years at this school our solo and ensemble recitals were attended by capacity crowds. More important, perhaps, was the fact that the participants in these musicales were as keenly enthusiastic about them as they were with regular concerts of band and orchestra, if not more so.

As to instrumentation of the ensembles, every practical combination was maintained. Trio, quartette, quintet, sextette and miscellaneous combination were given opportunities; and their worth was well borne out by the ultimate standing of these groups in the national contests.

It is almost unnecessary to point out the benefits of solo participation. Students studying privately should by all means include this phase of musical development, and of course all good teachers will stress its value. And solo work is no less important to those students who are not studying privately.

There is no better means of serving a school and community than a solo and ensemble program. Various civic organizations and churches are constantly requesting the services of school musical organizations; and often, where it is impossible to provide for a full unit, the soloist or ensemble group renders its best service.

Another outstanding problem, which we face in the development of the ensemble program, is the scarcity of appropriate material. One has but to peruse the literature published for various chamber music combinations to learn that string combinations have the advantage over the winds, when consideration of material available is made. Too few of the works of the old masters are available for wind groups.

Wood Wind Ensemble Material

JUST AS THE STRING repertoire is superior to that of winds, so is the wood wind repertoire superior to that of the brasses. This may be somewhat due to the fact that the masters wrote very little for brass because of inaccuracies of construction of brass instruments in the eighteenth and nineteenth centuries, as well as their limitations in matters of range, technic and tone color.

However, during the last decade there have been constant improvements and enlargement of literature for wind ensembles. Many excellent new works have been published, and suitable works by the masters have been uncovered. The National School Band and Orchestra Associations have compiled exemplary lists of solo and ensemble material. This material is carefully graded, indexed, and so classified that discrimination is made between material recommended for contest purposes and that best suited for program and student training purposes.

A list of this material may be secured through the National School Band Association, 64 East Jackson Boulevard, Chicago, Illinois. A booklet provided by this organization may be had at a slight cost; and it contains valuable information regarding band and orchestra music lists.

The solo and ensemble festivals sponsored by the various state associations have proven so successful and have grown so rapidly that there is a necessity for increasing facilities, judge personnel, and auditoriums for the audiences which have become so greatly interested in this phase of our music program.

If our students desire earnestly to continue their musical experience in adult life, there is no more natural and desirable means of their doing so than this participation in string or wind ensembles. Build up a solo ensemble program in your school music department; put your student leaders to work; begin a solo ensemble music library. Then take note of the fresh motivation, the new enthusiasm, the improved performance of your student musicians. Watch, for example, the brightening up of your tuba and horn players, with their opportunity to play something other than their traditional "um-pahs".

"As go your solo and ensemble groups,
So go your bands and orchestras!"

QUESTION AND ANSWER DEPARTMENT

Conducted

By KARL W. GEHRKENS

Professor of School Music, Oberlin College
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Inables in Minor Keys.

Q. Will you please answer this question. A music student told me that a minor key always begins and ends on la, *or A as I would think. Is this right or wrong? How do you decide when a minor key of a major key?*—A. M. G.

A. A minor key always begins on *la* if the major tonic is called *do*. In other words if you use the "movable *do*" system, the key note in major is called *do*, and its relative minor (a third lower) is called *la*. Thus with one sharp in the signature we have either G major or E minor, with three sharps, A major or F-sharp minor; and with three flats, E-flat major or C minor. With the "fixed *do*" system the whole thing is quite different, but since you do not ask about this I will not confuse you by explaining it.

Pictures of Musicians.

Q. I need pictures of musical instruments, both ancient and modern; also, pictures of musicians and composers. Can you tell me where I can secure such pictures suitable for mounting. I do not wish to cut them out of my Etude magazines.—L. C.

A. I have two suggestions with regard to your problem. The first is that you might subscribe for a duplicate copy of THE ETUDE in order to take such pictures out of each issue you would like to use for individual purposes. The other suggestion is that you write to the publishers of THE ETUDE and ask them whether they cannot supply you with such pictures as you need.

Are There Triple Flats?

Q. 1. Will you kindly tell me the value of the first notes in the triplets of measures 27 and 28 of the "Black Key" Etude by Chopin?

2. In measures 29, 30, 31 and 32; 45 and 46, are the accidental flats in the bass, to be played as if the piece were in the key of C major, or as it is written, making double and triple flats?—Mrs. R. C. R.

A. 1. The upper stem does not change the value of this first triplet note. It merely indicates that these double-stemmed notes form a melodic progression. Some editions use only *staccato* dots, while some have accent marks.

2. Your second question is a little obscure but I think what you mean to ask is what happens to a staff degree that is already flatted in the signature when a double flat is placed on it somewhere in the course of the composition. The answer is that the note affected is double flatted. There is no such thing as a triple flat.

Violin Manufacture.

Q. Please give me some information on how violins are manufactured, or advise me concerning where I may obtain such material. I often read THE ETUDE MUSIC MAGAZINE, *and think the Question and Answer Department a very interesting and beneficial.*—N. T.

A. The subject is too complicated for an answer in this column, but I am glad to give you the names of two books which I believe you will find helpful. They are: "Violin Making," by Edward Heron-Allen; and "The Violin and How to Make It," by a Master of the Instrument. These books may be secured from the publisher of THE ETUDE.

Accents in Twelve-Eight.

Q. 1. In exercises where two staccato notes are connected with a curved line: Should both notes be played, or are they tied and the first note only played?

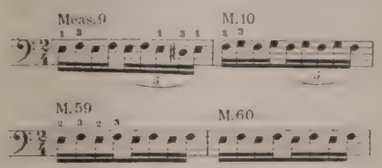
2. In an exercise in twelve-eight time, such as in the Etude, No. 7, *by J. B. Cramer, in Mathews' "Grade VII," should the accent fall on first note of each group of three—which could give the effect of triplets—or should they be played evenly, all as one group.*

3. Are triplets always marked with a 3?
—I. S.

A. 1. Play them as though there were an eighth note followed by an eighth rest in each case. This is not a tie but a *semi-staccato* sign.

2. In twelve-eight rhythm the first note in each group of three will be treated as the first note of a triplet, that is, it will be slightly accented. But since twelve-eight is a quadruple measure, the first and third groups will naturally be accented more than the second and fourth.

3. The triplet sign is usually used but occasionally omitted in places where the meaning is quite obvious without it.



Analysis of Mozart Sonatas

In a recent issue of *The Etude* a subscriber inquired about an analytical edition of the Mozart Sonatas and I replied that I knew of no such edition. I am now informed by Karl Eschman, of Denison University, that there exists an excellent volume entitled "The Sonata, Its Form and Meaning, as Exemplified by Mozart's Pianoforte Sonatas," by F. Helena Marks.

Trills in de Falla

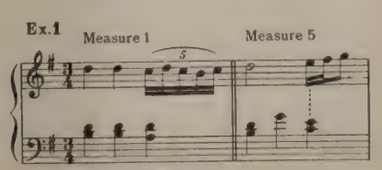
Q. Will you kindly write out the trills, showing the fingering, and so on, in these passages of the Ritual Fire Dance, by de Falla: measures 1 to 24 inclusive; 59 to 66 inclusive; 132; and 136 to 140 inclusive.—J. T. B.

A. The limited space of this column does not permit the writing out of so many measures; however, so many are similar that I think these few will give you the desired information. Measures 1 to 23 inclusive are played like measures 59 and 60. The grace note in measure one is played with the left hand. Measure 132 is played like measure 9.

Measures 136 to 140 are played in even sixteenth notes. The right hand plays measures 136, 137, and 139; while the left hand plays measures 138 and 140.

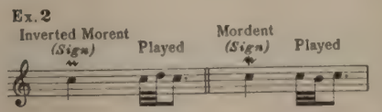
Will steam hurt a piano?

Q. This spring I am moving into a three room apartment. One room is very large and then there are two small rooms. One small room I would like to use as a store room and the other for a bedroom. The large room I would like to use as kitchen and living room. My question is this: Would it hurt a piano to be in the room where cooking is done? I have been told it would ruin the felt pads on the hammers.—F. F.



A. A reasonable amount of moisture will not hurt your piano; as a matter of fact, more pianos are harmed because the air is too dry than because it is too moist. The effect of dry air is to crack the sound board and loosen the mechanism, whereas the effect of very moist air would be to rust the strings and perhaps some of the other metal parts. If you were to have steaming kettles of food all day long, or even if your tea kettle were to boil hard throughout the day, this would probably constitute an excess of moisture and might result in rusted strings. But the amount of cooking that is ordinarily done by the two or three people living in a three room apartment would hardly have any such effect; and, since your room is large, I see no reason why you should hesitate to take the apartment that you mention.

Ornaments in Paderewski's Minuet



Q. 1. I would like the mordent in Paderewski's Minuet d'Antique *explained. Is it played in triplets for a quarter count, or as grace note triplets? Please illustrate what notes are used and their time.*

2. Is this the inverted mordent?—Mrs. R. S. G.

A. 1. There are no mordents in this composition of Paderewski's. You probably are referring to the slide in measure 6; however, you may mean the turn in measure one. To make sure I am writing both measures as they are usually played:

2. This is how mordents are marked and played:

Notice that the mordent proper has a line through the sign and goes to the note below and back, while the inverted mordent has no line and goes to the note above and back. The confusion in terminology may be avoided by referring to the first of these as the "upward mordent" and the second as "downward mordent."

What Tempo

Q. Please give me the approximate tempo *marks of the following compositions.*—L. B.

1. Valse Caprice, *by Newland; 2.* Prelude and Fugue, No. 3, *by Bach; 3.* Claire de lune, *by Faure; 4. (Vocal)* What's the Time Blackbird, *by Oliver; 5. (Vocal)* By a Lonely Forest Pathway, *by Griffes; 6. (Vocal)* Supplication, *by La Forge.*

1. ♩=92; 2. Prelude, ♩=84; Fugue, ♩=96; 3. ♩=76; 4. ♩=126 to 136; 5. ♩=80; 6. ♩=100.

The metronome mark for No. 3 is for the song by Faure. I do not find any piano composition under that title in the catalogs of the various publishing houses. The *tempos* suggested are all approximate, of course.

"Why I Chose SHERWOOD Training"

As a prospective Sherwood student you will be interested in these reasons why other young people selected Sherwood instruction:

"Talks with leading musicians of my community emphasized the importance of specialized, *professional* training for my chosen field." . . . "I wanted a school whose courses were nationally recognized, whose students and graduates were proving the worth of the school's instruction by achieving success in their work and careers." . . . "Sherwood measured up to every requirement for thorough preparation for a music career."

Sherwood Music School is conveniently located in the cultural heart of Chicago, and its beaches, parks and playgrounds, theaters, art galleries and museums afford unparalleled opportunities for healthful recreation and broadening cultural contacts.

Accredited instruction. Courses lead to Certificates, Diplomas, and Degrees in piano, violin, voice, organ, cello, wind instruments, theory, composition, public school music; conducting; microphone technique, dramatic art, play production, and liberal arts.

Student aid and scholarship opportunities for deserving pupils of limited means. Dormitory. *Fall term begins Sept. 19.*

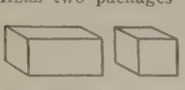
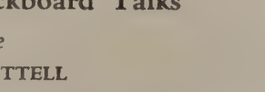
One Minute Studio Blackboard Talks



On The Tie

By MARY ALICE GETTELL

We have here two packages



One is two inches long and the other is one inch long. With the use of a ribbon these two packages may be tied together and converted into one package, three inches long.

So in music we may have two notes ♩ ♩, one a half note ♩ worth two counts, and the other a quarter note ♩, worth one count; and these two notes, placed on the same line or in the same space on the staff, may be tied together by a ribbon, a curved line placed above or below them, thus:

Ex. 3

This converts the tones of these two notes into one tone sustained for three counts thus:

♩ = 2 counts
♩ = 1 count
♩ + ♩ = 3 counts

In other words the ribbon or curved line, or the "tie," as it is called in music, placed above or below these notes, means that we play or sing only one tone, but sustain it for three counts.

FRETTED INSTRUMENTS DEPARTMENT

Edited by GEORGE C. KRICK

The Guitar

ACCORDING TO RELIABLE STATISTICS, the number of guitars sold in this country in 1937 reached the almost unbelievable total of half a million. This, of course, includes all varieties, classic, plectrum and Hawaiian. By way of contrast, it is interesting to note that Torres, the most celebrated of the Spanish guitar makers, whose productive period occurred during the middle of the nineteenth century, made not more than three hundred instruments during his lifetime. Of these about twenty-five were considered instruments superior to all others and gradually found their way into the hands of guitar virtuosos in different parts of the world, where they are prized very highly by their proud possessors. Miguel Llobet, one of the leading Spanish guitarists, is the owner of one made in 1853. Emile Pujol uses one; and the Torres guitar of Tarrega, after the latter's death, crossed the Atlantic and is now owned by Maria Anido, the celebrated guitarist of Buenos Aires. These guitars are noted for their beautiful tone quality, carrying power and excellent workmanship. The instrument treasured above all others by Torres, was produced in 1856 and was named by him "La Lione." For many years he refused to part with it at any price, but finally it came into the possession of a young woman, a pupil of Tarrega and a member of a family of great wealth. Twenty years later this family experienced severe financial difficulties and the instrument was sold to an amateur guitar enthusiast and collector, Nicolo Gimenez for twenty thousand dollars. It is said that on the day of change of ownership the whole family was dressed in mourning and, with heavy hearts and tears in their eyes, bade farewell to their beloved guitar.

Senor Gimenez took the guitar to Paris, had it insured against fire and theft for the amount quoted, and frequently permitted some of the prominent artists to use it in their concerts. It created quite a sensation amongst the fraternity, and everyone agreed that it was the finest guitar ever constructed.

While there were other guitar makers of high rank in Spain at that time, none of them was considered quite the equal of Torres. The guitars of Lacote enjoyed great popularity in the early years of the nineteenth century; and after Ferdinand Sor made his home in Paris he used the instruments made by this French master. These guitars were somewhat smaller than those of the Spanish makers. The Italian model was also of smaller dimensions, rather slender and shallow, producing a crisp tone of fine quality and good carrying power, but lacking the depth and sonorous quality of the Spanish model.

Some Famous Viennese Makers

DURING THIS PERIOD Vienna was the guitar hub of Europe, and sooner or later most of the players of note were to be found in this beautiful city on the banks of the Danube. Amongst the numerous guitar makers of Vienna, J. G. Stauffer (1800-1850), J. G. Scherzer (1834-1870), and F. Schenk (1809-1850) were the most renowned; the instruments produced by these craftsmen were most popular with the Russian and many of the Italian virtuosos. While the six string guitar was widely used, some of these artists preferred
instrument with three or more added
strings. J. K. Mertz, the celebrated
trian guitar virtuoso and composer, pla
an instrument having four extra
strings. The Terz guitar, a smaller m
tuned a minor third higher than stand
was also quite popular at this time, e
cially for playing duets with another gu
or piano, or in ensemble with st
quartet.

From that time up to the present, it
been the ambition of every serious ma
to improve the instrument, to give
greater carrying power and, withall,
retain its characteristic tone quality.
was after the sensation created in Eu
by the performances of Miguel Llo
followed, a few years later, by that
Andres Segovia, that the European mal
came to accept the principles as laid d
by Torres, with results that have b
quite surprising and satisfying to play
The most successful, perhaps, of the pres
generation of guitar makers is Herm
Hauser. His concert guitar, called
"Segovia Model," is slightly larger t
the old Torres, and has been acclaimed
many of the great artists, includ
Segovia, who used one during his rec
American concert tour. Classic guitars t
also deserve recognition are those made
Vincente Tatay and Luigi Mozzani.

And in America

AMONGST THE AMERICAN manufacturers
gut string guitars, the F. C. Martin C
pany has enjoyed an enviable reputat
since the house was founded in 1833,
the instruments made by this firm h

Welcome, Friend!

● Coming our way this summer? We'll be mighty glad to see you at our home, 1712 Chestnut Street. The "Pennsy" will land you at the Broad Street Station, three blocks away; or the "Reading" at the Reading Terminal about five blocks away, while the "B. and O." Station is only half a dozen blocks up Chestnut Street. If you come by air you will land in Camden, N. J., just over the river, and a taxi will whisk you to the heart of the city. Many come by motor. Just tell any officer, when you reach the city, you want to get to Seventeenth and Chestnut and he will point out the shortest route. (Plenty of parking lots nearby.) But don't pass by without dropping in and letting us have a little chat with you.

With pleasurable anticipation we look forward to the vacation season and the visits of many friends we have made in over fifty years of accurate, speedy, friendly mail-order service.

The Cover for This Month

Regardless of who said it or whether he said it a little differently, there is a lot in the thought that there are "Sermons in Trees." Nature tries to tell man many things, but unheedingly men have gone against the wise provisions of Mother Nature and there are such things as widely devastated lands like those which have resulted from the tragic dust storms in some sections of the United States.

Nature's great protection against soil erosion is in such things as trees, turf, and bushes. A good old-fashion name for a farmer is "husbandman" and in good husbandry the farmer rotated his crops, rested his lands by portions, and provided for the replenishing of his woodlands. What has this to do with THE ETUDE cover for this month? Well, THE ETUDE cover portrays two young people who have music, as one of the beneficent things, placed in their lives by their parents to protect their characters from the erosion which occurs in lives which are bleak and bare of beautiful things.

One of the greatest things a music teacher can do is to plan and carry through ways and means of bringing to the parents of every child in his or her community, the vitally important information that the study of music will give a child life advantages with values far beyond measuring in dollars and cents. Perhaps the display of this ETUDE cover throughout the country will supplement the efforts music teachers are making to bring parents to a serious consideration of music study for their children.

This picture is by Richard T. Dooner, a Philadelphia photographer, nationally known for his portrait and art photographs.

ERRATA: In last month's issue the given name of Paganini was spelled incorrectly, both in its original and in the anglicized form. The proper spelling is "Nicolo" and "Niccolo" respectively.

The Etude Historical Musical Portrait Series

The well known family name of Smith—from Ella May to William George—makes its appearance in this month's instalment of *The Etude Historical Musical Portrait Series.* And if you read carefully, you'll note that a Smith (John Stafford Smith) is credited with writing the original musical setting of our national anthem *The Star Spangled Banner.*

Following the Smiths, there's Nicolai Sokoloff, noted conductor and director of the Federal Music Project; Oscar Sonneck, prominent musicologist, editor and authority on Beethoven; John Philip Sousa, the "March King," composer of *The Stars and Stripes Forever;* Sigmund Spaeth, eminent music critic, author, editor and lecturer; Albert Spaulding, the distinguished violinist; Oley Speaks, celebrated singer and composer; and many other outstanding musicians and musical personalities every music lover should know.

The 44 pictures and brief biographies on page 480 of this issue represent just one instalment in this unique pictorial-biographical series. Multiply this by 66, the number of instalments published to date, and you have some idea of the tremendous size and scope of the collection and its inevitable value for reference and scrap book purposes.

To meet a demand for separate copies of past instalments we have made reprints of each one to date. These we will be glad to supply to any of our readers at the rate of 5 cents each.

Fragments from Famous Symphonies

For Piano

Compiled and Arranged by **William Baines**

Radio listeners, young and old, are becoming more and more familiar with the great symphonies of the masters, through the many fine orchestral programs to be heard every week over the air waves. Due to the zeal of Walter Damrosch, Arturo Toscanini, Leopold Stokowski, and others, the beauty of the symphony has now been brought to the masses. Under such circumstances, it is natural that there has grown up a demand for the themes of the symphonies arranged in simplified form for the young piano student. Such is the material offered in *Fragments from Famous Symphonies.*

The compiler of this book, William Baines, is well known for his many successful teaching pieces for piano and his experience well qualifies him as an arranger of music of this type. In a foreword to the book, Mr. Baines says: "Young pupils who desire the best in music should have a chance to study and become acquainted with the works of the great masters. In these easy arrangements, students will have a new and happy experience, something appealing to their imagination, which will help them build a firm foundation in piano playing."

The music is drawn from the great symphonists Beethoven, Brahms, Mozart, Haydn, Schumann, Schubert, Tschaikowsky, and Dvořák. Among the selections are such popular bits as the *Allegro* from Schubert's B Minor Symphony (Unfinished), the *Andante* movements from Tschaikowsky's 5th and 6th Symphonies, the *Menuetto* from Mozart's Symphony in G Minor, the *Largo* from the "New World" Symphony of Dvořák, and the *Larghetto* from Beethoven's Symphony No. 2. Twelve numbers make up the contents of this unusual book.

Orders may now be placed for single copies of this book at the low advance of publication cash price, 30 cents a copy, postpaid. Copies may be sold only in the U. S. A. and Its Possessions.

Little Pieces from the Classic Masters

For Violin and Piano

By **Leopold J. Beer**

"Classic Novelties" is the title given by one music lover to pieces of the type found in this book. "Classic Novelties," he explained, "are pieces from the great masters of the olden days, neglected or forgotten for years, and now brought forth for this generation to enjoy."

Leopold J. Beer, long prominent in the music life of Vienna, has a predilection for digging out of old libraries manuscripts of long forgotten musical works. Here he presents gems from Purcell, Kuhnau, the Couperins, Rameau, Bach, Handel and Gluck in arrangements that can be played by violinists well along in the first position. Some have alternate fingering for playing in the third position, if desired.

In advance of publication single copies of this unique volume may be ordered at the special cash price, 35 cents, postpaid.

The "Business" of Teaching

"Success Stories," in newspapers and magazines, telling how a sudden "inspiration" caused some individual currently in the public eye to invent some gadget, write a song, or inaugurate a certain profitable business enterprise are quite intriguing to most of us. Yet, with few exceptions, these successful persons will tell you, if they are perfectly candid, that *prior* to the happy inspiration they prepared for its arrival diligently, and frequently not without many personal sacrifices.

The music teacher who annually finds his or her teaching schedule "full to overflowing" has prepared for the success thus achieved by years of study and practice. And, frequently, even such thorough preparation is not sufficient, unless attention is given to the "business" of teaching.

What is meant by the "business" of teaching? Selection, arrangement and decoration of the studio or music room; dignified, yet forceful and convincing announcements, in local newspapers and by direct mailings, of the teacher's qualifications; and, above all, a well arranged plan of teaching procedure, including the inclusion in the curriculum of modern, up-to-date materials.

For many in the teaching profession the summer months offer the most favorable period for examining new works and new compositions. See your music dealer now, or write to the publishers, for material to look over. Ask for helpful free booklets, such as *Guide to New Teachers on Teaching the Piano, Guide to New Teachers on Teaching the Violin, The Music Teacher's Hand Book,* or for thematic catalogs showing portions of new and standard publications. The three booklets mentioned contain carefully selected lists of teaching materials and many valuable suggestions for the above-mentioned "business" of teaching, such as Professional Cards, Announcements, Pupils' Records and Bookkeeping Helps.

Thorough preparation will save hours of precious time at the beginning and during the coming teaching season. There is no time like the present for making a start.

Play with Pleasure

An Album for the Grown-Up Piano Student

There is one type of music publication always in demand—a volume containing a collection of piano pieces which can be kept handy on piano rack, or in the music bench. Accomplished performers have their *Celebrated Compositions by Famous Composers* ($1.00), less-advanced players their *Best Loved Themes from the Great Masters* ($1.00), there are albums of salon pieces, reveries and quiet music for the evening hour or Sabbath Day playing, march albums and the many books of piano pieces for children and young students. All have excellent sales records.

Some time since, we published a *Book of Piano Pieces for Adult Beginners* (75c) which has proven very popular. Realizing that many grown-ups, who were beginners when that book was first issued are now able to play third and even fourth grade music, the compilation and arrangement of the material for this book was decided upon.

The general character of the material will be what may be described as the "better popular type"—good music with marked melodic and rhythmic charm. It will include many selections never hitherto available in such easily

(*Continued on Page* 484)

ADVERTISEMENT

Play with Pleasure (Continued)

playable arrangements; numbers such as *Valse Triste* (Sibelius), *Fair Maid of Sorento* (Italian Folk Song), *Qui Vive* (Ganz), *Salut a Pesth* (Kowalski), *España Waltz* (Waldteufel), *On Wings of Song* (Mendelssohn), and selections from popular operas like *The Mikado* and *Carmen*.

Here, indeed, is a veritable feast for the amateur piano player. And by ordering it now, in advance of publication, one can obtain a copy of the book, when published, by sending to Theodore Presser Co., 1712 Chestnut St., Philadelphia, Pa. 40 cents in stamps, currency or money order. Orders can be filled only in the U. S. A. and Its Possessions.

28 Miniature Etudes

A Book of Studies for the Third Grade Piano Student

By Ella Ketterer

Many modern teachers of the piano prefer the use of short etudes, or study pieces, rather than rigid adherence to the material in graded courses and formal instruction books. Unquestionably, the etudes are more interesting. They have the added advantage of presenting succinctly the necessary technical figure to be mastered, and while this thus can be accomplished with a minimum of practice, such study pieces actually get more time spent upon them by the pupil than would be given to material assigned from an instruction book.

Miss Ketterer is not only a prolific and very successful composer, she is a practical teacher of the piano as well. Every educational feature in her instructive works has been tried out in her own teaching and only those which have proved most successful appear in the books she has published.

The material in this work covers such problems as playing triplets, trills, suspensions, arpeggios, wrist study, broken thirds, various rhythms (including syncopation), repeated notes, etc. Each etude is attractively titled to add to the pupil's interest.

In advance of publication orders may be placed for copies of this book, when issued, at the special cash price, 30 cents, postpaid.

Child's Own Book of Great Musicians

Brahms—Tschaikowsky—MacDowell

By Thomas Tapper

The three subjects chosen for these new booklets in the celebrated Tapper series are composers whose works steadily are gaining in popularity. All are recognized by present-day music lovers as masters whose contributions to the art deserve immortality. Programmed frequently on club, concert and recital programs and in radio presentations their music has become familiar, even to the children.

And what more natural then that musical youngsters should want to know something of these men who produced such beautiful music? Mr. Tapper, who told them so delightfully about Bach, Beethoven, Chopin, Grieg, Handel, Haydn, Liszt, Mendelssohn, Mozart, Schubert, Schumann, Verdi and Wagner, now presents childhood incidents in the lives of these modern masters and tells of the traits that helped to bring about their great success.

Surely, inspirational reading for young music students. And then when one considers that while reading the story the child pastes in designated places throughout the book "cut-out" pictures of the composer and of scenes and incidents in his life, and after reading the story he writes his own version of it, the educational value of this series is readily recognized. The binding of the book in art style, using the cover, with needle and silk cord provided, is an added attraction for the young student.

While these three new booklets are in preparation for publication single copies of each may be ordered at 10 cents, or 25 cents for the set of three, postpaid. The original 13 booklets are priced at 20 cents each and are not included in this special offer.

Reward Cards for Music Students

(Second Series)

Teachers, everywhere, are familiar with the popular series of *Reward Cards* (16) issued by Theodore Presser Co., each covering one of the great music masters—Bach, Beethoven, Brahms, Chopin, Gounod, Handel, Haydn, Liszt, Mendelssohn, Mozart, Schubert, Schumann, Tschaikowsky, Verdi, Wagner and Weber. These cards, the size of a postcard, have on one side a colored photograph and a picture of the birthplace, and on the reverse side of a short biography, a facsimile of a manuscript and an autograph of the composer. The set, which includes a beautiful *Prize Card*, reproduced from steel engravings, has sold for years at 50 cents.

Frequent requests that additional composers be added to the series prompted the compilation of an entire new series, the set to be known as *Reward Cards* (Second Series). The following composers will be included: Bizet, Chaminade, Debussy, Dvořák, Elgar, Gluck, Grieg, MacDowell, Massenet, Moszkowski, Moussorgsky, Rimsky-Korsakow, Rossini, Rubinstein, Saint-Saëns and Sibelius. These will be issued in the same manner as the first series and each set will include the *Prize Card*. In the new set, in some instances a scene of interest will be substituted for the picture of the composer's birthplace.

While this publication is in preparation sets of *Reward Cards* (Second Series) may be ordered at the special price, 35 cents, postpaid. Only one set to a person, please, at this introductory price.

Fourth Year at the Piano

By John M. Williams

The special price offer on this work will continue throughout the current month. Teachers wishing to place orders for introductory copies may do so by sending to Theodore Presser Co. 50 cents in currency, stamps, or money order. The copies will be delivered when the book is published.

Those who have used the John M. Williams instruction books *First Year at the Piano* ($1.00), *Second Year at the Piano* ($1.00) and *Third Year at the Piano* ($1.00) are eagerly awaiting this new book as an interesting continuation of the course. They know that they can expect not only the best in practical exercises but also a fine collection of piano pieces in arrangements that make them delightful recreation material for the student in this grade.

Grown-Up Beginner's Violin Book

By Maurits Kesnar

Music teachers everywhere are finding that many "grown-ups" are showing an interest in music study. Young people just beginning work now have money to get for themselves that which their parents could not afford to give them. Some "grown-ups" including businessmen, wives, and mothers, on the other hand, now are finding it possible for the first time in their lives to use time and money for carrying out a long cherished desire to play an instrument.

Other "grown-up" beginners are those who have studied one branch of music and now want to add playing ability upon another instrument to their accomplishments. Heretofore violin teachers meeting "grown-up" beginners, such as any of these, have been faced with the difficulty of finding suitable material, since most beginner's books are for young beginners.

A well known violinist and successful violin pedagog, Maurits Kesnar, has made a great contribution to violin education material in creating this *Grown-up Beginner's Violin Book*. Here is material that will interest beginners whose minds are above those things which appeal to children. Besides excellent exercises which will help provide the technical ability that should be gained in the first year of study, this book includes a number of easy arrangements of some famous melodies and of some gems from folk song sources.

A single copy of this work may be secured now at the low advance of publication price of 40 cents, post paid. The sale of this work is limited to U. S. A. and its Possessions.

A Child's Journey

Rote Songs for Primary School Activities

By Ada Richter

Teachers still have an opportunity this month to reserve for themselves first-off-the-press copies of this work at the special pre-publication price. Many regular readers, who in similar manner made the acquaintance of this author's immensely successful publications, *My First Song Book* (75c) and *Ada Richter's Kindergarten Class Book* ($1.00), promptly subscribed for this book when the initial announcement of its forthcoming publication was made.

Mrs. Richter in recent years has enjoyed remarkable success with young students, her boys and girls having appeared in recitals and concerts and on junior music club programs, giving every evidence of the fresh, modern ideas their teacher brings to the classroom and studio. Unselfishly Mrs. Richter has shared these innovations with her fellow teachers in her published works and their appreciation has been shown in the adoption of them to such an extent that several editions of both books have been necessary, although they have been on the market only a comparatively short time.

In this new book you will meet sixteen songs covering familiar scenes and things that a child might encounter on a holiday journey. If used for class work, they may be correlated with other primary grade activities. Used as a continuity they will make an excellent little playlet. A simple piano accompaniment is provided but the songs are sufficiently rhythmic to be sung without instrumental accompaniment.

Orders may be placed now for single copies at 35 cents, post-paid. Copies will be delivered when the book is published.

Manual of Fugue

By Preston Ware Orem, *Mus. Doc.*

Whatever the cause may be, the very mention of the word Fugue usually brings the idea of a musical study so advanced as to be almost beyond the reach of students of average ability. One of the probable reasons is that it has generally been presented only in learned language befitting such a dignified study.

It has remained for Dr. Orem to prepare a Fugue manual in such simple language that the subject stands revealed much more clearly than ever was thought possible. Its pages make perfectly plain the various angles of Fugue writing—Canon, Imitation, Double Counterpoint, etc. Those who have made a careful study of harmony, theory, composition, and counterpoint, especially as treated so effectively and entertainingly in Dr. Orem's published books on these subjects, will have had a trustworthy preparation for the study of his Fugue manual.

Dr. Orem, through his faculty of apt explanation and his wealth of clarifying original examples, opens the eyes of the student to new and finer shades of musical beauty and increases our appreciation of music as one of the outstanding fine arts.

This valuable book is now in preparation. Those who wish to take advantage of our special advance of publication cash price of 40 cents, postpaid, for single copies can place their order now, copies to be delivered when ready.

One String Solos

For Violin Beginners

By Kate La Rue Harper

At first thought it might seem impossible for a good melody to be formed of notes confined to the first position on one string; but it has been successfully done in this interesting violin book. The tone of the open string, and those produced by the use of the first, second, and third fingers, are ampl some very interesting little melodies, g substantial preparation for later work re ing all the strings, the use of the fo finger, and the employment of the higher more difficult positions.

In this fast-moving age the element novelty, interest, and anticipation hav be given their true value, and books la them might as well not be published. T fore, everything that will help to interest beginner and make him anxious to be to play the violin has been prepared, in ing fascinating story texts and attrac illustrations.

This work has been written for use ei in private or class teaching. It will be is in two separate volumes, one for the v (for juvenile students), the other for p (for the teacher or accompanying pian The books will be oblong in shape, greater convenience.

Those who wish to avail themselves of special advance of publication cash price order single copies now; 15 cents for violin part, 20 cents for the piano p Copies will be delivered when printed.

Publisher's Printing Order

In the Summer months many who Presidents of various organizations are l making plans for the success of those or izations during the season that will begi the Fall. No matter how good those pl or how enthusiastic may be each Presid there generally must be the admission the loyal support and hard work which be given by a faithful group will be things that carry the plans to a rich fruit

When we personalize music publications see something of the same thing. In orde meet the various types of set-ups found the several different fields of music activ there must be a great host of music publ tions available, but out of that great l there are, for each field of music endea certain publications which bear the m share of things.

An acquaintance can be made with th much-depended-upon publications by revi ing carefully each month the results l given of the most active publications re sented on the printing orders of the p thirty days. You may know these num by other than their titles if you but ask Theodore Presser Co. to send a copy of that you would like to see "On Approv

A Musical Bargain

ing the months of June, July and t, we shall offer an introductory sub- on to THE ETUDE at a price of only ts for the three numbers. Every music is given the opportunity, at little cost, ome acquainted with THE ETUDE. This is good only for the three summer s and the supply is limited. Orders e filled as received. When issues are sted, no more subscriptions will be ted. Send your 35 cents in cash, money or United States postage stamps NOW. lian subscribers should include 10 cents onal to cover extra postage.

ine Merchandise for New ubscriptions to The Etude

r no cash outlay whatever, many music s secure attractive and useful rewards by lucing THE ETUDE to their musical ls. Here's how it is done. Any one in- ed in music, whether a professional, eur or an occasional player needs THE E MUSIC MAGAZINE. The subscription is only $2.00 a year, as you know, and y one interested in music is well worth small amount invested. For each sub- tion obtained, we will give you one t credit toward any piece of merchan- selected. The following are a few gifts h may appeal to you:

LECTRIC ALARM CLOCK—Now you ave a dependable Electric Alarm Clock aken you at whatever hour you wish. is a genuine Westclox. Its ivory color nonizes with any other color and it s can be kept clean and new looking. r reward for securing six subscriptions.

ONTINENTAL FRUIT BOWL. Fruit l. centerpiece or ornament are a few of uses you will find for this fine reward. It 9" in diameter, 3½" high and is attrac- ly etched on the inside of the bowl. rded for securing four subscriptions.

NDWICH SERVER. Here is an attrac- ly designed Server that is ornamental as as useful for sandwich or cake service. has a graceful swinging handle and ced-design plate. Permanent chromium sh. Diameter 10". Awarded for securing e subscriptions.

OOK COVER. This unique Book Cover ade of Florentine leather, has hand-laced es and includes a page marker. A grand or prize. Your reward for securing one scription, not your own.

ILVERCRAFT COMPOTE. This attrac- compote is 7" in diameter, has a scalloped e, stands 5½" high and has a bright, omium finish. Awarded for securing one scription, not your own.

ORRESPONDENCE CASE. This handy rrespondence Case has a gold-stamped g-gram linen binding and includes sta- nery, perpetual calendar and a paper fe. Size 6" x 7". Your reward for securing subscription, not your own.

Send postcard for a complete list of gifts ered by THE ETUDE.

raud Agents Are Active Again

Many responsible men and women add ostantially to their incomes through taking scriptions for THE ETUDE. But swindlers o are working, so be careful to assure rself of the responsibility of the canvas- before paying out cash to strangers for gazine subscriptions. Beware of the man, woman, who offers THE ETUDE at a ridicu- sly low price; he or she is only trying to your money. Frequently these swindlers nd up fake receipts, collect what they can the music lover is the loser of whatever ount he pays. Help us to protect you from s. The price of THE ETUDE in the United tes is $2.00 a year. In Canada, $2.25.

Changes of Address

When you change your address, be sure advise us promptly, giving both old and w addresses so that no copies of THE UDE will go astray. If you desire THE UDE to follow you to your summer home, d postcard at once, giving both old and w addresses and tell us for how long a e you wish THE ETUDE mailed to the mporary address. We should be advised at st one month in advance when an address changed.

Neither Can the Rest of Us

"I try to keep my mind open, but I cannot understand the meaning of most of the music that is being written today. On my programs are the works of modern composers, Debussy, Rachmaninoff and Schelling—but the average composer of today seems to be seeking color only, and color alone is not music."—Ignace Jan Paderewski.

World of Music

(Continued from Page 422)

DR. JOHN WINTER THOMPSON, after forty-eight years of service on the music faculty of Knox College, of Galesburg, Illinois, retired from his position at the end of the scholastic year in June. Mrs. Jessie Lynde Thompson, his wife, at the same time retired as head of the vocal department.

COMPETITIONS

THE NEW YORK WOMEN'S SYMPHONY ORCHESTRA is offering a Prize of Five Hundred Dollars for an orchestral work of ten to twenty minutes, by an American composer. The competition closes December 31st. Full information as to instrumentation and other details may be had from the New York Women's Symphony Orchestra, 53 West 57th Street, New York City.

AN ENGLISH "GRAND PRIX" has been established by the British Council, which offers an annual stipend of £250 (about $1,250), for which foreign students will compete in order to complete their musical education in one of the Royal Schools of Music in London. The prize entitles the holder to free musical training and maintenance in England during three years. Let American students take notice!

THE MENDELSSOHN CLUB of Philadelphia offers recognition in the form of a Public Dinner in Philadelphia in honor of the successful American or Canadian composer of a mixed chorus in four or eight parts, requiring not more than twenty minutes in performance. Submissions close September 15th; and further particulars may be had from Miss Sophia Blivens, Secretary of the Mendelssohn Club, 530 Walnut Street, Philadelphia.

TWO WOOLLEY SCHOLARSHIPS in instrumental music, for the year beginning October 1, 1938, are offered under the auspices of the United States House of the Cite Universitaire of Paris. Winners will have quarters in the United States House and a stipend of six hundred dollars. Candidates must be American citizens, between the ages of nineteen and thirty-two, who are graduates of a college, university or professional school, and who have a good working knowledge of the French language. Particulars from school mentioned.

THE H. W. GRAY COMPANY PRIZE of one hundred dollars is offered under the auspices of the American Guild of Organists, for an anthem of any difficulty or length (with about eight printed pages given the preference). Submissions close January 1, 1939; and further information may be had from The American Guild of Organists, 1270 Sixth Avenue, New York City.

THE AMERICAN SOCIETY OF THE ANCIENT INSTRUMENTS is offering a Prize of Five Hundred Dollars for a composition to require not less than fifteen minutes nor more than twenty-five minutes in its performance, and to be suitable for interpretation by this ensemble. The competition closes August 31, 1938; and full information may be had from Mr. Ben Stad, founder and director of the organization, 4331 Chestnut Street, Philadelphia, Pennsylvania.

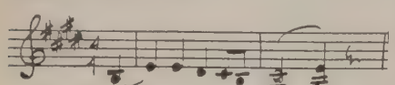
A PRIZE OF ONE THOUSAND DOLLARS is offered by the Cincinnati May Festival Association, for a composition for a children's chorus of six hundred voices (to which an adult chorus may be added), with orchestra, or organ, or both. The work will be performed at the May Festival of 1939; entries close August 31, 1938; and full information may be had from the May Festival Association, 142 West Fourth Street, Cincinnati, Ohio.

A PRIZE OF $500 is offered by G. Schirmer, Inc., for an unaccompanied choral composition dedicated to the New York World's Fair. The competition is open only to American composers, and the poem also must be by an American author. Entries close August 31st; and further particulars may be had from G. Schirmer, Inc., 3 East 43rd Street, New York City.

The Junior Etude

Edited by

ELIZABETH A. GEST

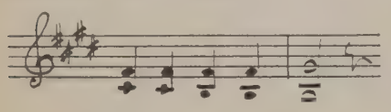


Listening Lessons

By E. A. G.

Watcher's Night Song, by Grieg
(Op. 12, No. 3)

THIS PIECE by Grieg is very well liked and is in the repertoire of a great many Juniors. It is somewhat descriptive, and has lots of contrast. It was inspired by Shakespeare's play, "Macbeth." (Have you ever read that?)



Have you ever played this piece? Or heard it? The next time you have the chance, LISTEN to it!

Although the key is E major, it contains lots of minor chords, as all of Grieg's music does.

The pedal must be carefully used. (Are you an expert with the pedals? Try to pedal well, always.)

Notice how the first phrase is made of two contrasting ideas, the first with variety in rhythmic pattern, and the answering section, more regular.

Then notice how the second phrase repeats this idea higher, but changes the direction enough to get back to E for its landing place, or "home."

In the E minor section, try to make the low E in the left hand stand out like a distant bell, and make the arpeggio effect in the right hand very soft. Be sure to make the third one of these low E's long enough—a half note with a dot. Then make the succeeding triplet of chords bright, as a contrast to the mysterious gong, and look out for careful counting in this measure with the triplet. Lots of people make mistakes here.

LISTEN carefully in this piece for rests. Remember rests are silent, *not* spots of held tones.

LISTEN again to the piece and see where you can improve your playing of it.

Playing Arpeggios

By Augusta Wixted

YES, even arpeggios should be played with expression! Why not be one of the pupils who realize this?

Perhaps it never occurred to you that arpeggios which you may have considered merely as exercises, can and should be played, artistically.

There are several ways of bringing about artistic effects and after a little experimenting, you will discover some for yourself; but one sure way of playing arpeggios effectively is to add a *crescendo* and *diminuendo* to each one—*crescendo* as you go up and *diminuendo* as you go down.

If you were entering your arpeggios in a contest, such playing would be very apt to place you with the winners.

It is usually the little things well done that put the winners above the losers. Why not be a winner?

Who Is a Good Pupil?

By Mary Clemens Furze

ONE EVENING, after the Music Shop was closed, and when the instruments were resting after a hard day of being handled by customers and clerks, they were surprised to see enter a violin that had been sold several months before.

"Come in, come in," urged the grand piano. "How do you like your new home?"

"Oh," sighed the violin wearily, "the home is lovely, but such a girl is supposed to be studying me! I wish I could stay here with all of you again."

"Why, what is the matter?" queried the flute. "When you left here you were so happy over what you thought was your chance to do some good in the world."

"I know. But I was mistaken," said the violin. "Here in the shop we were handled with care and respect. Mr. Simmons and his clerks loved all of us and knew how to take care of us. But I found that all people are not alike. My new owner, for instance, is a little girl who does not take care of me; she drops me down anywhere at all when she is through practicing and never puts me back in my case. She does not care whether she makes music or not when she tries to play. She never listens to what her teacher tells her, so she does not know how to practice. And I did so hope I would get into the home of a good pupil." The violin looked very disappointed and downhearted.

"Who would you say is a good music pupil?" asked the drum.

"A good music pupil," the piano answered, "is a boy or girl who loves music. He listens to good music over the radio and at concerts at every opportunity. He is interested in knowing the difference between good and bad music; and he has for his motto something like 'Music study exalts life.'

"You are right," said the flute, "and he is also interested in who wrote the music he is learning to play, and why. A good pupil likes to read about music."

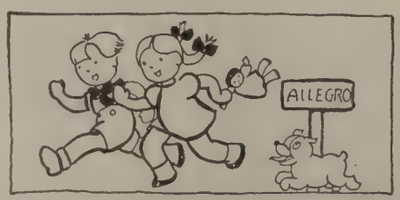
"Yes," spoke up the trombone. "A good pupil also takes care of his instruments. He loosens the bow hair when he puts away his violin. He keeps the piano keys clean and the piano in tune. He regularly greases the joints and slides of us brass and reed instruments."

"And don't forget," put in the violoncello, "that a good pupil listens to his teacher. He obeys instructions and admires and respects his teacher."

"It is important to remember," added the cornet, "that a good pupil always practices regularly. He knows that failure to practice even one day does him much harm. Also, he practices his scales and exercises slowly and carefully. He knows the difference between practicing and just playing his lesson over."

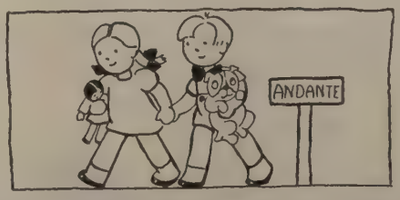
"And when a good pupil plays," said the upright piano, "he makes his playing interesting. He remembers that notes, fingering and time are not everything. He makes his loud tones loud, his soft tones soft, his *legato* notes *legato*, and so on. He plays with expression."

The violin sighed again. "I wish my new owner knew all you have been saying. It is getting light outside, so I suppose I must be going back to her."



"Cheer up" replied the drum; "she will improve, I'm sure. Just help her to make some beautiful tones and she will soon learn what lovely music means."

"I hope that somehow she will become a good pupil," answered the violin, sadly, as he closed the door of the music shop behind him.



The Tempo Twins

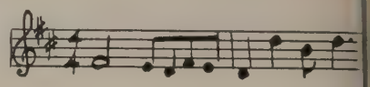
By I. Ripplinger

The tempo signs in music show
That fingers travel fast, or slow.
Four signs you'll see 'most every day,
The Twins will show you what they say.

ALLEGRO makes our fingers RACE;
They scamper fast to keep that pace.

But when we want a WALKING speed,
ANDANTE is the sign we heed.

For ALLEGRETTO, RUN along;
What fun it is; We'll sing a song.



And when we're sad our steps are slow
We DRAG along, ADAGIO.

Nature and Music

By Gertrude Greenhalgh Walker

BRUCE had just entered Junior H
School and was much interested in
of his new subjects, botany. Whenever
and his Dad went for a ride his fat
would explain all about the different ki
of trees they passed, as well as the shr
and vines. The sturdy oak was Bru
favorite, but he was also deeply interes
in the vines. It seemed so strange that t
had such deep roots and were so limp t
could not stand alone. They must h
something to lean on.

"You will notice little tendrils on
vines," explained his father, "and th
are strong, but the vines have no ba
bone, you might say."

"And do you know," began Bruce,
never realized before how much nature
teach us about music lessons. I'm not go
to be a clinging vine any more."

"What do you mean?" asked his fath

"Well, my last few lessons were not w
prepared. I did not stand alone and lo
up words in my musical dictionary, as M
Brown told me to do; and I did not co
out some tricky places in rhythm beca
I thought I would just wait and let
do it for me."

"Oh, I see, no back bone, as it wer
said his father. "But it is never too l
to mend," he advised.

"And I am going to become a stur
oak instead of a clinging vine with
back bone."

March! March! March!

By Nellie G. Allred

B WAS PRACTICING the second violin part the *Washington Post March*, as his sis- Betty, thumped out the notes with one ger on the piano.

"Bob, you just don't accent the right tes," she exclaimed. "You can't even tell a march, the way you play it!"

"Did somebody say something about a arch?" asked Uncle Carl, as he came to the room and settled himself in his vorite chair to read the evening paper.

"The orchestra is going to play *Washton Post March* for us to march into hapel Friday," Betty explained, "but I on't think Bob will ever learn this second iolin part."

"Well, well! John Philip Sousa's *Washgton Post March!*"

Uncle Carl threw aside his paper, and egan another one of those tales he so iten told the children.

"I'll never forget the first time I heard Sousa March. It was my first day in he Army, and our regiment had to march ifteen miles through the wind and dust. And as long as I was a soldier, a march y Sousa could make me forget my aching eet and weary body, and march, march, march!"

"Where did Sousa live?" asked Bob.

"He was born in Washington, D. C.," continued Uncle Carl. "His mother was a German, and his father a Spaniard. His father played the trombone in the United States Marine Band."

"Was Sousa a musician all his life?" asked Betty.

"Yes. When he was only eight years old, he earned a living by playing the violin in a dancing school. In his teens he taught harmony, and played in orchestras.

John Philip Sousa

When he was about twenty-five, he became the leader of the United States Marine Band, which he directed for twelve years. Then he organized his own band—Sousa's Band—which was famous throughout the world.

"Just as Strauss is the Waltz King, so Sousa is the March King. And now when you play that *Washington Post March*, put some pep into it. Play it so it will make men march! I can't play a fiddle or a piano, but I can whistle and I can march. Listen! This is the way!"

And Uncle Carl marched gallantly back and forth across the room as he whistled the tune of Sousa's *Washington Post March*.

The Scales in Rhyme

By Carrie Ward Lyon

"I REPRESENT the scale of *C*, the very first tone *family*. In the white keys is our *home*, and never to the black ones *roam*."

"I am the scale of G, sharp *F*, the sign I write upon my *cleff*, a notice to each little *friend*, a sharp comes just before the *end*."

"If you will count five up from *G* you'll come upon my key of *D;* two sharps are to my credit *set;* it will sound strange if you *forget*."

"My sharps are three, F—C and *G*, the new black key as you can *see* comes just before the end of *me*."

"Four sharps are mine; their tones *combine* in a harmonious *design;* two near the start, two just *before* the end; one step up in to my *door*."

"Those five, C, G, D, A and *E* were fingered all the same, you *see;* and now we have five sharps for *B*, a scale that takes in each black *key*."

"If no more black keys we can *use*, a white key now we'll have to *choose*, that just before the end shall *come*, and on that note we'll put the thumb."

"C-sharp is left, the easiest *one* of all the scales, and the most *fun!* The fingers fall in twos and *threes* on black keys with greatest *ease;* two white keys must be sharped, that's *all!* and on B-sharp the thumbs must *fall*."

"For flats count down the other way. Five down from C, and F we *play;* its sign is B-flat; learn its *name* so you can play the music *game*.

"A word you will now have to *spell*, the order of the flats to *tell;* the first B-flat, the next one *E-flat*, followed by A-flat and *D-flat*."

"The small word Bead, if you *recall*, will bring to you the flat keys *all* except G-flat with one flat *more* (F-sharp its name when heard *before*.)"

'Tis six o'clock in music *land*, six sharps, six flats beneath the *hand*. Now must our tale of rhyming *end*, lest dragon double-sharp *offend*.

Although he really means to *please* by raising note to two *degrees*, this scaly dragon if you *name* I'm sure that you'll soon learn to *tame*.

Creative Faculty

By Anna Meloni

MOST JUNIORS are capable of a certain amount of original invention. It is enjoyable to do something on one's own initiative and even in the most elementary of creative work a feeling of balance is acquired, the need for the phrase is felt; one is more apt to observe phrasing in the study of all music, if one learns how to invent his own melodies. Have you ever tried it?

Write a melody to your favorite nursery rhyme, and also write words and set music to them. Soon you will learn to criticize your own, and each other's work.

The next step is to harmonize the melody. Such work must be of a very simple character. The progression of the common chords and the dominant seventh chord may be employed. Of course the idea is not to produce composers, but simply to awaken the musical creative faculty, and pupils who have this training have a keener perception of the rhythm and form of music. Try it. You will enjoy it.

Such a program may be outlined in this manner—

1. Write answers to given phrases.
2. Choose a four line stanza and select four pupils in the class to write the four phrases, one to be carried on by the next.
3. Some of the class may be employed in writing melodies while others supply the harmonies.

"A word to the wise is sufficient." The group may now enlarge upon this outline and create their own ideas of procedure. Try it. It will be found most interesting.

BEETHOVEN said: "True art endures forever, and the true artist delights in the works of great minds."

CLUB CORNER

DEAR JUNIOR ETUDE:

Thank you very much for sending me the prize. It was quite appropriate as my greatest interest in life is that of which the pin is a symbol.

So very little is known about the music up here that I take this opportunity to describe it briefly. It begins with the children. All public schools have singing and the pupils are taught to read music. Also a great many have private teachers.

The younger pupils have rhythm bands, the high schools have student orchestras of high standard. And they play large and difficult works. But we do not have all the instruments for a symphony orchestra, as we have no violoncello, no flute, no bassoon, no oboe, nor do we have a great variety of drums. But the effect is good.

In Fredericton, where I live, I am the concert-meister and we are doing great work. The students are very desirous of playing in an orchestra.

Last May our first festival was held and the great success of the event shows its popularity. Then, by radio, we hear the best symphony orchestras and artists. There are few large cities up here to tempt the accomplished musician, but the spirit of the people should make up for this.

From your friend,
SAMUEL MARGOLIAN (Age 15),
300 Northumberland Street,
Fredericton, New Brunswick.

DEAR JUNIOR ETUDE:

I have often seen The Etude at my friends' homes and so I coaxed my mother to get it for me; for it seemed to be encouraging me to study my music. I have taken lessons for three years, but this is the first year that I am really doing well.

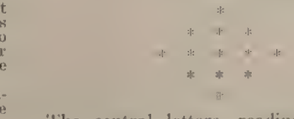
Now music seems to be a part of my everyday work, instead of being just a visitor that I didn't feel like seeing. When I now listen to any musician play, it makes me want to practice much more than I do. Also as I think of the many, many people made happy by music it becomes more and more interesting to me.

From your friend,
HENRIETTA TITTES (Age 12), Pennsylvania.

DEAR JUNIOR ETUDE:

My aunt has taken THE ETUDE for eight years and I find it interesting to see what used to be in it and what is in it now.

I notice there used to be a series called "Little Biographies for Club Meetings." I am going to make a scrap book of these biographies which will help me in times to come.



From your friend,
EVELYN REICHART (Age 14), Pennsylvania.

A Junior of Pawtucket, Rhode Island, in costume recital

Diamond Puzzle

By Stella M. Hadden

The central letters, reading down, will be the same as the central letters reading across.

1. A letter of the alphabet
2. A dance step
3. A conductor's wand
4. A tone of the scale
5. A letter of the alphabet

(*Answers on this page*)

As usual the Junior Etude Contest will be omitted during July and August. The results of the April contest will appear in September

Poco A Poco Junior Club, Indianapolis, Indiana

Answers to Who Knows

1. *Morendo calando* or *perdendosi;* 2. Norwegian; 3. Composer; 4. "Lohengrin"; 5. Franz Peter; 6. Six; 7. B-sharp; 8. The third; 9. Mendelssohn; 10. Bach.

Letter Box List

Sara Louvenia Boyd; Robert Zechini; Rita McCreery; Mary Hyatt; Ruth Stewart; Mary Frances Totten; Dorothea Wyllie; Emma Jean Zell; Drusilla Congdon; Jane Creswell; Frances Little; Flora Lloyd; Isabel Poirier; Flora Nethersmith; Marian Andrews; Roberta Thomson; Violette McNary.

LETTERS FROM THE STUDY FRIENDS

Why I Take A Music Magazine

To THE ETUDE

The music teacher who thinks it is not important to subscribe to a first class music magazine, is just as far wrong as the professional writer who considers it so much wasted money to take magazines pertaining to the writing field.

If one is undecided about securing the service of a music teacher, and the choice lies between a couple of teachers nearby, pay a visit to the home of each. Then select the one who is not only a subscriber to the leading magazine of music but who also daily studies it.

A magazine pertaining to music is a far too precious and valuable tool of the trade to be ignored. It freshens, it broadens, it gives new ideas in all phases of the music world. It lifts up, it gives added inspiration, it is wisdom and meat for the teacher who desires to make good, and to improve day by day in knowledge, and who is eagerly alert to give her pupils the very best that is in her.

There may be many other articles of knowledge, helpful yes, in their place, but the most helpful of them all, and the one that will meet more needs of the teacher and her pupils, is the magazine of musical knowledge. It opens doors, gives suggestions, points out mistakes, helps over or out of predicaments. It never fails to have in its pages the best ideas of the better grade teachers and instructors.

If, for any reason, economy has to be practiced by any teacher, let that teacher heed well before she gives in to the mistaken idea of dropping her subscription. It is the height of foolishness to think there will be enough contacts with the musical world, or enough "pull" to bridge over the loss of the price of that subscription.

The magazine, brimful of useful musical knowledge and helps, is what it takes to make a grand success out of a part time and poorly paid teacher. The wise teacher is one who chooses her magazine well and with the same precision and care that she does with her clothing, knowing she gets the best when she pays for the best.

—JULIA BOWEN (Kentucky).

The Fretted Instruments

(*Continued from Page* 482)

the fingerboard.

For orchestra work most professionals choose the guitar with carved top and back, as the tone of this instrument is big, crisp and penetrating. Some players still prefer the instrument with flat top, for its subdued and ingratiating tone quality. On all modern orchestra guitars the body of the instrument joins the neck at the fourteenth fret. Most Hawaiian players use the flat type of guitars of fairly large size, with body joining the neck at the twelfth fret.

Having selected your instrument, get busy with it.

Fifty Years Ago This Month

(*Continued from Page* 434)

"I called to take my lesson, one morning, and found him in depair, because the housemaid, in sweeping and dusting his study, had broken the leg off a tiny toy dog worth about two cents. He sat regarding this treasure with mournful eyes—his eyes, by the way, are beautiful, like forget-me-nots dipped in dew. The situation was pathetically absurd. He tried to make his dog stand, but of course it toppled over constantly. At last he propped it up by means of another dog that had escaped the maid's duster, and exclaimed triumphantly, 'There, he *can* stand in the world by the aid of his companion!' There was not a bit of affectation about the whole affair. He was simply unnappy over the accident, as a child would have been."

* * *

"All little difficulties are surest, quickest and most permanently overcome if their fundamental element is at once made a thorough study in all its bearings."—Kullak.

Music and Dancing in Siam

(*Continued from Page* 440)

when a Siamese orchestra gets worked up. The music, as a whole, is minor, plaintive and even melodious. As in India, Java, Burma or other oriental countries, there is no organized harmony. The music of the East may be said, as a whole, to be monodic, with the beat of the drums furnishing that rhythm that is so essential where harmony is wanting.

The comparative discussion of eastern and western music does not mean much, when one is lost and captivated by the effect on the mind and emotions in seeing the famous Siamese dances and hearing the music back of it. We see a picture complete in itself, reflecting the echoes of racial antiquity, of tradition and conception. It is the voice of Siam speaking and it is a different dialect from our own, that is all. The music may be alien to our ears, but it belongs to the dance that it accompanies; it is a mood pitched in a minor key, with the throb of drums sounding the eternal rhythm of life, that is always the same.

And the little dancers, so like the Apsaras whose sculptured images still stand wistfully on the old walls of Angkor. They are appealing and fascinating, for when we see them we are looking far back into the dim past, and the living ballerinas are carrying on the banner of the old dancing girls of thousands of vanished years.

"The Apsaras, how pretty and smiling they are in their coiffures of goddesses, with, nevertheless, that expression of reserve and mystery which is so little reassuring. Richly adorned with bracelets, necklaces, headbands of precious stones, tall tiaras, either pointed or surmounted with a tuft of plumes, they hold between their delicate fingers sometimes a lotus-flower and sometimes an enigmatic emblem (Pierre Loti's "Siam").

The brooding shadow of mysterious Angkor hangs forever over the dancers of Siam; its influence is inescapable; and the beauty and charm of the Apsaras are eternally kept alive by the little dancing-girls who keep alight the altar fires of the ancient past.

Next Month

THE ETUDE for August 1938, brings these entertaining and inspiring articles.

THE QUEEN OF AMERICAN PIANISTS

Perhaps she should be called Empress Teresa Carreño, this beautiful, majestic musical figure of the last century. Born in Carracas, Venezuela in 1856, she was brought to New York as a child and, shortly before his death, played for President Lincoln at the White House. The story of her colorful life is told in our article by her former pupil, Cordelia Hubbard Nelson.

TERESA CARREÑO

THE ART OF ENSEMBLE PLAYING

Thousands of boys and girls in high schools all over the United States are taking up ensemble playing, which will lead to a new generation of music lovers in America, with their pride in quality rather than quantity. Adolph Busch, world known virtuoso violinist, founder of the famous Busch String Quartet, and international authority upon ensemble playing, will give to readers of THE ETUDE many of the secrets of his renowned achievements.

YOU'VE HEARD HIM EVERY MORNING

Yoichi Hiraoka, one of the greatest xylophonists in the history of the instrument, has for years played nearly every morning, over the NBC system. He has lots of interesting things to tell about his unusual instrument.

THE WORLD'S MOST FAMOUS SONG

THE ETUDE has presented many fascinating articles upon the great songs of history. Now we come to *Home, Sweet Home*, the most famous of all these immortal ballads, the romantic background of which will be presented in an article by E. Clyde Whitlock.

PERSONAL RECOLLECTIONS OF ANTON RUBINSTEIN

The eminent French pianist-teacher, I. Philipp, in an article that all readers of THE ETUDE Music Magazine will want to preserve, gives in our August issue, his very interesting personal memories of the great Russian virtuoso, "Lion of the Piano" of a former generation.

OTHER INTERESTING ARTICLES and special features by distinguished teachers and musicians, PLUS 24 pages of interesting new music to play and sing.

"Real Music Is Born, Not Made"

Why does a certain sequence of tone charm us and another but slightly different seem "stale, flat and unprofitable"? Both have used the twelve tones of the octave, but one shines with a sacred fire, the other is the dull and inarticulate expression of labored mediocrity. Can this difference be explained? One has vitality, the other is still-born. As Hadow well says: "The composer must be the parent of his musical ideas, not their fabricator." In other words, real music is born, not made. The great composer draws from a hidden fount, and we say he is inspired, that he has breathed in from that which inspheres and interpenetrates our common life. He has tapped unseen springs, has touched the Over-soul. The winds that blow across vast overspaces set the strings of his lyre into vibration. He hears something of the primal music our duller ears fail to catch and transcribes it, not for himself alone, but for all who care to listen, for the world.—William Arms Fisher.

MUSICAL BOOKS REVIEWED

Opera, Front and Back
Watching the Wheels Go 'Roun

By H. HOWARD TAUBMAN

The small boy's curiosity in' taking a w to pieces to see what makes it go, is never in adult life. Opera goers who look at the of the proscenium cannot help wondering w is going on in the mystic land behind. M books and articles have appeared upon subject, notably that of Rose Heylbut Aimé Gerber, entitled "Backstage at Opera." Now we have a new work, "O Front and Back," of voluminous nature, w is designed to present the conditions on sides of the footlights. It is written wi view to answering scores of questions, nothing has escaped the eyes of the au H. Howard Taubman. It tells how performa are prepared, how the golden voices of sin are hunted, how the illusions are contri how the choruses and ballets are trained, tickets are sold. In fact, there is hardly thing that the thousands of students who their hearts set on Broadway at Thirty-n Street might ask, that is not answered in book. In the appendix there are thirty p of excellent rotogravure pictures of cont porary scenes at the Metropolitan.

Ministry of Music

By MINA HOLWAY CASWELL

One of the most active men in New musical life for over a half of a century, William Rogers Chapman. He was born Hanover, Massachusetts, of Maine parent on August 4, 1855, and was educated in York City. Among his first teachers were outstanding musicians of Manhattan of t day, Sebastian Bach Mills, William Mason George F. Bristow. Thereafter he studied Germany and in England, and then retur to New York to play at Trinity Church later at Christ Church. He was the third receive a Doctor of Music degree from Col bia University. From his youth to the time his death, he was continually engaged i great variety of musical undertakings, rang from the great music festivals in Maine, which most of the celebrated singers of era appeared, to the concerts of the Rubins Club of New York City, of which he was conductor for so many years. In New York choruses he conducted would have aggrega over one hundred thousand individuals, in Maine over one hundred and fifty thous The four hundred fifty page volume contain very interesting review of prominent mus people with whom Mr. Chapman came in tact, and for that reason it has an histor value peculiar to a book of this type.

Wagner

By ROBERT L. JACOBS

We have here one of the most interesting "The Master Musicians" series, as edited Eric Blom, that fine British critic of thi musical. The author has told, with a fascin ing skill, the story of the always interest life of the creator of the epic "Das Ring Nibelungen," the passionate drama of "Tris and Isolde," and that inimitable classic musical and literary wit, "Die Meistersing One recognizes at once the ardent but jus critical Wagnerian; the writer with a ge for distributing his interest so that no p becomes dull. At the same time he is "kee analytical, sanely enthusiastic, and capable seeing things independently." A book, value for its store of intelligence, and with a s that lures the reader.

The N B C Symphony Orches
A Remarkable Organization

The book of the N B C Symphony Orches which was so widely announced over the ra as for sale at one dollar, had between three four thousand mail order purchasers bef the book was published. There is an introd tion by Hendrik Willem van Loon. The history of the orchestra and the biographies the conductors, were written by Mr. Wa Koons. There are excellent charcoal portra by Bettina Steinke, and photographs by W liam Haussler and Sydney Desfor. The nine two crayon drawings, each given an entire p in the book, are, insofar as we know, about finest tribute ever shown to the individ members of a great orchestra. These men of course, all artists, but the membership other great orchestras includes numerous standing *virtuosi*. We have always had feeling that many very fine musicians may h an idea that their individuality is lost i great organization. Certainly a part of the ward for artistic service is artistic recogniti and we are sure that if for no other reas this book will prove a stimulus to the in vidual members of the orchestra who will preciate the recognition of having their p traits and biographies handsomely presen

The President of R C A, Mr. David Sarn has taken a great interest in this orchestra a in its presentation through this book.

Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

MRS. EDWARD MACDOWELL

A COMMEMORATIVE EXHIBITION, in memory of the thirtieth anniversary of the death of perhaps our greatest American composer, Edward MacDowell, was opened in May, at the Low Memorial Library of Columbia University, New York City, with which Mr. MacDowell was long associated as head of musical instruction. Dr. Nicholas Murray Butler, president of the University, presided; and Mrs. MacDowell, widow of the composer, was among the speakers.

GROTRIAN HALL, one of the smaller but most historic of the concert halls of London, is reported to be about to be demolished. "This oasis of culture must be swept away," laments our oracle, "before the advance of his (Mr. Selfridge's) impertinently vast emporium"—Mr. Selfridge being a naughty American interloper and promoter of barnumesque department stores.

EDGAR STILLMAN-KELLEY'S "Pilgrim's Progress" had a brilliant performance at Easton, Pennsylvania, when given on April 26th, with John Warren Erb conducting. Following the performance, Dr. and Mrs. Kelley were guests at a reception given in their honor.

A CREATIVE MUSIC FESTIVAL, the first of these county events in the United States, was held on May 19th, by Cassia County, at the Albion State Normal School at Albion, Idaho, under the direction of Mrs. Florence Haight. Chief interest centered in the creative contest of young students from the first to the eighth grade, and in a massed Harmonica Band of over four hundred players.

HANS PAUL BARON VON WOLZOGEN, one of the last of the personal friends of Richard Wagner and a famous interpreter of his works, died on June 2nd, at Bayreuth, at the age of eighty-nine. Baron von Wolzogen was himself a widely known playwright, critic, composer, and writer on Wagner.

GLADYS WELGE

GLADYS WELGE, conductor of the Oak Park (Chicago) Symphony Orchestra, is announced as leader of the Chicago Womans Symphony Orchestra, for the coming season; so that this famous organization of the mid-west will become again an all feminine institution. Miss Welge achieved considerable fame through her success with the Oak Park group, made up of doctors, professional men, housewives, stenographers and salesmen, who entered the activity in a purely amateur spirit of fun and ended in the playing with enthusiasm of such not very elementary works as the "Jupiter Symphony" of Mozart and the *Overture to "Tannhäuser"* by Wagner.

"DER RING DES NIBELUNGEN" of Wagner will be given complete, by the Metropolitan Opera Company of New York, in its forthcoming Philadelphia season. This will be the first time that "Penn's Towne" has heard "The Ring" entire in a single season since the Philadelphia Civic Opera Company accomplished this ambitious feat in 1929-30. Will our esteemed Chicago contemporary, which recently announced that we have not heard the complete "Ring" since 1909, please take notice?

ERIC CUNDELL has been appointed to succeed Sir Landon Ronald, lately resigned, as Principal of the Guildhall School of Music of London. He comes from Trinity College, where he had been a student, professor, examiner and fellow.

THE CONCERTS-COLONNE of Paris devoted its program of April 15th to a Beethoven Festival, with M. Paul Paray conducting. Works presented were the "Symphony Eroica;" two of the great overtures; the *Romance in F* and the tremendous "Concerto," both for violin and orchestra, with M. Jacques Thibaut as soloist. Our mentor records that the audience of the occasion consisted mostly of foreigners, largely British and American.

THE SPARKLING OPERETTA still suits the German taste; as, according to reports, during the season of 1937-1938 the works of Lehar had 2545 performances and those of Strauss had 2273 performances in that music loving country. "The Merry Widow" led with 778 hearings and "Die Fledermaus (The Bat)" seconded with being heard 767 times.

LILY PONS, one of the most brilliant of present day coloratura sopranos, and a favorite of devotees of the silver screen, was married on June 2nd, to Andre Kostelanetz, the widely known orchestral leader.

"THE SUN DANCE," a new romantic American Indian opera, by William F. Hanson, had its world première when presented on April 26th, by the New York Light Opera Guild, at the Broadway Theatre. The composer, who is his own librettist, made himself one of the greatest living authorities on Indian lore, by years of continuous living among the native tribes.

ARTURO TOSCANINI has signed a contract for three more years with the NBC Symphony Orchestra of New York. The orchestra, with Toscanini leading, will make several out of town appearances during the coming season, probably visiting such nearby cities as Philadelphia, Boston and Washington.

MME. EIDÉ NORENA filled a large part of the program of March 5th, of the Concerts-Pasdeloup of Paris, when she gave, among other songs, *On Mighty Pens* from "The Creation" by Haydn, and *Oh, Quand je dors* (*Oh, when I sleep*) by Liszt.

THE ASSOCIATION OF NORWEGIAN COMPOSERS, recently celebrated its twentieth anniversary, at Oslo, with a program which included songs by Arne Eggen; a *Poem* for orchestra, soli and chorus, by Sparre-Olsen; and a new *Symphonic Phantasy* by D. M. Johansen.

"THE BROWNINGS GO TO ITALY," a one act American opera by Eleanor Everest Freer, was presented on May 11th, before the Italy-American Society of Chicago. The event was arranged as complimentary to Mrs. Freer, by Robert Hall McCormick, president of the sponsoring organization, who spoke most graciously of Mrs. Freer's accomplishments.

NATIONAL MUSIC WEEK of 1938 was officially opened with an ambitious program for "The Magic Key Hour" of the National Broadcasting Company. This enterprising organization contributed no less than seventy programs over its national network, in this fifteenth annual celebration of achievements in our musical art.

BOTE AND BOCK, famous music publishers of Berlin, have been celebrating their one hundredth anniversary. This firm has left an invaluable legacy to musical art, by the publication of significant works, including Gounod's "Faust"; Meyerbeer's "L'Africaine"; Smetana's "The Bartered Bride"; d'Albert's "Tiefland"; and most of the Offenbach operettas. It gave first publication of many of the best works of Schumann, Tschaikowsky, Dvořák, Paderewski, Raff, Liszt, Johann and Richard Strauss, Wolf, and many others.

ADOLF MUHLMANN, once eminent operatic baritone, and for many years a leader among voice teachers and musical critics of Chicago, died on April 27, at the age of seventy-two. He was long a leader in Wagnerian rôles, at both Covent Garden and our Metropolitan.

THE WAGNER SOCIETY of Amsterdam, Holland, has given a performance of "L'Heure Espagnole" as a memorial of the late Maurice Ravel.

THE ROYAL COVENT GARDEN season of international opera opened on the evening of May 2nd, with a brilliant production of Mozart's "The Marriage of Figaro," with Erna Berger as *The Queen of the Night*, Richard Tauber as *Tamino*, and with the veteran Sir Thomas Beecham as conductor.

"DE SNOCK," said to be the first completely original Dutch opera, was a brilliant feature of the close of the musical season at Amsterdam. The score is by the young Hollander, Willem Landre, the libretto by Den Hertog; and Queen Wilhelmina added to the luster of the première by her patronage. The story is humorous; the score is reported to be clever and witty; and an excellent performance raised enthusiasm to a white heat.

ERNEST J. KRUETGEN

ERNEST J. KRUETGEN, postmaster of Chicago, the third largest city of the world, was Honorary Chairman of the great North American Sangerfest held in June in that progress metropolis. Mr. Kruetgen has been lc associated with the musical activities Chicago; and this was perhaps the first ti that the postmaster of a large city ever w so prominently identified with a great n sical festival.

SIX STANDARD OPERAS, in Engli and two of the perennial Gilbert and Su van operettas, will be produced during t summer session at Chautauqua Lake. Albe Bimboni will be chief of the vocal staff.

A PIERNÉ FESTIVAL PROGRAM, honor of the noted French composer, h been given at Monte Carlo, with M. Em Cooper conducting. Among the compo tions on the program were a *Poeme Sy phonique* for piano and orchestra, in wh Giuseppe Benvenuti was the soloist; a *L'An Mil* (*The Year One Thousand*) chorus and orchestra.

EDNA THOMAS, our southern sin who has become internationally known as interpreter of the music of the South, cently gave in Amsterdam, Holland, a ve successful recital of plantation songs a Negro spirituals.

THE NATIONAL ORCHESTRAL ASS CIATION, INC., of New York, announ for the season of 1938-1939 a Gabrilowits Memorial Concerto Series of concerts, c voted to the romantic period of compositi and with Rudolph Serkin as soloist.

"LOST" STAGE WORKS by Wagr have been presented in a Festival at Leipz They consisted of a fragment of his you "Die Hochzeit," with "Die Feen," "Das L besverbot," and "Rienzi" offered in son what abbreviated form.

LUIGI CARNEVALE

THE ITALIAN SYMPHONY ORCHESTRA made, on the evening of May 7th, a highly successful début before musical Philadelphia, with Maestro Luigi Carnevale creating a most favorable impression as conductor. The organization has the powerful backing of such eminent figures as Commendatore Edoardo Pervan, Royal Consul General f Italy; Donna Alice Pervan; Hon. Juc Joseph G. Tumolillo, and Commendat Furey Ellis; with Dr. Cavaliere G. Vi Ciccone as President and Mrs. Joseph Tumolillo as Vice-president of its Executi Committee.

(*Continued on Page 553*)

THE GREAT CHICAGOLAND MUSIC FESTIVAL AT SOLDIERS' FIELD, CHICAGO

Mass Music and the Masses

THE buttons on the coat of Patrick Sarsfield Gilmore probably strained to the bursting point when he raised his six foot long baton over a chorus of a thousand, before an audience of fifty thousand at the great Peace Jubilee in Boston in 1872; but what would the musical "Pat" think if he were to find himself at the Chicagoland Music Festival, given each year at the gigantic Soldiers' Field on the shore of Lake Michigan, in Chicago, Illinois, under the auspices of the Chicago Tribune Charities, Inc., before an audience numbering from 80,000 to 100,000 people?

America has certainly "gone wholesale" into music. The sight of such a multitude interested in music, is thrilling. There is always something marvelous, tonally, about a great mass of individual voices singing together. For instance, let us say that an organ has two hundred stops. It would be possible to take the resulting sound and amplify it electrically so that it would be one hundred times as loud; but the rich tonal effect would be very different from that of twenty thousand individual pipes sounded together. However, all musical effects are relative. A chorus of one hundred, in a small auditorium, might be very much more effective than a chorus of one thousand in an extremely large open air space, designed originally for sports such as football games, races, rodeos, and prize fights. Moreover, in order to get the full effect of so many voices singing together, one must be present in person, as it is seemingly impossible to transmit this effect mechanically through metal wires or invisible "wires" of ether.

At the Chicagoland Music Festival, to be held on Saturday, August 20th, eight thousand men, women and children, will take part in the Festival program, representing thirty states of the United States of America and Canada. Mr. Henry Weber, of the Chicago City Opera Company, will conduct the major events. Mr. Philip Maxwell is the Festival Director. There will be a hundred piece symphony orchestra, a chorus of three thousand voices, two thousand bandsmen, a ballet of one thousand dancers, and an audience of one hundred thousand. As a grand and spectacular climax the program will close with the singing of Handel's "Hallelujah" Chorus followed by a brilliant display of fireworks. Mr. Victor Grabel, for years editor of the Band and Orchestra Department of The Etude, was a very active factor for many seasons in bringing this great Festival to its present renown. It is, in all probability, the greatest mass music assembly regularly held in the world.

However much those who ridicule such events as musical circuses may rail, there can be no doubt that they do a great deal to enlist popular interest in music, that in the long run benefits the art and those who practice it. Years ago, at Willow Grove outside of Philadelphia, the great concerts of John Philip Sousa, Frederick Stock, Walter Damrosch and Victor Herbert drew, week after week, audiences of from ten to fifty thousand people. The open air concerts at the Hollywood Bowl, the opera in famed Forest Park of St. Louis, the "Zoo" of Cincinnati, Ravinia Park, Chicago, and other centers, the Stadium Concerts, as well as the Goldman Band Concerts on "The Mall" of Central Park, in New York, and the Robin Hood Dell Concerts in Philadelphia, all have vastly developed the habit of concertgoing and so increased the audiences of the regular concert season. These, in many cases, have been made possible through electrical sound amplification, which, when good, may be very, very good; but which, when bad, may sound worse than the old phonograph on the cracker barrel in the corner store, which scraped out "Soozies Marches."

For years we attended the concerts at Willow Grove, spending the interludes in the "green room" with the various conductors. Time and again we discussed music for the masses with John Philip Sousa and Victor Herbert. Both of these much loved conductors were agreed that the melodic music of the masters was as strong in its human appeal as that of the popular writers.

Commander Sousa contended that one of the most popular pieces was the *March from "Tannhäuser"* by Wagner. His definition of popular music was "It is simply music that is heard a great many times and liked by a great many people." Some of the most popular pieces remained obscure for a long time before assimilation by the public, among them being Sousa's own *Stars and Stripes Forever* and Cadman's *At Dawning*.

The New York World's Fair of 1939 is planned to include a huge music festival under the chairmanship of Dr. Walter Damrosch. Music of all kinds and types will be presented in this monster instrumental and vocal outpouring of the world's most striking metropolis. It is expected that many European organizations will participate.

Behind all of this activity has been the radio. From the start we have pointed out that the radio is ultimately certain to raise the desire of the public to be present in person at musical performances and to see the performers as living beings; and this prediction is now being borne out in an astonishing manner. Mass music events are by no means confined to the United States. The huge concerts at the old Crystal Palace in London were for three quarters of a century conducted upon a very high plane by the leading musicians of Great Britain; and on the continent, France, Scandinavia, Italy, Germany and the U. S. S. R. have joined the procession by giving monster outdoor musical programs. Perhaps, after all, if we can get enough music in the world, we may, in a measure, do away with "fooling around" with firearms.

The "Forgotten" Pupil

SEEK TO THE RIM of the universe and you will find no nobler human trait than that kind of love which reaches out to those to whom Fate has been unexpectedly cruel—those who, in the race with their fellows, are hopelessly handicapped those who seem to be forgotten in the scheme of things. It is this supreme love, which is exemplified in its highest sense in the life of the Carpenter of Nazareth, which has made the religion of Christ sublime in the souls of millions. Forgiveness, tolerance, sympathy, kindness, sacrifice—these are the traits which make men and women truly great. Faith, honor, courage, industry, these are life's indispensables; but the great mosaic of existence is in no sense complete with them alone. Sympathy in itself can be a synonym of hypocrisy. The loving forgiveness and the understanding that reach out for the afflicted, with the hope of bringing real help, without condescension and without preaching; these then are the things which we have in mind when we talk of human love.

A part of the music teacher's duty is to carry the great message of music to all. We have known of numerous teachers who would work slavishly to make an appeal to a Park Avenue audience of dilettanti, but who would pay slight attention to an audience of unfortunates on the East side. We have known teachers whose whole idea of great success was in teaching the children of a millionaire clientèle. The great teachers are those who forget the social surroundings and fortunes of their pupils, in their endeavor to raise aloft their musical ideals for those who deserve them most. One of the most remunerative pupils your editor ever had was a little Jewish newsboy in East New York (a suburb of Brooklyn) who, by his talents and his industry, paid fees in results accomplished that could never be paid in money.

The late Theodore Presser, in the bigness of his heart, coined an expression which those who knew him and loved him have never forgotten. It was:

"Be kindest to the humblest.
They need it most."

This he lived in his own life. He was not fooled by people of loud pretensions, ostentatious wealth or ridiculous socialite ambitions. The humblest and poorest persons, if they possessed character and real ability, meant as much to him and had as ready access to his attention as the most famous and the most prosperous. Moreover, his was the philosophy of St. Augustine, when that religious zealot wrote, "If we tread our vices under our feet, we make of them a ladder by which to rise to higher things." That was the thought of Theodore Presser. Worth and character were the primary keys to his interest. Himself a Presbyterian and the son of Mr. Christian Presser, a religious leader of Pittsburgh, he cared not what a man's religious beliefs were, if he was a real man with something worth while to engage his time. Race, creed, color, nationality, financial or social position meant absolutely nothing to him, if the individual was all right. He was just as intensely interested in the playing of a poor child as he was in the performance of a great virtuoso. While he never mentioned his feeling in such matters, they were always obvious to those who knew him. He was essentially a man of action and not of talk. "Much talk, much foolishness," runs the proverb in the Talmud.

Teachers instinctively give their best to talented pupils—yet we all know that if music is to go on we must not neglect those with lesser talents. Of course they are more difficult to teach; but does not this present a challenge which makes pedagogy more interesting? In this plea for the "forgotten pupil," the pupil who, because of limited means and limited talents, is often given mere perfunctory attention rather than the teacher's best, we would like to assure our readers that we have rarely met a really successful teacher who did not recognize the right of such a pupil to the teacher's best. In fact, we might paraphrase Theodore Presser's axiom,

"Work hardest with the most difficult pupil.
He needs it most."

It was this philosophy which established The Etude policy of including in each issue some music of a type designed to appeal to many whose tastes have not yet been highly developed. Thus, after the advice of St. Augustine, The Etude becomes a ladder and soon the very readers who were attracted to it by pieces that are admittedly trite, and put there for that reason, begin writing to us and asking for music of a more serious (classical) or modern style. Have no fear. Although our aim is to lead in all matters, The Etude will never neglect the "forgotten pupil."

Of course Theodore Presser's famous saying, "Be kindest to the humblest. They need it most," was given forth in a far wider sense in Matthew 25:40, in the significant words:

"Inasmuch as ye have done it unto one of
the least of these, my brethren, ye have
done it unto me."

Here Comes the Band

BUT the band isn't coming, it is sitting down. Well, what of it? The band is coming somewhere; but it will not be playing the music that it seems to be playing, but that of the gentlemen sitting down in the picture. The band marching down the street, which you see on the screen in your cinema theater, will be resplendent in uniforms and will be tooting away for dear life, but you won't hear a note of its music. This is getting funny. The reason you do not hear the music is that the tones of a marching band cannot be as accurately recorded as a stationary band. "Well, why didn't they record it in a studio then instead of out in the street?" That's easy, junior—because the sound of a band out of doors is very different from that in a hall. "But Maestro, is this really out in the street?" "No it is not, it is only a make believe street 'out on the lot' in Hollywood."

But what of the traffic noises in the ordinary street. Naturally "that's something else again." The sound expert goes to his library and takes out a record marked "traffic noises." This is getting altogether too mixed. "Better call it all off." But no, there are millions of cinema-addicts waiting to hear that band, and we must fix it up somehow. This is done by the sound magician who takes the picture of the marching band, synchronizes it with the music of the sitting band and the record of street traffic noises and the result is far more "natural" than it could possibly have been otherwise. The conductor here is Leo Forbstein, head of the music division for Warner Brothers in Hollywood. Incidentally, his annual salary is said to approach that of the President of the United States.

* * * * *

THE ETUDE has been always a utilitarian magazine—a magazine seeking practical artistic results. Our September issue will be particularly rich in "Tell How" material, for both students and teachers.

RUBINSTEIN AT HIS PRIME
From a Russian Photograph

Personal Recollections of Anton Rubinstein

By the Eminent Pianist, Pedagog and Musical Scholar

M. ISIDOR PHILIPP

Translated from the Original French

By FLORENCE LEONARD

Rubinstein on his Way to Fame
From a Parisian caricature by von Ciardi

HERE IS THE MONTH of November, the anniversary month of the birth (November 18 (Old Style) or 30 (New Style), 1829), and of the death (November 8 (O.S.) or 20 (N.S.), 1894), of Anton Rubinstein; and I see him again before me, just as I knew him.

I had asked Saint-Saëns for an introduction to his illustrious friend, and he gladly gave me a letter to him, saying, "I hope you will find him in a good mood—I mean talkative and not silent." At this far away time, fifty years ago, Rubinstein lived in a hotel frequented by artists, the Hotel du Helder (I knew Godowsky when he lived there later). I was announced and, with the help of the letter from Saint-Saëns, was received.

I still can see Rubinstein sitting there and smoking in a large easy chair. I see a striking ensemble—the leonine head, the great forehead, the Beethovenlike hair. His eyes were nearly closed, for already he was complaining that they troubled him seriously. Beside him were two young women, one the lovely Countess Potocka, whom I knew before, and the other a pianist whose name I have forgotten.

"Good!" he said to me. "Saint-Saëns has asked me to hear you. I can give you a quarter of an hour, right away, if you wish."

The two ladies discreetly withdrew, and Rubinstein said to me, "Do not hurry; it is just my way of getting rid of troublesome people. And, first of all, I will ask a favor of you. Will you look at those two rolls of music on the piano, which have just been sent me, and tell me what is in them?"

"There are two copies of the same suite, Master," I explained, "by Sascha de Glazounow."

"Ah," he said, "Glazounow! Remember that name. He will be the greatest of Russian composers. And now, what do you wish to play for me?"

"Something of Rubinstein's, Master, if you will allow me, some 'Etudes,' or the beginning of your 'Fourth Concerto,' which I have just played at the Concerts Colonne and at Angers."

"Why always this concerto, why not the one in G? That one also is very effective." Then, after a silence, "Decidedly not; no Rubinstein. Have you any Schumann? The Fantasie, Op. 17? Very good."

A Generous Approval

WHILE I PLAYED Rubinstein rose, began to walk about the room, to my despair, stopped by the piano, and resumed his walk. When I had finished he gave me a general criticism: "Your beginning is not passionate enough, nor declamatory enough. Always be natural, never be affected. I like your second part; you give it a certain grandeur. Do not force the tone. The ending must have more enthusiasm. I understand the third part as more lyric, more ethereal. But, in general, your playing is far from being an indifferent performance. Come to see me again."

I did not have the good fortune to play to him again. But I happened to be present at an audition which he gave to an artist who had just played the *Finale* of the Chopin "Sonata in B minor:" "Do not hurry the notes. Never rush through anything. You do not give the listener time to follow and understand; the playing must be always clear. It is a pity," he added with a smile, "that I have so little time to work at my piano, I could have showed you how I understand this composition, how I feel that it should be played. Virtuosity is a powerful auxiliary to music, but difficulties must be actually conquered, and to such a degree that the listener is not aware of them."

This extraordinary artist, whose success was stupendous, was a simple person, almost timid; taciturn but affable; and he was never critical of other artists. There is a story that he once remarked of the great virtuosi of his day, "There is Tausig, there is Bülow, there is myself; but Liszt puts us all in his pocket." This comment may be compared with a remark of Hans von Bülow, who was always peevish and surly: "No, no," he said one day to his Berlin manager. "Do not offer that engagement to me; it may be good for a spectacular person like Rubinstein, but not for a Bülow." Indeed the Russian giant was in every respect more spectacular than Bülow, who was small and sickly, and whose playing—when I heard him, at least—was dry and pedantic.

RUBINSTEIN AT THE COURT OF THE CZAR
From an oil painting by Joseph Sohn, reproduced, by permission, from the Steinway and Sons Collection

Two Lions of the Keyboard

RUBINSTEIN HIMSELF, according to Georges Mathias, had all the qualities of Liszt, and even surpassed him in tone, in naturalness, in simplicity. It is impossible to give to those who have not heard him any idea of this inspired interpreter of the great masters. Such a performance went beyond talent and rose to genius. Power, accentuation, rhythm, enchantment, delicacy, passion, an extraordinary variety of nuances, the gift of imagination. Rubinstein had, in truth, and in the highest degree, the genius for interpretation.

Like all geniuses, he was not always at his best. He was sometimes *inferior to himself;* but, if sometimes his playing wavered for a moment, it was only to soar higher into realms of vision where one could scarcely follow. Whoever had the good fortune to hear his Seven Historical Concerts cannot forget them. The remembrance of them will remain among the most beautiful and rarest of my musical joys. After a half century my ear still recalls his way of playing pieces of Philip Emmanuel Bach, the *Fantasie in C minor* of Mozart, the *Variations in F minor* of Haydn, the *Erl-King* of Schubert-Liszt, the "Sonata, Op. 110" of Beethoven. How many of his hearers have I seen moved to tears as he played the *Arioso dolente* of this masterpiece.

The Seven Historical Concerts, which he generously repeated for the artists, were given in St. Petersburg, Moscow, Odessa, Paris, London, Vienna, Berlin, Dresden, Manchester and Liverpool.

"Rubinstein," wrote Saint-Saëns, "could fearlessly face the recollection of Liszt, with his irresistible magnetism and superhuman execution, though otherwise they were very different; Liszt, the eagle; Rubinstein, the lion.

"Those who have seen this paw of tawny velvet laying its powerful caress upon the keys will never forget it. The two great artists had nothing in common except their superiority. Neither of them was ever for a single moment *a pianist*. Even in playing very simply the smallest pieces they remained great, without attempting to do so,

by reason of the incoercible grandeur of their natures. The living incarnation of Art, they created a sort of sacred awe, something beyond ordinary admiration; indeed they performed miracles."

Disappointed Ambitions

RUBINSTEIN, AS WELL AS LISZT, was disappointed in the hope that his success as a composer would equal his success as a virtuoso. The works of Rubinstein have been characterized as the music of a pianist. His magnificent "Ocean Symphony," the music of a pianist. "Feramors," with its fresh, clear score, the music of a pianist? Fashion, with the help of snobbishness has cast aside his delicious Persian melodies, his duos so charming, his chamber music for piano and strings, for piano and wind instruments, and even his compositions for piano, which comprise more than two hundred pieces. Of these, the "Etudes," for instance, and the five *Barcarolles* are full of poetry and feeling. The "Preludes and Fugues," and his *Variations,* also are first rate music. But fashion can not, indeed, destroy what it neglects, and all these compositions, remarkable for their charm of personality, their grace or their warmth of feeling, will be revived.

At the beginning of this talk, I referred to the "Fourth Concerto," of which the first movement is a masterpiece. I spoke also of the third movement, full of spirit and life. But I must not forget the *Russian Fantasie,* nor the "Concerto in E-flat," a magnificent work, passionate and energetic, which can, however, be mastered only by a virtuoso. Busoni played it, I believe, several times.

I recall very clearly Rubinstein's conducting the Pasdeloup Orchestra, and his being acclaimed after the "Ocean Symphony" and the "Ballet Music" from "Feramors." This giant at the conductor's desk filled us with awe. I recall also that Sophie Menter once played the "Concerto in G" at the Pasdeloup Concerts; and that she made an error and had to stop. Then she made a long speech, accusing Pasdeloup and his orchestra of not giving her a proper accompaniment.

A Dynamic Personality

EVEN IN RUSSIA, Rubinstein was much discussed and opposed, just as Tschaikowsky was elsewhere. He was regarded as *a Russian who made music,* and not as a *Russian musician.* Nevertheless he stood at the head of the movement for music in his country. His genius for the piano was alike incontestable and uncontested; and he had an immense influence upon the other artists.

In 1859 he founded the Society for Russian Music, which had so important a part in the development of the national music of Russia. In 1862 he created the Conservatory of St. Petersburg, by associating with himself as professors a group of eminent artists, such as the violinist, Henri Wieniawski; the violoncellist, Davidoff; the composers, Solovieff and Napravnik; the pianists, Dreyschock and Leschetizky. It is well known that he established the Rubinstein prize for piano and composition, which in 1890 was won by Ferrucio Busoni; in 1895, by Josef Lhévinne; and in 1905, by Wilhelm Backhaus.

In spite of all this activity, his compositions were always neglected. A prodigious worker, he wrote score after score, dreaming of a great success in the theater. L'Opéra of Paris had promised to bring out his opera of "Nero"; but this promise was not kept. "The Maccabees," "The Demon," "Feramors," "The Merchant Kabachinoff," "The Casseurs of Siberia," each achieved some success, especially "The Demon" with its admirable rôle for baritone, which was a favorite with Chaliapin, and "The Maccabees." But all these works, although abounding in beauty, were always omitted from the repertoire.

His Oratorios met the same fate—"The Sulamite"; "Paradise Lost"; "Moses"; "Christ"; "The Tower of Babel." "In 'Paradise Lost,'" said Saint-Saëns, "there is a combat of angels and demons in *fugato* style, which has extraordinary vividness and power; and 'The Sulamite' is a masterpiece of grace and poetry."

It was impossible for Rubinstein to ask for anything for his own advantage. He never would have approached a director of a theater to request the revival of one of his works. He never flattered any one; he was never mean. Most of his operas have remained in Russia, unknown; though a few have been performed in Germany.

These disappointments were a cruel grief to the great master, and were, without doubt, the cause of the pessimism which darkened the close of his life. But the dramatic compositions were not the only ones which the conductors discarded. His symphonies also; and the lyric scenes with orchestra—"Hecuba"; "Hagar in the Wilderness"; "The Requiem for Mignon"; and his symphonic poems—"Ivan the Terrible"; "Don Quixote"; and "Antony and Cleopatra"; all were put aside.

He has been reproached for his fecundity, and with lack of patience to work out details. He gave forth his works as they presented themselves to him, fresh from his pen, without revisions, without alterations. It was said that he showed a feverish haste to create, to be always producing. The various judgments passed upon him were so contradictory that they in themselves are amusing. "The Jews," he said (his grandfather was a Jew, and he himself was baptized at the age of twelve months), "regard me as a Christian; and the Christians, as a Jew; the Germans, as a Russian; the Russians, as a German; the composers, as a pianist, the pianists, as a composer. What am I?"

A God in the Dusk

IN 1893, AFTER PAINFUL family difficulties, he retired to Dresden. There he lived modestly in two rooms, seeing only a few chosen friends; playing whist—in which he excelled; but aloof from all other interests.

Rubinstein died in Russia, in sadness, but yet trusting in the future, believing that in time he would be recognized in his rightful place, and that that place would be a lofty one. *"Let it be,"* he said. *"To resign one's self is the great secret. It is not death which harms us, but life."* He had suffered too many disappointments; but he suffered also from the fog of doubt which is born in the mind of the creative artist, as he realizes how fragile is human effort.

Some quotations from his *"Pensées"* shall follow:

"Instrumental music is the most intimate friend of man. One will acknowledge this especially when he is suffering morally. The piano is the instrument which responds, above all others, to this sentiment. Therefore I consider that the study of the piano is a benefit to humanity, and I should like to make it obligatory in the schools, so that each one could enjoy it."

"I have played in public so much that I observed that I played better than I did when I was alone. And I ceased to play in public when I found that I played better for myself than for the public."

He said also, "If I go one day without practicing, I notice it; if I go two days, my friends know it; if three days, the public notices it."

The Cream of Kindness

THE KINDNESS OF RUBINSTEIN was proverbial, but people abused it, just as they do to-day with another great artist: I mean Paderewski. There is a story that on one occasion, at Hamburg, Rubinstein promised the men of the orchestra a splendid supper with caviar, if his opera, "The Maccabees," had a success. But the opera was a failure. Rubinstein went away sadly to his hotel. He was about to undress when there was a knock at his door.

"Who is there?" he inquired.

"I, Monsieur Rubinstein, Meyer. I play the double bass in the orchestra. I have come to the supper."

"But there is no supper. You know very well that my opera did not please."

"It did not please the others, Monsieur Rubinstein, but I liked it very much." And Rubinstein dressed again, to have supper with the old musician.

I remember that when my great friend, Theodore Ritter, died suddenly (the most admirable of the French pianists, he was his despairing wife was left without penny, and she sent me with a friend Rubinstein. We had scarcely spoken be he offered to pay for the funeral and attend the services.

Another instance: Rubinstein was givi a concert in a large city of Austria. A the program was finished he received pocketbook containing a large sum money, the proceeds of the concert. In t crowd he saw a woman, a pianist whom knew. He went to her and inquired ab her situation. "It is wretched," she plied. "I was so ill-paid for my lesso and yet obliged to teach, that I have h to give up playing altogether, which mak me very unhappy." Instantly Rubinst handed her the pocketbook, with its co tents.

Despotic Officialdom

ANOTHER ANECDOTE is, alas, true. Rub stein arrived in Russia, on one occasi without a passport, and was obliged to terview the Chief of Police, Gene Galakhoff. He waited in the antecham one hour, two hours, three hours—standi all the time. He was not the only pers waiting, and no one dared sit down. who came with requests for the gene had to stand.

Finally he was admitted to the office.

"Oh, yes, they have told me about yo gruffed the General. "They have told who you are, but I'm not so sure. So y must go at once and find my Chef Bureau, Tschesnokoff, and play him so thing, so that we can find out if you really a pianist. Tschesnokoff will kno

His manner was scornful, even bru Rubinstein was taken to Tschesnokoff, w had a wretched little piano. The man thr himself down in an easy chair and co manded, "Now play!"

All the bitterness in the heart of great, unfortunate artist, he expressed his furious playing. Tschesnokoff liste patiently. At last he rose and led Rub stein back to the general.

"It is true, Your Excellency, that t man is really a pianist, for he knows h to play the piano."

After three weeks of humiliating de Rubinstein received his passport, wh allowed him to be considered a man!*

A delightful era, that! But is not terrible even to-day in certain countri

*Rubinstein and Henri Wieniawski ma concert tour in America in 1872. Each ceived two hundred thousand francs. itinerary was carefully arranged. Dur eight months they traveled through Ame from the North to New Orleans. Two l dred and fifteen concerts! Sometimes gave two or even three concerts on the s day, in different cities. The receipts and success of the concerts were always h But Rubinstein suffered so much from tour—"factory labor," he called it—(when two years later he was offered ha million for another tour, he refused.

FIFTY YEARS AGO THIS MONTH

WILSON G. SMITH, widely recognized among our mid-Victorian composers, was quoted thus in our columns, from an essay read before the then recent convention of the Ohio Music Teachers' Association:

"The basis of all musical development in a nation is its national folk-song; this, evoked by pastoral simplicity, Arcadian happiness, or perchance by patriotic valor, forms a rich mine from which many of our most distinguished composers have drawn inspiration. Even the mighty Beethoven has incorporated in some of his sonatas themes that have sprung from the hearts of the people, and we all know how copiously Chopin and Grieg have quaffed from this fountain.

"In this vital and fundamental principle we, as Americans, are laboring under a great disadvantage; we have no fund of national melodies to go to for characteristic treatment.

"The process of musical generation as an art and science has been slow in all countries, and the genesis of our national art must of necessity be of similar growth.

"Music with a verbal text is an accessory to the act of portraying emotion or dramatic passion already expressed in language, and consequently the more readily grasped and comprehended; but music without verbal text, appealing only and directly to our emotions or reason, must express the qualities of human heartthrobs, to awaken a responsive echo in our hearts. The highest types of these two distinct phases of musical inspiration, that play upon the entire gamut of our emotions, are to be found in the dramatic master works of Richard Wagner, and the purely instrumental dramas—the symphonies of the immortal Beethoven. Here we have the highest emotional and intellectual achievements of musical inspiration.

"'But what has this to do with my subject?' you again ask.

"Very much, I assure you. The works of these and other masters show what must be attempted and accomplished by American talent and genius before we can call ourselves the possessors of a school of musical composition worthy to rank with the European nations.

"Because we do not yet possess such genius among our talented and ambitious coterie of composers is not to be considered a discouraging condition of our musical development. 'Rome was not built i day,' and there has been but one Beetho and but one Wagner, each the most per embodiment of two distinct phases of development. Each the ultimate expres of idealized inspiration that only centu of honest effort and worthy ambition h been able to develop.

"Who can say that America is destined to have her Wagner and Beetho in the years that are to follow?"

* * *

"A fully trained musician should be to realize the effect of a passage by loo at the printed notes. He should also able to write down what he hears as qu as his hand and pen permit."

—Dr. J. E. Borland

The Folk Tunes of England

By the Internationally Known Composer

WILLIAM BAINES

William Baines, widely recognized as a composer of attractively melodious music, largely for the piano, was born at Bradford, Yorkshire, England, but for years has lived at Roslindale, Massachusetts and been active in the musical life of Boston. He is a son of Charles Baines, known in both England and America as a most successful organist and teacher, and a relative of the very talented young composer, William Baines of London, whose untimely loss to our art was brought about through the World War. An alluring spontaneity is characteristic of all of Mr. Baines' works, including many for choir and chorus.—Editorial Note.

A May Pole Dance in Surrey

IT IS OFTEN SAID that England has not contributed much in the way of folk tunes and never has been comparable to other countries in this respect. Nevertheless, having had occasion to delve into the archives of English music, I was greatly amazed to find much of appeal. England certainly has contributed much which compares most favorably with country dances of other nations. As singing and dancing were two of her natives' chief recreations, and feast and merry making indulged in through all seasons of the year, by rich and poor alike, they were bound to leave a heritage of old tunes that required only rediscovery.

"For sports, for Pagentrie, and Playes,
Thou hast thy Eves and Holy dayes,
Thy Wakes, thy Quintrels, here thou hast,
Thy Maypole too, with garlands gract;
Thy Morris Dance, thy Whitsun Ale,
Thy Shearing Feast, which never Faile,
Thy Harvest Home, thy Wassail Bowle,
That's tost up after Fox-i'-th'-Hole;
Thy Mummers, thy Twelfth Night Kings
And Queens, thy Christmas revellings."
—*From* Brand's Antiquities

Through the efforts of Mr. Cecil Sharp and H. H. MacIlwaine of London, who spent much time in research work, by wandering through the English countryside, visiting out of the way hamlets, interviewing the inhabitants and searching old farm houses—many long hidden tunes were brought to light. A large percent of the items discovered had long gone out of print, others never had been published and were obtainable only through having the residents to sing or whistle them.

About one hundred and eighty were discovered; and, while to the modern ear many are lacking in harmonic beauty and melodic charm, a great many certainly can compare favorable with our present day compositions. *Country Gardens,* of which we hear so much, is one of them; and even this was changed to suit the popular fancy, having, I suspect, its beginning in *The Vicar of Bray,* an old English folk song.

Some Interesting Sources of Origin

NOW, WHEN AND WHERE did these old tunes originate? No one knows; but history informs us that throughout the pagan days of Britain people danced and chanted in religious rites, around sacred shrines, groves and wells, to drive away evil spirits, famine and disease. Also, on the first day of each May they celebrated the coming of spring, and sang and danced around fruit and nut-bearing trees of orchard and woodland—this in honor of their goddess Flora, believing that by so doing she might grant to them a bountiful autumnal yield.

Children also took part in these religious rites. Marching in procession through the village streets, carrying fern leaves, sprays and branches, they sang and danced, holding aloft in their midst an image of this goddess beautifully decorated with spring blossoms. Children of our time, who on the first of May celebrate the day by parading in gaudy ribbons, are unconsciously enacting a relic of pagan days.

Then, as time went on, paganism gave place to Christianity and customs changed. But people were loth to give up singing and dancing altogether; so, instead of the former religious rite and tree worship, the Maypole was instituted; and we may safely say it was about this period when many of the tunes were changed, both in conception and rhythm.

The fiddle and concertina were unknown at this time; but a small wooden pipe, somewhat like a flageolet, was used and was held in the left hand. This instrument had three holes, two above for the first and second fingers and one below for the thumb. From the elbow hung a tabor (small drum), and this was beaten with a stick held in the right hand.

The Popular Morris Tunes

IN AFTER YEARS came the Morris Dance, and apparently the tunes were much in vogue, because so many have been left to us. These were generally written in four-four time and were very gay and colorful in character. Here follows an account of expenses incurred by the king, Henry VII, for music, in which the Morris Dance is mentioned:

	£	S	D
1492—Feb. 4—to the childe who playeth on the records (recorder)	1	0	0
Apr. 6—to Gwyllium for flotes (flutes) with case..	3	10	0
May 8—For making a case for the king's suerde (sword) and a case for James Hide's harp	1	0	8
July 8—To the maydens of Lambeth for a May..	0	10	0
Aug. 1—At Canterbury, to the children, for singing in the gardyn.....	0	3	4
1494—Jan. 2—For playing the Mourice (Morris) Daunce	2	0	0
Nov. 2—To woman that singeth with a fidell.....	0	2	0
1499—June 6—To the May-game at Greenwich	0	4	0
1501—May 21—For a lute for my lady Margaret	2	10	0
Sept. 30—To them that daunced the mer' (Morris) daunce	1	6	8
1502—Feb. 4—To one Lewes, for a morris daunce	1	13	4

To convey to the reader an idea as to how the tunes came to be, a short perusal into the history of Morris dancing will not be out of place. It is supposed that the word Morris (or Morrice) was fashioned from Moreska, this being the name of some person believed to have introduced the dance into England. Other historians claim the dance was introduced by the Moors from Spain, and so it was called Moorish Dance; but of this there is no proof.

An old Lancashire song pertaining to Morris Dancing:

"Morris tune is a very pretty tune,
Lads and lasses plenty,
Every lad shall have a lass
And I'll have four and twenty.

My new shoon they are so good,
I could dance Morris if I would,
And if hat and coat be dressed,
I will dance Morris with the best.

This is it and that is it,
And this is Morris dancing
My poor father broke his leg,
And so it was a chancing.

Bread and cheese and old cow's head,
Roasted in a lantern,
A bit for me and a bit for you,
And a bit for Morris dancer."

Men, only, were allowed to perform the Morris Dance, as it was considered too vigorous for womenfolk. Six dancers constituted a troupe. Each wore a tall hat, rounded with a gay, wide ribband, a white shirt, black corduroy breeches, yellow stockings and wooden-sole shoes called "clogs." In the hand was held a colored handkerchief with a hole cut in one corner for the thumb to go through, and around the calves of the legs were wound leather thongs to which were attached small ball-bells, called Morris Bells, and these kept time to the music. The steps were rather vigorous, being three forward hops, and a throwing out of the foot as if kicking, left and right alternating.

We give now a partial list of folk tunes discovered: *Bean Setting; Laudunm Bunches; Country Gardens; Constant Billy; Trunkles; Rigs o'Marlow; Bluff King Hal; Shepherd's Hey; Hunting the Squirrel; Getting up Stairs; Haste to the Wedding; Rodney; Processional Morris; Jockie to the Fair; Old Woman Tossed Up in a Blanket; Flowers of Edinburgh; Field Town Morris; Princess Royal; Lumps of Plum Pudding; The Fool's Dance; Derbyshire Morris; London Pride; Richmond Hill; Morris Off; Long Morris; Cross Morris; Nancy Dawson; None So Pretty; With a Hundred Pipers; Lively Jig; Sally Luker; A Nutting We Will Go; I'll Go and Enlist for a Sailor; Green Garters; The Gallant Hussar; Leap Frog; Greensleeves.*

WILLIAM BAINES

The Romance of Jigges

JIGGES, SEEMINGLY, were the popular tunes of the day. Written in six-eight time, and of a lively character, their cheerfulness made a strong appeal to all, rich and poor, saint and sinner. Royalty enjoyed the playing of these tunes, and rustics of the countryside employed them at all their merrymakings. The musician boasting the largest repertoire was far famed indeed.

They were not considered wrong at funerals; weddings always had a "jigger" to enhance the joyous occasion; and christenings were never complete without one.

Contests in musicianship were held at village fairs; and every hamlet boasted its champion. Often quarrels with bloodshed took place, so jealous were the followers of their respective favorites. Mostly jigges and reels were performed, as this type of music enabled the contestants to show their ability in speed rather than tonal beauty. The prize generally was a flitch of bacon.

Some Changing Customs

BETWEEN THE YEARS 1603 and 1635 a change came over English life. Puritanism was in the ascendance, and all music of a frivolous nature was banned. All festivities of church and field were frowned upon; and under the stress of straitlaced ideas, folk tunes were forgotten. The ban had its echo here in the America of the old Pilgrim days, when to hum a tune was a Godless act, and called for stern measures from the elders. The ducking-stool, probations, and fines were among the usual punishments; and many a fair maid and daring youth, who had brought with them ideas of a once Merrie England, and were caught humming the gay lilts, were summarily dealt with.

So now we are beginning to realize that England did leave to us a heritage of folk tunes. Our modern orchestras, hard put to find new material, are discovering it in the old, and with a greater variety of instruments, newer scoring and modern treatment in presentation, the Old English folk tunes are taking on a new lease of life, with much greater charm than they had before.

Sir Edward German, in his "Three Dances from Henry the Eighth" and "Nell Gwynn" has given to us modernized versions of old English folk tunes which are quite famous for their old world air and beauty.

Let us close with a list of old monthly festivities, with the music used:

January—Twelfth Night—*Polly Oliver,* a Minuet
February—Candlemas—*Candlemas Eve,* a Carol
March—St. David's Day—*Hunting the Hare,* a Hunter's Dance
April—April Fool's Day—*Sing Care Away,* a Song
May—Robin Hood's Day—*Pop Goes the Weasel,* a Maypole Dance
June—Whitsuntide—*Rustic Reel,* a Country Dance
July—Fair Day—*Country Gardens,* a Morris Dance
August—Harvest Home—*Rustic Jigge,* a Country Jig
September—Holy Rood Day — *Barley Break,* a Country Break
October—Hallowe'en—*Nuts and Apples,* a Hallowe'en Dance
November—Guy Fawkes' Night — *Fire Dance,* a Fire Dance
December—Christmas—*Cushion Dance,* a Yule Dance

Worth While Music in the Movies

By VERNA ARVEY

"AMERICAN MUSIC, American composers, and American interpreters," seems now to be the slogan in Hollywood. True, certain foreign musicians (like Erich Wolfgang Korngold whose latest musical score is that for the film of "Robin Hood") have been imported and have adapted themselves to films so successfully that they have won wide renown. But, on the whole, the American product, whether serious or secular, is to-day most accepted in Hollywood.

For example, there is Robert Russell Bennett, one of America's fine, serious composers; and who does not remember his "Abraham Lincoln Symphony" as performed by the Philadelphia Orchestra under Leopold Stokowski? Mr. Bennett has been engaged by RKO's musical director, "Dave" Dreyer, to write, orchestrate and conduct original music for "The Pioneers," a sequel to "Cimarron." For this music, Mr. Bennett may draw upon American folk songs. He is being given an opportunity to confer with the film's director; so that, in this case at least, music will be a more vital, intelligible part of the completed film. In Mr. Dreyer's opinion, Bennett's background has prepared him for films better than any other serious American composer; for the many years he spent in scoring Broadway shows gave him a knowledge of drama and the swift *tempo* of the modern stage. "The Pioneers" is scheduled for release in the Fall of 1938.

At Paramount Studios, Boris Morros has engaged the noted American composer-conductor, Werner Janssen, to write original music for "Men With Wings." Janssen will be recalled as the composer of the atmospheric music for "The General Died at Dawn," a signal achievement in the annals of screen music. The astute Morros (who, by the way, is a subscriber to THE ETUDE!) has also signed Richard Hageman (American composer of the opera "Caponsacchi") to write an original score for "If I Were King," starring Ronald Colman.

Recently completed at Fox Studios is the epochal "Alexander's Ragtime Band," in which the music of Irving Berlin is used exclusively in a dramatic film showing the complete evolution of American popular music, from ragtime, through romantic waltzes, to jazz and swung. This film, with its music supervised by Alfred Newman (borrowed from another studio, when Fox's regular music staff was discovered to be very busy on other films), made enormous demands on the music department, according to James O'Keefe, manager. It was necessary to be faithful to the idiom of each period, as regards orchestral limitations, vocal inflections, and manners of singing—from the rugged vocal style and jauntiness of the early tunes to the freedom of modern crooners. "Alexander's Ragtime Band" was both prescored and afterscored, and it is regarded by all of the Fox executives as being the finest film ever to emerge from that studio.

* * * * *

Do We Know Our Composer?

"Whatever the terms of the communication may be, we want to know better the man who speaks to us through music; and inevitably we feel that to know what he looked like, what were his tastes in quite trivial matters such as eating and drinking, how he lived and where, brings us a little nearer to an understanding of him. First hand information on these matters gets harder to come by with every year that passes."—H. C. Colles.

RECENT RECORD RELEASES

By PETER HUGH REED

EUGENE ORMANDY, with the Philadelphia Orchestra, contributes one of his most inspired interpretations to the phonograph in his performance of Schumann's "Symphony in C major, Op. 61" (Victor set M-448).

In order of composition, the "Symphony in C major" is in reality its composer's third, since the "Fourth, in D minor," in its first state preceded it. When Schumann wrote this work in 1845, he was in a state of great depression. The first movement is full of the struggle that was going on in the composer, and is the least effective part of the score; but the *adagio* is a great dramatic song. One German writer has said that "in the four movements of this symphony we recognize four stages of a struggle ending in victory." The first movement, he finds, depicts an active wrestling with evil powers; the second—indecision, feverishness; the third—"an outpouring of prayer, resignation, hope, and thankfulness"; the finale—a return of strength and a triumphant return to the battle of life. Remembering the composer had no program in mind when he wrote this symphony, we accept the above analysis as a purely psychological one.

In listening to a symphony of Schumann, it is well to recall the period in which he lived, and the efforts he made to keep his music above the tenacious sentimentality of the times. He was a romantic, a poet of meditation and sentiment, who sought to link the purity of the classicists with the emotional tendencies of his day. The late W. H. Hadow once said of Schumann that "no composer is more companionable," and, for that reason, we always turn to him "with the certainty that somewhere in his work we shall find satisfaction."

Felix Weingartner has contributed many fine Beethoven performances on records, but none more forcibly or admirably realized than his rendition of the "Triple Concerto, for Violin, Violoncello, Piano and Orchestra, Op. 56" (Columbia set 327). Aided by three excellent soloists and the Vienna Philharmonic Orchestra, the conductor succeeds in making us realize that this disputatious work is an unjustly neglected one. Writers on Beethoven are inclined to underestimate the qualities of this score, which contains many notable pages equal to the best to be found in the "Emperor Concerto" and the "Violin Concerto." The ever reliable Tovey says "a close study and a sympathetic hearing" of a work like the "Triple Concerto" "is a valuable experience not obtainable from great things." Without it, he contends, "Beethoven could not have achieved the piano concertos in G and E-flat, nor the 'Violin Concerto'." The "Triple Concerto" was undoubtedly a study for these later and greater works.

In the latest volume of the Sibelius Society (Victor set M-446), we have a new version of the "Fourth Symphony, Op. 63"; an orchestral legend—*The Homecoming of Lemminkäinen* (a squel to the composer's poetic *The Swan of Tuonela*); and several excerpts from his incidental music to Shakespeare's "The Tempest." All are played by the London Philharmonic Orchestra, direction of Sir Thomas Beecham.

Sibelius' right to be called the foremost modern master of the symphony is assuredly demonstrated in his "Fourth Symphony." Here his supreme concentration and his stature as a composer are most saliently set forth. Although the work has been termed formidable, this assertion is not a true one; its closely integrated style and economy of means need only several hearings to establish its meaning in the listener's mind. Beecham's reading of this score is fully revealing and absolutely in ac with the composer's directions, a state which cannot be applied to an earlier cording of the work with which the poser is said to have disapproved. orchestral legend is an exciting score, profound than the symphony, interes solely for its effective scoring. It is b on a program derived from Finnish lore. The music from "The Temp shows the genius of Sibelius in mu characterization. Admirers of Sibelius find this new set of his music a most warding one.

Brahmsians will tell you that they never certain which of the composer's t sonatas for violin and piano are the cherishable. Undoubtedly the most comp and therefore the greatest, is the "T in D minor, Opus 108," with its widely pressive scope and its depth of feeling. *adagio* of "Opus 78" may be the peer of *adagio* of the "Sonata in D minor," but outer movements of the latter sonata unexcelled. Of the several performance this work on records, none equals the la by Joseph Szigeti and Egon Petri (Col bia set 324). One English reviewer has that their performance should make pl ograph history. We concur with that st ment.

In a performance of the "Sonata for lin and piano" by César Franck (Vi set M-449), Jascha Heifetz and Art Rubinstein display superlative musicians without merging themselves in the cha ter and quality of the music underha Exaggerating its drama and hurrying *tempo* (they play it in three-quarters of time in which it is usually heard), t make the work a virtuoso *tour de fo* The reticent and meditative qualities the music are completely lost. One retu therefore to the Thibaud-Cortot vers (Victor set M-81) for a more defini rendition of the score, even though it is as splendidly recorded.

The great Russian basso, Feodor Cha pin, is dead, but his remarkable vocal istry survives in his records. Victor has leased two discs which he made in the two years; the first of which (No. 149 contains his finest renditions of two so which were closely associated with his cert appearances, Moussorgsky's satir *Song of the Flea* and the Russian folks *The Volga Boatman.* The other (No. 14902) contains *Aleko's aria* fr Rachmaninoff's opera of the same name the singer's moving rendition of Mas net's familiar *Elégie.*

Ernst Victor Wolff, the German pia and harpsichordist, has recorded for lumbia (set 326) six harpsichord "F tasias" by Telemann, a famous conte porary of Bach, Handel and Rameau. Th pieces, written in the style of Scarlatti, attractive miniatures, undeserving of neglect to which they have been accor Wolff plays them well and the recording excellent.

Orchestra discs, magnificently played recorded, include a collection of Joha Strauss waltzes: *Wine, Women and So Vienna Blood; Artist's Life; Empe Waltz;* and *Voices of Spring;* perfor by the Boston "Pops" Orchestra, un Arthur Fiedler (Victor set M-445); chestral excerpts from Berlioz's "Dam tion of Faust" (Columbia set X-94), pla by the London Philharmonic under Thomas Beecham; and two of Harl Donald's "Hebraic Poems" for orches based on authentic Aramaic and Heb themes, performed by Eugene Orma and the Philadelphia Orchestra (Vi disc 14903).

The Queen of American Pianists

Some Unpublished Memoirs of Madame Carreño

As told to ELIZABETH STERLING

By CORDELIA HULBURD NELSON
A Former Carreño Pupil

TERESA CARREÑO
At the age when she played for President Lincoln

PROBABLY NO MUSICAL PERSONALITY of the generation just past stands out more brilliantly than that of Teresa Carreño. This dynamic woman possessed many gifts. She was endowed with a remarkable musical talent which gained her a place among the foremost of the world's pianists. She also had an unusual linguistic ability. In addition to her native Spanish, she spoke French, Italian, German, and English, all equally well. Indeed her English was the English of an American. She also confessed to a smattering of Russian—enough "to get by" during her Russian concert tours.

She was born in Caracas, Venezuela, in 1853, of aristocratic parents. In 1864 the family moved to New York, where they lived with very little money and quite equal to the problem of making a living. During the trip, Señor Carreño, with the proverbial lack of business ability of many aristocrats, had confided eighty thousand dollars in cash, which he carried, to a shipboard acquaintance, who betrayed his trust. As a result, upon the childish shoulders of little Teresa dropped thereafter most of the burden of supporting the family. She had displayed marked musical talent at a very early age, and by the time she was eight years old she was already an accomplished pianist, having received a remarkably well grounded training from her mother. She had played the "Studies" of Kramer up to *tempo*, as transposed into various keys, and the "Preludes and Fugues" of Bach, likewise, in any key that might be called for. So it was the public as the *wunderkind* which contributed largely to the family support.

A White-House Episode

WHEN SHE WAS TEN years old, President Lincoln requested that she come to the White House to play for him. But unfortunately the summons did not meet with the young lady's pleasure as she was having a gorgeous time in the hotel playing with a small boy of her own age. So Señor Carreño escorted a reluctant and defiant child to meet the President. To begin with, she seated herself at the piano, which was a Steinway Grand, ran her fingers over the keys, and remarked that no one could play on such a piano—it was so badly out of tune. But a look from her father silenced her on that score.

The President was very gentle and tried to win her confidence and good humor. He told her she must play something quite simple, as he was a man with no musical talent or knowledge. Whereupon the naughty young miss launched into the longest and heaviest *Prelude and Fugue* of Bach that was in her repertoire. When she had finished, the President said he supposed it was very fine, but he could not understand it. He told her that he only knew two tunes, one of which was *Listen to the Mocking Bird*, and asked whether by any chance she could play it. Teresa, by this time thoroughly frightened at the expression on her father's face, assured the President that she could, and plunged into the theme with a series of original variations entirely by ear, stopping only when exhaustion compelled her to. The scene, which took place afterwards between the child and her irate parent at the hotel, was one that Teresa never forgot.

During those first years in New York, Teresa studied with Gottschalk. When she reached her early teens, the Carreño family moved to Paris, where she carried on her studies with Mathias, to whom she later gave the credit for much of her virtuosity. These two teachers, Gottschalk and Mathias, were pupils of Chopin, who considered them the only real pupils or disciples he had. Though Chopin taught a great many students among the aristocracy and society people of Paris, these two alone were with him sufficiently long to absorb thoroughly his ideas and carry out his traditions, not only of piano playing in general, but especially of his own compositions as he felt they should be interpreted.

Sweet Girlhood, Gracious Queen

AT SIXTEEN, TERESA WAS SUMMONED to play before Queen Victoria. The idea of giving a program in the presence of this illustrious sovereign did not worry the young artist in the least; but she was panic stricken at the idea of wearing her first long dress and making the "excruciating curtsy" before the queen according to rigid court rules. She was carefully rehearsed in the procedure: her approach to the throne; just how she must make her deep curtsy; the careful backing away toward the piano (to turn her back on the queen would have been the gravest of errors); another curtsy when she reached the piano; the quick, graceful arrangement of her long train; and the seating of herself at the instrument. The eventful evening arrived. The curtsy was successfully accomplished, and Teresa had backed safely to the piano; but, after making her second curtsy, she was so interested in arranging her train strictly according to instructions that she completely missed the piano stool and, alas! unceremoniously sat on the floor.

Teresa was just angry enough to determine to show the Queen she could play the piano even if she could not be at ease in a court gown; and the program she played amply redeemed her accident. When she had finished, the Queen, in an effort to put the girl at ease, very graciously complimented her on her playing and added that, since she had given her so much pleasure, she in turn would like to make Teresa a gift that would be a lasting pleasure. She asked what she would like—a watch, a brooch, a ring? Imagine the astonishment of the Queen when Teresa promptly replied, "Oh your Majesty, I should much rather have money!" The burden of supporting her parents was weighing heavily on the young girl's shoulders at the time, which probably explains her unexpected reply. A warm friendship developed, however, between Queen Victoria and Teresa Carreño, which endured to the end of Queen Victoria's life. Teresa made numerous appearances at the English Court, and she and Queen Victoria never failed to laugh heartily over the beginning of their acquaintance.

TERESA CARREÑO
In her later years

Those Marital Troubles Begin

AT SEVENTEEN, much against the wishes of her parents, Teresa married the violinist, Emile Sauret. As she later expressed it, she was not at all in love with the man but fully believed that he would carry out his threat of committing suicide if she did not marry him. It was a case of marrying an older, blasé genius, who was too much addicted to drink to be reformed. The result was inevitable. After a hectic year a daughter was born in England; but, when the baby was three days old, Sauret spirited it away and gave it into the care of his two sisters who were living in Germany. As the child legally belonged to the father, Teresa was quite helpless to do anything about it. A divorce followed, and for years Teresa expressed herself as being through with men. She did not see her daughter for thirty-six years. When they finally met by appointment in Germany, the daughter was the wife of a German army officer, Captain Tauscher (brother of Madame Gadski's husband), and had three children of her own. Mother

and daughter became the most devoted companions from that time on.

During the years which immediately followed Mme. Teresa's divorce from Sauret, she achieved marked success as a pianist in Europe, and her fame as a virtuoso rapidly increased. She studied for a time with Anton Rubinstein, who was perfectly amazed at her phenomenal memory. She played the *Hungarian Phantasie* for piano and orchestra, with the Lamoureux Orchestra in Paris, after a single rehearsal on the morning of the performance—and this after not having seen the composition for nine years.

At the age of twenty-three, she met Giovanni Tagliapietra, a talented opera singer who was as handsome and charming as he was temperamental; but her close friends regarded him with disfavor. Now Teresa believed herself really in love. Despite many vicissitudes, the match lasted about sixteen years. Señor Tagliapietra was the leading tenor with the Mapleson Opera Company, which was composed of the outstanding talent of the day. Adelina Patti was one of the members of the company.

The Tagliapietras lived in New York. They might have been prosperous had it not been for the fascinating tenor's propensity for gambling, which kept them in difficulties. One by one all of Teresa's treasures, that had been given her by admirers, including nearly every crowned head in Europe, were pawned by the Lothario husband to meet his gambling debts.

Two children survived—Teresita and Giovanni. Teresita was even more gifted than her mother and equally as beautiful, but she never became the artist that her talent promised that she might be. Giovanni was a very capable violinist. At eighteen he was the first violinist in the Berlin Philharmonic Orchestra under Nikisch. Later he gave up his violin to sing in opera in Italy.

Artist, and Young Genius

During their New York residence the Tagliapietras lived next door to Edward MacDowell's mother, and a deep and lasting friendship was formed. Mrs. MacDowell was full of sympathy for the brilliant young wife who was struggling to keep her family together under the handicap of an irresponsible husband, and, at the same time, carving out her own career as a pianist.

Edward MacDowell was a young boy at the time and had several years of lessons from Madame Carreño. He was a typical American boy, fond of music, detesting practice, and undecided whether he wanted to be a musician or a writer. At one time, when he had tried Teresa's patience to the point of exasperation by bringing week after week a *Scherzo* by Chopin that was neither memorized nor worked up, she threatened to kiss him if he did not get it memorized by evening: "I have never played this *Scherzo*," she continued; "but I shall have it memorized by the time I come to the party at your home to-night. Now, if I have it and you do not, I shall certainly kiss you." When Edward heard her voice that evening, he bolted from the room. But a determined lady pursued him upstairs and down again, and finally carried out her threat in the coalbin in the basement. In later years Teresa Carreño's loyal admiration for MacDowell's compositions undoubtedly helped to establish him as a composer.

The marriage between Teresa and Tagliapietra finally came to an end, and Teresa took her children to Berlin, where, after many years' absence from Europe, she began for the second time to make a place for herself as a pianist. Came an invitation to play with the Philharmonic under the baton of Nikisch. This engagement meant a great deal to a newcomer in the field. When the committee inquired what she would play, she said the "Concerto in A minor" of MacDowell and was indignantly informed that they would have no unknown concerto by an unknown American in their concert. Though realizing what a clash with this committee might mean to her, Teresa replied, "I shall play MacDowell or I shall not play." She carried her point. The morning following the concert, the press loudly acclaimed a brilliant performance of a masterpiece by a young American.

A Genius Recognizes Genius

One evening she played the "Concerto in A minor" of Grieg, with the Gewandhaus Orchestra in Leipsig. At the close of the performance she found a very modest little man in her dressing room who kissed her hands and said, "Madame, my name is Grieg. I never knew I had created so beautiful a thing."

She lived for a while at a family hotel in Berlin that was much frequented by musicians. Here she met Eugen d'Albert, who immediately became infatuated, threatened suicide, and carried on quite like a mad man. As a result Teresa succumbed and they were married. They lived together something over two years. During that time they gave a series of two-piano concerts which was an entirely new thing in that day. Unfortunately Teresa received more applause than her husband, and thereafter life was anything but tranquil in the d'Albert household. Two daughters were born to them, Eugenia and Herta. When the second baby was still an infant, d'Albert eloped with an opera singer from Weimar. Teresa scored a very unusual triumph for a woman in Germany in those days, when she was granted a divorce, the custody of her children, and alimony.

By this time Madame Carreño was firmly established as one of the leading artists of the day. One evening when she had included the so-called "Minute Waltz" of Chopin on a program, she noticed an old gentleman in the first row take out his watch when she came to that number. Fired by an impulse, she played the waltz with all the brilliant swiftness of which her nimble fingers were capable. At its close, the old gentleman snapped his watch shut and said, "By George, she did it; I didn't think she could."

Teresita loved to tell this story on her mother: One of Carreño's war horses was the *Sixth Rhapsody* by Liszt. One night, after she had played it DePachman fell on his knees. He said it was wonderful—it was marvelous! He had heard it played by Liszt himself, but he never had heard any one play it as she did! The following winter Teresita happened to meet the eccentric gentleman in San Francisco. He repeated her name musingly, "Carreño—Carreño? Are you any relation to Teresa Carreño? She is a handsome woman, but it's too bad she thinks she can play the piano."

At last real happiness was to come to Teresa Carreño. Several years after the d'Albert episode, Arturo Tagliapietra appeared on the scene—to the great joy of Teresita and Giovanni who adored this uncle more than any one in the wor cepting their mother. During all the years in New York, this kind, quiet looking gentleman had been like a to his brother's children, and a friend to his brother's wife. All thes he had loved her, never marrying of his great affection for her. Now come to Europe to try his luck. Fo time Teresa refused to consider possibility, but as she later said, and Giovanni made the match, and ally she married this brother of her husband. This marriage lasted until death, and for the first time in her knew what it was really to have co tion and unselfish devotion.

Berlin at that time was probal music center of Europe. A great prominent artists and teachers we ing there, among whom were God Busoni, Jonas, de Motta, Artur Sc Philipp and Xaver Scharwenka, an others. Madame Carreño had acq large following as a teacher—proba cause she was one of the few great who really loved to teach, and wh alytical mind enabled her to tell how she produced every effect. In p her piano playing was based upon tion rather than force—an accepte nowadays, but one which was new time and which caused a great deal troversy.

The Sympathetic but Exact Teacher

When a student went to her for a whatever composition he brought, w a Beethoven sonata or whatever it w to be memorized and worked up very best he knew. It made no diff to Madame whether this preparatory was done with one of her assista alone, just so it was done. Each had to be paid for at the time it was as the student might not be permit return. She always had a waiting fifty or more, and as she did not herself to keep anyone who was not ing to the utmost of his ability, the were in constant fear of being "ch This did not mean every student ha a genius; for occasionally a very b and talented player was dismissed w less talented student who was w hard was allowed to continue.

JUSTICE FLORENCE E. ALLEN

All homage to Honorable Florence E. Allen, of the United States Circuit Court of Appeals. Justice Allen, the most distinguished woman jurist in the history of the United States, was for some time engaged professionally as a music critic in Berlin and in Cleveland. The Etude feels honored in adding her to the long list of eminent people in all professions who have studied music in their youth, and who have appreciated its advantages as an inspiration and self-discipline in helping them to obtain the highest offices in other callings. This list includes such great names as Lord Balfour, Benito Mussolini, Edouard Herriot, Alfred Einstein, and scores of others at the very top of their vocations.

The Art of Ensemble Playing

By ADOLF BUSCH

Eminent Violinist, Conductor, Composer, and Founder of the Busch Quartet

A Conference Secured Expressly for The Etude Music Magazine

By R. H. WOLLSTEIN

Following a series of violin and piano concerts given in New York by Adolf Busch and Rudolf Serkin, the New York Times *stated that "The performance said the last word in perfection of ensemble," and characterized the rendition of the "Kreutzer Sonata" as "dazzling in its virtuosity and equally remarkable as an exhibition of supreme musicianship. Every slightest indication of nuance and dynamics in the score was meticulously observed, and nothing added which Beethoven had not inserted." In the following conference, Mr. Busch presents to readers of The Etude his views on ensemble playing.*—Editorial Note.

THE READING AND PERFORMING of chamber music is a necessary part of every musician's education. It is especially vital to players of stringed instruments. Pianists, also, would do well to give a certain amount of time and attention to chamber music, even though their own library is comparatively rich in its own right. But the library for solo violin is not one too extensive, and some of the greatest works for the violin are not solo pieces at all. In the case of the violoncello, the situation is even worse. These instrumentalists would be denied access to some of the most sublime music in the world, if they did not seek an opportunity of exploring the rich library of ensemble or chamber works.

Furthermore, it is extremely difficult, if not impossible, to attain genuine musicianship, as a soloist exclusively. Virtuosity, no doubt, may be achieved by applying one's self to his own instrument and nothing more. But well rounded, well grounded musicianship requires more than that. It requires musical building.

An Ideal Plan of Work

IN MY OWN STUDENT DAYS, two hours a week of ensemble work were set down as part of the regular conservatory training. It was as much part of the curriculum as theory and harmony. And after those "required" hours were done, my fellow students and I made music together, purely for the enjoyment of it. We would meet at my home, where my father was always ready to listen to us, and would read through quartets, trios, octets, everything. After supper, then, we went at it again, reading, playing, discussing the music, and arguing about it. The evening was gone before we knew it, and all of us had had the most delightful sort of fun. If our activities were "good for us," so much the better. But the chief thing was that we enjoyed them.

That, I believe, is the most wholesome way of finding an entrance into this very important branch of music making. Regardless of the benefits to be derived from it, let the start be made in a spirit of musical fun. Most conservatories and private studios, I am sure, offer facilities for pursuing this pleasure. But if the opportunities do not exist, then the student must create them for himself. Everyone, who studies music at all, surely must know three friends who also are studying. And there you have a quartet!

Perhaps it is not quite so easy as that, though. The first requisite to good ensemble playing is that the players who work together must be thoroughly congenial. Group music making is perhaps the highest form of personal expression; and one always feels freer and more expressive in the company of people who think and feel like himself; whose tastes and outlooks are bound to his own by a measure, at least, of similarity. One may quarrel effectively with a man whose opinions cross his own at every turn; but it is difficult to express a harmonious understanding of Beethoven with him. And the first requisite of finished ensemble playing is precisely this harmonious unity, towards which each individual player must contribute his share.

The arrangement of the instruments is also important. In the end, though, any question of arrangement falls upon the first and second violinists; the viola and violoncello (especially where there is only one of each) will take care of themselves. The first and second violinists in a quartet must be of absolute equality. Technically and musically, the second violinist is quite as valuable as the first, and does not in any way rank as inferior to him. To "play second fiddle" carries a suggestion of inferiority in every branch of activity except the musical one, in which the expression originates. In my own quartet, I had the rare good fortune to find a second violinist who is a magnificent soloist and in every way capable of playing leading parts except that he is too modest to aspire to them. Thus, he contents himself with a second violin and contributes much to the musical worth and balance of the entire ensemble. Do not be afraid of playing second violin.

A Knotty Problem

IT IS DIFFICULT to try to settle the technical problems of ensemble playing, for the excellent reason that they are never settled. Each time the music is worked over it will be found to possess new points of shading and new dynamics to be explored, points which did not suggest themselves at the earlier readings. In addition to giving the player a splendid acquaintanceship with more good music, ensemble work offers excellent drill in precision, understanding, and patience. If the work is regarded as a game, its chief fun lies in the players being always alert for something new—something which cannot be settled in advance.

ADOLF BUSCH

Ensemble playing and mere virtuosity approach the question of musicianship from entirely different angles. Virtuosity, performance, technic, and the handling of the instrument, all can be learned by more or less external means. One can see and observe; one can profit from the spoken word of wise teachers; one can practice and imitate; and all of these means will certainly help the student to play fleeter scales, to improve his touch, his tone; to attain any of the factors which depend upon external manipulation. But musicianship is gained only by personal study and experience. The musician, as distinguished from the performer, does not strive to perfect a single passage of difficult notation. He strives to perfect a musical conception of the work as a whole, and then to translate those inner thought values into tonal expression.

There is an important difference between playing tones, or making the playing the chief consideration, and using tones simply as a means of expressing musical ideas, or shifting that first consideration to the thought underlying the musical sounds. The second system of music making is by far the more desirable. I do not for a moment suggest that a solo virtuoso cannot attain it. That is not the case. But I do believe that ensemble playing offers better opportunities for deepening the purely musical approach. For one reason, it involves the energies of several people, and therefore necessitates more concrete thought and discussion. You may have "an idea" of what you want to accomplish in your own playing; but you give more substantial form and greater clarity to that idea when you take it out of your own mind and discuss it with three fellow players, each of whom has definite ideas of his own, which he will develop and sharpen in contact with yours.

In my work with my ensemble partner and son-in-law, Rudolf Serkin, frequent examples of this musical discussion have arisen. In the "Sonata in G major, Opus 30, Number 3" of Beethoven, to offer but one example, the composer's indications are *"molto moderato e grazioso."* In my own readings of this movement, I inclined to emphasize the *molto moderato*. Serkin, in his turn, wished the *grazioso* to be emphasized. Both of us had the composer's indications to support our views. Where should the distinction be made? We talked it over, argued about it; each tried it in the other's way, and then we talked some more. Finally, we put the sonata aside for some days and then came back to it afresh. The second time, each had considered the other's wishes to the point of evolving a new, unified conception. I obeyed the *grazioso* indication by taking the *tempo* a shade more quickly, though not entirely quickly; Serkin followed the *molto moderato* indication by taking the *tempo* a shade more slowly, though not entirely slowly. And thus we worked out a reading which suited us both and which, we believe, comes closer to the composer's indications than either of us would have been able to accomplish alone. That

particular kind of experience never could be attained by solo playing alone, where one is of necessity in accord with one's self.

Seeking the Source of the Spring

THE GOAL IN EVERY KIND OF PLAYING is, of course, to carry out the intentions of the composer as minutely as possible, and at the same time to keep the interest level of such a minutely controlled performance both vital and individual. This requires great practice and much experience. It is a simple thing to vary *tempi* and shadings at one's own sweet will; but that is not music. The original meaning of the composer must always come first. He needs no assistance. How is it possible, you may ask, to expect to reproduce exactly what was in the mind of a musician who wrote over two hundred years ago? The obvious answer is that one must carefully observe the printed indications in the score, taking no more liberties with them than with the sequence of the notes themselves. But the next question is, how far are these printed indications absolutely accurate? Here again, much experience and solid musicianship are often required to determine the answer.

In the first place, indications of *tempo* and shading permit of so wide a field of interpretation that the composer himself was often at a loss as to the exactly fitting term. Not long ago I had an opportunity of examining the original manuscripts of certain of Mozart's quartets. It was of the greatest interest to note that in one passage Mozart had indicated a *tempo*, and then had struck the indication out and altered it *three times*. The final indication is, of course, the one we may assume to have been the wish of the composer; but even in such a case a wide knowledge of Mozart's general habits of *tempo* indication and, indeed, of the entire use of terms in that epoch, is essential.

We know, of course, that the terms of musical indication have somewhat altered their meaning since the classic age. In Beethoven's time, for example, the alteration in tonal volume between a *forte* and a *piano* was not very different from the alteration we make to-day between a *piano* and a *pianissimo*. For that reason, one very seldom finds the indication *mezzoforte* in the Beethoven quartets. We know also that Beethoven's *piano* was intended as a *piano cantabile*, unless specifically indicated as *piano sotto voce*. Obviously, it is of prime importance to familiarize one's self with the meanings of these indications *at the time when they were written*. Otherwise, it would be perfectly possible, to-day, to take up a modern edition of a Beethoven quartet, to read the indication *piano*, to play it simply as a *piano* shading of volume according to to-day's use of the term, and still to have the result very different from Beethoven's own use of the term. Thus, it becomes requisite not only to observe the indications, but to make a certain amount of research into the actual meaning behind those terms.

It is always advisable to consult the earliest edition of a work, in order to be sure of finding the indications which the composer desired, instead of those which some later editor might have written into the score. In the case of the great masterpieces, this is a difficult thing to do. Help can be obtained, however, since the great museums and libraries which possess these valuable manuscripts (or first editions) are often willing to make photostatic copies of them for students' use, and at a comparatively small cost.

It is a great pity, I think, that so many of the great works have been edited and reëdited almost beyond recognition. In my own student days it was possible to buy the Brahms works entirely unedited; that is to say, to have them exactly as Brahms himself wrote and approved them. Regardless of the comparative shortness of time since Brahms' death, it is to-day a difficult thing to buy any Brahms work without finding it edited, fingered, phrased, and so on, by some one other than Brahms himself. Personally, I prefer to take my indications from the composer. I do not believe, either, that young and immature students are assisted by this process of reëditing, which may (or may not) make the technical passages easier, but which in the process certainly risks altering the entire dynamic structure of the piece.

And So Is Climbed Parnassus

MOST PROBLEMS OF ENSEMBLE PLAYING are settled only by practice and experience in group playing. Certain hints may be valuable, however. The music should be always first studied away from the instrument. This, of course, applies to solo performance as well as to group work. Playing should not be begun until there has been formed a well founded conception of what the music is intended to say and how this is to be accomplished in the playing. It is a mistake to invert the process, playing the music first and then trying to fit the sounds into a pattern after they have been heard. Musical thought patterns cannot be made to depend upon the sound of the thing. The sounds are simply the means of expressing the thought that existed in the first
before the notes were written. The
it is only logical to study the scor
for its thought and meaning. The nex
is to form a personal mental picture
that meaning is to be conveyed th
sound. Only as the third step do
clothe his mental conception of the
in the living robes of tone. In other
the playing of a piece should not
tempted until it has been studied
definite idea built up about it. M
one's most valuable music study is do
at the instrument but in the mind.

Until one has acquired a certain fa
ity with the demands of ensemble pl
it is suggested that there be wo
quartets. Here there are not too
players to work with comfortably, a
so few but what the tonal requireme
each may remain pretty much the sa
for the familiar solo playing. In trio
special tonal demands may be needi
order to make up for the smaller n
of instruments. For players who ha
yet full control of their technics and
instruments, the simpler works are
able. Ensemble playing never should
lowed to lose itself in a mere worki
of technical difficulties. It is to be as
that each player can acquit himself of
is technically required of him, befo
begins. The joy and beauty of group
ing is quite removed from technical
tice. It lies in approaching the wo
the masters in an inquiring spirit, a
striving to reproduce the significan
their thoughts in the language of
That, to my mind, is the highest fo
music making. At all events, it is a pl
and profitable way of broadening and
ening the course of one's musical educ

Musicians of August Birth

By W. FRANCIS GATES

IF AUGUST is somewhat a little short in its gifts of musical talents of the first magnitude, still it can boast of a generous constellation of those who fall but little short of this distinction.

Of composers it can claim Jacopo Peri, composer of the first opera to reach public performance, and with him are his countrymen, Amilcare Ponchielli and Umberto Giordano; then, Alexander Glazunov (Russian), Eusebius Mandyzcewski (Rumanian), Sir Alexander Mackenzie and Samuel Sebastian Wesley (English), Ambroise Thomas and Cécile Chaminade (French), the last perhaps the most gifted of all feminine melodists.

August born conductors include, Sir Joseph Barnby, Alberto Bimboni, Otto Goldschmidt, Felix Mottl, Emil Oberhoffer, Ettore Panizza and Emil Pauer.

Of singers there are Christine Nilsson, Emma Eames, Ludwig Wüllner and Reinald Werrenrath; and the famous old singing master, Niccolò Porpora.

Of violinists this month offers Maud Powell, American and perhaps of all time the supreme feminine genius of the bow, Georges Enesco, and Albert Spalding.

In a more general group may be mentioned Johann Nepomuk Mälzel, inventor of the metronome; Sir George Grove and Sir Frederick Austin Ouseley, eminent British musical lexicographers; and William Thomas Best, Fernand de la Tombelle, and Pietro Yon, among famed organists.

To America August has contributed such creative talents as Hugh A. Clarke, Clifford Demarest, Luther O. Emerson, Percy Goetschius, Ernest R. Kroeger, Ellsworth C. Phelps, Silas G. Pratt, George F. Root, Charles Stanford Skilton, Wilson G. Smith, Harriet Ware, and George William Warren.

A Natal Chronology

1st—Bruno Huhn (1871), Benedetto Marcello (1686)
2nd—Leopold Schmidt (1860), Julius Schulhoff (1825)

In the September issue of THE ETUDE we shall present another of those fascinating and valuable master lessons by Mark Hambourg, internationally famous pianist and teacher. This time he will discuss and analyze the technic and interpretation of that very popular *Mazurka in F-sharp minor* by Chopin. Any one of these lessons by this master musician is worth many times the price of a year's subscription to THE ETUDE. Many such lessons are in preparation.

The Threshold of Music

The Seven-Storied House of Chords

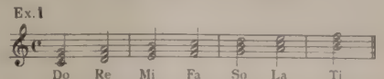
By LAWRENCE ABBOTT
Assistant to Dr. Walter Damrosch

This article is the sixth in a series on "The Doorstep of Harmony." The first appeared in The Etude *for January, and an article will appear each month hereafter.*

ALL MUSIC (except the ultra-modern) gives us a feeling of tonality,—of hovering around some central tonic c, or, to phrase it differently, of being some definite key. Every key has a major le and a minor scale belonging to it. d every scale has seven notes, the first ng the tonic and the seventh being the e just below the octave higher repetition the tonic.

These seven notes are like the seven stor- of a building. Each story has its own chitecture and personality. Likewise each te of the scale has its own personality, as ll as being the resting place of a triad ich has also a personality of its own. ne triad on the sixth floor, for instance, ay be sometimes major, sometimes minor. t, aside from its major or minor char- teristics, it has a distinct "sixth-floor" rsonality which sets it apart from the ad on the third floor (which, too, is metimes major and sometimes minor). Some of the floors are already familiar us. The fifth is the dominant, which is xt in importance to the tonic; in fact ere is probably an express elevator direct om the first to the fifth floor. The fourth the subdominant, also an old friend.

Here is the complete list of tenants:

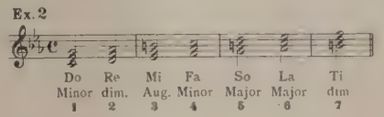


Ti, or Leading Tone...7-9-11 (or 7-2-4)
La, or Submediant ....6-8-10 (or 6-1-3)
So, or Dominant .....5-7-9 (or 5-7-2)
Fa, or Subdominant ...4-6-8 (or 4-6-1)
Mi, or Mediant 3-5-7
Re, or Supertonic 2-4-6
Do, or Tonic 1-3-5

There is no eighth floor. *Eight* being an tave above *one*, it is a duplication of one, d so must be considered the first floor f another seven-storied house of chords gher up. Since this second house is higher, will be well for us to imagine the houses s being built on the side of a steep hill, o that the basement of the second house is n a level with the top floor of the first ouse. Farther up the hill stands yet an- ther house whose basement is on a level ith the top floor of the second house. And on, indefinitely.

Incidentally, there has grown up a lot f prejudice against using the names Do, Re, Mi, Fa, So, La, Ti, Do, for the various teps of the scale. Many of us were taught n our youths to pooh-hooh them. But it is fact that every position in the scale has s own personality—a personality which emains distinct and unalterable through very possible change of key. When you are istening to a piece of music it is much more mportant for you to know that a note is "second floor" than that it is C-sharp. It ardly seems fair to brand these seven per- onalities with mere numbers especially tuffy looking Roman numerals, which is he way most harmony textbooks treat the even stories of the scale. When people talk bout seventh chords on the sixth degree f the scale and six-four chords on the eventh degree, we are bound to be confused y such an overdose of mathematics. So— with due apologies—this book welcomes, nd hopes you will learn to become better equainted with, those seven occupants of he House of Chords: Do, Re, Mi, Fa, So, a and Ti.

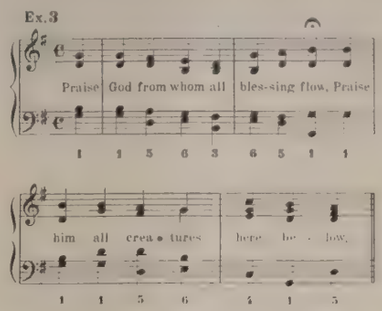
Now let us look over the seven triads which correspond to the seven positions of the scale and see what they are like. Here they are, on the scale of C major:



Ex.1

We find that three of the triads (Do, Fa and So) are major, three are minor (Re, Mi and La), one is diminished (Ti), while the augmented triad is not in evidence at all. Try this in any major key, the same chords will be found in the same relative places.

The minor scale, too, has its seven triads. They are built on the notes of the harmonic minor scale. The result is a somewhat different grouping of major, minor, diminished and augmented traids. In C minor, for instance, they are,

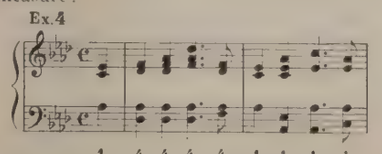


Ex.2

Here there are only two major triads (on So and La) and two minor triads (on Do and Fa). But the diminished triad has risen in importance. There are two of them (Re and Ti). And there is even an augmented triad (Mi).

The simplest harmonies are to be found in this series of seven triads. Hymn tunes, for instance, are mainly composed of simple combinations of the seven triads. For instance, we have *Old Hundredth*, which is, with some reservations, accredited to Louis Bourgeois of 1551.

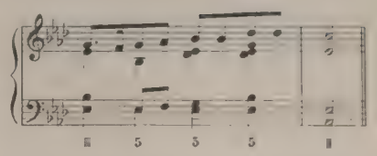
Ex.3



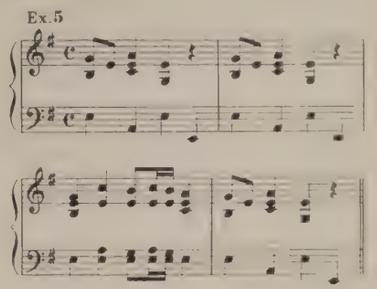
Every chord in these four measures is a major triad, belonging to either the first, third, fourth, fifth or sixth floor of the scale. The numbers marked underneath the chords will help in their identification.

The very simplicity of a piece of music harmonized wholly in triads gives it an air of great dignity and nobility. Tschaikowsky's boisterous *"1812" Overture* opens with a fervently solemn Russian chant intoned by violas and violoncellos. Its harmony consists of just four triads: 1, 4, 5 and 6 (Do, Fa, So and La).

We are already familiar with the triads on So and Fa—the dominant and subdominant triads. The subdominant (4) chord, you remember, is the one usually used to harmonize the "A" of "A-men" at the close of hymns. It also occupies a prominent position in the Hawaiian melody, *Aloha Oe*, written by Queen Liliuokalani. We find it monopolizing the opening measure:

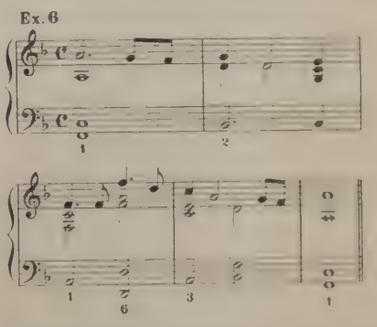


Ex.4



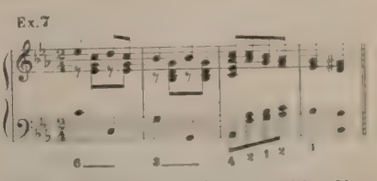
A NEW MUSICAL TECHNIC

This native of the tribe of Paiwan, on the Island of Formosa, now a part of Japan, is shown playing a typical instrument of his race, which is performed by the breath through the nostrils.



Subdominant chords are equally effective in the minor. The following passage, from *Song of the Volga Boatmen*, a familiar old Russian folk song, contains nothing else but chords on Do and Fa. In this key Do is the E Minor triad, while Fa is the A Minor triad.

Ex.5

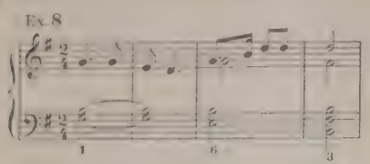


The Negro spiritual, *Deep River*, furnishes us, at the beginning of its second measure, an example of the Re triad (one of the minor triads belonging to the major scale). In the next two measures of this same tune we find the chords on La and Mi (6 and 3).

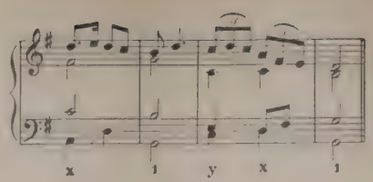
Ex.6

Hymns and folk songs are, of course, the stronghold of such simple and elemental harmonies. In the field of popular music, Jerome Kern has composed a truly folk-song-like melody with the title of *Once in a Blue Moon*, from "Stepping Stones." So we are not surprised to meet the triads on La and Mi (6 and 3) in the third quarter of the chorus—or burthen, as Mr. Kern prefers to call it.

Ex.7



(This quotation from Once in a Blue Moon *is reproduced here with the kind permission of the T. B. Harms Company, owners of its copyright.)*



Another melody of folk song character is the second theme in the opening movement of Dvořák's "Symphony, No. 5. 'From

the New World.'" Here also La and Mi make their appearance.

At the points marked x the composer has used seventh chords, about which we will learn later. At y he has given an incomplete chord: it has only two notes, C and

Ex. 8

E. We are left to imagine the rest of the harmony, ourselves; our imagination can supply for a third note either G, making a chord on Fa, or A, making a chord on Re.

The Queen Of American Pianists

(*Continued from Page* 498)

talent of the younger generation was attracted by Teresita and Giovanni.

Geraldine Farrar, who was then the idol of the Royal Opera, was a frequent visitor. One of the students was one day kept waiting nearly an hour for her lesson, while some one was playing concertos with Madame Carreño. She was very much surprised when the studio door opened and out walked Geraldine Farrar. Madame said that if Miss Farrar had not been a singer, she would have been a great pianist.

Fanny Bloomfield-Zeisler admired Madame Carreño a great deal, and they were very good friends. A large photograph of Madame Zeisler hung over Carreño's piano in her studio, bearing the inscription: "To the queen of all pianists and the queen of all women."

A War and an Eclipse

THEN CAME THE TRAGEDY of the World War. Teresa Carreño was the wife of an American citizen who was an Italian by birth. Her oldest daughter was married to an influential German army officer. Eugenia and Herta were also married to young German officers. Giovanni was in Italy. Because of the frequent letters which he received from his mother in Germany, he was arrested as a suspicious character and ordered to leave the country.

Teresita was traveling in Algiers when war was declared, and she was arrested as a German spy and condemned to death. Her execution was postponed from day to day because of the activity of the English Government, as Teresita was married to an Englishman. The American Government also took a hand in the situation, but unfortunately did not seem to have the influence accorded the British foreign service. The girl endured untold horrors for several months in a hot, dirty Algerian prison. Every time she heard a step in the corridor, she expected she was to be led out to be shot. Eventually, however, she was sent on a penal ship to Portugal, where she was released. She got back to Berlin, a wreck of her former self, and never fully recovered from the effects of the horrible experiences through which she had passed.

With her heart torn in so many directions, Carreño's lot during the war was most unhappy. Music, of course, was at a standstill in Europe. At the beginning of the war the German Government confiscated all the money deposited in the banks. But eventually Carreño and her husband were allowed to come to America, providing they would leave all their possessions behind. They were especially warned not to bring out a single piece of paper. So rigidly was this ruling enforced that Carreño was not allowed her calling cards, much less her valuable musical library. When they arrived in New York, the situation was not too good. America was about to enter the war, and concert engagements were few and far between. However, there were many of her former admirers who were glad to welcome their favorite back to America. But anxiety and financial embarrassment had taken their toll. After a brilliant recital at the Waldorf she sailed the following morning for Havana where several concerts were scheduled. She was feeling so ill and was so annoyed at seeing three of everything, that Mr. Tagliapietra at the last minute decided to accompany her to Cuba. When they arrived, her condition was worse instead of better; and, before appearing in public, it became necessary for her to rehearse walking on and off the stage so as to learn which of the three pianos she so clearly saw was the one she should use. A doctor was in attendance during the performance, and at the close of the program, which was received with the wildest acclaim, he told Mr. Tagliapietra that, if he wanted ever to take his wife back to New York, he would better get the boat which sailed the next morning.

Madame Carreño lived for several months, but never left her bed again. The doctor said she literally died of a broken heart; and that if those who had loved her so dearly had just known and had gotten together to make up a few thousand dollars to relieve her immediate financial worries and to give her financial security, she could have lived.

Combine the Arts

By NELL V. MELLICHAMP

A RECENT experiment is worth passing on to other teachers. A rather difficult little pupil happened to express a preference for studying drawing rather than piano. By discussing the subject with a group of children of her age, we found like tastes in art. The outcome was the forming of an art class in our studio. The pupils continued piano, and, by recognizing and assisting them in something in which they were keenly interested, we strengthened their confidence and won a greater degree of cooperation. One child entered a composition in a State Contest. She designed the cover in her art class, and won State honors.

This applies equally to the dance, which is so much the popular thing for children now. A high school girl in our group created a lovely interpretative dance to a Chopin waltz which she had studied at the piano; again combining the arts to advantage and to the detriment of neither.

Radio Flashes

By PAUL GIRARD

THE POPULAR SLOGAN about "time marching on" might be used in connection with the radio; for radio marches on with ever increasing manifestations of progress. One of the latest of these is the new home of KYW, the NBC Red Network station in Philadelphia. Having outgrown its cramped quarters on Chestnut Street, the station moved in the middle of May to its own building, a new six hundred thousand dollar home, on Walnut Street. Here, save for the ground floor store area, the entire structure is devoted to the broadcasting activities of KYW. The new building embodies all of the latest innovations in studio design and construction, including an underground studio, and two floors for television.

The principal innovation of this new radio building is a large basement studio, said to be the only subsurface one ever constructed for broadcasting purposes. Its construction was made especially difficult, we are informed, by the fact that it was necessary to support the superstructure over a large open area. The studio itself is sixty-four feet long, twenty-nine feet wide, seventeen feet high, and has a capacity of two hundred and twenty-five people.

All the large studios are equipped with observation galleries, from which visitors can watch the operations of a broadcast. An interesting part of this new radio center is its air conditioning plant. It manufactures artificial atmosphere for all rooms in the building, making windows nonessential to the health of their occupants.

"Radio marches on," not alone along with time but with the arrival and adoption of each new invention. KYW's new station may be only one of many fitted out with the latest and best modern improvements in this country.

Recently that highly interesting program series, known as "Adventures in Science," heard on Fridays, from 7:30 to 7:45 P.M., EDST over the WABC-Columbia network, presented Dr. McNish, of the Carnegie Institute in Washington, who gave some facts about the effects of sunstorms upon radio communication. Sunstorms are the explosions of gases on the sun, which we see as sunspots. Observations, Dr. McNish contended, have revealed that solar radiation produces three layers of electrically charged particles far out on the fringes of the earth's atmosphere. The first of these layers is about sixty miles from the surface of the earth, and the other three times that distance. These layers, it appears, serve as reflectors to radio waves, bending them back toward the earth. No long distance radio transmission could exist if it were not for these waves. When explosive disturbances take place on the sun; or, in other words, when sunspots are most numerous, everyhing goes wrong and radio is blanketed out. This is because, according to Dr. McNish, the radio roof is bombarded from the sun by unusually heavy bursts of ultraviolet rays.

The modern piano and some of its earlier forms, such as the harpsichord and the clavichord, form the basis for an interesting new program, known as the "Keyboard Concerts," heard on Wednesdays, from 5:00 to 5:30 P.M., EDST, over WABC-Columbia network. This series of programs, which should be of great interest to readers of THE ETUDE, aims to project the full range of keyboard instruments and their literature. It features artists distinguished in particular fields of keyboard music, and also presents their comments upon the music under hand.

Howard Barlow, one of the radio's foremost musicians and conductors, is back on the air again with his "Everybody's M This is the third summer of this which, on Sundays, from 3:00 to 4:00 features a symphonic program to app the majority of radio's listeners. Mr. low inaugurated the series this year a fine program, but with his second l cast he made radio history. This w May 22nd, when, because it was th hundred twenty-fifth anniversary of R Wagner's birth, this conductor gave first radio performance of scenes I a of the Paris version of "Tannhäuser

Mr. Barlow is one of the first personalities to fight for and to obtai ter music on commercial broadcast was responsible for the innovation first series of Philco programs, als the symphonic broadcasts, heard on nights, of the Philadelphia orchestra, as far back as 1930, he prompted a mercial concern to sponsor. Barlo conducted opera programs of all Beethoven cycles, All-Wagner prog as well as the popular "Understa Music" and "Understanding Opera casts." Besides the conducting of st symphonic programs, he has been asso in special broadcasts, with many f instrumentalists and singers.

One of the most sensible and ca conductors in the field, Barlow has lished himself as one of the foremost personalities in America. His attitu wards music and its interpretation is to be the result of a sound knowled American life and music. Aware t radio conductor's problems are dif from any other, he studies these pro assiduously and works with the rec engineer to preserve the vital contrast outlines of the music. Since he mem his scores, he can, in performance, attention to other details. Whenev name of Barlow is seen in connectio a radio program, one may be certai it is a competently managed one.

Among radio's distinctly worth programs for the old and young alik four that the WABC-Columbia ne sponsor under the auspices of the Education Board. The word "educatio a tendency to frighten some folks, whi others it means exploring and investig increasing the boundaries of the min stimulating the imagination, all o contribute to greater happiness. The grams to which we refer are "Adventu Science" (already noted above), hea Fridays; "Americans at Work," heard Thursday; "Living History," heard Wednesday; and a new one called "Of and Books," which is broadcast from to 4:15 P.M., EDST. This last pro is conducted by Professor John T. F rick, professor of Modern Letters a Medill School of Journalism of North ern University.

Early in February, the Firestone engaged the services of the highly tal Alfred Wallenstein as conductor, and considerably increased the size of it chestra. This program, which is heard the NBC-Red Network, on Monda 8:30 P.M., EDST, has come to b garded as one of the best of its ki the air. It features light symphonic and also engages the services of a singer as soloist. The success of this gram is largely due to the work director, Mr. Wallenstein, whose job to arrange each week the program must in every way be interesting t greatest number of people and at the time be well balanced and unhack Mr. Wallenstein is one of radio's mos tinguished personalities.

...n Howard Payne as the first native ...erican Hamlet. *From a Portrait by William Dunlap.*

The Boyhood Home of John Howard Payne, at Easthampton, Long Island

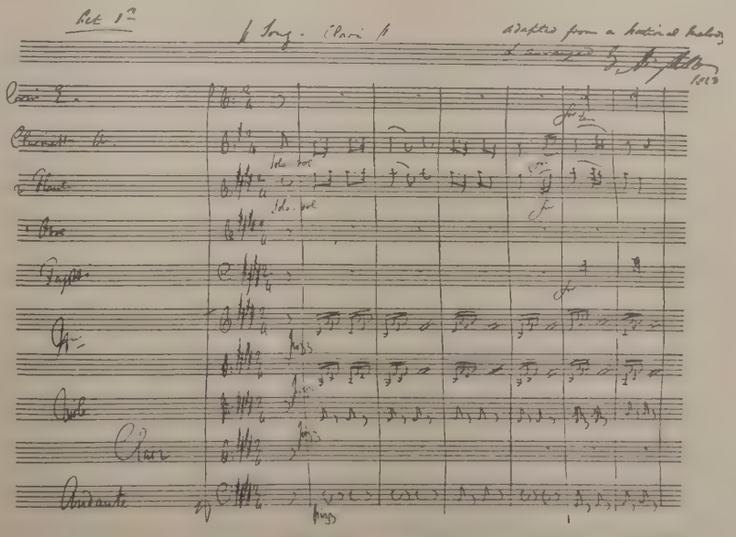
The World's Most Famous Song

The Story of "Home, Sweet Home"—The Song Immortal

By E. CLYDE WHITLOCK

E. Clyde Whitlock is the head of the Violin Department at the Fort Worth (Texas) Conservatory, concertmaster of the Fort Worth Symphony Orchestra, music critic on the Fort Worth Star-Telegram, *and a vice-president of the Texas Music Teachers' Association, of which he also has been president.*
—Editor's Note.

THERE COULD BE NO FINER BOND between the United States and Great Britain than the imperishable song, "Home, Sweet Home," the text of which was written by one of the most romantic figures in the early history of our drama, while the music of the song was done by a brilliant and able British composer.



The word, home, is translated in all tongues; but in no tongue, other than English, does it have the same significance and the same connotation. The British home and the American home have a kind of hallowed meaning that is not quite the same in other lands. Even though the Englishman's home is no more than a rose-buried cottage, when he gets inside and sits at his hearth, that cottage turns instantly into an impregnable castle; and the saying, "Every Englishman's home is his castle," is no empty euphemism.

The American cherishes much the same feeling; and it is, therefore, not surprising, even in this day when conditions have condensed living quarters into bandboxes, that those with British blood cannot relinquish the idea that, no matter how tiny his residence, the Briton's home is his domestic stronghold, fortified by age-old traditions, comforts, sympathy, love and understanding. It is for this reason that Americans and Britons cling so tenaciously to the vision of "Home, Sweet Home."

A Roving Genius

JOHN HOWARD PAYNE, the author of *Home, Sweet Home,* was born at Easthampton, a little hamlet on the ocean side of Long Island, June 9, 1791. He evidently had a precocious talent. In his father's school he was a bookworm and a famed debater. At twelve he was sent to the then recently founded Union College at Schenectady, New York; and at fourteen he was editing and publishing *The Thespian Gazette.* At fifteen he published his first play, "Julia," which was given in the same year at the Park Theatre in New York City and survived fourteen performances. Payne next went to Boston and continued his own education electively in the Public Library and by acting as a "super" in the old Federmount Theatre. Three years later, he made his début as an actor and became an immediate success. All contemporary newspaper criticisms speak of him as a glowing youth of very great personal charm, with beauty of face and figure. He received fees which would be large, even in this day. For a performance in Baltimore one ticket brought as high as fifty dollars.

Payne's interpretation of *Romeo* was so remarkable that in 1813 he was engaged for appearances at the Drury Lane Theatre of London, where he appeared also in "Hamlet" and "King Lear." During the following twenty years he remained in England and France, where he wrote and adapted more than sixty plays for the English stage. Edmund Kean played his "Brutus" fifty nights in London, a record run for those days. At one time it was as popular a part in the repertory of such great actors as Booth, MacCullough and Forrest, as was *King Lear.*

THE ORIGINAL MANUSCRIPT OF "HOME, SWEET HOME"

The Original Manuscript of this historic song was bought in 1923, by Mr. Sibley, a month after its centenary—it was first done in 1823. It was purchased at the sale of the library of Mrs. Luther Livingston, at the Anderson Galleries of New York City. The song is a part of the opera "Clari, The Maid of Milan." The opera itself was not a success; and it is famous only because of this song. It was first produced on May 8, 1823, at the Royal Theater, Covent Garden, London. The tune appears in the overture, then is sung in the first act, by the soprano, and is done again at the end, this time by a chorus off stage. The original copy of the manuscript is now in the Museum of the Eastman School of Music at Rochester, New York.

In May, 1823, he prepared the libretto for an opera called "Clari; or the Maid of Milan," with music by Sir Henry Bishop. There are some who contend that the libretto of "Clari" was first produced in Paris and that consequently the Payne version was an adaptation rather than an original work. Payne was then thirty-two years of age and becoming homesick for his native land. This undoubtedly accentuated the nostalgia instilled in the words of his immortal song, *Home, Sweet Home,* written to relieve the similar home longings of the heroine of the opera, which was presented that year at Covent Garden, London, with Ann Maria Free in the leading rôle and singing for its first time the song which was to become "a jewel that sparkles forever on the forefinger of time." The Library of Congress at Washington acquired, in 1932, a manuscript of the verses by Payne, which he had sent to Mrs. Joshua Bates of London with the following comment:

"I comply with your most complimentary request and write the words of 'Home, Sweet Home' in your valuable little book. I have added a few words more, addressed to you. It would be more pleasing to me if I could have had time to contribute something worthier of my friendship for you, but what this trifle wants in poetry, you will do me the justice to believe is made up in truth."

The Bloom of Romance

PAYNE FORMED A CLOSE FRIENDSHIP with Washington Irving, who helped him continually. He also knew Charles Lamb and was deeply in love with Mary Lamb. He was the first American to command serious attention in England, as an actor and as a dramatist.

Payne's infatuation for Mary Lamb never developed into courtship. Lamb wrote to him in Paris in 1822. "The weather is charming. There is a mermaid in London. You may not have an opportunity of inspecting such a pursiade again in ten centuries. My sister joins me in the hope of seeing you."

The pursiade (sic) was, of course, a fake worthy of a Barnum.

In 1831, Payne met Mary Harden, the charming daughter of the American Minister at Paris, Gen. Harden. "Love at first

sight" resulted, and Payne was devoted to her until his death, despite the fact that Mary's father forbade their marriage. When in 1832 Mary returned to her home at Athens, Georgia, Payne followed her. It was Gen. Harden who secured Payne's appointment to the consulship at Tunis. Payne gave the original manuscript of "Home, Sweet Home" to Mary; and, at her request, it was buried with her some years later in the tiny graveyard of an ancient local church.

Payne had a very keen feeling for the American Indians and for a time lived with the Cherokee chief, John Ross, in a southern hut (Georgia?). He warmly espoused the cause of the Cherokees and wrote a number of magazine articles in their behalf.

Three years after his appointment at Tunis, he was recalled, but was again appointed in 1851 and died in the African City on April 9, 1852. His body remained abroad, in the cemetery of St. George, over thirty years, when the well-known art connoisseur, W. W. Corcoran, provided means to have it brought back to America, where it was buried in a national shrine at Oak Hill, Washington.

A Popular Composer

In 1936 the world celebrated the one hundred and fiftieth anniversary of the birth of a composer of pre-Victorian times, Henry Rowley Bishop, who in his day was popular, influential, prolific, capable, and for nearly half a century a leader in London musical affairs. His name at the right hand side of the program sheet, where composers' names customarily are credited, is nowadays associated almost exclusively with one song, *Lo, Hear the Gentle Lark,* as sung by the coloratura, with flute *obbligato*. The song, to a text by Shakespeare, is the badge of an age which is irrevocably closed, the era of scroll saw architecture and umbrageous beards; but it has vitality, and a century after it was written is given constant performance throughout the world with a frequency which could not have been hoped for by its composer.

Few composers could have enjoyed greater popular and official recognition than did Bishop in London, where he had been born in 1786. His first opera, composed at the age of twenty-five, attracted attention; and, all in all, he produced about one hundred and thirty operas or similar works. The list of official posts he held is imposing, including the following: 1810-11, composer and conductor at Covent Garden, London; 1813, alternate conductor of the London Philharmonic, years before it commissioned Beethoven to write the "Ninth Symphony"; 1819, oratorio conductor at Covent Garden; 1825, conductor, Drury Lane Theater; 1830, musical director at Vauxhall; 1839, bachelor of music, Oxford; 1840-41, musical director, Covent Garden; 1841-43, professor of music at Edinburgh; 1842, knighted by the young Queen Victoria; 1840-48, conductor of Ancient Concerts; 1848, succeeded Dr. Crotch as professor of music at Oxford; 1853, Doctor of Music, from Oxford.

An Unsettled Origin

But it is not for all this, nor as the composer of the lark song, that he should hold a place in the affection of the entire English speaking world. How lamentably few persons, even among musicians, know that one of the most loved songs ever written, *Home, Sweet Home,* was a number in Bishop's opera, "Clari, Maid of Milan." The inseparable union of text and tune, is, however, the combined work of two authors. The authorship of the tune appears to be pretty well settled upon Bishop, though there are still books of songs which identify it as a Sicilian melody. Charles Mackay, English poet and journalist, reports a conversation with Bishop in which the composer gave the story of the melody. He was editing a collection of songs of all nations, and discovered that he had no worthy Sicilian melody; so he wrote one himself, ascribing it to Sicily; and it was that tune which he used for Payne's poem.

We must recognize certain incongruities in this story. Mackay's account quotes Bishop as saying that in his "early boyhood" he was engaged upon the collection, for which the so-called *Sicilian Air* was composed "to the verses of an American author, Mr. Howard Payne, then residing in England." Since Bishop was six years older than Payne, and since Payne did not submit his plays until 1823, Bishop could hardly have joined tune and words "in early boyhood."

While it is possible that the tune might have been written many years earlier, and chosen at the proper time for use with Payne's words, there are internal evidences in the melody, as we now know it, which would testify against its earlier use. While the main body of the tune is entirely conventional in form, the refrain is so unusual in meter, both in scansion and musical measure, that it would seem necessarily to have been written expressly for the text. It is possible that Bishop did write the tune in early manhood, for his national collection, but without the peculiar refrain, which may well have been added at the time of his work upon the opera. In the long run it is far more plausible to believe that the tune was composed directly for the Payne text than that it could have been in existence as a whole, as the so-called *Sicilian Air,* and but by accident possessed the exceptional metrical characteristics of the refrain, which would fit the Payne verse.

Extraneous Stanzas

As published, the song consists of four stanzas. But a copy in the handwriting of the author, dated at London, September 19, 1829, and containing two additional stanzas, has been deposited in the Library of Congress by a secretary to the British embassy, Leander McCormick-Goodhart.

The added stanzas read:

"To us, in despite of the absence of years,
How sweet the remembrance of home still appears;
From allurements abroad which but flatter the eye
The unsatisfied heart turns and says with a sigh—

'Home, home, sweet, sweet home!
There's no place like home, there's no
place like home!'

"Your exile is blest with all fate can bestow,
But mine has been chequered with many a woe;
Yet though different our fortunes, our thoughts are the same,
And both, as we dream of Columbia, exclaim—
'Home, home, sweet, sweet home!
There's no place like home, there's no
place like home!'"

The lady, to whom this autograph-album like addition to the song was addressed, was Mrs. Joshua Bates, wife of a London banker, but a native of Massachusetts. The publishers of the song are said to have made ten thousand dollars from it during the first two years, while the author received from them not even a copy of his own song. But if Payne remained without pecuniary reward, he did experience one brief soul stirring moment of recognition. In 1850 Jenny Lind made her last tour of the United States under the management of P. T. Barnum, and in the course of her travels appeared in Washington, D. C. before a brilliant audience, including President Fillmore and the leading government officials, gathered in the hall of the House of Representatives for the concert. The Philadelphia Record, reviewing the concert, carried the paragraph:

"The matchless singer entranced the vast throng with her operatic arias and exquisite ballad melodies, but the great feature of the occasion seemed to be an act of inspiration. The singer suddenly turned her face to that part of the audience where Payne was sitting and sang *Home, Sweet Home* with such pathos and power that a whirlwind of excitement and enthusiasm swept through the vast audience. Daniel Webster himself almost lost his self-control, and one might readily imagine that Payne thrilled with rapture at this unexpected and magnificent rendition of his own immortal lyric."

When Your Child Won't Practice

Practical Suggestions to Parents of Children who are "Practice Problems"

By WILLIAM PARKS GRANT

The problem of getting children to practice music lessons is, of course, an old one. But it sometimes happens that even with thoroughly up to date teachers and so-called "irresistibly interesting" teaching material, the practice problem still exists. After all, children who would rather practice than play are very rare; and, while a good teacher using good materials can stimulate interest, he cannot inject it into the child.

Parents, who are confident that their children are studying under good teachers and are being assigned attractive material, but who still find the practice hour something of a struggle, might ask themselves these questions:

1. Does the child have a practice period reserved free from interruptions? Or is he asked to stop practicing every few minutes to run an errand, to do a household task, to answer the door, or to telephone, and the like? Few people like to undertake work when they do not know how long they can keep at it. It is only fair to the child that he should be guaranteed a certain time of the day in which only the severest emergency might interrupt him.

2. Is he often asked to stop "a minute" so someone can answer the telephone? If so, could arrangements be made so that the practice room will be far enough from the telephone to eliminate such interference? Of course this is not always possible, but sometimes it is.

3. Is he asked to play for guests? Often a rebellious child can be made to play for an hour under the strategy idea that he is entertaining someone. If he does play for guests, do they really listen to him or do they make his music a mere background for an unceasing buzz of conversation? Do not let "That's just lovely, dear; do play some more" hypocrisies from chattering guests deceive you; if they talk, they are not listening to the music.

4. Does your child get an opportunity to hear good performers on his instrument? If he does not, after a little progress he will soon think he knows enough about his instrument, and will have no incentive for further study. In smaller communities, where concerts by artists never occur, this is quite a problem; but it may be solved by a judicious use of the phonograph and radio.

5. Speaking of the radio, it can be also overdone. In some homes the radio is turned on the first thing in the morning and turned off the last thing at night. Meanwhile market reports, weather reports, and all kinds of music blare forth by the hour. If a child hears music all day long, he will become surfeited by it and will not want to make music of his own. The musical appetite must be sharpened by moderation in its gratification. To scold a child for not practicing, when the radio already has been grinding out music for hours on end, is as unreasonable as scolding a child for not eating a good, full supper after he has been "piecing between meals" all day long.

6. Is the practice hour chosen so as to be at the time of day the child most wants to practice? Or is he called off the baseball diamond with "Johnny, you come in here and practice your music lesson"? If so, it will be a rare Johnny who will come willingly and who will practice joyfully.

7. Are the child's lessons too far apart? The writer recalls the case of a beginning piano pupil whose assignments were naturally very short, but who was given a lesson only once in two weeks. Only a few days after one lesson she would know her assignment—all that could be taught during her lesson—perfectly and by heart. Small wonder she did not want to practice an hour a day for the remaining ten days or so. Young students should have two lessons a week; if possible, more.

8. Do not insist that your child should do his entire day's quota of practice in a single sitting. Psychologists say that most children get more benefit from an hour's practice if it is split into three twenty-minute or four fifteen-minute periods, than if it is done all at one sixty-minute peri

9. Is the child's playing limited to less material only? If he wants to sight-re other music, and it is not trash, let h do so; it is a healthy sign, but regard t as "time out" from the practice time quo Also, if he has an inclination to "dru or experiment with his instrument, do n interfere unless he is obviously only wa ing time. Many good musicians, young a old, love to "drum around" and "monke with the piano, or other instruments. Su experimentation is very definitely valuab Debussy's discovery of a new style of co position based on unusual chords is sa to date back to his boyhood experimen at the piano. Schumann and Chopin al loved to do this.

These suggestions are not intended a cure-all. In many difficult situations th are not at all the cause. But even if yo child practices without a whimper, t rights and privileges suggested here belo to him.

* * *

"Music, rightly taught, is the best mi trainer on the list. We should have me of the practical subjects, like music a drawing, and less grammar and arithmeti

Dr. Charles Eliot

BAND AND ORCHESTRA DEPARTMENT

Conducted Monthly by

WILLIAM D. REVELLI

FAMOUS BAND LEADER AND TEACHER

CONDUCTOR OF THE UNIVERSITY OF MICHIGAN BAND

A New Challenge to the School Musician

THE PROBLEMS THAT FACE US in our public school music educational system are many and varied, nd as in any other field of activity, advancement is made when obstacles are surmounted and problems solved. The school and and orchestra program of to-day is he result of a long struggle for recognion, and a measure of success has been chieved in establishing it as a potent force n the lives of our young people.

Yet the field lies open and challenging. Experience has taught us that perfection is himerical—a goal to be striven for and not eached. We are justly proud of the healthy tatus of instrumental music in the educaion of American youth, but we are not ontent to rest on past success.

To my mind, one of our next steps orward must be in the direction of a true valuation of the worth of our different nits of organization, and an understanding of the care and attention each one deserves. Basically, we believe, there are four definite nits of organization involved in our school program:

Unit I—*The individual* (using any single instrument).

Unit II—*The section,* or class (separate groups of instruments such as violin, clarinet, horn, and so on).

Unit III—*The division,* or family of instruments (such as the woodwinds, strings, and percussion).

Unit IV—*The full Band or Orchestra.*

Soloists and ensembles are adjuncts to these basic units, and these have been discussed previously at length in this Department.

It is obvious that these units are progressive, for the fourth cannot exist without the third, nor the third without the second; the first unit is the essential constituent of all.

The functions and levels of achievement of these units, however, are at variance. Throughout our school instrumental system there are tremendous differences in the importance attached by our music educators to each unit. For some the full band is a beginning point as a unit of major importance, and the other units are regarded as natural parts of the whole. Others view the fourth unit as a final development of the first three.

The problem, then, with which we are concerned, resolves itself into the matter of determining the relative importance and attention which should be accorded each unit. In the process of instruction how much time must be given to each unit? For all practical purposes which unit should be the focus of attention? Which is ultimately of greatest value to our entire educational program?

With these questions in mind, we may perhaps examine each of these units, discovering the advantages and disadvantages of too great or too little attention to any one unit. We must consider the elements of time and materials available to the educator, the methods of instruction involved, and the demands of the instrumental music program. It may be the means by which we can take a progressive step toward higher levels of musical attainment.

Unit No. I

IT IS APPARENT that any individual beginning the study of an instrument will progress most rapidly and satisfactorily if given individual attention and the opportunity for private consultation on the difficulties encountered in the study of the instrument. In the final analysis it is the individual whose capabilities determine the worth of the full unit, and as a component it follows that a better foundation in fundamentals for him brings a securer and better musical organization.

Those fundamentals so necessary to the complete control of the instrument can be more thoroughly mastered with greater guidance and closer supervision on the part of the instructor. Under such a condition, the student's attitude towards his task is more serious, and correction of faults can be accomplished more efficiently. The conservatories of Europe and America have proven that this type of instruction is absolutely essential to the final mastery of any instrument.

On the other hand, it goes without saying that in most of our public schools an intensive course of individual instruction is virtually an impossibility. The expense involved for teachers makes it prohibitive for the average community. Students are enrolling in our public school music classes in such "wholesale" quantities, that individual instruction would entail an expenditure of teacher time and money which most school systems could not afford.

Another disadvantage coincident with a greater emphasis on individual instruction is the lack of real interest displayed by the average young music student under such a method. It would appear that in this great country of keen competitive forces, the young American requires competition as a tonic for the motivation of his interest in music. This is certainly proven by the progress and development of school organizations under the stimulus of various contests and festivals.

It is to be understood, of course, that individuals differ from one another and musical individuality is not to be regimented. But in general the foregoing premises are applicable.

Unit No. II

IN ANALYZING the second unit we find instruction methods are advantageously similar to those in the case of the first unit. There is the possibility of correcting specific faults of each individual in spite of the fact that less time can be alloted to each. Fairness and expediency require a division of time and effort so that every student of the section may receive sufficient instructional aid. Although less time and attention are given to the individual, there is a saving of expenditure of time and money.

Man is a social creature, and as such he is highly adaptable to community or group effort. In group music instruction the young student learns this desirable characteristic in his earliest lessons; and this is an advantage which might be lost in an overemphasis on the individual, where the student is apt to follow his own path undisturbed and at his own *tempo.*

Sectional training of this kind promotes a desire for ensemble experience to a greater degree, also, than individual training. Such an instructional method, however, is not intended for those few talented children whose careers are to be those of the concert stages, but for those who are enrolled in our music program with a view to their own social and aesthetic advancement.

This second unit shows up to disadvantage, however, where such groups are so large that sufficient attention cannot be given to the separate students. As a result the class will continue to have as members some players who are deficient at the end of a term in the normal requirements of musicianship. In addition the working out of the music schedule is more difficult for this unit, and problems are great where there is a limited music staff.

Unit No. III

BY TEACHING INSTRUMENTAL WORK in family groups, which include the four main divisions of strings, woodwinds, brass, and percussion, one might at first conclude that with greater attention to this unit there is effected a considerable saving of time and expense. But closer scrutiny shows that this is not so true when the limited progress of the individual is brought to light. Such a program of training has really been false economy, for those students who have not been corrected of bad habits may be afflicted with major faults from which they cannot recover.

Schedule problems with this larger group are more marked than with the second unit, and this method of instruction of divisions fails from a teaching standpoint. For one thing, there is a scarcity of available material suitable to such instruction. We have no textbooks for academic subjects which attempt to include in one book all the sciences, or even closely related subjects. In like manner no method has been written which covers satisfactorily the many problems involved in the teaching of family groups of instruments *at one time.* Some excellent material has been provided on many of these problems such as range, individual characteristics of the various instruments, and many other problems, but none are so wide in scope that they enable the handling of this third unit in the process of instruction.

Unit No. IV

A PLAN WHEREBY the entire band or orchestra is to receive attention and instruction at one session appears on the books as the least expensive. It entails less trouble for students and teacher, and it is naturally more attractive and popular for the student. It is a sugarcoated pill to the beginner, and helps him over the period of "growing pains" on his instrument. The glory of playing in a complete group causes the organization to grow quickly. There is unbounded enthusiasm. Schedule conflicts are lessened.

These factors seem to permit the assumption that this fourth unit is most desirable as the focal point of instruction. But actually it is very likely the least desirable. It must of necessity lack every vestige of thoroughness of instruction on the individual instruments, and there is a sacrifice of

(*Continued on Page* 547)

THE ETUDE is warrantably proud of its new Band and Orchestra Department under the direction of William D. Revelli. No educator of America is in greater demand for band and orchestra clinics held in educational institutions in all parts of the country. His own Symphonic Band at the University of Michigan is widely recognized as one of the finest bands of its type anywhere in the United States. It is noted for the purity and smoothness of its tone as well as for the brilliancy of its wood wind choir.

A Monthly Etude Feature of practical value, by an eminent Specialist

MUSIC EXTENSION STUDY COURSE

For Piano Teachers and Students

By DR. JOHN THOMPSON

Analysis of Piano Mu appearing in the Music Section of this Issue

VIVIENNE
By STANFORD KING

As indicated by the title, the characteristics of this piece are animation, pulsating life, and energy.

The *tempo* is *allegretto;* the rhythm, while well marked, should be allowed a certain amount of graceful elasticity.

Preservation of the melody line, phrasing, and correct use of the pedal, these are equally important. Pedal marks and phrasing lines are clearly indicated, while the melody is obviously in the upper, or soprano, voice of the right hand.

The restless activity of the first two sections is in contrast to the more sustained melody of the *Trio,* which lies for the most part in the alto voice and is played by the right hand.

Throughout the piece particular attention should be given to the sudden accent, *staccato* and *sostenuto* marks appearing in the melody.

Another point is the observance of many changes in pace, all however, clearly indicated in the text.

THE FROG'S CONCERT
By FRANCESCO B. DE LEONE

This humorous piece should be played somewhat in the style of a burlesque. It opens with the melody in the bass and is played *senza pedale,* without pedal. By observing the phrasing lines and applying a sharp release, the croaking of the frogs is given a musical imitation.

Be sure to roll the right hand accompanying chords rather briskly with sharp release. Try to imagine if you can, a frog banjo strumming an accompaniment to the throaty notes of the melody.

In the second section, beginning with measure 17, make a noticeable distinction in the volume of tone where the melody in eighth notes passes from one hand to the other. This section might suggest alternating phrases between the lady frogs and gentlemen frogs of the chorus.

The Cuckoo joins the program with an obbligato at measure 41. Note the echo effect in measure 43.

An interesting novelty and easy to play.

THE FOUNTAIN
By CHARLES WAKEFIELD CADMAN

This number, in the form of an etude, is a piano setting of the verse by Nelle Richmond Eberhart.

It opens with a four measure introduction which leads playfully into the first theme. The *staccatos* represent the "shining drops it flings," while the *legato* passages indicate "Ripples, dimples, bends and sways". This music calls for agile fingers and it might prove helpful to learn the right hand part first in *legato,* changing to *staccato* after the passages are well set in the hand.

Set a good six-eight swinging pace at the very beginning and preserve it throughout.

The second section is played much more boldly, the *fortissimo* measures alternating with those marked *mezzopiano.*

In performing this music, use your imagination and make it as descriptive as possible.

DANCING IN THE GARDEN
By BERTHA R. FRICK

Except for the *tempo* this number is to be played in the style of a gavotte. The *alla breve* sign of course, means two counts to the measure, one to each half note.

As in the gavotte, contrast between *staccato* and *legato* is of vital importance. Be sure to observe the many two note slurs all of which have a direct bearing on the rhythm.

Keep it rather on the dainty side, not allowing the fortes to be too robust. The *tempo,* once set, should be kept quite strict. Make it as colorful as possible without becoming too intense. As in most dance forms, simplicity is the real charm.

Pedal should be used sparingly.

THE CATHEDRAL AT TWILIGHT
By BERNARD WAGNESS

In playing this number capture as closely as possible the atmosphere suggested by its title.

With the hands held close to the keys apply forearm pressure combined with the use of the pedal as indicated to secure the utmost resonance with the minimum amount of percussion.

Treat the entire piece in the style of a nocturne and try to balance the tonal value of the chords so that the upper or melody tones are given a bit more prominence than the other notes of the chord.

At measure 17 the *tempo* becomes a bit more animated, *piu moto,* and this remains in effect until the *allargando* in measure 22.

This number will afford good practice in the use of the so-called syncopated pedal.

FLOWERLAND
By CHARLES HUERTER

The ever melodious Mr. Huerter presents this month a musical picture calling for adroit finger control in the right hand, especially where the theme appears in double notes. Both *legato* and *staccato* come in for equal attention and the passages must be given light and graceful treatment. It will be helpful to learn this piece first with rather firm and deep touch, followed by light and shallow touch after the groups are comfortably set under the hands.

Much freedom in the use of *rubato* is not only allowable but desirable. Mostly the changes in *tempo* are indicated, but in addition the performer may "bend" the *tempo* according to taste—within reason of course.

The second section, beginning with measure 21, indicates a certain degree of animation, both in *tempo* and tone. The key (C major, dominant of F) is also brighter in character than that of the first section.

At the *Dal Segno* mark return to the first mood and stop at *Fine* in measure 20.

A CANOE FOR TWO
By GEORGE E. HAMER

Quite apropos for the month of August is the title of Mr. Hamer's piece.

It paddles its way along in waltz time and should glide from one phrase to the other with the smoothness of a canoe over placid waters.

Extended use of the pedal is indicated to preserve resonance, thus emphasizing the gliding effect.

After the first theme begins, measure 9, note the accents appearing on the second beat in the left hand. These accents are important to the rhythm. Coming as they do on a weak beat, they have a decided effect on the general "swing" of the piece.

For the rest, follow the marks of expression. There is nothing complex in the interpretation.

TANGO MEXICANO
By FRANK GREY

A very popular rhythm is the tango, both in standard and popular music.

It is Mexican in origin and imitates curiously enough, the movements of Negro dancers. Rhythmically it is similar to the habanera which in itself is a Cuban version of an African dance. The *tempo* of the tango however is just about half as fast as that of the habanera.

In the second section, beginning with measure 23, give marked emphasis to the left hand part while preserving a syncopated accompaniment in the right hand. The *Trio* section which follows should be treated rather lazily with a slight dragging (not overdone) of the rhythm. Pick up the *tempo* again as the first theme reënters—*D.C. al Fine.*

The pedal is not marked and must be used at the discretion of the performer. Generally it is to be applied on the first eighth and released on the third eighth of the measure.

SALTARELLO
By CHARLES DALLIER

The saltarello is a popular Roman dance, similar in many respects to the tarantella.

It can be danced by one or two persons. When danced in pairs, it is generally by a man and woman, the latter of whom holds up her apron throughout the dance.

It maintains a quick and hopping step with much leaping into the air and, like the tarantella, gradually increases in *tempo* as the dancers move round in a semicircle, constantly changing position and exercising the arms as vigorously as the legs.

The *tempo* is *presto* and it is suggested that the piece be learned first in six-eight, later counting two to the measure—one count to each dotted quarter.

The second section is in the minor key and contains many two note slurs, observance of which is very important.

The piece is very pianistic as is to be expected when it is learned that Charles Dallier is a *nom de plume* of Constantin von Sternberg, a distinguished Russian pianist and teacher who was located for many years in Philadelphia.

EXCERPT from SONATA, Op. 101
By L. VAN BEETHOVEN

Beethoven is credited with having developed the sonata form to its highest and most refined state. His earlier works reflect the influence of Haydn, his predecessor. The compositions written during the so-called "middle period" of his life show a treatment distinctly his own, while those of the later years have become models of perfection for all time.

The example here given is from the early part of the third period.

Space in these columns is much too limited to attempt anything like a lesson in Beethoven traditions, characteristics, style, and so on. The work should be studied under the guidance of a teacher and it assumes a previous study on the part of the performer of earlier Beethoven.

SCHERZINO
By E. HABERBIER

The word *scherzo* is from the Italian and signifies "jest" or "joke."

It was first used in a musical sense to indicate style; that is, *scherzando* meaning playfully.

Later, when each movement of a composition had to have a distinct title, it was used in conjunction with some other word such as, *Allegretto scherzando* or *Presto scherzando.*

Still later the scherzo developed a form of its own and this is best exemplified, perhaps, by Beethoven in his symphonies.

Scherzino is the diminutive of *scher* therefore this piece becomes *A Li scherzo.*

Let its treatment be as playful as sible. Indeed it would be hard to do ot wise since its Chopinesque figures f "play themselves" as they sportively up and down the keyboard.

An interesting finger nail sketch of Ha bier will be found preceding the musi self in this issue of THE ETUDE.

LEAP FROG
By LOUISE E. STAIRS

As might be guessed from the title, piece affords practice in cross hand pla —the left hand leaping over the ri Sharp contrast should be made betw *staccato and legato.*

In difficulty it is about grade one a half.

BY THE BROOK
By EVELYN LANE

In this number the right hand sh play its melody with the best poss singing tone while the left hand simul the ceaseless murmur of the brook in *leg* eighths.

Follow the marks of expression indi ing *crescendo, diminuendo, ritardando,* so on. For the rest the piece more or plays itself.

PEACH BLOOMS
By SIDNEY FORREST

Melody playing, finger *legato* and brc chord accompaniment are all developec this short piece by Sidney Forrest.

It is in the key of F major and is pla *Andantino con moto* — which is to somewhat slowly but with motion.

It is best if played without pedal, quiring the fingers to do all the sustain

OLD MR. BASS CLEF
By A. LOUIS SCARMOLIN

We give you one chance to guess clef used for this number!

According to the text (*con fuoco*), *Mr. Bass Clef* is in a terrible temper a opens on the tonic and dominant. In answering four measures he shouts e louder as the hands appear in unison, octave apart.

Obviously this number is intended pupils who need additional practice in re ing bass notes.

SONG OF THE CELLO
By DAVID NASON

A good number for developing left h melody playing.

The left hand part, naturally, should made to imitate as closely as possible tones of a violoncello.

The right hand accompaniment cons almost entirely of two note slurs, wh should be played with the drop roll atta

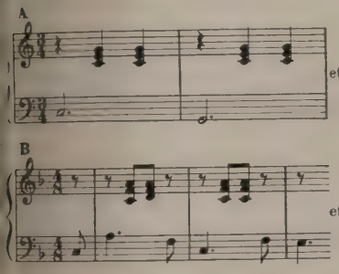
PARADE OF THE GOBLINS
By EVE JUDITH ROBINSON

Assign this number now to be f mastered for the Hallowe'en program s two months hence. Modern teachers h long realized the value of arranging *sonal* programs; that is, selecting titles fit the occasion. Hallowe'en titles mak particular appeal to junior students much interest can be added by a costu recital on a stage dressed up with a pumpkins, Jack O' Lanterns, and so on.

Since this number is a parade, it sh be played counting two to the measur one count to each dotted-quarter.

THE TEACHERS' ROUND TABLE

Conducted Monthly by



GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

Melody in the Left Hand

I have a pupil who has difficulty in bringing out a left hand melody of a piece, while the right hand should be playing softly. When there is a piece in which the right hand is to bring out the melody, she also has the same trouble. She complains that she cannot "bring out" one hand and keep the other soft at the same time. A good example is *Rose Petals*, by Lawson. To my notion, the left hand melody should be outstanding and the chords in the right hand should be kept in the background. But she seems to play both hands alike. Is there anything you can suggest to help us?
—A.B., Pennsylvania.

If Lawson's *Rose Petals* is the first bass melody piece you gave your pupil, there is very reason why she cannot subdue the ght hand; for this composition is too ficult, since the melody and accompany- chords are often played at the same e. Better first pieces for the purpose are lie's *The Big Bass Singer,* or Ketterer's *Evening Story* (this latter, slightly re difficult). In both of these, as you see the following excerpts, the melody and companiment are never played together. is a simple matter to teach the pupil to y the left hand richly *legato* and the ht hand very lightly *staccato.*

Ex. A is from *The Big Bass Singer,* by olfe; Ex. B is from *An Evening Story,* Ketterer. It is only a step from these other slightly more complicated left hand elody pieces, such as—Mallard, *The Dancg School;* Scovill, *The 'Cellist;* Lehman, *he Skating Boy;* Lemont, *The Graceful ady;* Endres, *In a Sailboat,* and *The Gay ld Frog,* not forgetting our old, but ever elcome friend, *The Happy Farmer,* by chumann.

Studies Wanted

Please advise some studies to teach; and also some instrumental numbers for a student who has completed the following work: Mathews' "Graded Course, Ten Grades"; Hanon, "Three Books"; Czerny, "School of Velocity, four books"; Czerny, "Octave Studies"; Clementi "Gradus Ad Parnassum"; *Last Hope,* by Gottschalk; *Sextette* arranged for left hand; *Polka De Concert,* by Bartlett; *Polonaise in A,* by Chopin; *Fantaisie Impromptu,* by Chopin; *Flight of the Bumblebee,* by Rimsky-Korsakoff; *Prelude in C-sharp minor,* by Rachmaninoff; *Streamlet,* by Packer; *Spinning Song,* by Mendelssohn; *Elfin Dance,* by Jensen; *"Moonlight Sonata,"* by Beethoven; *By the Waters of Minnetonka,* by Lieurance.

Which composers have I slighted? I would also like to know some American composers for her to study.
—T. C. D., Wyoming.

Which composers have you neglected? Only Bach, Handel, Mozart, Haydn, Schubert, Schumann, Brahms, Liszt and MacDowell—not to speak of Beethoven, Chopin and Mendelssohn, only one of each of whose works she has studied! The greatest treasure house in the world is open to her. Go to it, choose anything and many things by these composers, and your student's spirit will be immensely enriched. Throw out all "pure" etudes for a while; let the harder Chopin preludes and studies (Op. 10 and Op. 25) take their place. Later, return to Czerny, this time Volume III of the Liebling selections; use only a few concentrated studies (Nos. 1, 4, 6, 11, 20, 25), these to be memorized and practiced at intervals *for many* years to come.

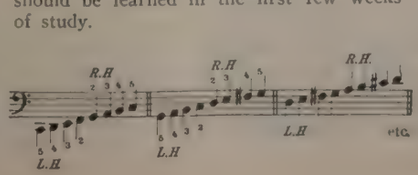
Suggestions for American pieces: Heaps, *Along the Navajo Trail;* J. P. Scott, *At the Donnybrook Fair;* J. H. Rogers, *Feu Follet;* Cooke, *Black Swans at Fontainebleau;* Mowrey, *The Soft Shoe Dancer;* Barth, *On the Horizon;* Terry, *Tarantella;* Whelpley, *Minuet, Op. 3, No. 2;* Boyle, *A Curious Procession;* Gardner-Amadis, *From the Cane Brake;* Josef Hofmann, *Nocturne;* Powell, *The Banjo Picker;* King, *Valse Coquette;* Ewing, *March of the Sea Gods.*

Study Material

I am a graduate pianist of a European conservatory; have taught piano for eight years. For two years I have not practiced much but can now devote two and one half hours daily for piano practice. 1. What would you suggest I study? 2. What are some good piano solos that I could play for groups who are not musical? 3. How should I divide my practice?—M. P. C., New York.

1. "Selected Studies from Czerny-Liebling, Vol. III"; Philipp, "Complete School of Technic."

2. MacDowell, *Concert Etude;* Guion, *Harmonica Player;* Charlotte Davis, *Valse in A-flat;* Lane, *Crapshooters Dance;* Dett, *Juba Dance;* Schuett, *A la Bien Aimée;* and *Etude Mignonne;* Lecuona, *Malaguena;* Harriet Ware, *Song of the Sea;* Saperton, *Zephyr.*



The names of several other light, effective pieces by American composers come to mind, but their titles are so silly that I blush to put them on paper. Why will composers insist upon giving their pieces these sappy labels? If the music is good, an undignified title is a downright hindrance to its sale; if it is poor stuff, no kind of a title can help it. So, composers, take warning, from now on, all pieces like "Dainty Dewdrops," "Simpering Sunflowers," "Crawling Caterpillars," and "Whispering Wishy-Washies," are barred from mention on this page.

3. Technic—forty-five minutes; two new pieces (thorough memorizing) each, thirty minutes; new pieces (reading) thirty minutes; review pieces, fifteen minutes.

When to Begin Scales

Some teachers do not begin scales until the latter part of second grade work. 1. Do you think it advisable to teach scales for transposition and key signatures early, or should they be disregarded for a while? 2. Also what instruction book would be good to start a ten year old pupil, who has never had music before?—Mrs. G. O. P., Oklahoma.

1. Major scales like these, in "tetrachords" and in the complete key circle should be learned in the first few weeks of study.

Before the end of the first year, slow major scales should be well started, three octaves up and down, hands separately.

2. John Williams, "First Year at the Piano"; or Isadore Freed, "First Year Essentials"; or Bernice Frost, "At the Piano."

Where Shall I Start?

Could you give me an idea as to the best section of this country where a young teacher could begin and grow with a community?

I have heard that the West offers some possibilities. Do you know anything about this?—R. A. H., Missouri.

Do you realize how much of a wallop any direct answer to your question holds for me? If I say, "Go West, young man," an army of music teachers in that part of the land will arise to slay me. In righteous wrath they will cry aloud, "Off with his head! The teaching profession here is glutted. There is no more room. Out with him!" And this goes for all sections of the country. So, you see, to save my tough old hide, I must answer you obliquely, reaffirming (however tritely) that opportunity, your humble servant, is at your beck and call; eagerly waiting at your doorstep to command, now and anywhere. Sometimes he is a bit coy; but, cleverly approached, he can be apprehended and coaxed into serving even a timid soul.

Of his would be masters, however, he demands certain qualities—competence, sincerity, unselfishness, resourcefulness, imagination, enthusiasm, boundless vitality. If you lack any of these, like as not he will promptly hie himself to another's doorstep.

Several years work supervising the middle western division of the Federal Music Project convinces me that prospects for success in the music teaching profession have never been so bright as now, especially in the more thinly populated or so-called "backward" sections of the country. Federal teachers are doing excellent spade work; and the thorough surveys made by the Project in several states have given us a clearer picture of the music needs of our land than we have ever had before. Startling facts on the pathetic plight of music education in rural districts have been brought to light; everywhere the call of opportunity is sounding.

Listen to a meager few of the items which have been culled from the surveys: In a comparatively small section of Ohio there are two hundred and thirty-seven rural schools with fifteen thousand children who do not have any music instruction whatsoever; in Michigan, where instrumental training is available in only one hundred and twenty-eight communities out of seven hundred and fifty, 13,526 pupils *would like* to study some instrument if facilities were available; that is, if there were teachers. In the enlightened state of Wisconsin five hundred and thirty-two out of six hundred and thirty-four communities have no private teachers at all; and, the most depressing fact of all, two-thirds of our nation's four million rural children are without musical activity of any kind.

Now, look at the brighter side: In the rural districts of Oklahoma alone, hundreds of music clubs and organizations have been started in the last two years, through the activities of the Federal Music Project. Here, as elsewhere, the training and stimulation initiated by many of the teachers are bearing a bumper crop of results; some teachers have been found so indispensable to the community that they have been taken over by towns or school systems, or are now, "on their own," teaching large groups of students privately or in classes. Everywhere there is need for properly equipped musicians who possess the pioneer spirit and who are willing to tackle a lot more than mere piano teaching. They must be able to organize choruses, orchestras and bands, and to teach all sorts of instrumental classes—depending entirely on the trends and talents of the community. Federal music teachers often cover a circuit of half a dozen towns.

After all, how much more interesting such a diversified field is than just plain private instrumental teaching. But it also takes much more resourcefulness and preparation. I wonder how many teachers will hear the call. As in the days of Paul, the apostle, the rural regions are crying out: "Come over into Macedonia and help us. We need and want music. Will you bring it to us?"

Neighbor's Corrections

A pupil asked me if there is any harm if a neighbor corrects her faults: wrong notes, value, or rhythm. I always encourage such corrections. Others argue against it. May I ask your opinion?—C. G., California.

If her neighbor is competent and interested, and her criticism instructive and intelligent, then by all means let her help. But, may I ask, where, oh, where is such a paragon of neighborly virtue to be found?

Defective Rhythm

I have a pupil fifteen years of age who has very good technic and a pleasing touch and enjoys her music greatly, but seems to have absolutely no natural sense of rhythm. When she came to me after three years with another teacher, she could play with apparent facility such things as the Bach *Solfeggietto.* I was pleasingly surprised at her playing. However, on questioning her, I found it was all froth, with no foundation, no real knowledge of the value of notes, of what key she was playing in, no realization that rests must be considered quite as much as the notes. I found that her playing was all by imitation, victrola records having been used to acquaint her with the sound of whatever she was studying.

Can you suggest any way to develop a sense of rhythm? Do you think it is simply a case of years of wrong teaching—or can it be that she will really never feel a rhythm without its being shown her?—M. M. W., Maine.

For helps in developing your pupil's rhythmic sense see this page in the July, 1937 issue.

Fifteen is not too late to improve her rhythm. Is it possible for her to join a tap dancing class? Even ballroom dancing will help her—and in fact any exercises or games which demand coördination from the large, basic muscles of the body. Also, by using the arm "conducting" movements which I have often recommended, her progress will, I am sure, surprise you—provided, of course, that she really *concentrates* on overcoming her defects. Does she listen carefully to rhythmic patterns, is she alert and attentive to all the rhythmic changes which she sees on the page, and which you point out to her? The attention factor is often the root of such a difficulty. You are following the right course in your insistence on improvement in general musicianship, for the possession of this quality makes a more sharply pointed mind quite indispensable.

Yes, Teacher, You Are in Business

A Frank Discussion of the Teacher's Approach to a Clientele

By DR. THOMAS TAPPER

I.

THERE IS A GLAMOUR about music, a hypnotic power within it, which seems to thrust many of its devotees into a realm of existence separate from that of the world round about. Particularly is it a realm apart from distinct commercial activity; from that of people in business who may be skillful in efficient operation, in the systematic handling of its processes, in money earning, and in fortune building.

The spirituality in music is so often set forth as a reason for classifying it apart from business, that it seems not amiss to call the meeting to order to look into the matter. If we can do that in a practical way, everybody concerned may benefit in terms of increasing prosperity. Even the most sentimental will stand for that.

Incidental to the inquiry and as an earnest of the fact that music may be regarded as a business without smudging its purity, let it be recorded here that no finer traders, for cash in advance and as much of it as the traffic will bear, are to be found on this revolving earth than many artists of deserved reputation in music who, knowing the value of what they can do, stand out for the best possible contracts. And they are absolutely right in so doing. Manifestly, the humblest teacher should, in the measure of her ability, learn their technic. It will be an everlasting advantage to her. But she must realize also what these famous people do to keep the contract in operation. There is a technic of that, too, which one must learn to perform without fumbling it. It is this: *These famous people not only give the public value, but they work with persistence to keep themselves and their skill up to their best attainable standard.* They hold to that standard faithfully. They keep it up to pitch just as a violinist keeps his instrument tuned with scientific precision. That is the technic which, in spirit, every teacher must set up and maintain. It is worthy of a just reward and, when intelligently applied, it invariably gets it.

The object of this article is, then, to consider the few fundamentals that follow. And the purpose of this consideration is to discover, if we may, how to handle our service giving power to the public so that we shall stand in the advantageous position of the man who was described by the Psalmist in these words: "And whatsoever he doeth shall prosper."

Here, then, are the approaches to the subject, four in number. Note their simplicity:

1. Any form of music occupation, whether it be teaching, singing, organ playing, radio performance, or what-not, is a business, or it is nothing.

2. This business, to be worth anything to society, must be handled in a manner as accurate, efficient and profitable as any other commercial activity.

3. While there is much in music that calls to and arouses the emotional, one should not be unaware of the fact that there is quite as much or more in it that appeals to the rational.

4. The person who, skilled in music to a degree that makes his service valuable to society and who does not get a living out of what he knows, is for some reason failing to make the most of his merchandise. His reason for failing may be legitimate. What we want to discuss, however, is whether his technic for making the most of what he has and can do is equal to the demands of necessity.

First, note this: If Robinson Crusoe had waited, on the sand where the wreck cast him up, for a sympathetic native to bring him a banana and a pomegranate for breakfast, his whitening bones would have been the only heritage he could have left. But he hustled around. On an island he had never seen before, he got busy and made a good living out of its resources for twenty-eight years. And he did it all by himself, by the simple process of *capitalizing what he found about him.* This, too, is a valuable technic only too little understood and practiced—the wonderful capacity to see, appraise, and use what is at hand.

Why, then, should a capable musician be idle in a populous community and do less? This is certainly worth looking into. Perhaps the technic of business may be made to serve the technic of music and both be made to serve the social life of which they are a part.

To begin with, we must remember that, though business handles tangible things, it is, after all, primarily concerned with the intangibles. Just note in advertising, printed or spoken, as well as in the announced policy of business procedure, the constant reiteration of these words:

1. Values.
2. Modernity (the newest).
3. Money back if you say so.
4. Exceptional service.
5. Courtesy.
6. Customer-Satisfaction.
7. Always a Pleasure to Serve You.
8. Come in Again.

Of course there is another type of business—the inefficient and disorderly. Here out of date stock is offered by way of poor service. There are always two kinds of everything—one finds his ideal in the class to which he leans most strongly. And, of course, he takes the consequences.

Will the reader be patient if we turn for a very brief moment to the automobile business? The digression will be worth our while. What interests the gentry of this commercial activity most? To-day's business, of course. But, alongside of that, note the enthusiasm its devotees have for next year's model. Now in the matter of next year's model, have you ever thought of this, that while we all delight to drive a car fitted out with the latest innovations, *we,* lord of it all, sitting proudly at the wheel, rarely, if ever, think of setting up a new model of ourselves? We go about equipped with the same old mental gadgets that we possessed on our twenty-first birthday, or prior thereto. They rub hard, one against another. They creak and squeak. But what care we? The car is a new model, if we are not.

So far, then:

1. Business, at its best, deals primarily in qualities invisible and intangible, but, nevertheless, real, satisfying and in demand.

2. Its great asset lies in giving better and better service.

3. Its merchandise is an ever-improving, useful, human adjunct of some kind.

4. It states plainly to the public the service it can render. It plays fair, guarantees satisfaction, and seeks persistently, or, "day by day, in every way," to pack more and more value into what it sells.

DR. THOMAS TAPPER

Despite what agitators, malcontents, a trouble specialists shout from the soap bo this is precisely what modern business trying to do. The music publishing house the department stores, the wideawake me chants in general, all are justly to b classed as creators and purveyors of valu

Reader, it should be our ambition teachers and artists to stand in this cla

II.

Let us consider a concrete case. Then w shall be permitted to see the technic which we speak in action.

A young man, a musician of good attai ment, left high and dry by a business cat trophe, determined to start over again in town some two hundred miles away. In this town he was a total stranger. Havin found a dwelling place for his family, moved them and enough furniture, inclu ing the piano, to set up a new home ba Then he considered his assets and liabi ties. On the asset side he placed the lo and companionship of his wife and chi dren; plus cash amounting to a few hu dred dollars; plus health and a type courage that never admitted defeat. As li bility he set down the cost of providi daily for himself and his family, plus e penses incidental to getting started profe sionally in a new community; and plus, course, the ever to be relied upon "u expected."

The situation was difficult; but, fort nately, it appealed to his sense of adventu And so he began, as Robinson Crusoe d to capitalize what lay at hand. First sought the president of a local bank, to r quest the privilege of depositing his mone But, more particularly, what he want from that gentleman was information. A between what the banker told him and wh he learned in conversation with the he of the local Chamber of Commerce, he co cluded that he should get to work with t following facts; and *reader, do you kn these facts about your town?*

1. The total of population within twenty-five miles of the center of town.

2. A list of local industries.

3. What local papers, daily and weekly?

4. The number of families in the population.

5. The number of children of scho age.

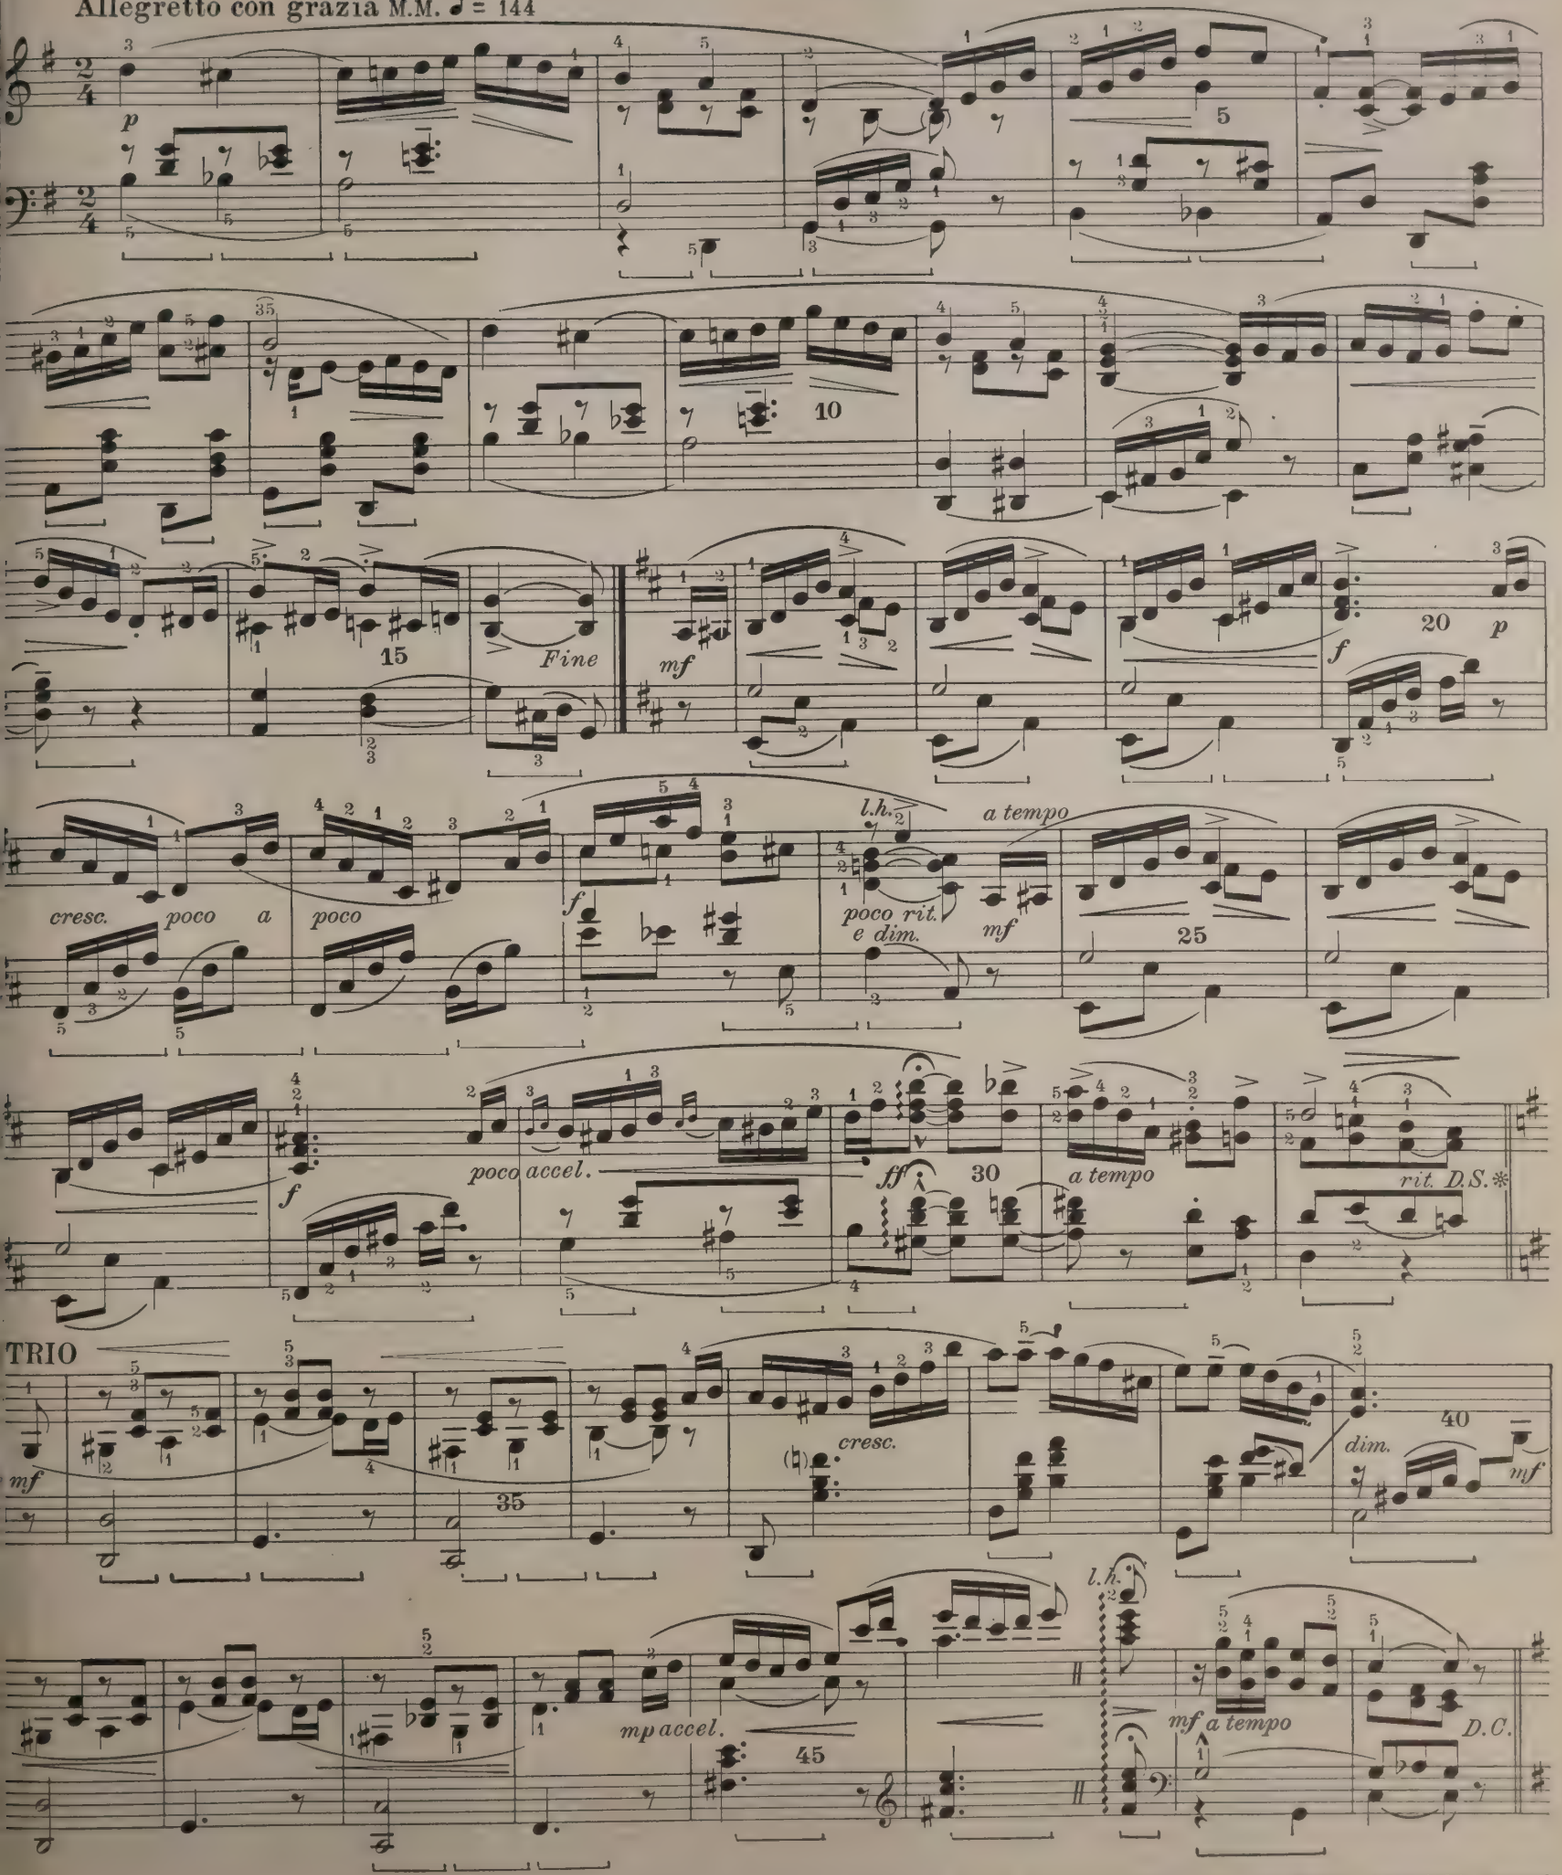
6. What business clubs (Chamber of Commerce, Rotary, Kiwanis)?

7. What music clubs and organizations (bands, orchestras, glee clubs study clubs, and the like)?

8. How many music teachers? How much friendly coöperation among them?

9. What forms of local entertainment are provided by local talent?

10. What types and quality of church music?



With these ten factors before him hero set about to make a blue print logical operations. For he saw that by means of one or more of these ten fa tors could he identify himself with t community and be of service to it. So worked out an efficiency program bas item by item, on the suggestion of banker and the Chamber of Commerce cial. He had, then, in hand the follow schedule of operations:

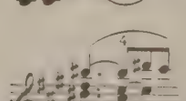
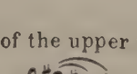
EXCERPT from SONATA, OP. 101

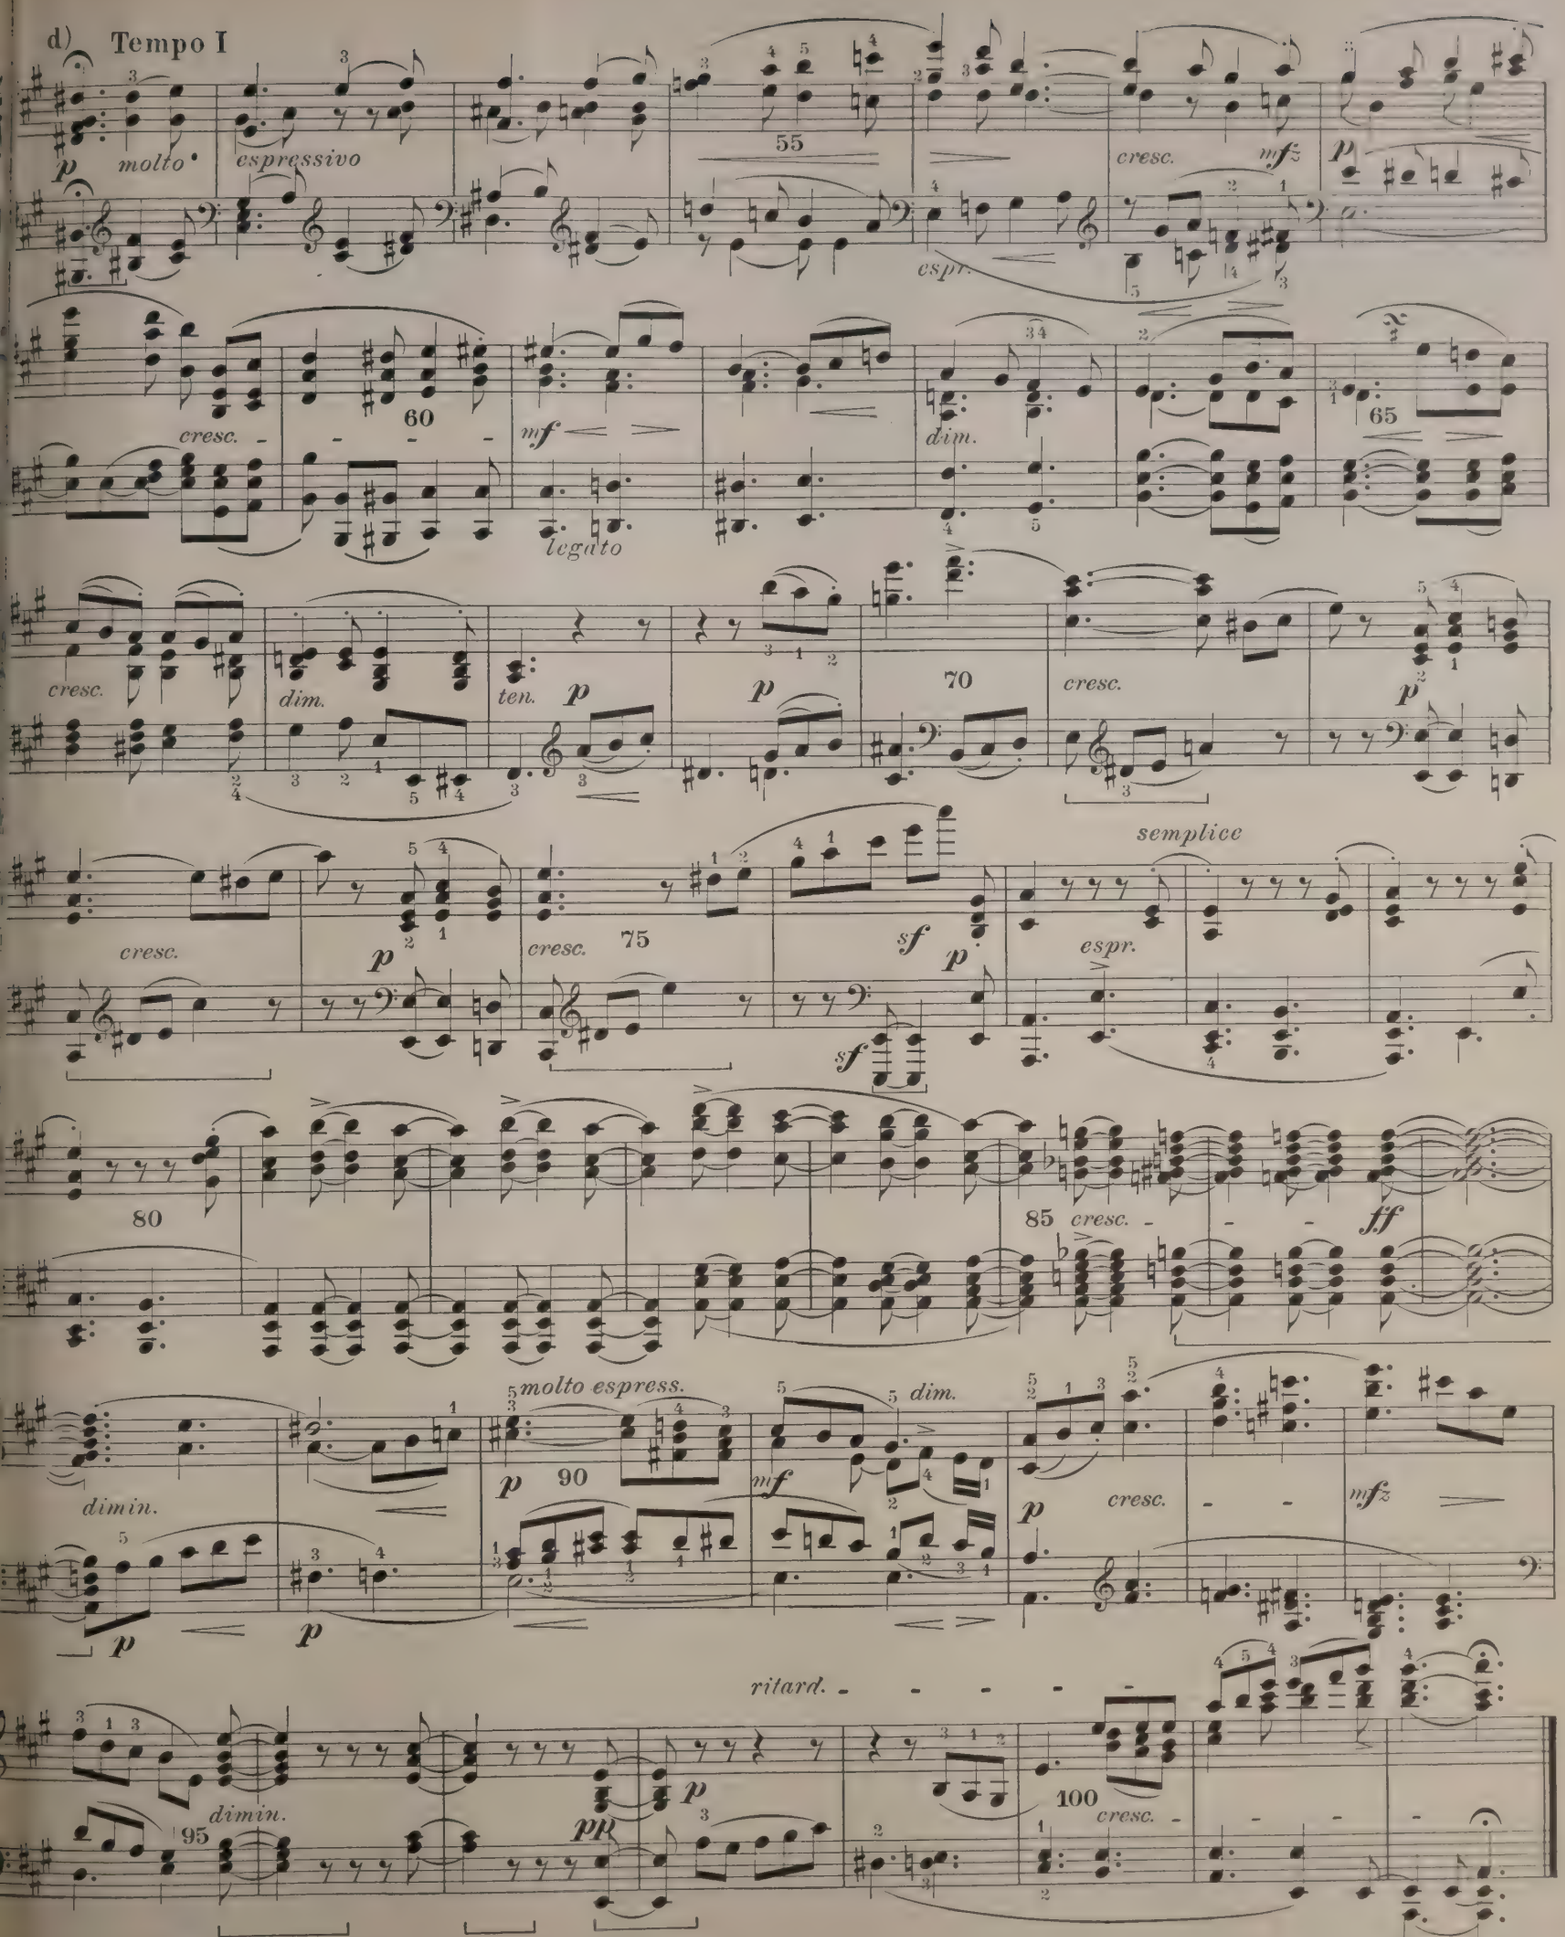


The magnificent genius of Beethoven, like that of other composers, progressed in periods. Critics assign to Beethoven three stages of devel
The "Sonata, Opus 101," for Hammerklavier (that is, "the piano"), was one of the first in the great third period, which included the "Missa Solenn
the "Ninth Symphony." The work was first performed in Vienna, February 18, 1816, and is therefore one hundred and twenty-two years old. It h
a great favorite with concert audiences for years.



Allegretto ma non troppo M.M. ♩.= 69 – 76

L. VAN BEETH

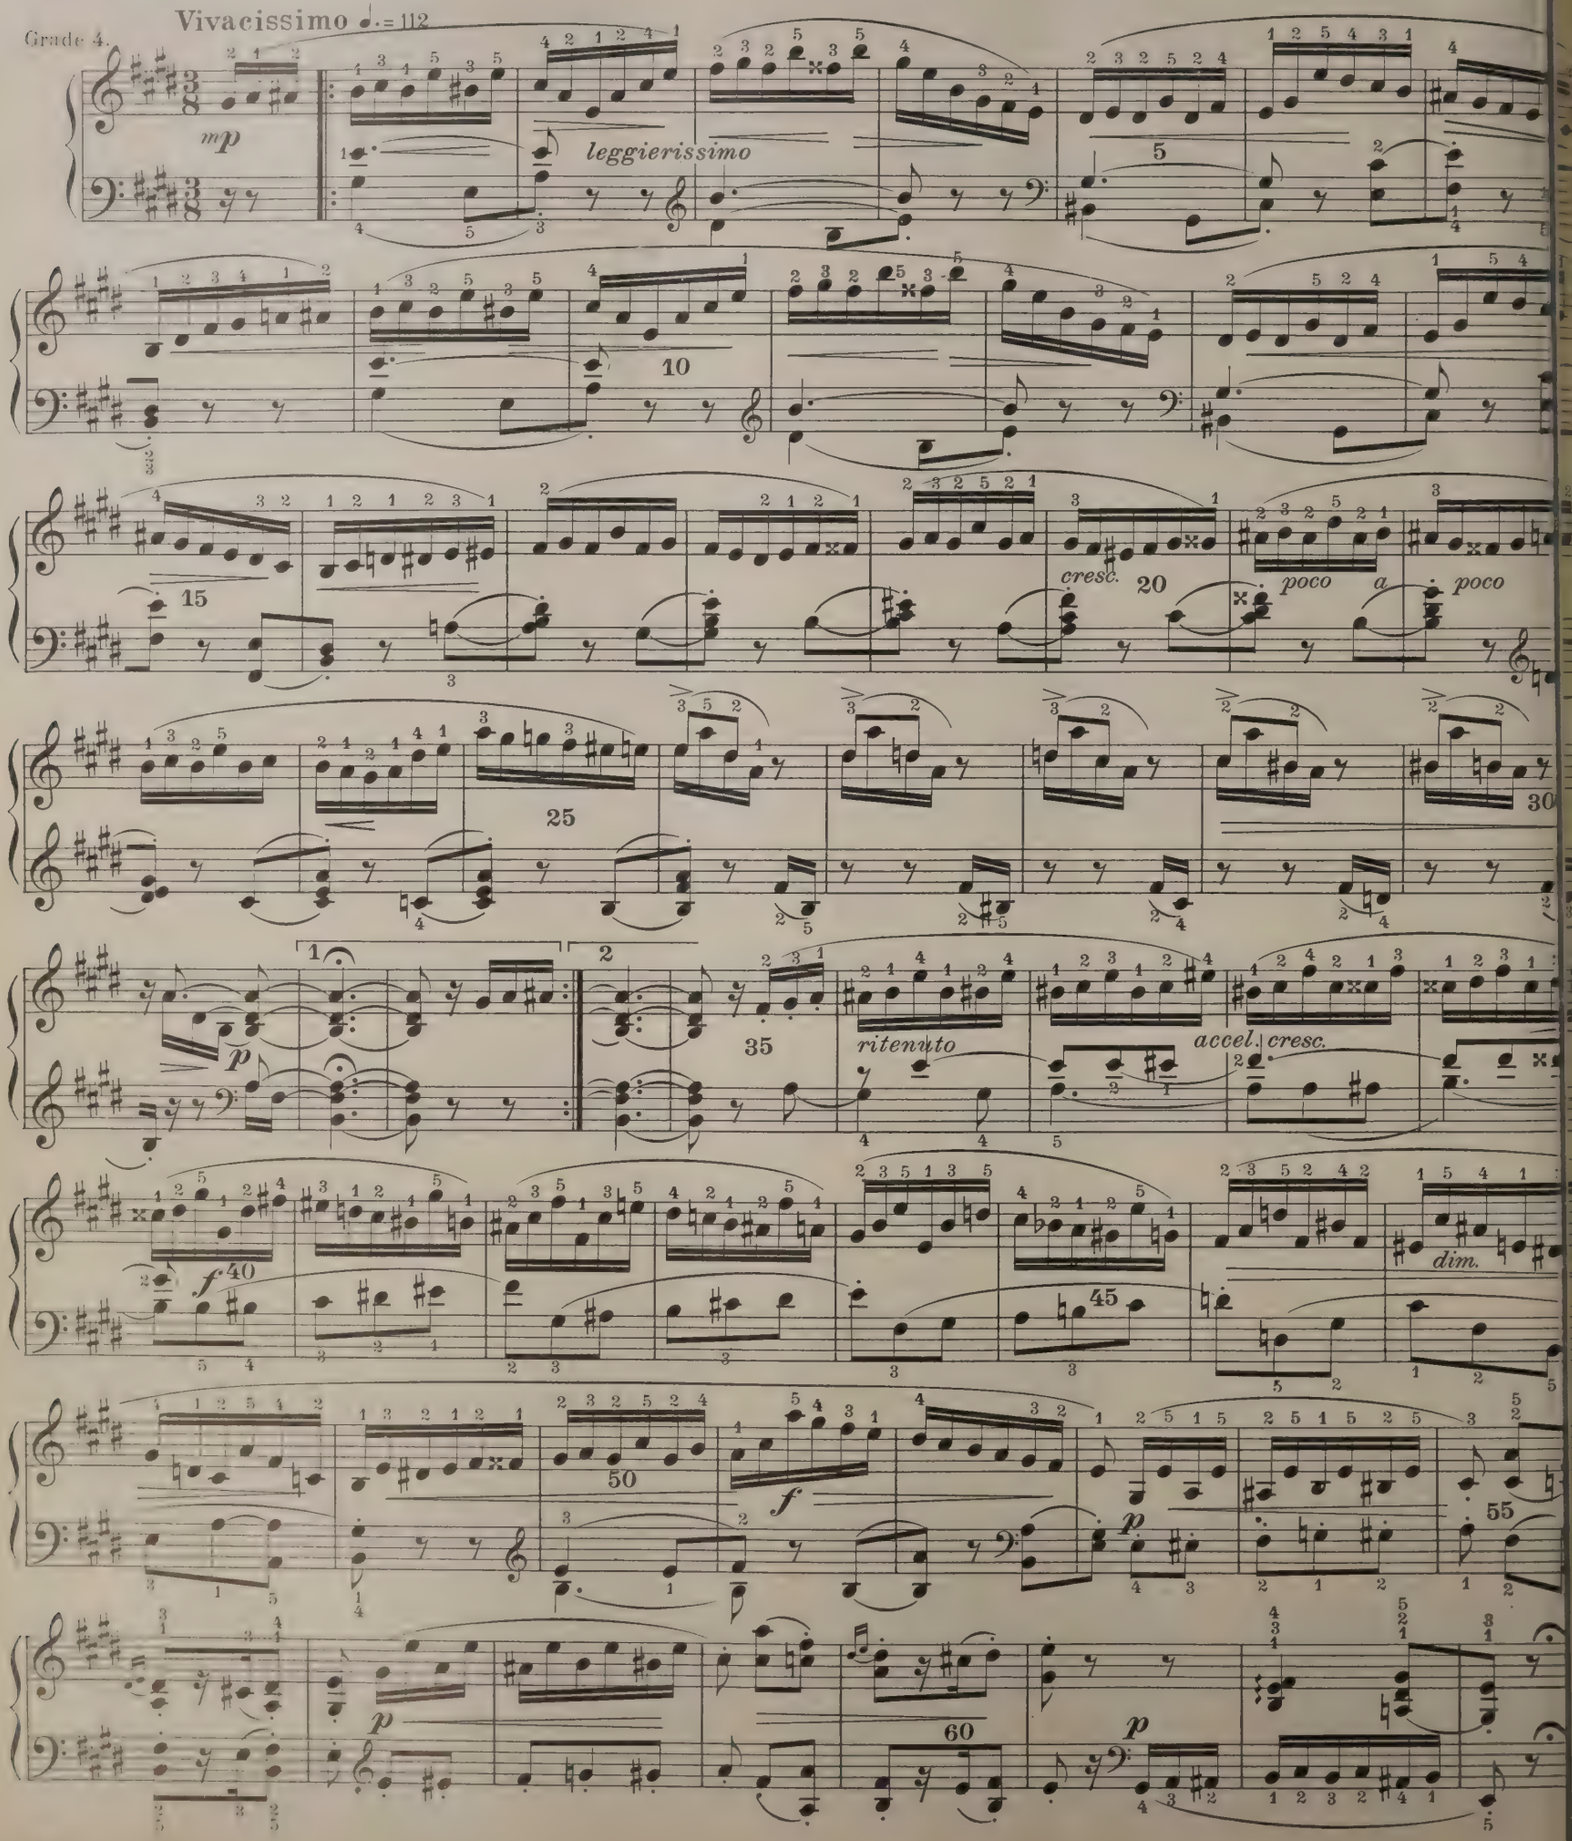


Grade 5.

a) Play thus:  on account of the legato of the upper voice, only one of the accompanying parts need be held and the 5th is the
suitable.

b) The double slur may be misunderstood, so we explain  Play G♯ and F♯ in usual legato and F♯ and E less connectedly. Another w
representing this effect is  but the former way is quite as intelligible being taken from orchestral markings and is therefore well
to violinists.

c) The tempo may be slightly increased here, as suggested by the contracting of the theme, especially if the player has dreamily retard
previous passage.



This pause may be held the length of a measure and a half or two measures. The rule governing the rhythmic movement and pulsation of the measures the same piece must be rigidly adhered to. After the pause there should be no doubt in the mind of the listener as to which is the question and answer

SCHERZINO

POETIC STUDY

E. HABERBIER, Op. 53,

Ernst Haberbier, whose charming and graceful lyric works for the piano have been widely used, was born in Königsberg, East Prussia, Oct 1813. A large part of his life was spent in St. Petersburg (Leningrad), Russia, where he became Court Pianist in 1847. His European tours we sationally successful. His most notable innovation, however, was the style of dividing melodic passages between two hands, a technical widely employed in this day. He finally settled in Bergen, Norway, as a piano teacher, where he died March 12, 1869.

EW YORK TOUR ATTRACTS MUSIC LOVERS

Visitors Coming From Every Part of The Country

O MOST PEOPLE a summer vacation means a trip somewhere. Some people go to the ocean, some to the mountains, some on cruises. But the fact hat most people, sooner or later, spend at least one vacation in New York makes that metropolis the greatest summer resort in the world. Transient ors pour into New York at the rate of 432,000 a day and find no dearth of gs to do. Every night $11,000,000 is spent on entertainment in New York h gives you some idea of what is in store for the guests of the city.

ew York is one of the greatest centers of the world and during the summer up to what its visitors expect of it. Popular operas, concerts and ballets are red at the Jones Beach and Randall's Island Stadia. The Federal Symphony hestra presents four concerts a week featuring distinguished conductors and ists. The theatres of Broadway have an active summer season. The Radio Music Hall's 6,000 seats are continually filled. Vast crowds attend the ning band concerts in Central Park.

n addition to these musical events the 1938 summer season will include the rnational Music Festival, details of which were announced in the pages of DE last month. A complete program of the tour which is shown below ludes, as you will see, all of the worthwhile musical events in New York as l as visits to many points of interest in the city.

rom every part of the United States, Canada and even as far as Cuba people making arrangements for the trip to New York in August. The program nounced last month brought a veritable flood of letters from ETUDE readers. So many people are coming that it has been possible to reduce the rates slightly d the revised prices are shown on this page. For those who have not yet ranged to come there is still time to fill out the coupon below. Even at this e date arrangements can be made for last minute arrivals.

Radio City Music Hall Glee Club

PROGRAM

Seven Days and Six Nights in New York

August 1938		
nday 21st	Aft	International Music Festival—Ukrainian Day.
	Eve	Symphony Orchestra concert and soloist. Welcome by Dr. James Francis Cooke, Editor of THE ETUDE, who will also comment on the program.
onday 22nd	Morn	Motor coach tour of upper Manhattan, via Fifth Avenue, to Rockefeller Center, Cathedrals of St. Patrick and St. John the Divine, Central Park, Columbia University, Metropolitan Museum of Art, George Washington Bridge; via Riverside Drive to tomb of General U. S. Grant and Times Square.
	Aft	International Music Festival—Pan-American Day.

IN

The MACMILLAN ENCYCLOPEDIA OF MUSIC AND MUSICIANS

has been designed to supply knowledge on all matters, directly or indirectly connected with the art, that have interest for the professional musician, teacher, student, writer, concert-goer, radio listener and record user; the editor and compiler of the work is well-known to every reader of this magazine through his many musical collections and works on music, of which the sales aggregate millions of copies. Information on every conceivable subject is supplied in concise form; the exclusion of unimportant detail has made it possible to include articles on three times as many subjects as are ordinarily treated.

Some Idea of the Tremendous Scope of This Work Can Be Gained by Presenting the Actual Figures on its 51,000 References:

14100 EUROPEAN COMPOSERS
1220 AMERICAN COMPOSERS
1240 BRITISH COMPOSERS
1300 'CELLISTS AND HARPISTS
3800 CONDUCTORS
3350 ORGANISTS
3210 PIANISTS
2835 SINGERS
2855 TEACHERS
2725 VIOLINISTS
720 WIND INSTRUMENT PLAYERS
3900 THEORETICAL WRITERS
4025 MUSICAL EXPRESSIONS

810 ARTICLES ON MUSIC
213 BOOKS AND PERIODICALS
225 CHAMBER MUSIC ENSEMBLES
115 ORCHESTRAS AND BANDS
375 CONSERVATORIES, COLLEGES, ACADEMIES, SOCIETIES, GUILDS AND FESTIVALS
420 PUBLISHERS & PRINTERS
260 CITIES, BUILDINGS
250 CRITICAL NOTES
2680 INSTRUMENTS & MAKERS
325 GRAND OPERA PLOTS

There are more than 2,000,000 words in its 2000 pages, and hundreds of lengthy articles of special interest, including a complete outline-history of music; a concise history of both ancient and modern Jewish music; a bibliography of books on music; historical surveys of the piano, violin, organ; a history of the art of dancing; an essay on Balinese music; outlines of Greek and Gregorian music; a small number of the various subjects adequately treated are listed on both sides of this announcement.

Compiled and Edited by

ALBERT E. WIER

Editor of the "Whole World" Music Series, the "Arrow" Miniature Score Series, the "Pianist's Music Shelf", the "Violinist's Music Shelf", the "Master Music" Series, the Radio Music Library, etc., etc.

THIS, the most comprehensive work on the subject of music ever issued in any language, is a *factual* encyclopedia. Unessential details have been wiped out ruthlessly to make room for more and later *facts* and to make these immediately accessible. A glance at the two columns of "Partial List of Subjects" will show the tremendously broadened scope which has been attained as a result.

American Composers, for example, provides for the first time a complete list of American composers in accordance with the places they occupy in modern music, gives succinctly the stories of their lives, careers, works; **Books on Music** provides a complete list of books *now in print*, averting the nuisance and expense of seeking dead, obsolete and out-of-print publications; **Critical Notes on Music** includes orchestras active in popular programs over the radio and on records; **Grand Opera Plots** provides not only all the standard operas, but those produced for the first time during the last season; **Music Conservatories** lists and describes the courses offered by the best here and abroad; **Music Festivals** describes such meetings as those at Saratoga and Worcester, as well as those of wider repute; **Radio Broadcasts** contains among other pertinent data, a history of classic music programs broadcast in the past ten years over N. B. C. and C. B. S. . . . This item-by-item analysis could be continued for more space than is occupied by this entire advertisement without exhausting the almost limitless material in of The Encyclopedia.

You must see it, **Examine It,** to obtain any adequate conception of what is offered.

Price **10.00**

Shopping for Charm

-Via Theodora's "Charm" Sampler

HUDNUT'S MARVELOUS KIT

When you discover your cosmetics clerk gazing penetratingly into your upturned eyes, do not quail or cry for help. He is merely as sold as I am on *Richard Hudnut's* new make-up conception, *Marvelous!* Blue eyes, grey eyes, brown eyes or hazel eyes? *Hudnut* says they provide the keynote of what shade in cosmetics you should use. No specific mention is made of green eyes because they may be those of your rivals. Tell me what color your eyes are and send for the well-planned kit of three silvery, metal containers of powder, dry rouge with a diminutive puff and miniature lipstick to match your eyes. Be sure to include it in your Sampler list.

AYER'S POWDER-CREAM SET

Were you among those fortunate readers of the June *"Shopping for Charm"* column who sent to *Harriet Hubbard Ayer* for her trial set of three tubes of cream and three types of face powder? If so, please do not ask for an additional set. If not, take advantage of this unusual *free* assortment offer. Here are samples of Ayer Luxuria Cream, Skin and Tissue Cream and Beautifying Face Cream, also three packets of powder suitable for dry, oily and normal skins. Try them all. You will know which kind of a skin you have by the powder which looks best on you. Ask for them in your request list.

ARRID DEODORANT

Among the many good deodorants now available is a comparatively new cream preparation called *Arrid* (derived from arid or dry). *Arrid* comes in a dainty, rich looking white glass, blue and white capped receptacle. Among its many advantages are these: it stops perspiration and its odors for from one to three days; it can be used immediately after shaving; there is no waiting for it to dry; it has an appealing odor of its own, etc. Enclose 10¢ in this case, for the generous trial size of this greaseless, stainless, soothing cream.

BOST'S TOOTHPASTE

Some women are lovely when they smile, but some are only lovely *until* they smile. Often a sweet smile is marred by tooth discoloration, due to smoking, which does not seem to yield to normal cleaning. If you happen to smoke, you will be interested in *Bost Toothpaste* which dissolves these stains and is perfectly harmless to the tooth enamel itself. This *free* sample is an average month's supply which sells for 10¢. *Bost* has very generously offered not only to give you this 10¢ sample but to mail it to you free. If you are faced with this problem ask for your test tube of *Bost*.

LUSTRITE IS JUST RIGHT

Everybody knows about *Lustrite Nail Polish* and *Lustrite Polish Remover*. But does every woman know that she can try out these two famous products for 10¢ each? And do *you* know that this polish can be had in 10 shades: naturelle, rose pink, coral, tomato red, cerise, ruby, creole, cubana, redbark and rust? If you want to give these well-known products a trial, send me 20¢ for one of each or 10¢ for either one, mentioning which color you want. I wish also briefly to mention the new Flora Deane Two-Purpose Nail Tonic which is said to remove cuticle and to strengthen and condition the nails. This product in a swanky, beribboned square bottle, sells for 25¢. You can order this by mail at the same time, if you wish it.

AMBROSIA

New ways of using well-known products have always been of particular interest to me. So I was pleased when I found that *Hinze Ambrosia* "pore deep liquid cleanser" is not only packaged in its regular classic bottle, but in the form of Ambrosia saturated pads kept air-tight in a simple black Bakelite purse-pack. The manufacturer is glad to acquaint Etude readers with the advantages of this new package, or to send a trial-size bottle of *Ambrosia* for 10¢. Specify which you prefer, pads or liquid. Address your letter to me, at Room 613 350 Madison Avenue, New York.

ROMANCE TOSCA

Romance and summer are synonomous! But if summer heat is robbing you of the enjoyment of these romantic moments, if your [illegible] its attribute, poise, you should use, as your refreshant, a perfumed eau de cologne. Famous *"4711"* has combined its *"Classic Eau de Cologne"* with its perfume of romance *Tosca* to produce *"4711" Tosca Eau de Cologne*. In order to give you the pleasure of using this refreshant, the maker has consented to send out a limited supply of *free* samples. Ask for yours quickly before our supply of 100 samples is exhausted

One of each item to a reader!

CONTI'S TRIAL PACK[AGE]

Castile soap is as old and as dependable a product as ever c[ame] out of our grandmothers' day. In my researches, I discover[ed] sample package containing a full 10¢ size bar of *Conti Pure [Olive] Oil Castile Soap*, a generous trial bottle of *Conti Castile Sham[poo]* and a small jar of their *All-Purpose Olive Oil Cream* which [the] manufacturer has consented to send to Etude readers for 10[¢] cover the packaging and mailing costs. This is a splendid trial [offer] worth several times the mailing cost. Be sure and make [your] request immediately, as the supply is limited to 300.

STEIN'S THEATRICAL MAKE-UP MANU[AL]

Stage make-up—what crimes are committed in thy name! Some amateurs, even s[ome] professionals only achieve a hideously splotchy effect in their platform appearances. [For] the art of putting on make-up is something that every public performer should kn[ow]. Therefore, at my request, *Stein*, premier maker of stage cosmetics, is offering to e[very] Etude reader, their 25¢ booklet "Modern Makeup," which is a nicely illustrated make[-up] manual, giving the exact directions for applying various types of stage color for var[ious] occasions; and a sample of their powder, *without cost*. Tell me in your letter whether [you] are Blonde, Brunette, Titian or Grey, so that the proper shade of powder can be [sent] with your copy.

X-BAZIN DEPILATO[RY]

Unwanted hair is most conspicuous on one's limbs. Let's face [the] fact and see what we can do about it. I suggest *X-Bazin Cr[eam]* for its removal. If the directions are followed carefully, this fam[ous] French formula is most efficient. The hair is not only remo[ved] but the regrowth, the maker says, is softer, thus aiding in [the] prevention of runs in your silk stockings! Like all chemical [de]vents, *the directions on the package must be followed caref[ully]* to insure satisfactory results. Send 10¢ for ample trial tube [and] wooden spreader for applying this cream.

EYES AGLE[AM]

"What beautiful big eyes you have!" he will say. "The better to have you see *me*, si[r]. You can have eyes that appear larger and more lustrous through the use of a new pre[pa]ration which makes the eyelids and eyelash tips glisten without having your dayt[ime] make-up look artificial or theatrical. The famed *House of Pinaud* has created a tra[ns]parent cream, *#612 Eyegleam*, which is effective for the grooming of the eyebrows as [well] as the lids and lashes; does not run; stays on for hours. Send me 10¢ for a most gener[ous] trial tube of *#612 Eyegleam*.

MAKE UP YOUR OWN "SAMPLER"

Here is your chance to shop and sample 14 leading manufacturers' products in one letter and under one postage. It took me weeks to select them.

Go over this list of sample offers, carefully checking on this page the ones you require. Then make a list of the products by name; indicating in each case which color, shade or type of preparation you prefer. After each product requested, indicate whether it is free or costs 10¢. Add up the 10¢ items and send me a check, money order or stamps, through the mail. Do not send coins. Address Theodora Van Doorn, Room 613, Borden Building, 350 Madison Avenue, New York.

P. S. Remember that the number of samples available is in several instances limited. Therefore you should get your request in very promptly, if you expect to get the full assortment. No requests arriving after September 15th will be honored. Only one sample of each product to each Etude reader. Please do not ask for samples that you do not want or really need. If anything in this offer is not clear, please write asking for further information. Be sure to print your name and address plainly, putting return address on your letter to avoid its being mislaid. Thank you T. V. D.

PINETTE TUCK COM[BS]

For the want of a horse a kingdom was lost. For the want [of] *Pinettes* a trim coiffure was wanting. One of the most vex[ing] of the average woman's problems is the keeping of th[e] recalcitrant wisps of hair in place. Stray locks can be eas[ily] and firmly held in place by these ingeniously delicate mc[-up] "tuck combs." A card of two will be mailed you for 1[0¢]. They come in Brown, Black, Blonde and Grey. Design[ate] which you want when you make up *your* list.

PETALSK[IN]

Sometimes there *is* something new under the sun, viz., [a] powder base that refines the pores; is of a neutral shade th[at] all complexions can use; that holds the make-up flower-li[ke] for added hours; relieves windburn and sunburn. I found t[his] confection to be a pleasantly perfumed liquid in an orch[id] capped, clear glass bottle, appropriately named *Petalsk[in] Cream Pastelle*. If you will note your desire in your letter [you] will have a trial bottle of *Petalskin Powder Base* and *Pet[al]skin Non-Allergic Face Powder* in five different shades se[nt] you for 10¢.

SIX PERFUM[ES]

A perfume for your every mood! *Adventure*—a charmi[ng] bouquet which beckons you on to new worlds. *Cherish*—[a] spicy odeur from an old-fashioned garden. *#3*—laden w[ith] sweet sandalwood and mystery. *Lilac*—just as if you w[ere] surrounded with these fragrant bushes. *Gardenia*—the exa[ct] facsimile of this exotic flower. *#12*—a summery floral co[m]bination. *Park & Tilford* is offering these swanky, bakel[ite] capped trial vials of their *Faoen* perfumes to Etude reade[rs] at 10¢ each. Send 10¢ as directed below for each odor wante[d]. They are all lovely.

America Demands Glamour

Edward Johnson, General Manager of the Metropolitan Opera Company, Reminds Young Artists That Personal Appearance Count

BY FLORENCE SMITH VINCENT

GUELPH, Ontario, was loyal to local talent. Its town hall was packed to capacity at every concert performance. One night a five
l lad sang *Little Annie Rooney* in a masterly manner that brought down the

t boy of James Johnson's is going to amount to something!" prophesied the
of Guelph. Right they were! That boy soprano is the present General Manager
Metropolitan Opera Company, where for so long he was its most persuasive
enore. His name is Edward Johnson.
aps this native ability to detect genius in the bud was developed in young Ed-
along with his embryonic lyric talent, under the kindly guidance of his clarinet
. grain merchant father. Throughout his twenty-five years as an opera singer,
ohnson's ear was quick to catch true pitch and Simon-pure tone in the voices
few among the many who came to him for friendly counsel. His heart was warm
nderstanding of the young musician's problems; his interest ever eager. Some-
midway in his own successful operatic career, he pledged himself to provide
for the furtherance of music among school children.
n he accepted directorship of the Metropolitan Opera Company made vacant
tragically sudden death of Herbert Witherspoon, two years ago this month,
l Johnson said, "I don't want to take on such a great responsibility; but I feel
do so, because just now we have the one opportunity that is likely to come in
time to develop a real tradition of opera on an American basis. Since opera was
ven at Old Castle Garden, it has been a foreign importation. Now we have a
to make it American, to give talented young Americans their great oppor-
I had to go to Europe to study to get the experience that is so necessary for
g artist before he appears with one of the big companies and competes with
d artists. So did all other American artists who have made names for themselves
past. We hope to make it possible for young Americans to acquire the experi-
singing in public in the only way it can be acquired, by singing in public, right

ard Johnson has made good on his word. Now, at the conclusion of two years of grand opera under his skillful direction, the prospectus reveals that sixty-five percent of the Metropolitan's cast are Americans; that now and again a new American opera written by an American is presented; that there is an American ballet—an astounding change in an old custom.

All this is no evidence that General Manager Johnson does not engage true talent wherever he finds it. His firmest conviction is that the Metropolitan tradition must be preserved, and the best possible opera given by the best possible artists. Nine of the new singers who appeared during the 1937-38 season are artists from the musical centers of Europe. It does mean, however, that the golden throated singer from Christmas Cove or Kansas City can make his own direct approach and give his own American name without fear of the Metropolitan's doors being closed in his face unless he can show some European nation's musical *visa*.

Spring rang the curtain down on an unusually glamorous season for the world's most celebrated lyric theater, to General Manager Johnson's pardonable pride. He says, "America is becoming increasingly opera conscious, thanks to the radio and concerts. I rather suspect that the musical motion picture is beginning to have its influence, too. It is perfectly reasonable to suppose that a certain large number of persons, to whom opera, as opera, has had heretofore not the slightest appeal, have been charmed by the appearance and so, won, by the voice of some of opera's loveliest prima donnas who have worked in motion pictures, such as Gladys Swarthout, Lily Pons and Grace Moore. Doubtless these "fans" have followed their favorites from the screen into the opera house and, once there, they have been so pleasantly surprised by what they saw and heard that they have returned to hear more. This mounting appreciation of lyric drama on the part of a brand new public stimulates our determination to make the Metropolitan Opera the clearing house for all young artists who go out to sing, and who soon will be in demand in other cities of our nation."

His own words reveal the reason why General Manager Johnson is universally and affectionately known as "Eddie." It is so obvious that his interest is in opera, that his chief concern is the musical welfare of youth. It is a matter of common recollection to the company that, in his tenor days, Johnson's presence in a performance helped many a debutant and debutante over the rough spots in a first appearance at the Metropolitan.

THE SINGER'S ETUDE

Edited for August by Eminent Specialists

It is the ambition of THE ETUDE to make this department a "Singer's Etude" complete in itself

How to Face the Audience with Confidence and Pleasure

By BEATRICE WAINWRIGHT

In which suggestions are made to students of singing as to how to overcome nervousness when appearing on the concert platform, and to acquire that poise and ease of manner that will lend personal charm and lure the hearer to sympathetic approbation.—Editor's Note.

THE SINGER, more than any other concert artist, is brought in direct contact with the audience, as she stands alone with no prop on which to lean. With instrumentalists it is otherwise, as they have a violin, piano, violoncello or whatever instrument they play, between them and the mass of human listeners, to be won as friends or left as just cold and unsympathetic members of the horde. But the singer sallies forth from the green room, dependent solely upon her own personality to "break the ice."

Now a manner that is warm and gracious at once establishes an atmosphere of friendliness that makes for greater enjoyment of a program on both sides of the footlights. No singer can stand with a blank countenance and closed eyes, as affected by some instrumentalists, and make her most favorable impression. The text of a song requires outward expression of inward emotions, and the face is the key to the palace from which these shall emerge. No matter how beautiful the voice, the song must have its spirit of joy, of sorrow, of humor, of pathos, each displayed sympathetically by the interpreting artist, if expression of the text is to be enhanced and its full beauty portrayed and given to the audience. All the vocal technic in the world is of little value, if the singer is unprepared to face her audience, with grace, poise, and an ingratiating manner. Through lack of these qualities, singers have failed completely at a début recital. At such a time some slight deviation from tone control, due to nervousness, may be overlooked; but a gawky manner is seldom forgiven and not soon forgotten. It is too apt to create some ludicrous situation that will offend good taste and alienate the audience. To do less than to present one's self in the most favorable light on the concert platform is unpardonable.

Never Too Soon to Begin

EARLY IN THEIR STUDIES, students of singing should be trained how to appear before an audience. Studio recitals are most helpful; and when sufficiently prepared, young singers should avail themselves of every opportunity to appear before an audience, be it large or small. Experiences of this nature are most valuable and aid greatly in gaining poise and confidence. It is important to select a teacher who has good social connections and a knowledge of social customs, aside from her professional attainments. Some students have natural ease of manner or have acquired this through early training, while others must be carefully taught. The timid student requires much sympathetic supervision, in order that she may overcome any tendency toward diffidence and self-consciousness.

Many beautiful voices have been lost to the world through lack of overcoming these two very bad traits. A gracious stage deportment is absolutely necessary to the one contemplating a public career or even if only expecting to sing socially.

Students who could not, at the beginning of their studies, sing for one person without extreme nervousness, fear and actual trembling, have been known with training to overcome such agonizing tendencies and by an acquired poise to take a real delight in self-expression before an audience. Dancing is of great value in acquiring physical poise; and this, in turn has its favorable effect on the mental attitudes, as it gives confidence and release from fear.

Developing the Graceful Body

ALL STUDENTS OF SINGING should have physical training, through either dancing or gymnastic exercises, to assist the body in overcoming awkwardness. Both social and esthetic dancing give physical control and grace of movement. The modern school of dancing, with its angular posturing, is not the ideal one for those aiming to sing in concert or opera. Grace of posture and movement is still in vogue, for a pleasing presence on the concert stage or in any form of opera, be it grand, light, or musical comedy. The screen, also, makes severe requirements for grace of bearing and general appearance. And all said herein is just as applicable to the male as to the feminine singer.

If needed, corrective physical exercises should be taken under the guidance of an instructor, and continued later to avoid returning to incorrect habits. All students of vocal art require lessons in stage deportment. These should include a correct manner of entrance upon the stage, the maintenance of a graceful poise of body, and a cordial attitude toward the hearer, from the moment of entrance to the instant of vanishing from the stage.

Under ordinary conditions, a moderately quick step is best for both entrance and exit. If the distance from the door or wings to the center of the stage is unusual, the step may be somewhat hastened to relieve conditions; and even a few lightly tripping steps may be added in exit.

Some Helpful Studies

AN INGRATIATING SMILE is of inestimable value to a singer. Some singers affect a cold, dignified manner; but one needs to be a very great artist not to help to meet the audience half way by a genial manner. For those with a tense facial expression, practicing smiling before a mirror is invaluable. Use the vowels *oo-e*, bringing the lip corners well forward in a pouting position on *oo*, and releasing the corners and letting them back a little beyond natural position on *e*. Do this many times—slowly and inaudibly at first—and then faster and orally. This will limber the mouth and cheek muscles, and will give to them a greater freedom and flexibility. It is an excellent exercise for all singers, regardless of experience, but is given here as an aid to acquiring a free and easy smile. Many people need to learn to smile correctly. Self-conscious people often have a tense smile, as the mouth muscles are stiff.

Freedom from tension brings liberation of spirit and a spontaneous radiancy that reacts most favorably on an audience. A pinched, tense expression kills any warmth of expression. All of us know the radiant smile of Deanna Durbin. The corners of her mouth are completely relaxed and the teeth show. The jaw also is very free.

Another excellent exercise for flexibility is to say the letters *q* and *x*—slowly at first, then gradually faster for a number of times. The lips should be forward on *q* and back on *x*, as directed for *oo* and *e*. One seldom has the opportunity to observe her own smile; and therefore criticism from a teacher is of importance.

That Gracious Ease

ANOTHER POINT REQUISITE to public performers is the avoiding of unbecoming mannerisms. Different types of people require individual training. Those who are tall should acquire grace with dignity and charm; while short, slender persons may be more vivacious. Mannerisms unbecoming a type make one appear ludicrous to an audience, though there must be an avoidance of becoming studied and affected.

Someone has said in regard to posture, "Stand like a lady or gentleman," but some definite suggestions are m ful. Stand erect with the body ba the balls of the feet. The head up, erect, but flexible, at all tin singing. There should be no st the neck, and the shoulders mus laxed. An excellent exercise fo chest position, which is up, is the of heavy books on the palms of t with arms extended forward elbows. To walk about in this w fine posture, and strengthens the of the chest, shoulders and arms.

For the inexperienced singer, o most difficult situations is having and face people and to see the confronting her, while waiting The best thing to do, under the tions, is to keep the eyes focussed ahead, not up at the ceiling, as i ing an interesting object a few f the heads of the audience at the the room. They may at times ro over the audience, but must not rest on or recognize anyone, ev moment. To look at the floor whil must be avoided, as this gives th ance of timidity and breaks one' with those listening. To keep the fixed on any one point is inadvisa need to be used flexibly, to avoid a stare.

The young singer should never mistake of singing to an individua is offensive to the remainder of ence and apt to make them feel At the same time it is apt to m "one person" feel conspicuous. The of the song is for all in the audie

By the practice of these hints form etiquette, the young singer w the acquisition of unpleasing ma and at the same time will develop ing personality which will greatly luring her hearers to her cause.

The Singing Cure for "Singer's Nodes"

By HOMER HENLEY

IS YOUR VOICE BEGINNING to sound a little rough, or hoarse? Is it becoming more and more of a physical effort to force your voice to respond to your will? Do you seem to be losing your soft notes, and is your *mezzavoce* becoming difficult to produce? Do you find that you are beginning to sing a trifle off pitch? Have you, thereupon, visited your throat specialist, only to have him to tell you that you are suffering from laryngitis, or, far worse, from an excrescence on one or both of your vocal cords—a glistening point, or "pearl," known as a nodule or "node"; that you have, in some manner, overstrained your voice—by singing too loudly, too long at one time, by shouting, by singing when you had a cold, or by singing wrongly? Perhaps he has gone so far as to say that it is imperative that you must refrain from singing for the next three months or a year—either that, or the nodule removed by the knife?

Removing "singer nodes" from cords by means of the surgeon's k extremely delicate and dangerou tion; and the reason for this art bring home to afflicted singers that such operations are quite unn I lately met an old friend, a fi singer of many years standing. I whisper he told me that he cou speak or sing again. His vocal been severed by the "eminent surg cialist" he visited for the remo nodule. The eminent surgeon wa —but my friend's voice had be forever. Had this unfortunate gether with untold others in like —known that such excrescences vocal cords can be easily and u removed by certain vocal exercis

dibly short space of time, they ill be singing to-day, and singing an ever.

iscoverer of this method was Dr. rook Curtis, a really eminent and nally recognized American throat- and scientist. For many years he he majority of the world's great- rs of his time, and he was Jean de closest friend and advisor. In 1901 tis gave to singers his method in called "Voice Building and Tone " Since then many throat specialists opted and prescribed his method, unvarying success; but the great of the medical profession, for rea- st known to themselves, have per- it to fall into disuse. The writer article has used the Curtis method oring lost voices; for curing count- les of laryngitis; for removing sing- des; for relieving hoarseness in and public speakers—always with success, and within surprisingly eriods of time. It is now his hope olish a curative renaissance for suf- from these ills, by briefly restating tis curative method, and by adding omplementary exercises which have valuable in thirty years of teaching.

A Scheme in Operation

S THE METHOD of its operation:

a tone with the mouth closed. making this tone as musical as pos- ix the mind upon the sound *Maw* entally bring forward the tone, al- aying it, until there is a conscious vibration upon the lips. At the same ne position of the initial tone should changed. Now pluck the lower lip he finger, as you would pluck the of a musical instrument; and, if the -tone is sufficiently far forward, an ive sound like *Mum* will answer. The *Maw* now breaks on the lips into nd we have the pure vowel with its ed consonant without being aware of ort that has produced it. The mouth remain closed; and, if we have not ered with our focus of attack, we the initial *Hum* still vibrating pure eautiful in the facial resonators.

hout any change in either the posi- of the lips or the far forward facial ator position of the *Hum,* seek now er the sound to *Maw* as nearly as is le. *Maw,* with mouth closed, can be approximated, but the effort to bring out, constructively assists in the rear- ment of the manner of vibration of ocal cords, at the same time increasing tension. Herein lies the crux of this od of restoring swollen, inflamed and ed vocal cords to their normal and c freedom of vibration in perfectly straight, parallel lines—whereas the laryngoscope had shown them to be touching one another in the middle third of their length, in conditions brought about by wrong and harmful methods of singing.

Practice on single tones, in a comfortable range, until the sound is firmly established in its forward geography of the head resonators. When this is rightly accomplished, proceed with a chromatic scale of five notes upwards and downwards.

Ex. 1

Always keep the mind and ear fixed attentively on the *Maw* sound, and always with the mouth closed. Hum this chromatic scale on *Maw* over and over on the same breath—about ten times is a reasonable average. This should be done for a period of about ten minutes in each hour of the day that is available for this purpose.

Later, when the *Maw* hum with its correct sound has become perfectly familiar, we may attempt it with open mouth. Permit the jaw to drop without the slightest muscular tension, and *sing* the sound of *Maw,* carefully preserving the correct focus of the tone as it sounded in the *hum.* At this step the chromatic scale will be preferable to the single tones. Having become certain that the tone still focuses freely in the frontal head spaces, the way is clear to bring some of the other vowels into line: Oo, as in "shoe"; Oh, as in "so"; Ăa, as in "sat"; Ah, as in "father." It will be noted that E, as in "me"; and A, as in "may," have been omitted. This is done for the reason that, all too often, a wrong production of these two vowels is responsible for the very conditions—"singer's nodes," laryngitis, and so on—for which a remedy is being sought. Let them wait until you have proved your mastery over the placement of the sounds indicated. When the recommended vowels have been done, scales and arpeggios should be added to practice.

We may now proceed to simple songs where the *tessitura* lies in a comfortable range. Sing the tune on the sound of *Maw.* Sing the tune on the other vowels sounds written above. Do this as often as you like, but do not attempt the words of the song until you are quite sure that every vowel sound you are singing has its free flight, winging pure and beautiful not only in the facial resonators but also in all the resonating spaces of the head. And by that is meant that the singer's entire upper head should ring with his song, as vibrantly as when a bell is struck—the mask of the face, yes, and the top of the head, and even the upper back of the head. The Italians (rightly) call the voice "the bell," but only when it is rightly rung in every possible place in the head. "Singing in the mask" is only the beginning of voice placement.

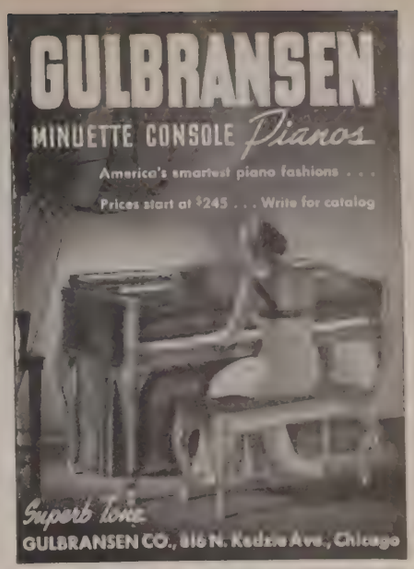
Hourly *humming* exercises on the short chromatic scale, however, is the device which best works magic in the restoration of hoarse or "lost" voices; whether the conditions have arisen from a wrong method of singing, from so-called attacks of laryngitis, or from the dread "singer's nodes." For not only will their use marvellously operate to restore quickly any of these conditions to normal; but they also may be employed every day of every vocalist's singing career to maintain the voice in "the pink" of vocal efficiency. Ten minutes of these chromatics on a properly hummed *Maw,* done the first thing in the morning, will put any singer's voice into a "tops" of resonantal efficiency for the work of the day. It was employed for many years, and with absolutely unvarying success, by the writer in his own public singing; and its magic in literally hundreds of other cases has been observed.

This essentially scientific physiological discovery by Dr. H. Holbrook Curtis is not in any sense set forth by this writer as a method of voice production. It is advanced purely as a curative agent for ills brought about by wrong singing methods, and as a device for refreshing the normal voice by insuring the correct vibratory action of the vocal cords.

The Perennial Encore Problem

By H. E. ELMORE

RE IS the question of "encores." The late ncesco Berger, living in London almost century's limit, wrote to *The Times,* ng that the late Sims Reeves, a very d tenor, maintained that "Novices t avail themselves of encores as short to popularity, but it was not consistent n artist of established fame to do it."



Mr. Reeves has been gone from us for a long time, and the encore is still heard in the hall. Why? Is there aught to be said, by the singer, in its favor?

So long as both public and artist demand and enjoy it, there is little danger of its early demise. After all, most of us go to concerts to enjoy what we enjoy.

* * * * *

The Unfinished Artist

"The vocal student who leaves the studio after four or five years' study, is only one-third equipped for his calling, for he will soon find that his beautiful tone will avail him but little if his diction is imperfect, or his knowledge of English is corrupted through faulty speaking habits. No audience will fully appreciate a song unless it can also comprehend the words. The audience can hardly be blamed for that, yet how many singers are there in this country who can "put the words across?" In my opinion all students of voice and speech should be encouraged to study phonetics and diction hand in hand with their vocal studies."—Boris Gregory.

OVER 40 of the world's outstanding music critics, of which the partial list above is typical, have joined in the production of this extraordinary book by contributing special authoritative articles on the great figures in musical history. In addition, the volume will include the whole range of musical knowledge, composers, singers, artists, instruments, musical theory, opera plots, etc. Completely up-to-date; accurate; American in its point of view; absolutely essential for reference; thoroughly delightful to read; beautiful format; made for a lifetime of service. Approximately 2650 pages.

The Origin of Hymns

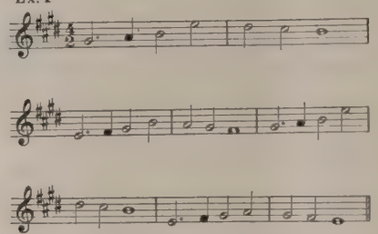
By EUGENE F. MARKS

HYMNS, THE NURSLING of ecclesiology, cannot be attributed directly to St. Ambrose (latter part of the 4th century), who perhaps was the first author to introduce true metrical singing into the church service, nor to Martin Luther from whose poetic genius emanated the chorale, the finest example of modern hymn form extant.

Broadly viewing the historical background of church music, we assume that the origin (irrespective of the priestly intonation of the uncouth dirges of the pagan temples) appeared in the ritualistic worship of the Hebrews, with the use of the Psalms as a basis. We possess no definite knowledge concerning the forms of the sacred music of the Hebrews, still we conjecture that it was a form of chanting, and as Dr. Hugo Riemann writes in his "History of Musical Forms," "we can scarcely err in concluding that perhaps the most authentic remains of Hebrew music are preserved in the Gregorian chant, particularly in the Hallelujah melodies." We can readily understand that these psalm chants of the Hebrews were carried into the Christian Church and that they finally merged into or influenced our present hymnology. Naturally, some tang of these past eras inheres within the hymns of to-day and influences our method of rendition. However, as the original method of rendering the Jewish psalms is hazed beneath the remoteness of the centuries, we dare not endeavor to instruct a congregation as to the correct manner in which a chant should be rendered; and to-day each congregation or district is a law unto itself and renders the psalms according to its individual custom. But we may be assured that the temple songs of the Hebrews were nonmetrical, that homophony prevailed, and that their manner of chanting no doubt was extended unchanged into the Christian Church, as far as the 5th century.

The Hymn Is Born

IN THE 4TH CENTURY St. Jerome distinguished between psalms, hymns and canticles. Hymns designated those chants (solemn psalms and songs) which extolled the strength and majesty of God, also, the jubilant psalms (Hallelujahs of exaltation). The psalms embraced those chants which were ethical in character. The canticles according to St. Augustine (4th century) were lofty songs of praise chanted in a quick animated manner.



"It was, however," (writes James Francis Cooke in his "Standard History of Music") "among the wonderful Greeks, who lived before the birth of Christ, that the foundation of our own kind of music were really laid. With them, poetry, art and culture were looked upon as real necessities, and the union of poetry with music made the study of the art of music one of great importance." Moderation in everything was the law of Grecian art. The rhythm of their poetry and music displayed a simplicity in arrangement; the duration of the musical tones were divided into feet containing two, three, four and five beats consisting of long notes (two beats) and short ones (one beat); and from these simple notes a combination of rhythmic progression was secured; namely:

— — —(one long and two short) Four beats measure.
– – ——(two short and one long) " " "
—— —(one long and one short) three beats measure.
– ——(one short and one long) " " "
—— — —(short between two long) five beats measure.

In these poetic feet one may easily prognosticate our bar measure and hymn meter. Their music evidently did not possess our dotted time. The music of this period, also, contained a lengthening and shortening in the duration of the delivery of the foot, which equals our *tempo*.

Up to the middle of the 13th century the music of the church was homophonous (*musica-plana*) and possessed no measured verses (*musica-mensura*). At this time (about 1250) the "original lively rhythm of the church songs had stiffened to a succession of notes of equal length, with which shorter notes were only occasionally intermixed" (Riemann). Among the songs of this period bequeathed to us, and still to be found in some of our hymnals, stands a selection from King Thibaut, IV, of Navarre (1254), which for its simplicity and regularity deserves some study, as it displays a decided trend towards hymn meter.

Ex. 1

It should be noted that each phrase, consisting of two measures each, presents a similarity in melodic scale outline with rising (four notes) and falling (three notes) displaying an upward leap from the third to the fourth beat in the first measure of each phrase (excepting the last one) to the apex (reënforced by being the point of change in direction of the melody line), also, each phrase proceeds in a facsimile rhythm on minims and crotchets, which places it in the category of *musica-mensura*. Also, each phrase agrees with quite a modern acceptance of harmonized cadences, the first phrase of seven notes may be harmonized as ending (2nd measure) with a plagal cadential, Iv-I second phrase ends in the regular cadence, I-V; while the third phrase, ilar to the first phrase, allows a de modulation to the key of B major, th its dominant seventh chord, F- A-sharp, C-sharp, E; and the final f phrase gives the familiar full mixed ca II-I-V-I.

Following the *musica-plana* (Gre music) and *musica-mensura* era i flourishing period of counterpoint fro 12th to 16th century (epoch of the N lands), songs evolved with the u (*cantus firmus*) sung slowly and sus by one voice, usually the tenor (*tenu* hold), accompanied with complicate uration of the other voices. The *firmus* of these compositions (some cient as 600 B.C.) finally became to extent the foundation of the Prot hymns. This elaboration of voices mately was curbed under a decree the Council of Trent, which insiste a simpler style of music should be to the church. This edict culminated refined and harmonic treatment of phonic music from the *musica-pla* Pope Gregory the Great (about under Giovanni Pierluigi known as trina (from his birthplace). From th verse mixture of a slow *cantus firmu* melody) of long notes with a con moving accompaniment of many and notes, necessarily sung by a highly t choir, the melodies were rescued a veloped into hymns sung by the con tion. These hymns were brought t fection in the chorales of Germany, the influence of Martin Luther 1546). The church music up to this had been sung in Latin; these ch or hymns were in the vernacular people, founded upon popular folk so original rhythmical melodies, and sung in unison in a slow reverential ner (which atmosphere still is adhe in the Protestant churches in Gern with pauses upon the last word of line of the simple regulated poetry. holds, facetiously, are said to have necessary in order to allow lagging ers time to catch up in their delinc in *tempo*, so that all would be pre to attack the next line of poetry taneously. But the pauses were dou produced by the natural desire for rhythm and have, in a measure, clu the hymns, in spite of the American in rendering hymns, which, to a lar tent, has obliterated these regular p

From this Germanic choral perio hymn tune had easy sailing into countries, notably via Switzerland to land and from thence into America; is, "a species of composition whic cause it is easily learned by ear, be the special property of the people like an heirloom, is handed from g tion to generation." The value of the culled collections of church-hymns u the services of any denomination is be underestimated. As William T. writes, "The great hymns teach theology than the seminaries."

THE ORGAN OF THE SEQUOIAS

This fine instrument is housed in the redwood forest of the famous Bohemian Club, about ninety miles north of San Francisco. The organ is concealed among the giant trees, the trunk of one of which may be seen just back of the console, which rests on a stage provided by nature. From top to bottom and left to right the eminent organists and musicians grouped about the console are Edwin H. Lemare, Benjamin Moore, Dr. Humphrey J. Stewart (seated), Uda Waldrop, and Wallace A. Sabin. Since this photograph was taken in 1936, Messrs. Lemare, Sabin, and Dr. Stewart have passed away.

The Organist As Salesman of a Proper Musical Service

By HENRY C. HAMILTON

Part II

JECTION may be voiced, why go so ld from purely organ music? Should e sincere organist confine himself o the instrument's own literature? d there are some good reasons for ive reply. For one thing, the stage of rld has been reset. A certain style an playing, in vogue at one time, is d to interest those of to-day. It was derous, and its supposedly churchly a sacred character, we now can see, ly but a name. Then, too, the church ly had but little concern about pos- vals. The House of God was a thing The organ, in a veil of sanctity, and rbed by cinema or radio, had the field to itself. Anyone who could play vonderful instrument was an awe ng being.

to-day things are different. The pub- nands more variety and considerable n music. People like tone color; the st of reed and flute begets interest. lumana and Chimes contrast beauti- but must not be overdone. Sub and couplers grow irritating if used con- y. Let a melody stop be heard, as a without these helps. The extremely nd low notes of the organ should be ed for special effects. Some element asant surprise may be introduced at n points. But there must be no osten- about it. It should appear as a seem- natural outgrowth of something else. should be a feeling of unity rather detachment.

Charm of the Medium Tone

VING A MELODY, keep principally at iddle of the road. After all, the me- register, while less spectacular, wears than the extremes in range. And, g chosen the solo stop, test out every rigorously. It frequently happens that on the finest instruments there will be note here and there—most frequently reed stop. This inferior note may be just where its employment will be required. What is the player to do? r substitute some other solo stop, or pose the piece altogether. This latter t so formidable an undertaking as suppose. If memorized, a change of presents few difficulties, and it is well h the effort. The people, too, like to a given melody in a variety of ways, egards dynamics. Batiste's *Offertoire minor* and the one in F minor supply two instances of a *piano* melody repeated *forte*. Well managed *crescendos* and *diminuendos* are followed with pleasure. The organ's possibilities here should be utilized.

Then, too, a pedal note may be a little out of balance; just a shade too heavy for some final *pianissimo* ending. Transposition here will usually solve the difficulty. A voluntary may occasionally be put in the key of C, for the sake of using the lowest pedal, the highest manual note—or both—in the final chord. When this is done, there should be care to avoid these extremes of pitch before the finish. A little glad surprise should be kept in store for the people.

The Lure of Variety

LISTENERS LIKE CHANGES of key, perhaps more than formerly. Monotonous tonality should be avoided at all costs. Learn to play a given melody in any key, and practice all forms of modulation—it will often prove a friend in need when improvising.

Change of tempo and of rhythmic outline are also most important for preserving interest. Brevity, too. And a judicious admixture of *staccato*, either as a contrast to, or in combination with, *legato*, helps to drive dullness away.

In the matter of harmony, detached chords or arpeggios are seldom desirable; though soft sustained harmonies on another manual, by casting a veil of sound, conceal the bald effect of detached sounds. And an *obbligato*, or anything in the way of a counter melody—will be listened to by those who find fugal development over their heads.

Pieces which most perfectly fulfill the foregoing suggestions will be found acceptable to the average hearer. And choose the most beautiful things. We have enough ugliness in this modern world, without making the Divine Art pay tribute to it. And many beautiful things are suffering neglect because organists lack the enterprise to search for them, arrange them, and give to church attendants a chance to enjoy something different from dullness on one hand and jazziness on the other.

As the Church stands for something different in a jazz-mad world, cannot the organist, too, rise to what is higher than being either a dullard or a copy cat? A church organist is one whose opinion generally commands respect, and he is, to a large extent, responsible for the musical status of his community.

Keep Clear Objectives Before the Choir

By DAVID R. ADAMSON

CTIVES will vary, of course, with dif- t groups; and they also will vary with rent anthems. While speaking of ob- ves, remember that the service rifle fall short of its mark, even though be within easy reach. The average r, with its mixture of partly trained totally untrained voices, cannot secure same results by merely singing the music, as would the highly trained ssional choir; but it is capable of sat- tory and sometimes even inspiring . The persistent disregard of this simple condition is responsible for more heartbreaks among choirmasters than come from almost any other one thing.

Aim high, by all means. Let "the sky" be the limit. When thinking of results, keep the necessary qualifications in mind.

Get as many, and as good voices as possible, into the choir. Bring them to the very highest training of which you are capable. Sing compositions that have some chance of being understood and liked. Then will your choir be a source of satisfaction, and even of joy, to all concerned.

Earn A Teacher's Diploma
or
A Bachelor's Degree

Do You Ever Wonder

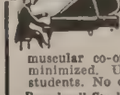
Why some teachers are more successful than others? Do you realize that those who hold the big jobs never cease to be students?

This is the age of specialization and the specialist is earning fully double or more the salary of the musician with only a general knowledge. Openings in the music field are growing very rapidly. More money is being spent every year for music.

Musicians who are using our Extension Courses as a means of going higher in their profession are making a great gain financially.

Prepare yourself for something better with one of the following courses. Study at your convenience by means of the extension method with a school of established reputation.

NORMAL PIANO, HARMONY, HISTORY OF MUSIC, ADVANCED COMPOSITION (credited towards the Bachelor's Degree), STUDENTS' PIANO, VOICE, PUBLIC SCHOOL MUSIC, EAR TRAINING and SIGHT SINGING, VIOLIN, CORNET, MANDOLIN, GUITAR, BANJO, REED ORGAN, TRUMPET, CLARINET, PIANO ACCORDION, SAXOPHONE and Choral Conducting.



Write for complete information. Check course in which you are interested. We will be glad to send sample lessons without obligation to you.

Circle-O-Keys
MUSIC CHART
An Ingenious Device That Simplifies Music Study and Teaching

● Circle-O-Keys Music Chart consists of a movable card that slides up and down in a sleeve. You slide the card to show the key you want and through the holes in the sleeve you can tell, at a glance, for that key, its number of sharps or flats, their names, and their staff locations in the signature. The relative minor key also is shown with both the relative harmonic and melodic minor scales, ascending and descending. These minor scales are shown through the slot in the lower half of the sleeve. Circle-O-Keys is a valuable aid in teaching, in stimulating interest in harmony and theory, and a handy reference for transposition. Every music pupil should have one. Actual size 3½" by 6½".

"It is almost impossible for anyone who reads much, and reflects a good deal, to be able, on every occasion, to determine whether a thought was another's or his own. I have several times quoted sentences out of my own writings, in aid of my arguments, in conversation, thinking that I was supporting them by some better authority."—Sterne.

ORGAN AND CHOIR QUESTIONS
Answered

By HENRY S. FRY, Mus. Doc.
Ex-Dean of the Pennsylvania Chapter of the A. G. O.

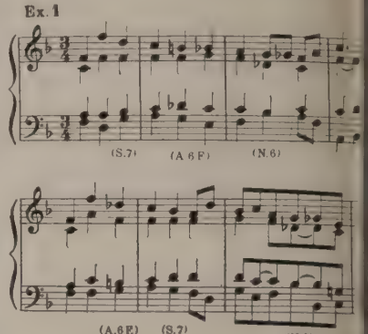
No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. I am directing a volunteer church choir of ordinary ability. One of the singers objected to singing the Amen *slower than the tempo of the hymns, as well as in the anthems. I tried to explain that most churches of good musical taste sing the* Amens *slower, with a slight pause on each syllable, also that the* Amen *should be sung in a subdued tone. I also said that some hymns should be sung slower than others. Most of the choir members agreed—some did not. Some want the hymns fast. I was taught that the Church is sacred, a House for the worship of God, not for the "jazz" age. Will appreciate your sound judgment on the correct manner of musical worship in God's holy sanctuary.*—W. J. R.

A. It seems appropriate that the *Amen* to hymns might be sung in somewhat slower *tempo*—depending on the *tempo* considered suitable for the hymn. The question of singing the *Amen* softly is a matter of individual opinion, but the choir should obey the choirmaster's wishes in the matter. Naturally, some hymns should be sung at a slower *tempo* than others—and always reverently. While there should be hearty singing, the pace should not be so rapid as to make the hymn undignified and "jazzy." Individuals differ in their ideas of *tempo*, which probably accounts for your experience.

Q. We have a two manual tracker action organ, purchased in 1923, which we are considering converting into electric action. What, in your opinion, constitutes a well balanced organ? Please list various stops on Swell, Great and Pedal. How may we be assured that we are getting all that is possible from our pipes? Is it true that more than one voice may speak from the same pipe? Is this to be desired? Recently a congregation purchased a new organ for $1500. (electric action). Our organ (tracker action) cost $2800. Can you tell us what the difference might be? Their organ seems to be everything ours is not—easy action, automatic combinations, all kinds of stops, even the chimes, and we wonder "how come?" —J. R. E.

A. We would not advise electrifying your present organ action. If the instrument is satisfactory tonally, the pipes from the present organ (and case work) might be included in a new organ. Your information, on which you ask us to give our opinion as to a well balanced organ, is quite indefinite. You give no information as to size of church, size of organ chamber or amount you wish to spend, and so forth. We are suggesting a specification which you might consider, or if you will send us a proposed specification we will give our suggestions based on such specification. Our suggestion is:



GREAT ORGAN		
Open Diapason	8′	61 Pipes
Harmonic Flute	8′	85 Pipes
Dulciana	8′	73 Pipes
Harmonic Flute	4′	73 Notes
Octave	4′	61 Pipes
Twelfth	2-2/3′	61 Pipes
Fifteenth	2′	61 Pipes
Chimes (if desired)		25 Tubes
SWELL ORGAN		
Bourdon	16′	97 Pipes
Geigen Diapason	8′	85 Pipes
Salicional	8′	73 Pipes
Vox Celeste	8′	61 Pipes
Stopped Flute	8′	73 Notes
Flute	4′	73 Notes
Geigen Octave	4′	73 Notes
Nazard Flute	2-2/3′	61 Notes
Flageolet	2′	61 Notes
Oboe	8′	73 Pipes
Cornopean (bright)	8′	73 Pipes
Clarion	4′	73 Pipes
Vox Humana	8′	61 Pipes
PEDAL ORGAN		
Open Diapason	16′	32 Pipes
Bourdon	16′	44 Pipes
Dolce Bourdon	16′	32 Notes
Flute	8′	32 Notes
Dolce Flute	8′	32 Notes
Dulciana	8′	32 Notes

To be assured that the pipes are being used to best advantage, you might consult someone who can give you such advice. Stops may be unified, which means that one set of pipes may be used for two or more stops. This is not ideal, but may be utilized when funds and space are limited. Some unification and duplexing are included in our suggested specification, such use being indicated by "notes" instead of "pipes." The difference between the two organs you mention may be specification. The $1500. instrument with chimes is probably very small—unified and duplexed; while your instrument may have more sets of pipes and not much unification and so forth. The "easy action" (compared with yours) is due to the use of electric action instead of tracker action.

Q. Kindly harmonize the enclosed melody, using Secondary Seventh, Neapolitan Sixth and Augmented Sixth chords where possible. What are Secondary Augmented Sixth chords? —M. R. S.

A. The following harmonization includes Secondary Seventh (S.7), Augmented Sixth—French (A.6 F.), and Neapolitan Sixth chords.

Ex. 1

We do not recall the use of the term "Secondary Augmented Sixth Chords." Perhaps you intend "Secondary Seventh Chords," which are seventh chords on scale notes other than the dominant.

Q. Enclosed find two specifications from different builders for a small organ in a church seating about three hundred people. The builder "B" has built many fine organs. This specification is duplexed (do you think too much?). The other specification is by "S". Do you think these rather small for the church? Would they be much for coloring purposes? Would there be volume if wanted?—C. K.

A. Our suggestions are made as to specification only, not as to respective quality of the instruments. According to the figures given in the specifications, that by "S" contains more pipes than that of "B"—which gives more specification as to pipes or notes for the Great organ "Octave" of which the Great "Fifteenth" is an extension. Presuming this to be "pipes," the specification by "B" includes more pipes than that of "S." The unification of specification by "B" will probably make the instrument more effective so far as color combinations are concerned. There are, however, some features in this specification which we do not approve. We would not like to have a Violin Diapason made up by a combination of Salicional, Gedeckt and Octave as indicated. We prefer a Vox Celeste of 61 notes instead of 49. We do not understand from the specification where the "notes" in addition to 12 "pipes" are derived for the Pedal Sub Bass and Lieblich Gedeckt. The Swell Gedeckt might be used to supply the Lieblich Gedeckt "notes"; but we do not advise its use for the Sub Bass too. We also suggest the following couplers: Swell to Pedal 4′ and Great to Pedal 4′, to match the manual couplers specified.

Q. A nine thousand dollar theater organ is being held at the price of one thousand dollars. Some people are of the opinion that, as it is a theater organ it would not be suitable for our church. I contend that, with possibly the addition of a Diapason, which it probably should have, it would be a better bargain than any other instrument that we could get. Will you give your opinion? List of stops enclosed. The organ is stored, and the owner has an available room for the organ, so that installation would be very inexpensive. Could it be used as it is (without the Drums, of course), or would you advise the addition of the Diapason? I realize the instrument would not have the variety, but I still contend that it would be more satisfactory than the other organ at about the same cost. What is your opinion?—M.

A. With the addition of an Open Diapason you might find the instrument fairly satisfactory, though we do not consider it ideal. It will, of course, have to take into consideration the added expense for the addition and the cost of installation. Since the present instrument contains three unified sets of pipes only, in addition to chimes, drums, and so forth, a thousand dollars is quite a high value for it. We certainly advise the addition of the Open Diapason if it is practical. Some parts of your inquiry touch upon a matter of principle in our editorial department, in that we do not recommend any one manufacturer or any part of an instrument.

Q. We are erecting a church, which will seat six hundred and fifty people, and an organ must be purchased. The possibility of a pipeless organ have been discussed. Some organists are of the opinion that a pipeless organ is not suited for church use. I would appreciate any information you care to give regarding the matter.—H.

A. Your question touches upon a matter of principle in our editorial department in that we do not give any opinion or preference for any particular type of instrument. Our advice is that you investigate all types of instruments, and base your decision on the instrument that you feel best suits your requirements.

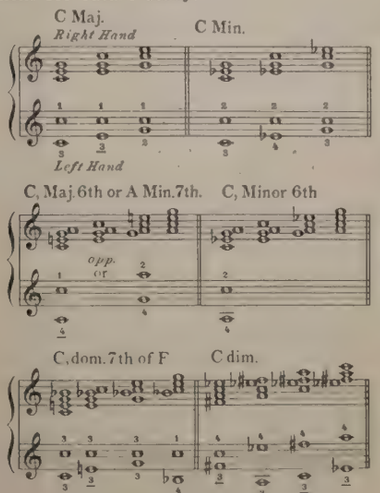
THE ACCORDION DEPARTMENT

Analyzing Accordion Chords



By PIETRO DEIRO

As told to ElVera Collins

MANY ACCORDIONISTS are capable of giving excellent renditions of complicated accordion arrangements but are seriously handicapped when it is necessary for them to arrange their own bass accompaniments. Fortunately, there is an abundance of fine music which has already been arranged for the accordion and most music publishers are rapidly adding their best material. The professional player, however, still finds it necessary frequently to make his own arrangements of selections not in the accordion music library. Those who aspire to become professional players should consider this point and prepare for it. Instead, there are some who share the opinion voiced by one young man who said he would not study such a monotonous subject as harmony because he did not intend to teach, he only wanted to play with an orchestra.

The study of harmony is far from monotonous and on the contrary, it can be made most interesting. Let us now approach elementary harmony from one of its angles which concerns the formation of chords. Accordionists must certainly admit that they need to know about all chords in all keys.

The purpose of the illustration accompanying this article is to provide material which will prove an incentive for accordionists to delve farther into the realm of harmony. If we were to present an academic thesis on harmony in these columns, some of our accordion readers might not be interested so we have, instead, worked out a sort of combination chord and harmony study. We believe it will be interesting because part of it is to be studied, part is to be played and the remainder is an assignment for future study.

The key of C has been used because it is the most simple and the scale for this key is familiar to all. The first measure of music for the right hand shows the C major chord in three positions. If you have not already learned the definition for the formation of a major chord, then that is the first assignment to be looked up and memorized. Secure an accordion harmony book and learn why C, E and G form the C major chord. Once you have learned the rule, you will be able to form any major chord in any given key.

The bass accompaniment in the first measure shows the C major chord, first with the tonic C as bass, followed by an E bass and then a G bass. Accordionists who are always prone to play the tonic of a chord as its bass should carefully observe the basses given here.

We suggest that the first measure be played over two octaves, ascending and then descending. Be careful not to watch the keyboard. The intervals and spacing on the piano keyboard should be just as familiar to the touch as the bass keyboard which is out of the range of vision. The fingers should be spaced and in position for each chord before the keys are struck and then all keys should be depressed simultaneously and with equal weight so the effect is a distinct chord. There should be no fumbling, for if one tone sounds before another the effect is as though one were hunting for the chord. This exercise is not a mere mechanical one for if you wish to play each chord correctly, it is essential that you concentrate upon the formation of the chord.

After playing the chord ascending and descending, alternate with it in the form of a broken chord in three positions, ascending and descending over two octaves. Play one bass and chord for each group of three notes. Each individual note must sound distinctly. Do not accent the note being played by the thumb.

The Firm Foundation

THE VALUE OF THIS EXERCISE is manifold. First, if taken as a study in harmony and the formation of chords, who could possibly forget the C major chord if this exercise were included in the daily practice program for a week? As a technical exercise, it enables one to learn the art of playing chords distinctly. In future studies when one wishes to fill in C harmonization, it will be found that the hand will automatically fall upon the correct keys.

From the second measure on we find the following chords shown in their various positions: C minor, C major 6th (or A minor 7th), C minor 6th, C, dominant 7th of F, and C diminished. Proceed with the study of each individual chord as outlined for the C major chord. Remember that if you do not know the rule for the formation of each chord, it must be learned before proceeding with the playing of that chord. Alternate the playing of chords with the broken chords over two octaves.

When these six measures have been perfected according to suggestions given, the accordionist certainly should have these chords indelibly impressed upon his mind. Let us then proceed into further studies along this line. We suggest that the ambitious accordionist provide himself with music writing paper and write these chords in all other keys, beginning with the single sharp and flat and continuing until all keys have been done. Thoroughly master each key before doing the next one. It is better to proceed slowly and thoroughly than to endeavor to rush through and not comprehend what is being done.

Before progress has been made far along this line it will be found that if you have not already learned all scales and their signatures, this will have to be done at once. If there are any scales which seem to be particular stumbling blocks, embody them as a part of the exercise to precede the playing of the chords.

Accordion arrangements would seldom call for the playing of a succession of chords as shown in the last four measures of the illustration. If such chords, however, can be played correctly and distinctly in

SPECIAL NOTICES AND ANNOUNCEMENTS

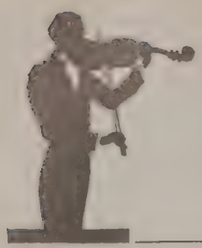
SPECIAL NOTICES

FOR SALE: MASON & HAMLIN PIANO, Model BB Number 41674, in Ebony. Five years old; cost originally $2,500; kept in perfect condition. Will sacrifice for $1,000. Might consider terms. B. Norman, 56 Wall Street, New York.

POSITION WANTED: Teacher for Dance recitals, Gym exhibitions, Swimming pageants, High School experience. Also teach instrumental music. Students rated high in school contests, and on radio. WEC c/o Etude.

WANTED: Highest Grade (new or used) Chamber Music for String Quartett. Communicate A. J. Colunga, 2845 Newton Ave., San Diego, California.

ANNOUNCEMENTS



PLAY PIANO JAZZ like dance and radio players. Quick mail course. Information free. Erskine Studio, Dept. B, 810 E. 14th St., Oakland, Calif.

SINGING MADE EASY—Send for free advertisement. Eastern School of Voice Culture, Chambersburg, Pennsylvania.

SEND FOR FREE PRICE LIST on strings. Address: Karl W. Stade, 146 Valley St., Lewistown, Penna.

MUSICAL DOORBELL! Plays a tune! New, inexpensive. Mosoriak, 1637 West 105 Place, Chicago, Ill.

FILM DEVELOPING. Eight gloss prints, two 5 x 7 enlargements. Send 25¢ coin with any roll, any size. Dependable Photo Service, General Delivery, Camden, N. J.

THE VIOLINIST'S ETUDE

Edited by

ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

The Mother of the Violin

By ETHEL KENYON

IN THE FOURTEENTH CENTURY, troubadours, called guslars, traveled over the green mountains of the land we know as Jugoslavia, or dwelt with the Tzars in their walled cities by the blue Adriatic. Slung over one shoulder, when not being played in accompaniment to the ballads they sang, the guslars carried a peculiar musical instrument known as the mother of the violin. The Serbians knew it as the gusle (goose-la) and even then it was so old that its history could be traced back to ancient China and India.

The gusle (Grove, in his "Dictionary of Music and Musicians," and Riemann spell the name as "guzla.") is of varying sizes and finishes, but the general outline is always the same. It varies in length from two to three feet. The mandolin shaped body has pigskin stretched tightly over it and the long neck is ornamented by hand carved serpents or with other emblematical motifs. It may be surmounted both by a crown and the national bird, which is an eagle with wings upraised.

A peculiarity of the gusle is that usually it has only one string composed of two or three dozen hairs from the tail of a horse. The arched bow has a like string. The tones of the gusle are high-pitched and wailing. To us they seem weird and monotonous.

The Jugoslavians are proud of the ballads that were sung to the music of this old instrument. They point with pride to the fact that Goethe compared them to Homer's "Illiad" and the "Odyssey." These ballads are very long; some of them containing four hundred and fifty-eight verses.

Not only are the ballads long but they are tragic and, for the most part, recite the story of the crushing defeat the Serbians, suffered by the hand of the Turk at the battle of Kosovo in Macedonia, on June 28, 1389. These ballads also tell of the country's woes after the Turkish occupation. They relate tales, tragic in the extreme, of national heroes and heroines who suffered every woe known to the human soul.

When these ballads are sung to the plaintive tones of the gusle the effect is wild and sad. The intense soul of the Jugoslavian quivers with emotion when he hears these songs sung to the strumming of the gusle. But if the soul of the Jugoslavian now responds fervently to the playing of the gusle, his ancestor held the musician and his music in a higher esteem. The Serbian Tzars honored them with position and wealth; even to making them members of their own family.

After the Turkish occupation, the conquerors were lenient toward what they supposed to be harmless musicians, since the guslars seemed to be, for most part, blind beggars. But the Serbians had chosen blind people purposely, to throw off suspicion, for then the guslars could go about f playing and singing to their countr songs that would keep up courage an sistance against the oppressor.

A Young Gusle Player

When the Turks discovered this guslar after guslar lost his life. M every walk in life then took up the g persistently singing and playing it. ballads now took on their tone of re and tragedy. The guslars, no matter many lives were taken, never cease their efforts to keep past glories b their countrymen and to urge the avenge the defeat at Kosovo.

Every home held a gusle and for than five hundred years the Serbian fo the Turk, and, when telling the sto his national sorrows, he sang to th companiment of this instrument's m ful, high pitched tones. But in time ballads of tragedy and woe began to way to songs of love and home.

To-day, while the gusle still hold almost sacred place in the affections o Jugoslavians, it is not played univer It is played mainly by bands of gusle ers as part of a long, romantic history. gusle will always hold its place of ve tion in the affections of the Jugosla because this mother of the violin helped alive a patriotism that held the invad bay and by so doing eventually saved t western world its own peculiar civiliz

As to the Care of Stringed Instruments

By FASSETT EDWARDS

PART II

Constant attention is required to see that a bridge does not bend toward the fingerboard. This is particularly true if a bridge is not very thick or is of soft wood. The pull of the strings, as they are tuned, always drags the upper edge of the bridge in the direction of the string pull—toward the free end of the fingerboard. Every few days the bridge should be grasped between thumbs and forefingers and gently pushed toward the tailpiece, but only enough to set it straight up, or perhaps very slightly back, so that the feet remain in full, accurate contact with the top of the instrument. It will be noted that the bridge does not bend forward evenly but will tip more on the side of the higher strings. This is because the smaller strings, being used more than the lower ones, are tuned oftener and kept at a relatively higher tension.

Bridges for the violin and viola sometimes have a small piece of ebony set in the maple where the highest string will rest. This is to save the wood from being cut. Since ebony has almost a metallic hardness, however, such bridges will change the tone quality of an instrument, to a quality more dull and brittle. The writer tried this idea on his own violoncello and found the effect undesirable.

The notches that will cradle the strings on the top of a bridge should be as shallow as possible, that the string may not be clutched in a viselike grip and its free vibration thereby impaired. Theoretically, the upper bridge edge should be thin and the notch shallow, although such a bridge will not last so long as a sturdier one. However, it is scarcely fitting to try to economize on bridges, since that part is the very soul of the stringed instrument. The French word for bridge means *soul*. The least defect or imperfection at this vital point will do great harm to tonal beauty.

The Soundpost

THE SETTING OF THE BRIDGE in the usual correctly built stringed instrument should be centered on the notches cut in the inner curve of the F holes. These are marks for bridge location. The instrument usually will sound best when the bridge is so situated. Attention should be paid that the feet of the bridge shall not be allowed to slide forward or backward from the best position, once selected, in as much as the tone will vary greatly by such alteration of position. The soundpost is set beneath the highest string to be precisely a certain distance back of the center of the righthand bridge foot—in a violin, about a fourth of an inch back—consequently any change of the bridge forward or backward, right or left, will alter soundpost bridge relationship, and change the tone. Many players are constantly changing the position of the soundpost, in striving to improve their tone. To select the exact, best position of the soundpost is difficult, yet once selected, the post should not be tampered with. It is a poor way to attain tone betterment. The time might better be employed in attending to the other details set forth herein.

Pegs

PEGS OFTEN SLIP when not being moved. They probably are not accurately round, and cannot make close contact with the periphery of the peg holes. A peg will wear, and in doing this it will take on small dust particles that prevent it from seating itself tightly in the peg hole. Once in a while take out the pegs and wipe them free of the microscopic fragments of worn wood. Incidentally it takes about seventy-five years for peg holes to be so badly worn as to require bushing and reboring.

A slipping peg is an unhappy nuisance and should not be permitted to harass the player. This defect is not difficult to correct. Many use a mixture of finely powdered chalk and soap. This is a rather good combination, used in moderation, if pegs are badly seated and worn; but the mixture should not be required in an instrument which is in prime condition. Properly adjusted pegs will hold with slight inward pressure.

Strings

THIS IS A MOST DIFFICULT matter about which to advise, since one must know his own instrument in order to know kind of string, as to quality and thick is best suited. As a rule, a thin string produce a thin, sweet tone, and will spond readily. But for brilliance, fine ity and warmth, a fairly thick stri preferable. Many musicians who are careful, and who do obtain excellent re from meticulous attention, use a s gauge; and they will buy only strings certain best thickness for their use. gauges may be obtained for a few cen most music stores. The string gauge is to be commended.

A little trick which is original with author, although probably it has been ployed by others, is to take a wound s by its extremities, one end in each h and to bend it slowly into the segment circle. If the curve thus produced is and free from angles or suggested an tion, the string is of uniform thick from end to end. This test is particu easy to make with violin G's and the l ier strings used by violoncellos and ba It is well worth trying when next you chase strings. Never accept a string wi taking it out of its wrapping and ins ing it from end to end.

Always buy the best you can a Economize, if you must, on something in your daily life, but do have good str A string will last much longer and pr a considerably better tone, if it be gr

ent intervals, every few days if much. No free grease should be left string or on the fingerboard, but it be rubbed over the length of the except near the area touched by the . To keep the string oiled will ef- prevent the shaggy, worn spots so en. If kept always oiled or greased, will not be abraded by the fingers, ter long use. For violoncellos and ordinary vaseline serves well. For and violas a somewhat lighter, non- lubricant is better. String oil is ob- at many music shops. Oiled strings ore easily and respond better. Like- heir tone seems to be clearer and resh.

Resin

SHOULD NOT be allowed to accumu- strings where the bow touches them for that matter, anywhere on the Such resin deposit should be fre- removed, and the strings kept . Ysaÿe to the contrary, one does ed a heap of resin on a string, to the bow cling sufficiently. The hair ip a string much better when it is than when the string reeks with crumbs of resin that roll under the bow and make a rough, highly unmusical squeak. The author uses the end of his right thumbnail to scrape off the strings, and finds it needful to remove resin half a dozen times during an evening's playing. The improved effect is very noticeable.

A bow should not carry much resin. The lighter, drier kinds are used for the smaller instruments, a medium, heavy grade for violoncellos, and a sticky kind for the big doublebasses. It is well to strike the back of the bow stick on the palm of one's hand, the hair being tensed, and thereby knock off any excess of powdered resin.

If the strings are kept clean, the bowhair should not be drawn very tight (there should still be considerable concavity in the bow stick when in use), since the hair will grip the string better if it is enabled to be dented slightly by the pressure of the stick. One should keep in mind that every instrument has in it just so much tone. No more is possible to be drawn from it, a heavy hand and much resin notwithstanding.

A closing suggestion is to keep your instrument always in accurate tune, at correct pitch. Tune it every day. It will sound much better if always kept at the same tension.

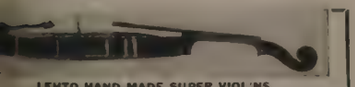
The Unholy Three Ghosts of the Violin Student

By C. D. CASSIDY

ACH FALL, WHEN the school term begins in all the medium sized towns of the middle west, there is department that has a problem for a satisfactory solution is eagerly t by the department heads. This, of , is the instrumental music depart- within which orchestral ensembles ormed.

director calls the class together, and eginner on the violin, reporting to class, presents the problem. The child s up his mind that he wants to play orchestra. Usually his parents make ir minds that they want their child dy the violin, or, as they so often t, the fiddle. If that were all of the the solution would be simple. But y in the ointment is the fiddle itself. ools that have a fairly well endowed tment can furnish the child with an ment and thus have not much trouble is respect. Unfortunately, the medium towns, especially throughout the mid- vest, are always short on funds, and cannot obtain instruments for free bution to the prospective student. s for their purchase must be obtained pular subscription or by benefits.

y musician knows that there are a er of good modern violin makers who faithfully the design and quality of ne violins made by the different mas- iolin makers. But right here is where director is haunted, not by one ghost, y three. They may properly be called Unholy Three," and each has a ification all its own.



The Worst Offender

FIRST GHOST, and probably the worst der, finds its counterpart in "that old that has been in the family for years years." The parents swear by that , because they have always been told old violins are the best; and, since know, or profess to know, that their possession is very, very old, they feel that it would be sacrilege not to have their young hopeful learn to play it. The age of their fiddle, regardless of its quality when originally made, makes it sound wonderfully sweet and pure to their prejudiced minds. It may not be worth more than the actual cost of the wood of which it is constructed, and even less than that as a musical instrument; nevertheless, it is "a genuine old violin" and must be played to be appreciated.

The next ghost that appears before the music director is the fiddle that Uncle Pete, or Uncle Bill, or Granddad made. Where is there a music director who has not been handed an assembly of wood, strings, pegs, and varnish, with the statement, "Try this, Professor, it's a dandy. I made it myself." And what professor has not shuddered when he saw the prospective student walk into the classroom with a crude wooden box or a quilted flannel bundle which contained that wonderful masterpiece—"the fiddle I made myself."

Now the third ghost, and probably the least obnoxious, presents itself in the form of a shiny, new, cheap, factory made violin. There must be a minimum price for such an instrument, if it is to give any degree of satisfaction; but unfortunately this does not seem to be the case, and each year many hundreds of three or four dollar violins are turned out to be offered to the uninitiated customer.

No doubt these problems in time will be solved. A fund may be created to purchase good instruments for the beginners who cannot afford to buy them. And those that can afford to buy their instruments may gradually be educated to the fact that a good violin is essential and that they must pay a fairly substantial price to get one. Until that time does come, the violin instructor will be confronted each year with the three ghosts: the old family fiddle, the fiddle I made myself, and the cheap new factory fiddle—"The Unholy Three."

LEHTO HAND MADE SUPER VIOLINS
Best Since Stradivari
...violins all of which Stradivari did, out of the old wood money can buy. My varnish, is the result of lifelong research and rivals the varnishes of the Cremona Masters. All in appearance, magnificent in tone—the kind of violin buyers longed to own. For all artists. Descriptive catalog free.

AMERICAN CONSERVATORY OF MUSIC
CHICAGO 53rd SEASON

Founded in 1886 by John J. Hattstaedt, today The American Conservatory of Music is outstanding among institutions for music education in this country. Its graduates are to be found occupying positions of honor and responsibility in every department of music.

Member of the National Association of Schools of Music

The Faculty—One hundred and thirty artist teachers of national and international reputation comprise the faculty.

Accredited Courses are offered in Piano, Vocal, Violin, Organ, Orchestra and Band Instruments, Public School Music, Children's Piano Work, Class Piano, Musical Theory, Dramatic Art and Dancing.

Certificates and Degrees are conferred by authority of the State of Illinois and recognized the country over. Degrees conferred are those of Bachelor of Music, Bachelor of Music Education, Bachelor of Speaking Arts, Master of Music and Master of Music Education.

Dormitories—Desirable living and boarding accommodations can be secured at the Conservatory Dormitories at surprisingly low rates. Particulars on request.

Professional and Teaching Engagements—Although the management does not guarantee positions, it has been most successful in assisting students to find remunerative situations in colleges, academies, music schools and in concert, orchestra, lyceum and choir work.

Tuition is reasonable in keeping with the times and may be paid in convenient installments. Complete particulars given in catalog which will be mailed on request.

Students' Self Help—The management makes every endeavor to assist needy students to find part-time employment. Many find work as teachers, accompanists, or part-time positions working for commercial houses, etc.

Fall Term Starts September 15th

America Demands Glamour

(Continued from Page 537)

In his current rôle, Director Johnson is just as human and just as wise. He is present at every audition in the opera house, and usually he is attended by his two assistants, Edward Ziegler and Earle Lewis. Some sixth sense keeps him attuned to the reaction and the need of the young artist in a state of nervous tension over her "great opportunity," confused, it may be, and alone, in the unfamiliar vastness of the Metropolitan stage. Mr. Johnson notices the first signs of stage fright. Immediately he leaves his seat, walks to the orchestra pit and talks across the footlights to the bewildered artist; calls her by name and by his informal friendliness puts her at her ease, and makes her feel at home. If at first the young singer does not succeed as well as he thinks she might have done, since he has detected fine tonal qualities in her voice, Mr. Johnson asks her to come for a second audition. If he believes she is in need of it, he gives her sound advice.

"An artist must be the combination of many different qualities," says General Manager Johnson. The voice must be there, in the first place. But just as it is possible to own a Stradivarius violin and not turn out to be a virtuoso, so one may possess a good voice and yet fail in becoming a finished artist. In addition to vocal ability there must be some quality within one's self, a spiritual vitality that assures artistic performance.

"Personal appearance counts more than the young artist is apt to realize," is another of his tenets. "It is not wise for her to concentrate so raptly on her music that she forgets her grooming and her looks. The eye must be pleased before the voice is heard; and it is well for the young artist to remember that her future may depend upon the impression she creates by her clothes, her manner, her grooming, in short, her personality. Often it is a deciding factor in the Maestro's final pronouncement as to her qualifications for an operatic career. For opera appeals to a combination of the senses. I have often wondered which phase of our art—our singing, our acting, or our costumes—makes the greater appeal to those on the other side of the footlights. In all probability they blend in a symphony of sound, motion and color. That is what one's appearance should symbolize—a symphony."

General Manager Johnson, himself flawless in his attire, believes clothes should be a part of one's self and, therefore, smartly inconspicuous. "Mobility of facial expression, lines of the figure, posture, grace, and economy of gesture—every young artist should study these phases of appearance with care, and practice for perfection, until perfection becomes a habit on stage, and off," declares Mr. Johnson. "The world demands much of its artists, and takes it for granted that it will find them as glamorous in real life as they seem from afar.

"Health is essential to the singer. Without a strong body and a well balanced nervous system, one cannot hope for any measure of success in a career in which long hours of physical and mental strain levy heavy toll upon even the sturdiest person's vigor and vim.

"No wise artist allows himself the luxury of fatigue, for fatigue etches shadows under the eyes and puts an edge on the voice. One of the first things he must learn is, how to relax, and he must relax often. The right diet, plenty of exercise, daily walks in the fresh air, and the proper quota of sleep, even at the sacrifice of many an hour of fun, are routine in the successful artist's life. It is worth mentioning that no singer nor songstress, who hopes to hear those vocal tones soaring upward and outward, will eat a hearty meal directly before a performance. A cup of hot tea, or a glass of hot lemonade, will give the necessary stimulus until the ordeal is over.

"And singing a steller rôle in opera is an ordeal; let there be no misunderstanding on that score. Love to sing as he certainly does; familiar with the rôle as he must be and is; even the seasoned artist finds his nerves frayed by temperament, backstage, and the temper of the audience out in front. The suspense element is always to be reckoned with.

Yes, Teacher, You Are in Business

(Continued from Page 508)

1. To travel about the twenty-five mile area and look at it intently. Watch first impressions. Note its business activity and its social characteristics.

2. To learn how many men and women are employed in the town industries: (a) of the laboring type (b) of the more special type of worker.

3. Do local papers pay any attention to music? Would they welcome short articles about it in terms of what it means in the home?

4. The number of families in the area he determined to be approximately twelve thousand in a total population of fifty-five thousand.

5. What music instruction is given in the public schools? What concerted singing or orchestra playing? What public performances by school children in music?

6. Of business clubs there were the Chamber of Commerce, a Rotary Club, and an Old Guards Club. Of these ascertain if they are interested in education, art and music.

7. There was no band or orchestra aside from the movie theater, and no glee club. A Woman's Study Club gave occasional musical programs.

8. The number of music teachers was not ascertainable, due to the fact that many, not depending wholly upon music for income, "took a few pupils."

9. Little or no public entertainment was provided by local talent.

10. Of all the churches, only three had outstanding musical programs.

III.

He had now before him a working schedule or blue print, and he set out to make the most of it. Did prosperity immediately settle upon him?

It did not!

What happened was this: Instead of falling immediately into a fine state of good times, he fell into a great degree of profitable understanding about his new location. And that began to prosper him, slowly at first, but with gratifying persistence. The logic of this way of going about it all might be said to be this: He caused several rivulets to join their waters and flow forward as a considerable stream that nourished the land of his needs.

Even pupils began to come slowly at first, because he did not look for them primarily. It happened in this way: He inves-

(Continued on Page 547)

VIOLIN QUESTIONS

Answered

By ROBERT BRAINE

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

A Dislocated Finger Joint

T. P.—I cannot give you any dependable advice about the trouble you are having with your dislocated finger joint, without seeing it. It is too bad that you did not have the joint treated directly after the accident happened, instead of waiting four years. Your best course is to go to a hospital in Detroit, where you live, and get them to recommend a surgeon, who is qualified to examine and treat the joint. The joint may be reset, so that it does not interfere with your violin practice.

Violin Varnish

H. T. Y.—You will find a great deal of useful information about violin varnishes and stains, in the little book, "The Violin and How to Make It," by a master of the instrument. This book can be purchased through the publishers of THE ETUDE.

Seeking an Opinion

J. R. N., Camaguey, Cuba. 1.—I can hardly give a guess as to what progress you might achieve in violin playing, unless I could hear you play, and examine you, so as to judge your musical talent. Your best course is to go to a good violin teacher and to play for him. Ask his opinion as to your talent and whether he thinks you have a chance of developing into a good violinist. 2. You will have to take or send your supposed Stradivarius violin to a good expert, in order to find whether it is genuine or not. There may be some competent judges of Cremona violins in Havana. Otherwise you will have to send your violin to Europe or to one of the large cities in the United States.

Beginning at Twenty

W. B.—If one hopes to achieve great things on the violin, the time to start is from five to ten years of age. A certain amount can be learned starting at the age of twenty, but that amount would be necessarily somewhat limited. The books you have consulted which stated that, "no great results can be obtained unless practice on the violin is started about the age of ten," are entirely correct on the subject.

If you will be satisfied with learning easy compositions, if you have good talent, and if you really love the violin, you will get a great deal of enjoyment from your studies, but do not hope to achieve the great solos you hear virtuosi play at symphony concerts and over the radio, because you will be disappointed. Your idea that you would like to teach yourself with the aid of some good books, going to a teacher occasionally to see how you are progressing, is all wrong. What you would need is steady instruction from the best and most experienced violin teacher you can find. Trying to learn, by yourself, at the age of twenty, is a difficult proposition. As to books aimed at teaching adult violin pupils, I do not know any. The rules are the same for adult players and youngsters. In your case the thing to do is to borrow or buy an inexpensive violin; get the best and most experienced teacher you can find, who will supply you with the proper beginning books and exercises. In six months of study, you will know whether it is worth while to continue.

The Maker Ruggieri

P. H.—Francesco Ruggieri detto il per (Cremona, 1631-1720), was once a pupil of one of the Amati's. He made violins of two types; small, slender instruments, and larger ones similar to the grand pattern of Nicola Amati. All his instruments are exceedingly handsome, and very rare indeed.

You can obtain additional details by consulting musical encyclopedias, and works on the violin, which you will no doubt find in your public library. I do not know of any single volume devoted entirely to the life of Ruggieri, but there may be some published in Italy, his native country.

Cannot Judge Blindly

J. W. D.—It is against the policy of *The Etude* to pass on the merits of violins of different makes. Besides, I would have to see the exact violin you are considering, as different violins made by the same maker, often vary greatly in quality. Have the violin you are considering buying, sent to you on proval, and then get the opinion of musical friends on its quality.

The String Quartet

L. B.—The instrumental group techni known as a string quartet, consists o following: two violins (first and sec viola, and violoncello.

A Cleaning Fluid

M. B. P.—1. The recipe for a violin c ing mixture which was published in Etude two or three years ago, and w you say you used with excellent succes as follows; Fine raw linseed oil, seven pa oil of turpentine, one part; water, parts. Shake the bottle well so as to mix ingredients; pour some of the mixture cloth, and rub over the violin. Then off and rub thoroughly with another dry cloth. Keep the bottle tightly corked. can have this mixture prepared at a store. 2. I cannot tell from the initials send, the name of the maker of your vi Possibly some dealer in old violins could ply it. Violin makers of importance their full names on the labels they past side their instruments.

A Bergonzi Violin Price

J. A. S.—The catalog of old violin which a violin by Carlo Bergonzi ($12,000) was listed, was published by and Healy, music dealers (violin departm Chicago, Illinois. If you write to them can furnish full details, and whether violin has been sold since the catalog published. Carlo Bergonzi was one of greatest makers of Cremona, and his vi are very scarce and high-priced. Many vi ists compare the tone of his violins those of Stradivarius.

Didier Nicolas

R. H. W.—Didier Nicolas (Aine) court, 1757—1833. The best of a famil Mirecourt violin makers, he made very instruments after the Stradivari model. violins were very much liked at one the result of which is that thousand imitations with his brand, "A la vill Cremonne, Nicolas aine," formed into a angle, were placed on the market. The tials, 4—D.N. (printed inside) mean D Nicolas. The 4 is probably the number o style of the violin.

Mirecourt is a great violin making c in France, where large numbers of i tions of the violins of the great violin m were produced.

The New Prodigy

O. L. T.—Quite a number of violin p gies have been produced in the United S within the past few years. The latest covery is Patricia Travers, a pupil of Letz, an eminent violinist and teacher o Juilliard School of Music in New York. Miss Travers was born at Clifton, Jersey, and is nine years of age. She h her violin studies at the age of four, couraged by her parents, neither of th professional musician. She made her p début on May 22nd 1938 (Ford Su evening hour at Detroit). She played s difficult compositions, accompanied by Ford Symphony Orchestra of seventy pieces, and was acclaimed by an audien several thousand. Her future eminenc predicted by prominent violinists.

Buying Used Books

T. Y. F.—A second hand bookstore good place to pick up a French, Germa Italian musical dictionary cheap, also musical works.

Birth Date of Joachim

R. E. W.—Joseph Joachim is consi by many violinists and musicians to been the greatest violinist of modern t He was born on June 28, 1831, in the lage of Kittsee, Hungary, within the radius which has produced three other musicians—Haydn, Hummel and Liszt. began to study the violin when he was years old.

Tuneful Twaddle

No Case

TEACHER: "How many times did you practice your scales?"

PUPIL: "Once."

TEACHER: "Only once! Why Paderewski practiced his fifty times every day!"

PUPIL: "Well, that was *his* lookout!"

Musical Selection

"Anyone here know anything a music?" asked the sergeant.

"Yes, sergeant," cried several exub recruits.

"Then go and shift the piano in concert hall," said the sergeant.

Bands and Orchestras

ile the band and orchestra program is
al one and should certainly be an in-
l part of every school music program,
convinced that we are guilty of plac-
the cart before the horse when we
pt to have our students perform in
c without adequate instruction and
round for a satisfactory and intelli-
rendition of musical programs.
ere was a time, perhaps, when we had
ell" our music program to the com-
ty and to educative administrators.
r price for coöperation was an im-
ate string of appearances of new in-
mental school organizations. But we
ot feel that such "selling" is true to
deals and purposes of music education.
ds have greatly changed.
ss stress is placed now upon the idea
playing a concert in four weeks," and
attention is being given to the proper
ing of the music student. We are
dly progressing to the point where
nts and administrators realize that play-
in the band or orchestra is but one
e of the student's musical development.
phasis will then be placed upon the
ent's initial training, and greater atten-
tion given to grounding in fundamentals rather than to the desire for early public appearance. The artificial appreciation and pageantry and tendency to "ballyhoo" our bands will no longer be a force in music education.

Lest we be misunderstood: The music education program has come a long way and most steps have been carefully premeditated. I do not rant at the past or present program, but rather wish to propose what may be accomplished in the future.

I believe that modern instrumental education is more and more on its way toward the tutorial system. The movement is away from mass education to greater individual attention. The four units build upon each other successively, and the firmer the foundation, the better the whole.

If our instrumental program continues to develop organizations for public performances at a sacrifice of an honest musical training, we are hardly filling our obligations to the student, nor to our field. Communities can be educated to an acceptance of higher standards, for there are progressive communities which recognize the finest musical performance for what it is, and do not regard a mediocre school band or orchestra as "simply marvelous" because it can perform.

A great deal of mass rehearsal is lost motion, and it is needless to point out that such practices have lead to little or no progress, and such bands or orchestras find themselves far behind in the achievements of the American instrumental program.

It is interesting to note the type of training in vogue in the schools which produce the outstanding school instrumental organizations. The Joliet, Illinois, High School Band, under its illustrious leader, A. R. McAllister, has for years emphasized the necessity for individual instruction. To this is added weekly sectional rehearsals, plus solo and ensemble participation. The Lane Technical High School Orchestra of Chicago maintains a similar program, as do the bands and orchestras of Cleveland Heights, Ohio. In Mason City, Iowa, the plan calls for individual attention through the use of the technical tests of the "Prescott system." These organizations have made enviable records for themselves, not so much through daily rehearsals as through attention given the individual.

Of the four units mentioned, and from a standpoint of normal requirements, we recommend that greatest attention be given to the second unit, up to such time as the fundamental habits of correct posture, playing position, and tone production have been thoroughly mastered by the young student. As much attention as is possible for the teacher should be given the individual.

From the second unit, development to the third would hinge on proofs of efficiency and advances in the section groupings. From thence to full band or orchestra is the next careful move. The conservatory method should be the guide throughout.

Where individual instruction is by necessity limited, division of sections might be arranged with attendant advantage. This may demand more time and effort from the teacher, and perhaps he must fall back on student aid, but that administrative problem is one which can be worked out and which will pay for itself immeasurably.

The outlook for our new direction toward greater progress is gratifying with the evils of mass rehearsal on the wane. Our instructors are stressing the importance of sound fundamental training, and most pleasing of all is a new attitude of students and public of a future devotion to individual, as well as group musicianship.

EASY to Own— EASY to Play

It's new, it's thrilling, it's spectacular—a genuine 2½ octave DEAGAN marimba, embodying DEAGAN standards of quality and beauty, at the lowest price in history.

The DEAGAN STU-DETTE is your opportunity, at negligible cost, to *stimulate* the musical interest of your children, *develop* their musical talent. No instrument gives greater expression to musical abilities. None wins greater applause—or is easier to master.

There's fun for all the family in the DEAGAN STU-DETTE. Shall we send you particulars? . . . J. C. Deagan, Inc., Dept. E8, 1770 Berteau Ave., Chicago.

Deagan STU-DETTE MARIMBAS

Yes, Teacher, You Are in Business

(*Continued from Page* 546)

ted first the matter of the local paper, ierring with the editor of the daily as what musical news or copy he was actomed to print, particularly about music related to the home. The editor replied one word—None. "But," he said, "we ll be glad to give the subject a little ce at any time."

io, without compensation, the young sician wrote for the Saturday Evening ies about:

1. How to Make the Most of Your Phonograph.
2. How to Use the Phonograph to Make the Most of You.
3. Getting an Education from Your Radio.
4. How to Listen to an Orchestra.
5. Your Children Sing in School. Do They Sing at Home?
6. Organizing Home Music, or Ignoring It—Which?

All of this was useful and entertaining; was written in a simple, homely manner t made people conclude that the writer s "Somebody just like ourselves" (and t, fellow teachers, is decidedly an asset). Coincident with the above, he talked with president of the Rotary Club and of Business Men's Club, to ascertain what ses of music had been discussed before se bodies. To his surprise, neither of se organizations had ever invited any to speak on the subject of music. But president of the Rotary Club was anxs to have him talk to the members about usic in our town—how to make the most it."

You see, reader, that, by doing a conerable number of interesting things for hing, this young man was building up usiness good will destined to stand him in fine stead, later on. Little rivulets of effort do make a mighty stream of accomplishment.

And he did not stop even with this. He discussed with the proprietor of one of the small manufacturing plants the desirability of setting up a glee and chorus group, not large, but large enough to be effective. A little practice to be done daily after work hours, or evenings, as might prove to be best. He told me that he had never been turned down so cold, flat and decisively as he was on this proposition. But remembering that life is an adventure in which, if you wish to accomplish something, you must not cease in effort; he invited the proprietor of the plant to attend the Rotary Club luncheon and listen to what he had to say about music. That clinched the matter, and the Glee Club came into existence.

On the blue print of operations there were ten items. With some of them he made no headway. There was nothing he could do, for instance, in the matter of school music except to meet the supervisor and learn what she was doing. The course of study and its accomplishment was of the highest order. But this was true: No effort was made to acquaint the public with this excellent state of affairs, nor was any "tie in" made between school music, home music, and private music teaching.

IV

As to the function of the music teacher in the community, it is interesting to consider this man's point of view. It sets up a practical working program by which, through music, the teacher becomes an active public team-working factor rather than

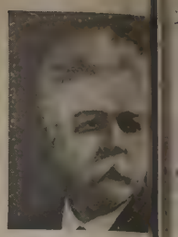
THE ETUDE HISTORICAL MUSICAL PORTRAIT SERIES

An Alphabetical Serial Collection of

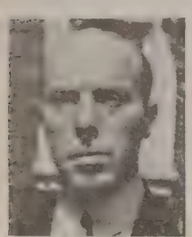
THE WORLD'S BEST KNOWN MUSICIANS

This series which began in February, 1932, has included to date a total of 3476 celebrities. It will be continued alphabetically until the entire history of music is adequately covered. Start making a collection now. Nothing like this has ever hitherto been issued.

Etude readers desiring additional copies of this page and pages previously published are referred to the directions for securing them in the Publisher's Notes Department.



Alexander Spendiarov — B. Kakhovka, Russia, Nov. 1, 1871; d. [illegible]. Was [illegible] of Reinecke and Rimsky-Korsakoff. Wrote [illegible] and many songs.

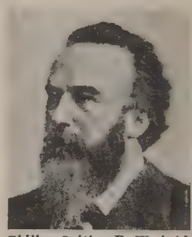


Vernon Spencer — B. Belmont, Durham, Eng., Oct. 10, 1875. Comp., pia., lectr., teacher. Active in Germany, 1897-1911; then located in Los Angeles. Songs, pia. pcs., a cantata and church music.

Willard Spenser—B. Cooperstown, N. Y., July 7, 1852; d. Phila., Dec. 17, 1933. First successful American operetta comp.; best wks.: "The Little Tycoon," "Princess Bonnie" and "Miss Bob White."

Herman Spielter—B. Bremen, Germany, Apr. 1860. Comp., teacher, of Reinecke and Jadassohn. Has taught in prom. New York schools. Songs, pcs. D. Nov. 10, 192[illegible]

Harry Reginald Spier—B. Boston, Mass., Nov. 7, 1888. Comp., accompanist, voice teacher. From 1914-23, coach and accompanist for Werrenrath. Songs, piano pieces, choral works.



Theodore Spiering—B. St. Louis, Mo., Sept. 5, 1871; d. Munich, Aug. 11, 1925. Violinist, comp., cond., tchr. Pupil of Schradieck. Taught in Chicago, Berlin, and N. Y. Fdr.-dir. of own quartet.

Hermine Spies—B. Löhneberger Hütte, Feb. 25, 1857; d. Wiesbaden Feb. 26, 1893. Concert contralto. Pupil of Sieber and Stockhausen. Début 1882. Excelled as interpreter of Brahms.

Fritz Spindler—B. Wurzbach, Ger., Nov. 24, 1817; d. Lössnitz, Dec. 26, 1905. Comp., pianist. Had great success in Dresden as a tchr. Over 400 salon pcs.; also sonatinas and some lge. wks.

Philipp Spitta—B. Wechold, Hanover, Dec. 27, 1841; d. Berlin, Apr. 13, 1894. Musicologist. Co-fdr. of Bach-Verein; Vice-dir., Hochschule für Musik. His writings and critl. edits. are valuable.

Jascha Spiwakowsky—B. Kiev, Russia, Aug. 31, 1896. Excellent pia., virtuoso. Pupil of Mayer-Mahr. Has been active for many yrs. in Berlin as concert artist. Has made numerous appearances.

Grace Spofford — Educator. Stud. at Peabody Cons., then supvr. of normal pia. tch. there. Former dean, Curtis Inst., Phila. Assoc.-dir., N. Y. Coll. of Music; dir., Mus. Sch., Henry St. Setlmt.

Louis Spohr—B. Brun[illegible] Ger., Apr. 5, 1784; d. [illegible]sel, Nov. 22, 1859. [illegible] vlnst., noted tchr., [illegible] Tchr. of St. Lubin, F[illegible] and others. Wks. incl. [illegible]torios and 17 vln. con[illegible]

Gasparo Spontini—B. Majolati, Ancona, Nov. 14, 1774; d. there Jan. 24, 1851. Dram. comp. Was general mus. dir. and court comp. at Berlin. Weber's rival. Operas include recently rev. "La Vestale."

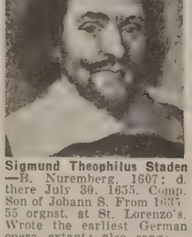
Hermann Springer — B. Döbeln, Saxony, May 9, 1872. Writer on music. Studied in Leipzig, Berlin and Paris. Was head, mus. div., Royal Library, Berlin. Has done important editorial work.

Reuben R. Springer—Important in musical history because of financial aid in fnd. Coll. of Mus. of Cincinnati. Donations of more than $400,000.00. (A prodigious gift for that day!)

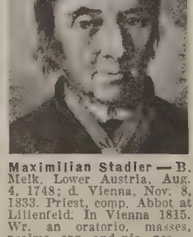
Charles Gilbert Spross—B. Poughkeepsie, N. Y., Jan. 6, 1874. Comp., pianist. Accom. for many world fam. artists. Over 200 songs, also pia. pcs., and a sonata for vln. & pia. Res. Poughkeepsie.

Walter Spry—B. Chicago, Feb. 27, 1868. Pia., comp., tchr. Studied in Chicago, Vienna, and Berlin. Soloist, Chicago and St. Louis Symph. Orchs. Fac.-meth., Converse Coll., Spartanburg, S. C.

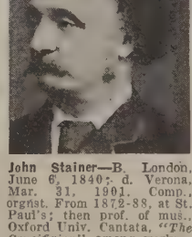
Alfredo Squeo—B. Bovino, Italy, May 22, 1899. Vlnst., comp., tchr. Studied at Royal Cons., Naples. Concert appearances in Italy and U. S. Pieces for violin and piano. Res., Mt., Vernon, N. Y.



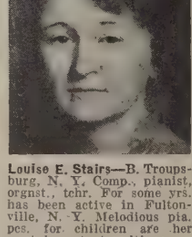
Frank St. Leger—B. Madras, India. Cond., pianist. Accompanist for Melba on U. S. tour. Was cond. at Covent Garden; also of Melba Opera Co., Melbourne. Cond. of Chicago Civic Opera Co.



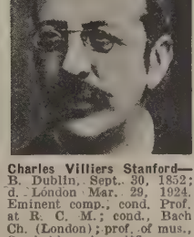
Ben Stad—B. Rotte[illegible] Holland, Jan. 22, 1885. [illegible]linist, cond., tchr. Pu[illegible] César Thomson and [illegible] Flesch. Fdr.-dir. of [illegible] Soc. of Ancient Instrs. of Inst. of Mus. Art, [illegible]



Johann Staden—B. Nuremberg, 1581; d. there Nov., 1634. Comp., orgnst. Held pos. as orgnst. of Sebalduskirche. Wr. many motets, magnificats and other church music; also secular music.



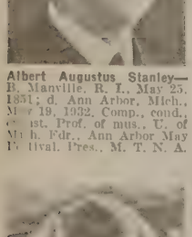
Sigmund Theophilus Staden—B. Nuremberg, 1607; d. there July 30, 1655. Comp. Son of Johann S. From 1635-55 orgnst. at St. Lorenzo's. Wrote the earliest German opera extant; also songs.



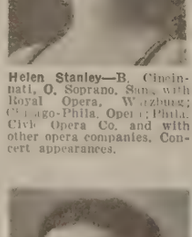
Maximilian Stadler — B. Melk, Lower Austria, Aug. 4, 1748; d. Vienna, Nov. 8, 1833. Priest, comp. Abbot at Lilienfeld. In Vienna 1815. Wr. an oratorio, masses, psalms, org. and pia. pcs.

John Stainer—B. London, June 6, 1840; d. Verona, Mar. 31, 1901. Comp., orgnst. From 1872-88, at St. Paul's; then prof. of mus., Oxford Univ. Cantata, *"The Crucifixion"* among works.

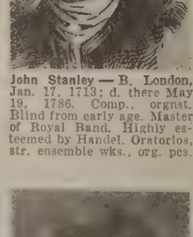
Louise E. Stairs—B. Troupsburg, N. Y. Comp., pianist, orgnst., tchr. For some yrs. has been active in Fultonville, N. Y. Melodious pia. pcs. for children are her most important writings.



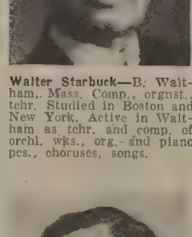
Charles Villiers Stanford—B. Dublin, Sept. 30, 1852; d. London Mar. 29, 1924. Eminent comp., cond. Prof. at R. C. M.; cond., Bach Ch. (London); prof. of mus., Cambridge. A prolific comp.



Hermann Stange—B. Kiel, Ger., Oct. 14, 1884. Mus. dir., cond. Pupil of P. Scharwenka, Mayer-Mahr and F. Fischer. Was opera cond., Prague, Berlin, Helsingfors and other large centers.

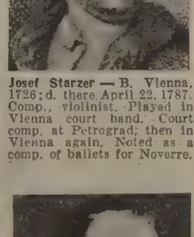


Max Stange—B. Ott[illegible] Ger., May 10, 1856. C[illegible] cond. Was prof. of s[illegible] at Royal High Sch. B[illegible] Wrote orchl. wks., viol[illegible] orch. pieces, and many [illegible] choruses. D. Jan. 25,

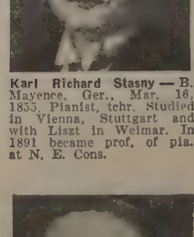


Albert Augustus Stanley—B. Manville, R. I., May 25, 1851; d. Ann Arbor, Mich., May 19, 1932. Comp., cond., orgnst. Prof. of mus., U. of Mich. Fdr., Ann Arbor May Festival. Pres., M. T. N. A.

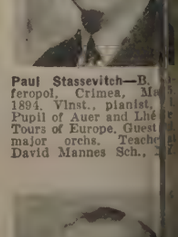
Helen Stanley—B. Cincinnati, O. Soprano. Sang with Royal Opera, Warsaw; Chicago-Phila. Opera; Phila. Civic Opera Co. and with other opera companies. Concert appearances.



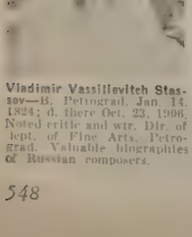
John Stanley — B. London, Jan. 17, 1713; d. there May 19, 1786. Comp., orgnst. Blind from early age. Master of Royal Band. Highly esteemed by Handel. Oratorios, str. ensemble wks., org. pcs.



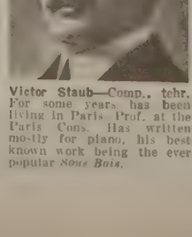
Walter Starbuck—B. Waltham, Mass. Comp., orgnst., tchr. Studied in Boston and New York. Active in Waltham as tchr. and comp. of orchl. wks., org. and piano pcs., choruses, songs.



Frederick E. Starke — B. Phila., Sept. 29, 1890. Comp., orgnst., pianist, cond., tchr. Pupil of Beardsly Van de Water and I. Philipp. Fmr. orgnst., Baptist Tem., Phila. Songs, pia. pcs., choruses.



Josef Starzer — B. Vienna, 1726; d. there April 22, 1787. Comp., violinist. Played in Vienna court band. Court comp. at Petrograd; then in Vienna again. Noted as a comp. of ballets for Noverre.



Karl Richard Stasny — B. Mayence, Ger., Mar. 16, 1855. Pianist, tchr. Studied in Vienna, Stuttgart and with Liszt in Weimar. In 1891 became prof. of pia. at N. E. Cons.

Paul Stassevitch—B. [illegible]feropol, Crimea, M[illegible] 1894. Vlnst., pianist. Pupil of Auer and Lhé[illegible] Tours of Europe. Guest [illegible] major orchs. Teache[illegible] David Mannes Sch., [illegible]

Vladimir Vassilievitch Stassov—B. Petrograd, Jan. 14, 1824; d. there Oct. 23, 1906. Noted critic and wtr. Dir. of Dept. of Fine Arts, Petrograd. Valuable biographies of Russian composers.

Victor Staub—Comp., tchr. For some years has been living in Paris. Prof. at the Paris Cons. Has written mostly for piano, his best known work being the ever popular *Nous Bois.*

Bernhard Stavenhagen — B. Gretz, Reuss, Nov. 24, 1862; d. Geneva, Dec. 26, 1914. Comp., pianist, cond. Pupil of Liszt. Tours of Europe and U. S. Court cond. at Weimar and Munich.

Nicolai Vladimirovitch Stcherbatchev—B. St. Petersburg, Aug. 24, 1853. Comp., pinst. Studied in Rome and with Liszt in Weimar. Closely allied with young Russian school. Pia. pcs. and songs.

Bruce H. Steane—B. Camberwell, London, June 22, 1866. Comp., orgnst. Was an asst. orgnst at twelve. Has held positions in various churches in Eng. Wks. incl. anthems, servs. and org. pcs.

Theodore Stearns—B. Berea, O.; d. Los Angeles, Nov. 1, 1935. Comp., cond., author, critic. Was chm., mus. dept., Los Angeles branch of U. of Cal. Wks. include an opera and orchl. pieces.

George Waring Stebbins—B. East Carlton, N. Y., June 16, 1869. Comp., orgnst., cond., singer, voice tchr. Son of G. C. Stebbins. Studied with Woodman and Sbriglia. Org. wks., anthems, songs.

George Coles Stebbi[illegible] East Carlton, N. Y., [illegible] 26, 1846. Gospel sgr., [illegible] Was chorister of churc[illegible] Chicago and Boston[illegible] worker with Moody, [illegible] and McGranahan.

QUESTION AND ANSWER DEPARTMENT

Conducted

By KARL W. GEHRKENS

Professor of School Music, Oberlin College
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Play Waltzes

In listening to radio programs I have been hearing the varied ways in which Chopin's Waltzes are played. The 1 2 3 *is characteristic. But often it is like this* 1 2 3. *The Waltz, Op. 69, by Chopin, is so played that sometimes I seem to stress 2 and 3 slightly; but that would be for musical reasons rather than rhythmic. Any explanation of a good interpretation of this will be appreciated.*—Miss G. C. C.

From the way you say you feel about the *Waltz, Op. 69*, I should say that you have much need of my advice. I think that how your own inclination you will keep from wrong. In concert waltzes, they are faster, the second and third are much lighter than in ballroom time. It is in the slower type that you will find second beat played *staccato* as you find in Chopin's *Op. 64, No. 2*. The rapid waltzes as Chopin's *"Minute"* one scarcely can hear the second and third chords, they are so light; and the time is actually in four measure lengths, one beat for each measure.

On Second Rhapsody

Will you please tell me the correct fingering the following examples from the "Second Rhapsody"? Page 22, measure 13. Page 40, measures 1 to 5 (for left hand). Where can I obtain either a piano roll or copy of this rhapsody?—J. C.

This section (Page 22, measures 1 to 5) is much simpler than so many other parts of this composition that I wonder if our copies are the same; however, they must be. The notes 1, 2, 3, 4, and 7 have triplets of sixteenth notes in the right hand against eighth notes in the left hand. Measures 5, 6, and 8 have two sixteenth notes in the right hand against each eighth note in the left hand. The sixteenths are played before the beat; that is, the eighth note comes on the half beat. Perhaps the *8va* sign has bothered you. This is good only for the first three measures and affects the right hand only.

The *Presto* is merely a series of major thirds in the right hand and minor thirds in the left hand, progressing chromatically up the keyboard, both hand striking alternately.

The three measures on page 40 consist of four groups of seventh notes to the beat. The right hand plays the octaves while the left hand plays single notes. The hands play alternately as you do in playing "Peter, Peter, Pumpkin Eater." Here, as in the above example, the *8va* affects the right hand only.

You are told that the "Second Rhapsody" has been reproduced on records nor on a player piano roll.

Pitch Standards

I would be glad if you would kindly inform me, through the Question and Answer department, on the following points: What is the number of vibrations of A and C, both low pitch and high pitch, as used in America to-day? What pitch is used in England and on the Continent? What is the usual pitch used for tuning pianos for concert work and also for accompanying the violin and the voice? —M. C. F.

The pitch called "International" was agreed upon by a congress of musicians at Vienna in 1885, this same pitch having been adopted as official in France some twenty-six years before. In 1891 a convention of piano manufacturers at Philadelphia adopted "International Pitch" for the United States; and, after a comparatively few years ago, it was in almost universal use, although some instruments continued to be tuned to a pitch about a step higher which was referred to as "high pitch." Some fifteen or twenty years ago a pitch standard, slightly higher than the International pitch but not as high as the old high pitch, began to be used in tuning pipe organs. This new pitch was called "Diapason" and at the present time all pipe organs manufactured in the United States are tuned to A 440 (middle C, 261.6). This pitch is employed in the case of orchestras that are to be used for concert work and accompanying as for those that are found in vaudeville.

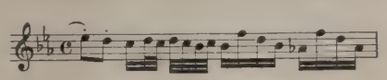
You are informed that this same pitch (A 440) is at present as the standard in Germany, while in England, A 439 is official; and in old France, the old International pitch of A 435 is still in use.

To answer the first part of your question a little more specifically: In International pitch, A 435 vibrations and middle C, 258.7. In Diapason pitch (sometimes now referred to as "concert pitch") A has 440 and middle C, 261.6 vibrations.

Playing Large Chords

Could you please inform me how the Chant d'Amour of Paderewski's Chant d'Amour *is played? Is the second note rolled, as it can be reached with the left hand, or does the hand take the two top notes? Is it true that the right hand always takes a note if the chord is turned up?*—Miss O. F.

Since Paderewski has not marked a roll in the chord, the tones ought to be sounded together. There are many chords like this throughout this composition, but any hand not large enough to strike all notes simultaneously is permitted to roll them. In this particular measure the right hand thumb can take care of the top B-flat. Stems, clefs, or fingerings do not always indicate which hand plays certain notes; in fact, there is only one sure way to tell, and that is by means of rests; however, the fingering, if marked, will usually give you at least a hint. If a composition is marked correctly there always will be rests on the bass staff when the left hand is idle, and on the treble staff when the right hand is not playing.



Pedaling in Chopin

Q. 1. Will you kindly give me a few notes regarding the right employment of the pedal for Chopin's Etude, Op. 10, No. 10? *Should the pedal be put down at the beginning of the measure and changed at the middle except when otherwise marked?*

2. Please give the correct way to do the trill in the second measure of Bach's Fugue, No. 7, *from the "Welltempered Clavichord, Bk. 1."*—P. E. L.

A. 1. Notice that some measures of this *Etude* are pedaled throughout the measure. In all such cases the harmony of the accompaniment remains the same. Except in these instances, change the pedal at each fundamental bass. However, the best advice I can give you is to trust your own ears. Listen, and if the tone seems to blur, make a change of pedal.

2. This is the trill in the second measure:

Difficult Rhythm in Liszt

Q. 1. How do you count the first measure of Liszt's Sixth Rhapsody? *Could I count one-and, two-and, and so on?*

2. In measure 42 from the end of the composition how are the triplets in the right hand played against the two groups of four sixteenths in the left hand?

3. In the Dance of the Gnomes *by Liszt (part marked* Un poco piu animato), what is *meant by the first note of the group being an eighth note with cross bars at top and bottom of the notes? Are they melody notes?*—Miss M. M.

A. 1. This measure is simply four even eighth notes with one beat for each note, like this: ♪ ♪ ♪ ♪

You probably are bothered about the accent mark over beats two and four; since beats one and three are the regular accents, these four notes are all played with about the same amount of tone.

2. This is simply three notes in the right hand against two in the left, the second octave coming half way between the second and third notes of the triplet, as follows.

3. Yes, Liszt meant these for melody notes.

Free Rhythm in Modern Music

Q. Will you please explain how to play and count these measures?—E. P. S.

A. In the first example we have an instance of duple measure in the midst of a composition which is basically in triple measure. The thing to do is to count these inserted measures in two's, attempting to give the entire measure approximately the same amount of time that would be given to one of the ordinary triple measures. Sometimes that same thing happens within a measure, as, for example, when in a composition in six-eight rhythm, a certain measure will have two pairs of eighth notes, each one marked with a figure 2, indicating that these figures are doublets instead of the usual triplet which constitutes half of a six-eight measure. Changes of measure in musical compositions are becoming much more common than used to be the case, and we find not only many instances of five-four and seven-four, but of a four-four followed by a three-four, and then perhaps we have a four-four, and so on. In the classical school, the composer adhered much more closely to the regular scheme of accentuation, but the modern composer, in his attempt to make his music "free," is breaking away both from strict adherence to a certain tonality and from continuing the same measure scheme throughout the composition.

VOICE QUESTIONS
Answered
By FREDERICK W. WODELL

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Low Tones of the Contralto

Q. I have a contralto voice and have not enough support for my lower tones from Middle C down. I should like to extend my upper tones.—Miss C. W.

A. Your need is to study tone-production with a good teacher. Keep your chest well up, but without strain on those lower tones. Have always the back of the tongue free, loose, and cultivate the feeling as if *about to yawn.* Practice downward scales and *arpeggi* on the vowels, slowly, using principally *ĕ, ĕ* and *Ah,* from the E-flat next above Middle C to your lowest note, keeping the tip of the tongue lying easily but closely against the lower front teeth. Study the breathing exercises on pp. 173-176 of "Choir and Chorus Conducting," by the writer. See page 173, third paragraph, for suggestions as to how to secure good tones throughout the voice. Get "head" voice on one of your upper notes, by the plan given in the third paragraph on page 172, and use it much in your upper middle range. Soon you will find it easier to sing higher than before. But control of the breath and a loose tongue and jaw are positively necessary for success in all this work.

Another Youthful Voice

Q. I am a girl thirteen years old. Hope to sing in concert and opera. Range is from A or G below Middle C to high C, or sometimes even high D, without forcing. People tell me my voice is pleasant. Have read THE ETUDE *for three years, and found it interesting and helpful concerning voice.*

(1) Lilli Lehmann, in her book, refers often to the ä; how is this pronounced? Have been told it is pronounced as u in "but."

(2) Been told that it is harmful to sing at all at my age; also that it is not harmful to sing a little, and not force the voice. Which is correct?—E. B.

A. (1) See article in Webster's dictionary, concerning the pronounciation referred to.

(2) The second statement is right. Your range, as you state it, is a wide one. Question is, what would a good judge say about the quality of your very high and very low notes? Sing mostly between Middle C and F (fifth line, treble clef).

Tenor—Closed Tones

Q.—I have a tenor voice of dramatic quality. Studied with one teacher for three years. Have been taught to begin my head tone at E-flat. Recently I found it necessary to change teachers. This new teacher tells me to sing open until F, and to begin closing at F-sharp. I do not know whether I am on the right track, and the uncertainty is affecting my singing. —*M. L.*

A.—We are not sure as to just what you mean by "closing" your tones, but will suggest that you lessen the weight of your voice for a while when singing upward between

Ex 1

and practice long and faithfully to make your voice sound to the *lightest breath pressure* which will bring the desired tone on those pitches. This work will be likely to result in a better quality on the notes from upper D onward. Keep the tongue and jaw free from stiffness; expect a sensation as of tonal vibration in the upper front mouth, which spreads somewhat sidewise, as the pitch rises. Will to feel that each ascending tone is originating at a lower point in the neck. Give the sound not a thin, nor a heavy quality, but a musical, rich color.

Singing Out of Doors

Q.—1. I am a tenor. Do the mumps endanger or harm one's vocal cords? Since having this disease two months ago I have experienced a certain heaviness in my throat, when attempting my top notes.

2. Can one sing in the open air in cold weather without harming the voice?—*A. T.*

A.—1. It is possible that the disease has left you with some stiffness of the muscles involved in the adjustment and conditioning of the larnx and pharynx for singing. A throat specialist could examine and advise you as to these points. We are informed by a medical friend that certain pus conditions have been associated with some cases of mumps, which have affected the vocal cords unfavorably. Beware of forcing your top notes. For a time sing carefully and rather lightly.

2. No. There is danger of setting up a congestion in the throat. Outdoor singing tempts to over exertion, often leading to laryngitis. One cannot hear and judge the tone as he does in indoor singing.

Those Upper Tones

Q.—I am a tenor. Have studied with a teacher for about a year and a half. I know my teacher has taught me the correct technic, because it is remarkable the way my voice has improved in quality and strength, and the ease with which I scale and hold the higher tones of my register; but when I try to employ this technic in a song, I do not seem enough control of it to decrease the when I want to. I do not seem to h shade the quality for expression, and to me that I sound like an Italian fish on my high tones. My teacher tells me songs as though they were exercises cannot help feeling that when I do s way it sounds unmelodious and expres 1. Do other singers have this trouble stage of the game? 2. Will I eventu control of this voice?—*A. L. M.*

A.—1. No doubt. 2. Depends upon you do the necessary work, and prac rectly. Better start singing moderat tones on various vowels, one pitch, middle of your compass, with light, c tional weight of voice. Transpose care semitones, first downward, then upw far as the work goes well, as shown musical quality of the sound and phys in singing. Then take the work on th as given in "101 Master Exercises" ander Hennemann; and practice it middle pitches, daily, for short peri this for many months. Begin with th half, from *mf* to *p*. Much later begi go to *f*. Lastly, work each half from and *vice versa*. Also practice sustaini weight tones, one pitch, five slow beats vowels from the upper G, transposin ward an octave at least, by semitones. of tone must be always in mind. Do n about getting much power on your upp from Middle C-sharp up to F-sharp. O notes upon which the singer can do swell are really in his compass for singing. Do not be in a hurry. It take period of intelligent work to make a s

A Changing Voice

Q.—I followed your advice co treatment of a young man who, though five, still spoke and sang with a high (head voice). He has now discover bass tones, and we are working out h He speaks also now in the low voice you suggest some suitable songs for hi present conditions?—*Teacher.*

A.—See catalogs of Theodore Press pany, John Church Company, and Ol son Company, where the compass of given; and where there are lists of pie cially for bass, baritone and tenor.

You might try the following: *It wo to be,* (in D), by Nessler; *The Nigh Thousand Eyes,* by W. H. Neidlinger *to me only with thine eyes* (low key), lish; *Last Night* (E-flat), by Kjer *through the night* (E-flat), Welsh fo

The Public School Teacher

Q.—My high school voice pupils a ners. I am using Sieber's vocalises al rote exercises and simple songs. It some years since I studied systemat shall appreciate any suggestions you as to new material I might use. Al of a few sacred and secular songs for soprano, to be used for recital numbe —Inst

A.—The new voice book by G. L. and W. W. Shaw will suit your needs Here are a few songs for your us *Lullaby,* by A. Needham; *Mission of* by F. Cowen (medium key); *Sleep H of mine,* by Charles Dennee (mediu *If I were your sweetheart,* by Fred Wodell; *Carmena,* by Lane Wilson key); *Voices of the Woods,* by Ru arranged by M. Watson; *Spring is a* L. Strickland; *The Sweet Story,* by att; *O Master, let me walk with Thee* Ambrose; *Savior Divine,* by H. T. (low key); *Spirit of God,* by W. H. N (medium key).

An Extensive Range

Q.—I am sixteen years old. My quite mature. Am I too young to s opera? My range is from E below to E above high C. I sing soprano parts above the first space F. How sing the tones from there downward?

A.—For those who would sing opera, the road is long and hard. Ve more than a good voice is necessary good teacher whether or not you young to begin the study mention your tones sweet and clear, and alwa something" when you sing.

Own Limitations

To C. W. S. and others who may ested:

This department cannot under recommend a particular vocal teach make comparative criticism of teache It may be worth while to say that who find present results of their stud factory, should beware of apparentl disposed advocates of other meth teachers. If you have a good teacher, him or to her, as long as your v general knowledge of singing and of tation seem really to be improving other hand, if, after honest trial, t developing noticeable defects, espe your voice production, then it wo well to be considering the finding of instructor.

The Race Is On!

● Bang! goes the starting gun as it cracks out on the crisp Fall air! They're off! Some will tie for first place, more will be in second, third and fourth place. Some will drop out of the race altogether, and ten to one, they will be those who procrastinate at the starting line; those who say, "Oh, there's plenty of time," "Now, don't push me. What if I am a little late? I'll make it up."

A good start for the music teacher is all important. Almost before we know it, we will be in the full swing of the 1938-1939 season. Will you be on the starting line when the gun fires? Will you have all your announcement circulars out, all your plans for lessons and recitals made, all of your necessary music supplies ordered? Your business for the coming year can not fail to suffer if you have not made the proper business preparations to sell every possible minute of your teaching time to the best advantage, and not be bothered with annoying details of ordering when you start your season.

The Great Cause— Incompatibility

The Cover for This Month

Little sixteen months old Nan Adriance Burrus gave such evidence of keen delight in beautiful melodies that her aunt, Miss Catharine V. Burruss, encouraged her to listen to music and gave her opportunities to sit at the keyboard and to endeavor, in her baby fashion, to imitate what she had seen grown-ups doing. Miss Burrus is an enterprising teacher of piano in Llanerch, Pa., a suburb of Philadelphia, and because the child's response to music was so intelligent, for her tender age, there came the inspiration to have some pictures taken of the little miss at the keyboard. Accordingly, a friend who was an expert photographer was invited to catch little Nan in some of her musical moods. This photographer, Mr. Walter F. Troupe, took some delightful pictures and our choice of these pictures is the one shown on the cover of THE ETUDE for this month.

We hope this charming picture will inspire many others to take pictures of youngsters in happy moods at a piano keyboard, but this hope is expressed for the pleasure they will give to friends and relatives and not with any promise that THE ETUDE MUSIC MAGAZINE will publish any of these pictures. Unfortunately, THE ETUDE could not afford to devote space to printing a great number of such pictures. This is just a good natured warning in advance so that no one will be expecting THE ETUDE office to expend a lot of time and a lot of postage, during the next few weeks after the appearance of this issue, to return unsolicited photographs.

There is the prophetic angle that makes a picture, such as little Nan Adriance's musical portrait, of particular interest. Because there is music in her home, and because from such tender days of childhood she is enjoying the privilege of hearing good music as well as pleasing little tunes that she can recognize, her life eventually will be richer and fuller than the life of the average individual not so fortunate in having music as a real part of life.

It is indeed a great misfortune when children must live in a home devoid of a good musical instrument. Music in the home from childhood can help build spiritual values. After all those who enjoy the privilege of parenthood, and who esteem themselves responsible for equipping their children with those qualities which have the highest values, will, in the words of the philosopher, find "The autumns of their life enriched with thoughts of things well done."

A Modern Reference Library of Musicians

Regular readers of THE ETUDE are familiar with *The Etude Historical Musical Portrait Series* which has appeared monthly in this journal since February, 1932. Published alphabetically, the listings have now reached those whose family names begin with the letter "S." Each month's issue presents 44 miniature photographs and "thumb-nail" biographies of composers, singers, pianists, orchestra and band conductors, etc., who have made a worthwhile contribution to the art of music.

For musical folk who have not begun to use this series, and for those who have not as yet made its acquaintance in the pages of THE ETUDE, this note is written as a suggestion that here is, indeed, a modern reference library that everyone interested in the art will find well worth collecting.

These, too, can have the entire series complete, as copies of all back issues of the pages that have appeared to date may be obtained at only 5 cents each. Maybe you would like to do as so many musical folk have done? Purchase a scrap-book in any stationery or 5 and 10 cent store and paste in the pages of *The Etude Historical Musical Portrait Series* from past, current and future issues. When completed you will have a most comprehensive reference on musicians.

Changes of Address

When requesting changes of address, be sure to give us both old and new addresses and let us have such changes at least four weeks in advance of the change.

Reward Cards for Music Pupils

(Second Series)

It is human nature to yearn for appreciation, and in our various fields of work and effort to strive for reward of some kind. The child at home is gratified when the parent approves, and when, later on, the young student can carry home from school a "Reward of Merit" signed by the teacher, the resolution to do better and better is strengthened.

Music pupils who practice diligently and show progress appreciate *Reward Cards* testifying to their advancement. For years we have supplied a set of sixteen such cards, each devoted to a different composer. On one side is an excellent likeness and his birthplace or other scene of interest, lithographed in harmonious colors; on the reverse side, a brief biography, an excerpt from one of his manuscripts, and a facsimile of his signature. Accompanying this is a *Prize Card* showing a group of eight distinguished composers, arranged around a space in which may be written the date of award, the pupil's name, and that of the teacher.

The demand for this kind of *Reward Card* has been so great that we have prepared a second series featuring the following sixteen composers: N. Rimsky-Korsakow, Anton Rubinstein, Camille Saint-Säens, Jean Sibelius, Modest Moussorgski, Giacchino Rossini, Moritz Moszkowski, Jules Massenet, Edward MacDowell, Edvard Grieg, Edward Elgar, Christoph W. von Gluck, Antonin Dvořák, Claude Debussy, Cecile Chaminade, and Georges Bizet.

One set only of the *Reward Cards* (Second Series), including *Prize Card*, may be ordered at the special advance of publication price, 35 cents, postpaid, to be delivered on publication.

Fourth Year at the Piano

By John M. Williams

As the time approaches for the withdrawal of *Fourth Year at the Piano* from the advance of publication offers, we feel that the patience of those who have been waiting for this book in Mr. Williams' important educational series will be amply rewarded. With the completion of the detailed editing and the comprehensive annotations which are such a vital part of works bearing this educator's name, and the engraving of plates all accomplished, but a short time should be required for the printing and distribution.

The author has drawn his study material from both standard and modern sources. Etudes are presented from the works of Concone, Czerny, Schytte, Dorn, Franz, and Bilbro. Choice pieces by outstanding composers, with carefully prepared fingering, pedaling, and phrasing, are a noteworthy feature of this volume. A glimpse of the contents reveals such favorites as *Träumerei*, Schumann; *Tarantella*, Pieczonka; *Reflets*, by Clarence Cameron White; and *Second Valse Caprice*, Felton.

Until publication, we shall continue to accept orders for this important book at the special price of 50 cents cash, postpaid. The sale of this book will be confined to the U. S. A. and Its Possessions.

(*Continued on Page 552*)

Fragments from Famous Symphonies

For Piano

Compiled and Arranged

By William Baines

There was a time, not many years ago, when the joy of listening to the sublime inspirations of the great music masters, as expressed in their symphonic compositions, was confined to the wealthy, and to those living in or near the larger cities of the country where great symphony orchestras were maintained. Now the family living 50 or 100 miles from a railroad, the music lover in the smaller cities and in suburban and rural communities, simply tunes in on his radio the foremost musical organizations of the world and enjoys the finest programs.

Naturally, this new acquaintance with the symphonies has created, in the minds of those who have studied the most serviceable of all instruments, the piano, a desire to play the melodic gems that they have listened to in radio programs. Piano arrangements, of all grades, from the grand operas, always have had a popular appeal. Now the demand is for piano arrangements of themes from the symphonies.

Mr Baines, in compiling and arranging the dozen numbers for this new book, has had in mind the cultural advantages of placing these master melodies within the playing capabilities of pupils in the second grade. Picture the pride of a young student, and the satisfaction of the parents, when he or she can sit down at the piano and play selections from Schubert's *Unfinished Symphony*, Tschaikowsky's *Fifth* and *Sixth*, or the celebrated *New World Symphony* of Dvořák. What a thrill to play the works of Beethoven, Brahms, Mozart, Haydn and Schumann. Far better to have the young piano pupil play these melodies as recreation material in his course of study than the old-fashioned "salon" pieces, or the so-called popular music of the day.

As is customary in announcing new books, a special low advance of publication cash price has been set for this volume. Copies now may be ordered at 30 cents each, postpaid. Orders can be filled only in the U.S.A. and Its Possessions.

Manual of Fugue

By Preston Ware Orem, Mus. Doc.

On May 26th, 1938, and in the very middle of directing a first playing over of one of his symphonic compositions, Dr. Preston Ware Orem suddenly passed away. He has left to the music world rich legacies from his exceptionally gifted mind. He was known personally by most of the successful composers of the last three decades or more, and many of these from time to time have frankly acknowledged that in Dr. Orem they they found one of the keenest, if not the most keen, musical mind it ever had been their privilege to meet.

Dr. Orem lived to see his *Harmony Book for Beginners* and his *Theory and Composition of Music* achieve unprecedented success, and just within the last year of his life his counterpoint book, *The Art of Interweaving Melodies* was accorded a wonderful reception in music education circles. There is yet to be published his splendid *Manual of Fugue*, on which Dr. Orem had worked long and painstakingly, and which fortunately he had completed before his passing.

As in his other theory works Dr. Orem here has followed the procedure of explaining the subject in simple, direct language, revealing things so clearly that it seems amazing that heretofore theory writers have been so involved in their efforts to direct the student in the various phrases of Fugue writing, such as Canon, Imitation, Double Counterpoint, etc. With that ability possessed only by one thoroughly sure of one's subject Dr. Orem has given in understandable language the necessary explanations, and has supplemented these by original examples which his unusual gifts permitted him to make. This *Manual of Fugue* will enable the theory teacher to increase the scope of his work, and most certainly the student of composition, who thoroughly digests the material in this book, will be stepping into realms where greater beauty will be found in the utilization of any talents for composing.

Those who wish to take advantage of our special advance of publication cash price of 40 cents postpaid, may order single copies now, copies to be delivered when the book is published.

28 Miniature Etudes

A Book of Studies for the Third Grade Piano Student

By Ella Ketterer

The most satisfactory studies for use with the piano student of today are those that are short and to the point. The etudes in Miss Ketterer's new book are exactly one page in length.

Pupils cheerfully practice studies that are not too obviously technical exercises. These are presented in the form of pieces, each bearing an imagination-creating title.

Teachers, as a rule, prefer studies that cover thoroughly one technical problem. Each of these is devoted to a particular phase of piano playing that the student meets in third grade work.

The titles of the study pieces and the problems they cover are: *The Whirlpool* (triplets), *Prattle* (the trill), *Oriental Song* (syncopation), *The Giant* (left hand and pedal study), *Sunday Morning* (suspensions), *Up the Stairs* (broken thirds), *In Sprightly Mood* (rhythm), *The Bouncing Ball* (repeated notes), *Harp Song* (arpeggios), *Scamper!* (wrist study), *Run and Jump* (rapid passages divided between the hands), etc.

Teachers may place an order for a single copy now at the special advance of publication cash price, 30 cents, postpaid.

Little Pieces from the Classic Masters

For Violin and Piano

By Leopold J. Beer

Hidden among the manuscripts left by the great composers of the early days in music's history are many gems that have been lost sight of in the development of the art. So prolific were these early genuiuses in composing that it was practically impossible for the publishers of their day to bring to the attention of the public all of the writings that flowed from their inspired pens. Then, too, some of their published compositions have been allowed to go "out of print" in the two centuries, more or less, that have passed by since these masters made their valuable contributions to the art of music.

Some of our best contemporary musicians —composers and performers—delight in browsing through old libraries in the hope of finding some long-forgotten gem of musical composition that is worthwhile reviving for the music-loving public of today. Mr. Leopold J. Beer, of Vienna, is noted for his success in this research work.

For this volume he has collected ten beautiful melodies from composers such as Bach (1685-1750), Handel (1685-1759), Purcell (1658-1695), Francois Couperin (1668-1733), Rameau (1683-1764), Gluck (1714-1787), Kuhnau (1667-1722), and Louis Couperin (1630-1665). These have been arranged for playing by violin students well advanced in the first position. There are alternate fingerings, however, for playing these numbers in the third position, if desired. An excellent piano accompaniment is provided.

Teachers and violinists wishing to add this unique volume to their libraries may order single copies now at the special advance of publication cash price, 35 cents, postpaid. The book will be delivered when published.

One String Solos

For Violin Beginners

By Kate LaRue Harper

The sooner the young violinst can be taught to play little tunes with an accompanying instrument, or instruments, the more rapid his progress because of the interest aroused. The pieces in this book take up one string at a time and, because of the natural weakness of the fourth finger, employ at first only the first, second and third fingers.

This pleasant path to violin attainments leads easily to the use of all strings and the four fingers and then to the employment of the higher and more difficult positions. The interest of the beginner also is attracted by fascinating story texts and attractive illustrations.

One String Solos will be issued in two volumes of the convenient oblong shape, one for the violin student, the other for the teacher or accompanying pianist. It may be used either in private or class teaching

The special advance of publication cash prices on this publication are 15 cents for the violin part and 20 cents for the piano part. Copies will be delivered when the books are printed.

Child's Own Book of Great Musicians

Brahms—Tschaikowsky—MacDowell

By Thomas Tapper

The editing of these booklets, which includes the selection of the many "cut-out" pictures that the child student pastes in designated places throughout the book as illustrations, is now completed and this positively will be the last month during which they may be ordered at the special advance of publication price.

The *Child's Own Book of Great Musicians* Series needs no introduction to most teachers of juvenile music students—piano teachers, school music instructors and those who have in charge the activities of Junior Music Clubs. For a number of years they have found most helpful the original 13 booklets devoted to Bach, Beethoven, Chopin, Grieg, Handel, Haydn, Liszt, Mendelssohn, Mozart, Schubert, Schumann, Verdi and Wagner.

These three new booklets present interesting biographical data on what might be termed more modern classic composers, as the works of each of these great musicians, in recent years, have received world-wide recognition, and symphonic programs as frequently list their compositions as they do those of the masters included in the original 13 booklets. There has been an ever-increasing demand for the three new booklets, both from teachers and students. Of course, each story stresses interesting events in the early years of the composer.

Incidentally, with these new volumes the purchaser receives also the needle and silk cord used to bind the book, after the child student has written, on the blank pages provided, his own story of the composer and has cut out and pasted in all of the pictures.

During this month only copies of the Brahms, Tschaikowsky and MacDowell booklets may be ordered at the special prepublication price, 10 cents each, postpaid—25 cents for the set of three. The 13 original booklets, mentioned in a previous paragraph, are priced at 20 cents each.

Grown-Up Beginner's Violin Book

By Maurits Kesner

Violin teaching, in the past few decades, has undergone a marked change in the methods employed, in the students who have taken up the instrument. Most of us can remember the long-haired individual who bore the unmistakable mark of the violin student. How different today when the star full-back or the "crack" pitcher of the high school may occupy a chair with the first violins of the orchestra? Have you seen, in community orchestras, the man graying at the temples who only recently has taken up the instrument and is proud to be given the privilege of playing with the second, third or fourth violins?

The author of this book knows about these "new" violin students; he knows the problems their teachers have had in selecting suitable study material for them. He, himself, has taught them; he has conducted the orchestras of which they are members.

Seeing the need for a violin instruction book that would appeal to adult minds, that would eliminate childish exercises and repetitions designed to impress the subject on the juvenile memory, but unnecessary with older students, he has made an instruction book that both author and publishers feel will meet with general approval.

There will be technical exercises, of course, selected from the works of recognized authorities on violin instruction. But these will be confined to the necessary studies only. Liberally interspersed throughout the b student will find easy arrangement miliar melodies and many hitherto ered gems, especially those from f sources.

Single copies of this instruction b be ordered now in advance of publi the special cash price of 40 cents, The sale of the book will be limite U.S.A. and Its Possessions.

Play with Pleasure

An Album for the Grown-Up B Student

Caution! Swindlers Are Working!

Again we warn all music lovers to exercise extreme care in paying money to strangers for ETUDE MUSIC MAGAZINE subscriptions. Daily receipt of complaints from musical friends throughout the United States and Canada who believe they are purchasing bargains in music when high class publications are offered at ridiculously low rates make this notice necessary.

We have hundreds of reputable men and women who earn their livelihood through the solicitation of ETUDE MUSIC MAGAZINE subscriptions. These people carry the official receipt of the Theodore Presser Co. Unless a canvasser is personally known to you, convince yourself of his responsibility before paying any cash. This warning is extended especially to Canadian friends across the border where several swindlers who have been working in the Provinces leave fake receipts, often times printed in the name of a responsible publishing house.

Help us to protect you from loss.

Valuable Premiums for Subscriptions to THE ETUDE

Many music lovers, teachers and students, may secure fine merchandise from THE ETUDE Premium Catalog as a reward for securing subscriptions. Any music lover will be glad to give you a subscription to THE ETUDE if you will show him a copy of the magazine.

The following selections from the catalog will give an idea of the standard, wanted merchandise that is given as rewards for each $2.00 subscription secured:

COMB AND BRUSH KIT: A compact arrangement including brush, comb and nail file in a black leather case. Your reward for securing one subscription; not your own.

SILVERCRAFT COMPOTE: This attractive compote is 7" in diameter, has a scalloped edge, stands 5½" high and has a bright chromium finish. Awarded for securing one subscription; not your own.

WAFFLE OR TOAST DISH: Designed in the modern manner, this all-chromium Dish has a convenient finger hole for removing the cover. The plate is 8" in diameter while the cover is 6". The height over all is 3½". Awarded for securing three subscriptions.

MARMALADE JAR: The spoon, cover and pointed-edge tray are all chromium-plated so that they easily can be kept bright and shiny. The jar itself is crystal glass 5" in height. The tray is 6" in diameter. Awarded for securing three subscriptions.

CONTINENTAL FRUIT BOWL: Fruit Bowl, centerpiece or ornament—just a few of the many uses you will find for this fine reward. It is 10" in diameter, 3½" high and is attractively etched on the inside of the bowl. Awarded for securing four subscriptions.

CONTINENTAL SUGAR AND CREAMER SET: This attractive three-piece set is finished in non-tarnishing chromium. The tray is 11" by 6½" and has a scalloped edge. The height of the Sugar is 3¼" while that of the Creamer is 3½". Your reward for securing six subscriptions.

Send post card for Complete Catalog of Premiums.

Introductory Three Months' Offer

August 31st is the deadline when introductory subscriptions for the three summer issues of THE ETUDE at 35 cents will be accepted. Do not delay in sending your summer subscriptions at this low rate immediately. Give some musical friend a treat by subscribing in his name. The amount paid, 35 cents for three summer issues, will be credited on a full year's subscription, the price of which is only $2.00, if the music lover wishes to continue the visits of THE ETUDE; and we are sure he will.

Representatives Wanted

Music lovers who would prefer cash commissions instead of merchandise as a reward for securing subscriptions to THE ETUDE can obtain full information by dropping a post card to the Subscription Department, THE ETUDE MUSIC MAGAZINE. You can add substantially to your income by taking subscriptions for THE ETUDE in your circle of musical friends and acquaintances.

The Elbow Position

By ESTHER WALLACE DIXON

THE ELBOW is a very important factor in ordinary piano playing. It might even be considered a measuring stick for correct posture at the piano. If the player is sitting at a correct distance from the piano the elbow will appear relaxed and at ease; but when the player sits too close to the piano the elbow appears awkward and incongruous. Sitting too far away from the piano is apt to give an exaggerated appearance of stiff arm playing. Very few people realize how much grace and agility may be due to a relaxed elbow, which does not swing with each independent finger motion.

Occasionally a player will be noticed who plays church music with an outward, swinging motion of the elbow on each chord. Now this is incorrect and inconsistent. It is merely a false imitation of a sustaining chord motion which should be made by first striking the chord in a natural "V"-shaped position between the arm and hand. Then, when the chord is sustained the small joint which connects the fifth finger to the hand is brought into prominence, as the "V" between the arm and hand is brought into a straight line, a decided advantage to the wrist and fingers.

The Camera of Music

Candid Snaps from Everywhere

Nadia Boulanger, the brilliant French teacher of composition, turned down George Gershwin when he went to her in Paris for lessons. She told him that there was nothing she could teach him that would help him.

Gustav Mahler was born a Jew in Vienna, became a devout Catholic, and then turned into a rabid pantheist. Once he said to the writer, "Every tree, every flower is a god." Once hailed as one of the greatest symphonists of the great Austrian music center, since Brahms and Bruckner, his music now is, of course, erased in the Reich by the Swastika. He had a great fear of being buried alive and begged friends and acquaintances to see that a needle was run through his heart after death.

The MacDowell Colony at Peterborough, Vermont, is a five hundred acre tract of mountain woodland, with cottages located here and there, in which artists, writers and musicians, who are fortunate enough to be admitted to this haven for work and study, work all day long. Mrs. MacDowell, widowed for thirty years and seriously crippled, has personally raised over one hundred thousand dollars for this monument to her husband.

The American Federation of Musicians is fighting a battle to compel every radio station using records for reproduction to engage also a given number of musicians. Joseph N. Weber, national president has fought relentlessly for this plan.

The "Big Apple," according to one account, originated in a synagogue in South Carolina. The building had been taken over by Negroes as a dance hall. Students from the University of South Carolina saw this performance and adopted it a little over a year ago. Since then it has spread like the boll weevil.

* * *

."The personnel of our best American orchestras is, with the possible exception of the bassoon group, mostly German, a Latin woodwind and a Teutonic brass section. This feature explains the versatility and technical efficiency of our orchestras; they can solve the tasks equally of a Ravel or a Wagner score."—Fritz Reiner.

World of Music

(Continued from Page 490)

LAWRENCE TIBBETT has been making his first tour of Australia; and last reports stated that, although he had been booked in advance for but one program in Sydney, it was practically decided that his recitals would number fifteen in this one Polynesian capital.

THE CENTENARY of the birth of Theodore Dubois has been commemorated by French musicians, with a program of his works performed in the Cathedral of Rheims, with two hundred and twenty participants. Included was his masterpiece, "The Seven Last Words," composed when he was but thirty.

IGNAZ FRIEDMANN gave lately, at Oslo, Norway, two concerts dedicated entirely to the works of Chopin.

BY THE LATEST REPORT of the Minister of Education of Austria, the National Library at Vienna contains 28,000 musical manuscripts; 39,000 published musical texts; 14,000 books on music and opera librettos; to which may be added 48,000 reproductions of musical works housed in the Hoboken Foundation.

* * * * *

COMPETITIONS

A FIVE HUNDRED DOLLAR PRIZE is offered for an original, unaccompanied composition suitable for a chorus of high school age. It must be from ten to fifteen minutes in length; the poem must be by an American author; and entries close August 31, 1938. For further information, address G. Schirmer, Inc., 3 East 43rd Street, New York City.

THE NEW YORK WOMEN'S SYMPHONY ORCHESTRA is offering a Prize of Five Hundred Dollars for an orchestral work of ten to twenty minutes, by an American composer. The competition closes December 31st. Full information as to instrumentation and other details may be had from the New York Women's Symphony Orchestra, 53 West 57th Street, New York City.

AN ENGLISH "GRAND PRIX" has been established by the British Council, which offers an annual stipend of £250 (about $1,250), for which foreign students will compete in order to complete their musical education in one of the Royal Schools of Music in London. The prize entitles the holder to free musical training and maintenance in England during three years. For information address British Council, care of Royal Academy of Music, Marylebone Road, London, N.W.I., England.

THE MENDELSSOHN CLUB of Philadelphia offers recognition in the form of a Public Dinner in Philadelphia in honor of the successful American or Canadian composer of a mixed chorus in four or eight parts, requiring not more than twenty minutes in performance. Submissions close September 15th; and further particulars may be had from Miss Sophia Blivens, Secretary of the Mendelssohn Club, 530 Walnut Street, Philadelphia.

TWO WOOLLEY SCHOLARSHIPS in instrumental music, for the year beginning October 1, 1938, are offered under the auspices of the United States House of the Cite Universitaire of Paris. Winners will have quarters in the United States House and a stipend of six hundred dollars. Candidates must be American citizens, between the ages of nineteen and thirty-two, who are graduates of a college, university or professional school, and who have a good working knowledge of the French language. Particulars from school mentioned.

THE H. W. GRAY COMPANY PRIZE of one hundred dollars is offered under the auspices of the American Guild of Organists, for an anthem of any difficulty or length (with about eight printed pages given the preference). Submissions close January 1, 1939; and further information may be had from The American Guild of Organists, 1270 Sixth Avenue, New York City.

Mary, Mary, quite contrary,
How does your technic grow?
With pearly scales and rippling runs,
With meter, both fast and slow.

Betty Prepares for Real Progress

By Albertha Stoyer

"OH, BETTY, where are you going with your music bag?" Florence called, as she saw her chum walking down the street one warm Summer morning.

"Down to Miss Dawson's studio, to make arrangements for my piano lessons this fall," answered Betty.

"Seems to me that you are getting a little ahead of time," remarked Florence. "It is still Summer."

"I know, but I want a certain day and hour for my lesson, and if I wait the time may be taken like it was last year," Betty explained. "Then, too," she added, "I want Miss Dawson to select the exercises and pieces for my first lesson so I will not waste time practicing the wrong things."

"Maybe you are wise in making these arrangements early," Florence admitted. "I neglected getting started on time last year, and couldn't take part in any of the fall recitals because I did not know my pieces well enough."

"Why don't you get your music, and come along with me?" asked Betty. "I'm sure the teacher will be glad to help you, too."

"I believe I will," Florence declared. And so the two girls spent the next hour at Miss Dawson's studio arranging for their lesson periods, and having her select the music for their first lessons. Then, much to the delight of the teacher and their parents, they both were ready to play in all of the fall programs.

The Scale Clock

By PRISCILLA M. PENNELL

MARION sat in the window seat trying to learn some rules from her music lesson notebook.

"I just can't remember key signatures," she sighed; "I learn the rules but I forget them just as quickly. I wish scales and rules and key signatures had never been invented!"

"What's that I hear?" asked Aunt Mary, from the next room. Marion jumped. She did not realize she was talking aloud.

Aunt Mary used to be a music teacher herself, and was just full of helpful ideas. Marion was always glad when she came to visit her family.

"I have an idea from musicland," said Aunt Mary; "and I think you might like it."

"Will it help me to learn these old rules?" asked Marion.

"It certainly will," said Aunt Mary; "that is just what it is for. But you must do exactly as I tell you."

Marion promised. This was mysterious and exciting; and Marion loved exciting things. They reminded her of detective stories.

"First," said Aunt Mary, "you must get a sheet of cardboard, a pair of scissors, a bottle of glue, some colored pencils, a ruler, and a large dinner plate. Do not lose any time, for we have much to do."

Although much puzzled, Marion skipped off to do as she was told. In a few minutes she returned and put the articles on the table.

"Now," continued Aunt Mary, "draw around the plate on the cardboard and then cut out the circle."

Marion couldn't imagine what this could have to do with her music lesson and rules; but it was fun, anyway, and she obediently went to work. When the circle was finished, the next thing to be done was to divide the circle into fifteen pie shaped parts, by drawing from the center to the edge with the ruler. In each section near the edge was marked the name of a key. These were not in any particular order for reasons which you will soon learn.

"We are making a scale clock," Aunt Mary explained, "It will help you to learn your scales and key signatures; and it is ever so much fun to play. Now our clock must have a hand that will spin freely and it will be ready to use. Let us see, what can we use for that?"

"I know just the thing!" cried Marion, "I have a spinner on a card that went with an old game I used to play. If I can't find that maybe brother Jack can make one and mount it on a little block of wood to stick in the center."

After delving into the depths of the chest which held her games, she triumphantly emerged with the spinner. The card to which it was attached was trimmed into a circle and glued firmly in the center of the clock.

Now that the clock was finished, Aunt Mary showed Marion how to play the game. She set it between them on the window seat and with thumb and forefinger set the spinner whirling. When it stopped it was pointing to the section marked C.

"What is the signature of this key?" asked Aunt Mary abruptly.

"Oh, that's easy," answered Marion quickly, "no sharps, no flats. But I am afraid I do not know the others very well."

"Now you spin and I will answer," said Aunt Mary.

Marion set the spinner going. It stopped at E-flat.

"Three flats, B-flat, E-flat and A-flat," answered Aunt Mary so quickly that Marion gasped. She had to figure out the answer slowly, herself.

Aunt Mary smiled as she counseled, "After you play this game awhile you will really want to learn your rules so you can play it better. And when you really want

arrow to see how she was pro-
and was surprised to see how
she improved. She took the scale clock to the next music club meeting and they all enjoyed the game. The counselor, Miss Harris, found so many ways to use the clock that soon every member of the club had improved very much indeed. They sat in a circle, with the clock on a table in the center, and played in turn, all trying to call out the correct answer first. Sometimes they named the key signature and sometimes the triad or the relative minor, but all ways were fun and helpful.

Surely other Juniors and clubs will want to follow Aunt Mary's directions and make a scale clock of their own.

Woodland Symphony

By **Monica Tyler Brown**

get up at break of day,
ear an orchestra at play,
truments in every key
ıemes in nature's symphony.

ıave to hurry for a seat,
the forest folk you'll meet
the airy woodland hall,
st seat's near the waterfall.)

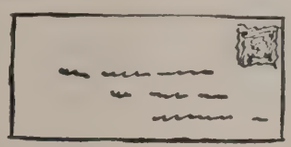
ıen the sky with roselight gleams,
werets wake from all their dreams,
from the thrush you'll hear—
ly it will bring a tear.

And all the listeners will applaud,
The violets will approval nod,
And daisies whispering in the breeze
Will for an encore beg and tease.

The bunnies will prick up their ears,
All hunted things forget their fears
And stand in awe beneath the spell,
As bird songs ring from dell to dell.

So please get up at break of day,
Go hear this orchestra at play,
For many joys it will impart,
To this great hymn you'll add your heart.

Don't Trust to Luck



For very little Juniors

ne one whole step, instead of a half

DEAR JUNIOR ETUDE:

I like my violin very much and just love to go for my music lessons to the National Institute of Music and Arts. I have had sixteen lessons. I like to practice for a half hour at noon and in the evening of every day. I can read my music very well.

Last Christmas we had a contest and the best players won prizes. I was pretty happy and excited, when I got a prize for playing a piece.

I am six years old. I started school last fall and I am in grade 1. I like to take my violin to school and play for my teacher and the children. My school teacher took me to grade II, to play for them. They would like to hear me play oftener, but I will have to learn a lot more about my violin and more pieces, so I can take it oftener. When I can play better, I will play with my Dad on the piano.

From your friend,
HAROLD RAMME (Age 6), Canada.

JUNIOR RHYTHM BAND
Columbus, N. C.

DEAR JUNIOR ETUDE:

I am a freshman in high school and live in a small village. I think I am quite unfortunate, as the only instrumental teachers here are piano and violin teachers and I want to take lessons on the xylophone.

I have had three years on the piano and like music, especially classical pieces. My greatest achievement has been to be able to play all my scales correctly on the piano. My future lies in music

From your friend,
SYLVIA TROP (Age 13).
New York

usual the JUNIOR ETUDE CONTEST is omitted during July d August. Results of the May Contest will appear in October.

The Perfect Pupil

By **Abbie Llewellyn Snoddy**

FREDERICK stopped at the door of the studio and stared in amazement. Everything was topsy-turvy. Even the room seemed to be out of shape. The windows were squinting at him, and the piano was balancing itself on one leg.

But strangest of all, his teacher—his quiet, rather stern German professor—had shrunk until he looked more like a brownie than like his cheerful, wholesome self. He had on a peaked cap, and in his hand he held a lantern, which he raised high as he searched anxiously under chairs and tables and behind the davenport.

"Have you lost something?" Frederick inquired politely.

His teacher barely gave him a glance.

"You make me think of Diogenes, search- with his lantern for an honest man," Frederick was inclined to laugh.

His teacher stopped then and looked at him sharply.

"You silly boy, don't you know what every teacher is constantly searching for, all his life? For the perfect pupil, of course?"

"The perfect pupil?" Frederick echoed in surprise, "Why—what—?"

And then suddenly, the room was full of pupils. They, too, were tiny in size and they stood ranged against the wall like a row of dolls.

"Perhaps you will find the perfect pupil there," Frederick suggested courteously.

"Yes, yes," his teacher agreed eagerly, "Surely there will be one in this group who will prove to be the perfect pupil." He lifted his lantern and looked at the first pupil anxiously.

"No, not this one," he sighed. "She has a bad hand position, and she will not try to correct it. Nor this one either. He will not practice his exercises."

"This girl may be the one you are looking for.'"

The teacher shook his head mournfully.

"I thought so once. She has good hands for the piano, and she is bright and intelligent. But she is careless—oh, so careless. She stumbles over her notes, and plays too quickly. The perfect pupil must learn to practice slowly are carefully."

"What about this fine boy?"

"No," the teacher said sadly. "He could be a perfect pupil, for he is musical—he has a good ear and much musical feeling. But he will not work. He will not memorize his pieces—he will not polish them until they are perfect."

Frederick hung his head, his face red with shame. All these faults were his. How often had his teacher told him to practice slowly and carefully, to watch the expression marks; to keep good time! He blushed again, as the teacher set down his lantern and turned to him with a deep sigh.

"Do you suppose I'll ever find him—the perfect pupil?"

Frederick opened his lips to reply. Then suddenly his mother was shaking him gently.

"Why Frederick, you have gone to sleep over your lessons!"

"Oh, mother—I've had such a strange dream. And oh, mother, please wake me early in the morning. I must practice an hour before school, for I want to try very hard to be a perfect pupil."

Initial Puzzle

By **Wilbur L. Motta**

The initials of the following words reading down will give the name of a composer of well known light operas. Answers must give words as well as composer's name.

1. A sign for *legato.*
2. A violin term, meaning from the point of the bow to the nut.
3. Very slow.
4. The opposite to *staccato.*
5. The difference in pitch between two sounds.
6. A small, old instrument of the harpsichord family.
7. Quick or lively.
8. The handle of a violin or other string instrument.

Fingering for Scales

By **Gladys Hutchinson**

IF THE STUDENT will memorize the key upon which the fourth finger is to be used in each hand of each scale there will be no chance of incorrect fingering.

To impress this further upon the mind, the student should recite, "C major scale—fourth finger in the R. H. on B; fourth finger in the L. H. on D"; and then play all the B's with the fourth finger, right hand, and two D's with the fourth finger, left hand, hands crossing over each other. The keys for the fourth finger in the other scales should be determined and used in like manner.

Answers to Initial Puzzle

1. Slur; 2. Up-bow; 3. Largo; 4. *Legato;* 5. Interval; 6. Virginal; 7. *Allegro;* 8. Neck. Composer, SULLIVAN.

MELODY MAKERS MUSIC CLUB
North Quincy, Mass.

Ten Little Athletes

By **Lulu C. Johns**

THESE are the days of athletic sports, and did it ever occur to you that you have ten good athletes with you all the time? Well trained, they will outshine any athletes in the world in speed and in receiving and obeying many commands per second from the brain. Can you guess who these athletes are? Your fingers, of course.

Did you ever hear a good athlete say, "I'll do just as I please?" or, "I won't pay any attention to what the coach says."

No indeed. Our ten little athletes must obey their coach just as carefully as any football player. They must practice carefully and in correct position. They must follow each other with regularity. Incorrect fingering will make them stumble and fall.

Let us be proud of our ten athletes and make our mind a kind but firm coach who watches over each finger athlete and makes it obey, and trains it to become a one hundred per cent perfect athlete.

Letters from the Etude Friends

Making Acquaintance With Music

To The Etude:

Not long ago I heard a superintendent of schools tell his primary teachers to have each pupil read at least thirty small books during the year. This was certainly an advance from the antiquated method which insisted that an entire school year be spent in plodding through the primer or first reader. I decided to use the idea in teaching music to my rural school youngsters.

Most of them were children of foreign born parents who gathered fruit, pruned orchards, and, in general, did whatever they could find to do for a living. To own a musical instrument was, for them, out of the question.

Our school owned an old organ. So I taught the children at noons and recesses, early in the morning, or after school to finger and play many of the little tunes in their school readers. Sharps and flats, I told them, were merely half steps up or down, and time and rhythm could be understood from the way we accented the words when we sang.

Whenever visitors came to the school, I had the children to play for them; and as they were usually encouraging in their attitude toward the pupils, this helped in the development of self-confidence among them.

Almost every rural school owns a piano or organ; and time should be taken by teachers for instructing their pupils so that they may gain some understanding of music.

—Agnes S. Thompson.

Accordion Department

(*Continued from Page* 543)

their various inversions during practice periods, less difficult chords should certainly be played well when encountered in a selection.

The illustration is an excerpt from the revised "Pietro Deiro Accordion Method."

(Pietro Deiro will answer questions about accordion playing. Letters should be addressed to him in care of The Etude.)

Accordion Question and Answer Department

Q. I contemplate purchasing a new accordion. Would it be wise to purchase a 96 bass instrument which possesses many fine features in preference to a standard 120 bass model, both selling for around $200.00? I have no intention of entering the profession but play only for my own amusement.—J. N. M., Canada.

A. The 96 bass accordion has its distinct place in the accordion world but we recommend that an adult avail himself of the advantage of a full sized 120 bass instrument as long as the price and quality of the two instruments are the same.

Q. I do not play with an orchestra but play only solos at occasional entertainments. Should I learn both bass and treble clef?
—B. M., Montana.

A. It is advisable to know both clefs.

Q. A father (age 45) and his daughter (age 10) want to learn to play the accordion. What sized instrument should they buy that would most nearly suit both their needs?

2. How long does a good accordion last? I have been told they last only five years with ordinary wear.

3. Can you give the name of some organization that offers correspondence courses for the accordion? Do you think it advisable to learn that way?—A. C., South Carolina.

A. 1. A 120 bass baby grand accordion should be convenient for both father and daughter. This model is complete in all details but the dimensions are slightly smaller than the full sized accordion and the weight is less.

2. Good accordions last almost indefinitely. The best instruments have hand made reeds so the quality of tone improves the more they are used. If an individual reed breaks it can be replaced at a minimum cost. The bellows can be relined and replaced. This is also true of other parts of the accordion. The life of an instrument really depends upon the care given it. This naturally applies only to good instruments because inferior models depreciate rapidly.

3. Many accordionists claim that they have learned to play well from correspondence courses. We regret that we cannot recommend in this column, any particular course.

* * * * *

"Were it not for music, we might in these days say that the beautiful is dead."
—Benjamin Disraeli.

Yes, Teacher, You Are in Business

(*Continued from Page* 547)

an individual operator working indefinitely and apart from the complexity of social activity which spells the life of teaching.

"Of course, basic to the fact of initiative service to the public, we teachers," he said, "must be unremittingly busy as investigators. We must study not only music and its collaterals but also our environment, its social aims and purposes. The people about us are the initiators of the life in the midst of which we live. The great human factor we must learn to know, understand and, above all, to serve. I am a firm believer in the correspondence method of instruction, for those adults who are so located that they cannot do personal or institutional study. Many universities in the United States offer most practical courses in this manner. I do not mean particularly professional music courses, although these are available too, but courses in education, history, sociology, art and education in the community, and the like. These tend to keep us up to pitch. For, inevitably, if we do not stretch forth to make progress we must slip back into inertia.

"Thus, the best thought of our own professional world and work, as reflected in the pages of best music educational journals, should be our one element of daily heed. No isolation is so complete as that which is generated by lack of contact with members of our own professional class.

"As I said at the Rotary Club, a music teacher or performer can create an influence with pupils or an audience, that will continue to increase in beneficial action for an indefinite time. Teach a person to love music, to play or sing, even a little, and you have established for him a lifelong investment. Indeed, we should think of teaching in terms of attainment for life rather than for a few passing hours of practice.

"I conclude, from my experience, that we must not weary in looking for ways and opportunities for well-doing. Our community needs what we can do. But it does not always know that it needs it. That is where, in a business sense, we have to take matters into our own hands and sell what we very logically call our merchandise."

This ends his story as he related it to me. There is testimony in it of two important matters that everyone of us can pursue to advantage if we will apply them at the same time with wisdom. The first is: Music is no mere embroidery to life, no superfluous cultural factor to be adopted or ignored at will. It is a human necessity, toward which everybody should make some approach—the earlier in life the better. The second is: The great artists referred to in Paragraph III of this article are real purveyors of service, and that in a form of loveliness that is enriching and ennobling to all who hear them. They are home missionaries of the highest type. *But decidedly no more so than any teacher who will, as these artists do, continue to keep her ability at highest standard of attainment and out of it give the best service possible.* This is simply making the most of what one has.

All this demands more than emotional reaction. The beauty, loveliness, and deep sentiment of music are its characteristics. Its interplay between the musician himself and the public is, in a definite sense, a business activity. And business, let us remember, is, at its best, the highest type of interchange of value for value, benefit for benefit, service for service.

Next Month

OPPORTUNITY STARTS WITH SEPTEMBER

What music workers do in September determines largely the success of their musical year. Great numbers of teachers, knowing the incentives for study and interest in THE ETUDE, make their classes 100% ETUDE subscribers, starting with September. Watch for our fine "Opening of the Season" issue.

GERALDINE FARRAR

GERALDINE FARRAR GIVES ADVICE

Geraldine Farrar, one of the most beautiful, glamorous and famous of American prima donnas of the recent past, tells the youth, or the "youthess," who wants to sing, how to proceed. Surely the one who could create a nation-wide myriad of "Gerry Flappers" should have something to say worth the while of the embryonic aspirant to operatic celebrity.

THE PIANO IS FORGING AHEAD

The American Association of Piano Manufacturers has made an extensive and expensive survey to get the real facts about the use of the piano. Those things, of emphatic interest to piano students and to teachers, are presented in concise, understandable form in the September issue.

PICTURESQUE MUSICAL PRAGUE

Call it Prague, Prag, or by the new official name of Praha, if you will; but the capital of one of the most discussed nations in the world, Czecho-Slovakia, home of Dvořák and Smetana, will remain one of the foremost musical centers of Europe. Norma R. Grave's article gives a colorful tale of the fascination of this romantic old capital.

A MASTER LESSON BY MARK HAMBOURG

Some years ago, in London, the great pianist, Mark Hambourg, was discussing with the Editor of THE ETUDE, his favorite compositions of the masters. Both concluded that the Mazourka, No. 1, in F-sharp minor, by Chopin, is one of the most interesting and distinctive of its type. The conversation resulted in Mr. Hambourg making this very excellent Master Lesson.

OTHER INTERESTING ARTICLES and special features by distinguished teachers and musicians, PLUS 24 pages of delightful new music to play and sing.

Musical Books Reviewed

Handel

By C. F. Abdy Williams

By the editing of this very readabl of Handel," so that it might be brou in a new and more dependable editi Eric Blom has done the musical re real service. In the quarter of a preceding this brilliant editing, resear deflated many of the picturesque fable intervening years had hung on th veniently appropriate name of "T Saxon." Among these was the discove for nearly two centuries the guides o had proudly shown to wide-eyed visit wrong house as the one in which the first cooed his infantile phrases; t colorful story of the "Water Musi most probably discolored in many and that the tuneful tale of the ins of the *Harmonious Blacksmith* was myth of a none too punctilious pu And thus we give up our long favore for facts for which the reader of histo be grateful. At the same time there a illustrations to enliven the story of the most interesting personalities amo gallery of creative masters of music.

CENTURY MUSIC 15¢ A COPY
CENTURY Certified EDITION SHEET MUSIC
WHY PAY MORE YOU CAN'T BUY BETTER

For thirty-eight years Century music has enjoyed the distinction of being one of the finest editions published, yet its price is but 15c a copy.

In the following list are featured some of our very latest issues, including the works of four of today's most popular composers.

Teachers, pupils and players will find them all of exceptional value, especially Kay Armour's "Modern Piano Method" and Walter Rolfe's "Book on Harmony." You can buy them at your dealer or direct from us.

Teachers who use and recommend Century music win the everlasting gratitude of parents who can't afford the high prices generally asked for teaching music. Century music helps you hold your old pupils and also aids in enrolling new ones.

Your money refunded without question, if not fully satisfied with your purchase.

NEW *and* IMPORTANT

A MODERN PIANO METHOD FOR BEGINNERS
by
KATHLEEN ARMOUR
PRICE 15c EACH PART

Here is something decidedly new and original. It is issued in five parts in sheet music form and each part sells at the regular price at 15c per copy, which enables the pupil to start the study of the piano with very little financial outlay. This modern work is based on the middle C approach and is so clear and step-wise that the pupil is playing little tunes almost at the outset. Profusely illustrated. Teachers, be sure to see this outstanding work.

3196—Part I—Learning Letters on the Keyboard
3197—Part II—Notes, Bars, Time Signatures
3198—Part III—Five Finger Exercises
3199—Part IV—The 2/4, Time Signature
3200—Part V—Introducing the 8th Note

CENTURY PIANO SOLOS, 15c ea.

WILLEM MENGELBERG

THE FAMOUS CONCERTGEBOUW of Amsterdam finished late in May its Golden Jubilee Year with a series of special concerts culminating in five performances in one week of the colossal "Eighth Symphony" of Gustav Mahler, which requires a large orchestra, a double chorus, a boys' chorus, an organ, and fourteen soloists. Willem Mengelberg, who has led the Concertgebouw Orchestra for forty-three of its fifty years of existence, conducted and was the center of all celebrations.

BORIS ROMANOFF, Russian dancer and disciple of Mikail Fokine, ballet master for Anna Pavlowa, and himself a former ballet master of the Imperial Opera of St. Petersburg and the Royal Opera of Rome, has been appointed choreographer and ballet master of the Metropolitan Opera Company for the coming season.

THE CHARLES H. DITSON FELLOWSHIP of two thousand dollars, for a year of foreign study of music, was awarded at the Annual Commencement Concert of the School of Music of Yale University, to Roger Leroy Cushman of West Springfield, Massachusetts.

THE HOUSE AT GRAMPA, near Pirna, Saxony, in which Wagner wrote the greater part of "Lohengrin," was destroyed by fire, early in June.

DUSOLINA GIANNINI created the rôle of *Hester Prynne* in a new opera, "The Scarlet Letter," by her brother Vittorio Giannini, when it had its world première on June 2nd, at Hamburg, Germany. Based on the classic novel by Hawthorne, the libretto was created by the composer of the score. An opera of the same name and story, by Walter Damrosch, was first heard when given on February 10, 1896, in Boston, by the Damrosch Opera Company led by the composer.

A SYMPHONIC CHOIR, under the direction of Cantor Myro Glass, has been organized in Palestine, where it will make a specialty of creating and performing compositions based on biblical themes.

TIANA LEMNITZ

TIANA LEMNITZ is heralded as a new star in the constellation of vocalists. On the opening night, June 2nd, of the Covent Garden Season of International Opera she won from a leading London Critic the opinion that "Tiana Lemnitz as *Pamina* (in Mozart's 'The Magic Flute') was completely satisfying." Of a later performance of Richard Strauss' "Der Rosenkavalier" the same oracle declared that "Tiana Lemnitz's *Octavian* was an authentic interpretation." We await her coming.

TO CELEBRATE THE RETURN to Caracas of the ashes of the internationally renowned pianist, Teresa Carreño (who died in New York in 1927), the Government of Venezuela has placed in circulation a postage stamp bearing the portrait of this artist.

GARDNER READ, young American composer, who at twenty-four won the One Thousand Dollar Prize offered to American composers by the New York Philharmonic-Symphony Society, with his "First Symphony, in A minor," is spending the season in Europe, from July 9th to September 7th, mostly at the six weeks' festival at Munich, on a one thousand dollar fellowship granted by Miss Mary Crowell.

THE THIRTIETH NATIONAL SÄNGERFEST of the Northeastern Sangerbund of America, with the Sängerfest Association of Baltimore City as host, held a four day celebration from May 28th to 31st, with more than five thousand singers from all sections of the country participating. The Beethoven Männerchor, of Bethlehem, Pennsylvania, won first honors, with the Rheinischer Sängerbund, of New York City, as a close second.

"DAPHNE," the second of the new one act operas of Richard Strauss, is reported to be about to have its first performance on any stage when given on October 22nd, in Dresden, under the baton of Karl Boehm, to whom the work is dedicated.

THE ST. LOUIS MUNICIPAL OPERA opened, on June 9th, its Twentieth Anniversary Season, at Forest Park, with the first presentation on any stage of "Gentlemen Unafraid," a recently completed operetta by Jerome Kern, Otto Harbach and Oscar Hammerstein, 2nd. The Municipal Open Air Theater, where all the productions are staged, was renovated for the event, and roofed pergolas had been added at either side to shelter ten thousand persons in case of rain.

THE PHILIP PAUL BLISS CENTENARY was celebrated on July 17th, at Rome, Pennsylvania. Mr. Bliss was born July 9, 1838, and for years he was a teacher in the Rome Academy, till his tragic death on December 29, 1876. He was associated in many conventions with such eminent American musicians as William B. Bradbury, H. S. Perkins and George F. Root; and he was the first solo evangelist to coöperate with the great Dwight L. Moody.

THE DUNROVIN MOZART FESTIVAL, presented by William Matheus Sullivan, at the Dunrovin Playhouse, Ridgefield, Connecticut, gave as its final performance, on July 2nd, portions of three of the most popular of Mozart's operas: Scenes from Act II of "Cosi Fan Tutte"; Scenes from Acts I and II of "The Magic Flute"; and Act II of "The Marriage of Figaro." Mr. Sullivan has expressed his desire to create at Ridgefield an "American Glyndbourne."

DR. CHARLES M. COURBOIN AT THE CONSOLE OF THE FAMOUS WANAMAKER ORGAN IN PHILADELPHIA

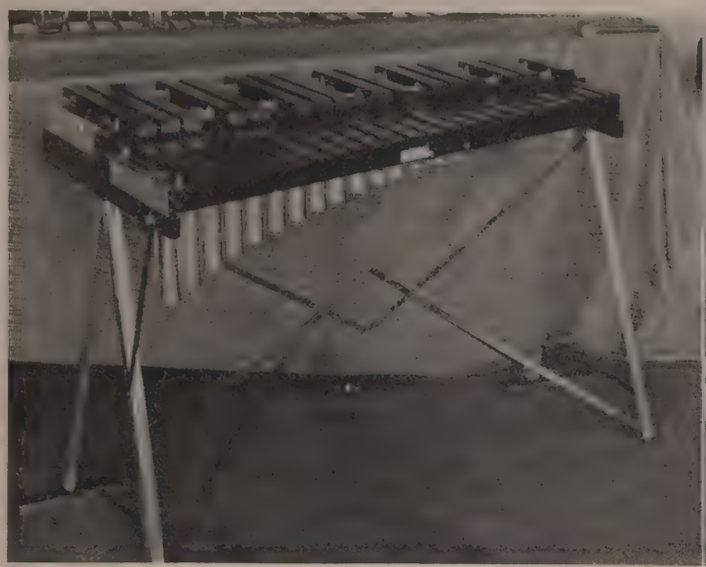
IRMA BJÖRCK as *Octavian*

IRMA BJÖRCK is reported to have won "a great personal triumph" in the Stockholm Royal Opera season which closed in May, when she "gave a brilliant impersonation of *Octavian*, beaful, slender, elegant, finished (in a rev of 'Der Rosenkavalier' which, but for ness in the cast, 'might have gone on weeks without stopping')." And furt "Miss Björck (are we to have a Flags II?) has had a happy season, distinguis not only by this 'Der Rosenkavalier,' also by a Brünnhilde full of dignity passion in all three parts of 'The Ring,' an impressive *Kundry* in 'Parsifal'."

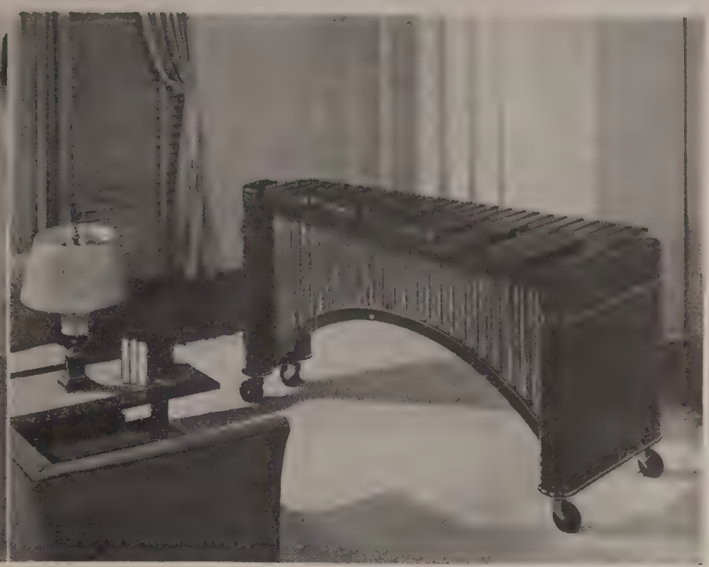
ROB ROY PEERY received on June the honorary degree of Doctor of Mu from Midland College, Fremont, Nebras and on June 6th the same degree from W tenberg College of Springfield, Ohio. Peery is an alumnus of Midland Coll with the Bachelor of Arts degree, and h also the Bachelor of Music degree of Obe College. At the present time he is head of P lications of the Theodore Presser Compa

MR. VICTOR J. GRABEL, eminent b leader of Chicago, and for some years editor of the "Band and Orchestra Dep ment" of *The Etude Music Magazine*, announced to have been engaged as direc of the Band and Orchestra Department the University of Tulsa, Oklahoma

A HIGH LIGHT of the Internatic Music Festival at Lucerne, Switzerland, the Wagner Festival Concert on August 2 which was conducted by Arturo Toscan at Triebschen near Lucerne, where Wag wrote several of his masterpieces.



PROFESSOR GUSTAV ERNEST, int nationally known composer, musical auth and pedagog, recently celebrated in Lond his eightieth birthday. Prof. Ernest has b long a welcome contributor to *The Etude*.



IFOR JONES

THE BACH CHOIR of Bethlehem, Pennsylvania, the first choral organization of America to give a complete performance of the Leipzig Cantor's monumental "Mass in B minor," has called Ifor Jones, internationally known conductor and organist of Westfield, New Jersey, to become its leader. He thus succeeds Dr. Bruce Carey who has b this position since the death, six ye ago, of Dr. J. Frederick Wolle, foun and for thirty-three years conductor this world famous organization. The cha is reported to have been made beca the Bach Choir Association of Beth hem feels that, to maintain its prestige, requires the services of a leader who will side in Bethlehem and give his entire time its interests.

(*Continued on Page 625*)

A FORM OF MARIMBA, STILL WIDELY USED

MODERN FORM OF MARIMBA IN THE HOME

Marimba Supersedes Xylophone

THE ancient xylophone (the *Strohfiedel* or *Holzharmonika* of the Germans) seems destined to be superseded by the marimba, as illuminating gas was superseded by the electric light. The Germans called the xylophone (pronounce it *zilé-o-fone*, *i* broad as in *kite*) a "straw-fiddle" because it originally consisted of blocks of no specified number of glass or metal, but usually wood, tuned to the scale and arranged on belts of straw and struck with two small hammers. It is a very ancient instrument and no one knows its exact origin. Nor do we know who first combined the two Greek words meaning "wood" and "sound" to make its English cognomen. Grove describes its tone as sweet and bell-like, but weak. When Mendelssohn first heard it, however, he said, "With a few sticks, lying on straw and struck with other sticks, the performer does what is possible only on the most perfect instrument. How, from such materials, even the small tone produced—more like a Papageno-fife (tin whistle) than anything else—can be obtained, is a mystery to me."

Feebleness of tone was the main trouble with the xylophone. In this issue readers of THE ETUDE will find an unusual article in the form of an interview with the remarkable Japanese performer upon the marimba (xylophone), Hiraoka, whose delightful playing has been heard, every morning for years, over WJZ from Radio City. He plays an older type of xylophone, which really should be called a marimba, since the tones have amplifying chambers as may be seen in the illustration. Much of his success with this type of instrument is undoubtedly due to the additional electrical amplification of the tone, as it is controlled by the mixing panel as it goes out over the radio.

Our readers should know that, according to well authenticated reports, this older form of percussion instrument is being rapidly superseded by the modern marimba. The two instruments, the xylophone and the marimba, are practically identical, save for the appearance and the superiority of the amplified tone of the marimba. The marimba is a comparatively new development of an old principle. It is now presented in a modern case, or frame, suitable for the drawing room of the finest home.

As recently as twelve years ago the marimba was not even listed in the great Grove dictionary. Groups of players from Honduras, Yucatan and Mexico were seen in vaudeville playing very primitive marimbas. In these the tones were more or less clumsily amplified by empty gourds suspended below the sound blocks. The effect was a kind of pleasing "booming" but not very musical. Certain instruments observed in the African jungle suggested the same principle; but the difference between these primitive instruments and the modern marimba is as great as that between the pipes of Pan and a huge organ.

Both the xylophone and the marimba are similar in that they are percussion instruments played with hammers; but in the xylophone the tones are unamplified, while in the marimba every tone is amplified by an individual resonating chamber accurately and scientifically adjusted and tuned to the tone.

One leading firm, that at one time manufactured most of the xylophones in this country, reports that it sold two thousand of the modern marimbas last year and only two of the older fashioned xylophones, such as Mr. Hiraoka plays. There is, as we have said, a vast difference in the tonal value of the instruments when heard side by side. While the technic of the two instruments is similar, the comparatively feeble tone of the xylophone expires almost the instant the wooden blocks are struck. On the other hand, the amplified tone of the marimba is sustained. This is the reason why in former days xylophone solos sounded like short *staccato* punches or patter against a continual orchestral accompaniment. Thus, with its incessant *staccato*, the xylophone was not designed to be used successfully as a home instrument, for solos to be played without accompaniment. The marimba is, however, admirably adapted to this purpose. We suggest, therefore, that the reader of Mr. Hiraoka's interesting and excellent article consider it from the standpoint of its technical importance, as the same principles may be applied to the modern marimba, substituting the word marimba for xylophone at will.

In the olden days the xylophone used to be the sensation with band and vaudeville performers. Often, dressed up like "Mrs. Astor's horse," with iridescent spangles and red velvet lambrequins, it provided an instrument upon which the player was expected to go through all kinds of acrobatic contortions, especially when he played his *chef d'œuvre*, the "William Tell Overture," with breathtaking *accelerandos*, and arrived at the *finale* like a foaming race horse. In vaudeville interest it rivalled the flying trapeze. Will Mahoney, the famous tap dancer, even used to dance out tunes with his feet, while jigging on a giant xylophone. The difference in appearance between the old-fashioned caparisoned xylophone and the dignified modern marimba

is as great as that between an outmoded gas stove and fine grand piano.

The brittle tones of the xylophone hardly invited higher musical attention. When heard without amplification, it suggested the rattling of bones; and there is no wonder that Saint-Saëns used it in scoring the dance of the skeleton in his *Danse Macabre*. The moment amplification was added, however, a tonal miracle occurred. The instrument immediately suggested serious musical possibilities. Sousa, in his last days, said to us, "The xylophone, except in such special passages as that of the skeleton dance in the *Danse Macabre*, is doomed to be superseded, in all better organizations, by the marimba."

Sousa was right; for, according to reports, eight of the leading symphony orchestras in America have introduced marimbas; and they form a regular part of the equipment of many radio "name bands." The marimba has added a new and fascinating color to the orchestral palette. Moreover, its introduction into the home will add another important note of variety to our active American musical life.

Gentleman

WITH the passing of years we have the joy of meeting many delightful people. It is a blessing to work in the field of music because, for the most part, we have to deal with such gentle folk. The late D. A. Clippinger, distinguished vocal authority and conductor, long resident in Chicago, who was a contributor to THE ETUDE for many years, was an outstanding type of all that one would expect from a gentleman of the "old school." Always genial, tolerant, high-minded, courteous, able, strong in personality and integrity, and everlastingly considerate of the feelings as well as the interests of all those who came in contact with him, he has left a living monument of beautiful memories in the hearts of all who knew him.

We like to think of Mr. Clippinger in the words his cultured wife recently wrote to us: "Our belief that he is going on, living and learning and progressing, is a constant source of comfort to me." Mr. Clippinger will be fondly remembered by hosts of former pupils. He was a splendid example of our definition of a gentleman as "a man who is incapable of doing any ignoble act."

Release

A circus press agent used to be a man who said, "Behold the thundering pachyderms proceed down the boulevard!" when what he meant was, "Oh, look at the elephants coming down the street!" Now that the circus trust has eliminated the long distance adjectives, the press agent has to turn to other means. The best known circus press agent of the last two decades has been the widely liked Dexter W. Fellows, who has just written a very engaging book of stories and facts about the world of sawdust and canvas. It is called, "This Way to the Big Show."

The paragraph that struck us most forcefully (and we have never lost the small boy's love for circusdom) was the following:

"There never has been, so far as I know, a shortage of clowns. At present we (Ringling Brothers, Barnum and Bailey) have nearly one hundred of these jesters; and, if we wished to double their number, we could do it over night. If we advertised, most of the applicants would be not professionals but men from the regular walks of life, eager to get way from the humdrum, eager to show off, eager to escape their own personalities. Everywhere we go we get requests from newspapermen, bankers, merchants, doctors, and others, to be permitted to go on for at least one performance as a clown; and, to accommodate them, we keep several extra costumes on hand."

Dexter Fellows thus eloquently describes a condition long familiar to psychologists—the need for release, for escape from the everyday grind, from the worries and cares, and from the monotony of the same thing over and over again, day after day.

Seeking release in sports, hobbies, and avocations is a part of the philosophy of the age. The reason for the intense interest in golf is that it compels concentration to an extent that the player finds it difficult to think of his daily cares and annoyances. It frees him from worry and any concern for the time being, save that of getting the right stance, the right stroke, keeping his eyes on the ball, keeping his left arm straight, and a score of other things.

The performance of a musical instrument calls for a far greater degree of mental and physical concentration; and, for millions, it has proven to be another peculiar release. Music has been the spiritual and emotional haven for countless people who otherwise might have had mental breakdowns.

If you want to have your fling, and feel that the best way is to put on the cap and gown and the grease paint of "Merry Andrew," by all means find a way to do it; and you will be better for the experience. Nevertheless, most people will seek other forms of release from the everyday commonplaces. The individual who has studied music has one of the finest of the golden keys to this escape from the prison of humdrum.

"Snap Out of It!"

"IT WON'T get you anywhere," or "Aw, forget it"—both of them are typical American colloquial epithets addressed particularly to those who take up the profession of trained nurse for their own disappointments, discouragements, worries and failures. What if up to now you have failed at what you have tried to do? That does not mean that you are going to be a failure all the rest of your days. What a wise thing it was that the New England philosopher, Bronson Alcott (father of Louisa May Alcott) wrote, "We mount to heaven mostly upon the ruin of our cherished schemes, finding our failures were successes."

In talks with countless numbers of music workers we have found all too many who were willing to sit content and view the disasters of the past as unsurmountable barriers for the future. The past is gone. There is nothing that anyone can do about past failures, but to forget them. There is always to-morrow; and to-morrow is largely what you decide to make it. "Hold fast to that which is good," as Saint Paul told the Thessalonians. Banish the rest and start out to build anew.

Consider these instances. A wealthy society man of an eastern city became intoxicated some years ago and on his way home in his automobile he ran over and killed three people. He was given a long jail sentence, and in all respects his life was a failure. On coming out he did not attempt to enter the gay society of his former days; but, with his wife, who had been a nurse in the prison, he started to devote his time and his means to prison reform and so gained the high respect of all his fellow citizens, a respect he never could have gained as a mere "society man." His triumph was built upon failure.

One of the leading American financiers of other days failed at the age of fifty-six, owing seven million dollars, due to the machinations of enemies. No longer a youth, he was obliged to start again in the race of life, with a load upon his shoulders that would have staggered any young man. Notwithstanding this, by wise operation of mining properties he built a new fortune, paid off his seven million dollar debt of honor, with interest, laughed in the face of his enemies, and died at eighty, a wealthy, honorable and successful man who had triumphed over a colossal failure.

A little Italian student went to the conservatory in his native city and failed in his entrance examinations. The examiners said, "He has no talent. He will never make a musician." The boy's name was Giuseppe Verdi; and musical history is filled with such instances of musicians who have built great careers by using the hard cold rocks of failure as their foundations.

If to-day finds you unhappy, discouraged, blue and grumbling, "Snap out of it," and remember that radiant thought of Marcus Antonius, "No man is happy who does not think himself so."

)w Can We Best Serve Our Students?

By GERALDINE FARRAR
The World Renowned Prima Donna

Conference Secured Expressly for The Etude *Music Magazine*
By ROSE HEYLBUT

GERALDINE FARRAR

[E DEVELOPMENT of any artist epends upon three factors: first, hat the artist himself brings to his econd, what his training releases ithin him; and third, what the out- orld contributes towards allowing express himself. Artistic progress us be built jointly by the performer, her, and the public. Let us consider iree contributions separately.

first requisite that the young artist pply (and without which no amount y or public support can assist him) ming, disinterested zeal for the work him. A pretty voice, a pretty face, g" for singing, these are not enough. ndation must be so strong an urge that one would prefer to go off to esert and sing in a cave, rather than sing at all. The student who reckons gress in terms of success and en- nts is on the straight road to an- ng the only thing that can make artist. The problem of determining e career should be settled, not by a ossibility of achieving a spectacular ut, rather, by the complete impos- of existence without singing. The student at the crossroads of decision, nows not whether to "go on" with or to "take up" something else, do well to read the superb biography dame Curie. Meditate upon it and urself whether *you* would be willing ulder the same responsibilities and ke some such sacrifices for art, as ade for science. The honest answer your own mind will provide better than any amount of auditions. And st is infallible. The student who ap- es art in the Curie spirit cannot fail; e excellent reason that his ultimate s will come through spiritual satis- n and not alone through material ds.

Natural Gifts Required

E THIS INNER ZEAL is undoubtedly the important requisite for a life of art it is not, of course, the only one. To one needs, of course, a voice. Zeal may point the way towards musician- pedagogy, or criticism; but for public rmance, the physical ingredients which performance possible must be present. es the voice, the beginner must reveal ent dramatic intuition and human etism to hold an audience. And, of e, our aspirant must possess radiant health—must possess it and work to it. The actual routine of singing re- s tremendous vitality; for singing, all, is basically a physical function. a sad mistake to weaken one's re- ce by making unnecessary obeisances c the altar of fashion. One cannot e one's self down to a weight of fairy ortions (keeping one eye on the re- ments of Hollywood), and hope at the same time to sing like an opulent Flagstad. The sheer physical strain of sing- ing demands a bulwark of dependable physical resistance.

The Choice of a Teacher

SUPPOSING, NOW, THAT our aspiring young candidate proves him- or herself to possess these necessary requirements, the next step is to work with a teacher who can bring all one's latent possibilities to the light of progressive activity. I believe that all legiti- mate teachers have good intentions. All of them know something, and all can produce some excellent results. The mistake lies in persuading one's self that any one of them knows everything and can produce all re- sults.

One often hears it said that this or that vocal theory is "wrong." If one presses the point to urge, "Why?" it will be generally but to be told, "Because I was not taught that way." I consider it disastrous to be- lieve that any one system of vocal approach must be equally applicable to all voices. Each voice, each student, each ardent per- sonality, is an experimental problem in its own right. No two people should be taught in precisely the same manner, unless their vocal and temperamental requirements de- mand it. The wise teacher soon realizes this; and he keeps himself sufficiently flexible to convert his knowledge, not into a rigid "method," but into a well stocked storehouse from which he may draw the exact principle he needs, at the proper moment of its application.

In my own student days I passed in and out of the hands of several admirable teachers whose methods were excellent, except for the fact that they were not entirely fruitful for me. For example, I knew instinctively that whatever pleasure my voice was destined to give would derive from its inherent natural quality rather than from prodigious displays of power or range. Accordingly I registered vigorous objection when fixed methods tried to force me towards effects which were not inherent in me. I was advised to amplify my range, to work for greater power, to conserve my energies in order to go on singing until I reached the age of seventy. I do not con- demn such advice; for many, it may be extremely useful. I condemned it only for myself. My destiny, as I saw it, was to give out to the fullest the spirit that dwelt within me. It disturbed me not at all if someone else could sing three tones higher or lower, or could assert herself more forcibly over a supergenerous orchestra. And I had no desire whatever to continue singing romantic rôles at the age of seventy. Thus, I changed teachers—all of them ex- cellent teachers for other pupils—until I came to one who understood not only sing- ing but also my individual needs in the art. This teacher was Lilli Lehmann.

Frau Lilli possessed, besides her superb artistry, a great fund of wisdom and under- standing. In the beginning she, too, wished me to conform to à pattern—the rather heroic pattern she had built to suit the needs of her own heroic style. Frau Leh- mann had evolved a series of vocal exer- cises, some of which were splendid for me and some of which wearied my throat (which was always extremely sensitive and not at all heroic). When I told her that these exercises were beyond my resistance, she seemed greatly surprised; but she per- mitted me to state why they were harmful to me and what I desired to substitute in place of them. In the end she was wise enough to see that my own vocal pattern had to be built to my needs, and was sat- isfied to have me proceed along my own lines of compromise and care.

I was not yet twenty when I came to Mme. Lehmann, and I was already singing in the opera in Berlin. Regardless of my professional schedule, I had a lesson every morning at nine, which continued until a quarter before twelve. And what work we accomplished! Lehmann's greatest influence lay in her magnificent approach to art values. As a teacher in the strictest sense of the term, she inclined towards severity. She was a rigorous taskmaster. I well re- member some of the arguments we had! Battles royal, to preserve my obstinate but individual approach.

Mme. Lehmann conceived her rôles with immense mental forcefulness. She would think out the most perfect way to play a part, and would then adhere to that concep- tion. She once told me that in forty-six performances of *Isolde* she had never varied so much as a single gesture. I respected her point of view, based as it was upon her preconceived idea of perfection, but I was not in sympathy with such a method for myself. To me, it was impossible to adhere to any conception of a rôle determined in advance. I had to sing each performance as I felt it. When the curtain rose I suddenly ceased being Geraldine Farrar, who had worked and studied and discussed the rôle. I became the character herself, and behaved not as I would have behaved under similar circumstances but as the character must have moved and spoken under those very conditions. Once on the stage, I forgot everything but the magnificent pleasure of making that other person come to life; and I thoroughly enjoyed myself at each per- formance. At first, Frau Lilli objected to this: but she later came to realize that I had to work things out in my own way, just as she had had to work them out in hers. Neither of us possessed absolute truth; yet both of us held to truth for ourselves, in honest endeavor.

Studying the Pupil's Individuality

IN THAT, FRAU LILLI was a great teacher. If a pupil's purpose was serious, she was willing to understand her limitations. She realized that the very person who possessed certain handicaps might prove to be the most painstaking student. Thus I learned that fine teaching lies not in imposing one set system upon all students but in bringing forth from each the peculiarly individual gifts latent within. Discipline I was fortu- nate in receiving at home. My dear mother, who loved order and orderliness in all things—in dress, in speech, in conduct, in work—had early taught me that the soul of any form of self-expression lies in the rhythm and shapeliness of precisely this order.

Wise teachers never force anything. They know that range, for example, is not nearly so important as musical expressive- ness. Antonio Scotti had a comparatively limited baritone range; but what he ex- pressed with it! The most individually expressive singer I ever heard, perhaps, had but five notes in her voice. She was

Nora Bayes, a bailadist, who never aspired to classic works at all.

It is quite as fatal to force dramatic gestures, by coaching them according to pattern. Nothing is more depressing than to see a singer performing semaphoric gestures, which she has probably coached before a mirror. Get away from the mirror and the charted little motions. Study the mood of the music you sing, and do only what your instinct bids as the most fitting way of giving back this mood in sincere feeling.

In third place, at last, what can the public contribute to the development of the singer? Support and admission fees? Those are but half the needed gesture. The public's rôle is to supply the young artist with a chance to perfect himself, as well as the interest and encouragement necessary for future development. And this brings us to a question which lies very near to my heart.

We Americans must promptly assume a responsibility which we have too long neglected: that of bridging over the cruel gap which now exists between the studio and the stage of our great opera houses. Students must have the practice of small routine work, and they should not be expected to get it on the stages with great traditions. We need small operatic theaters throughout the country, which would give our vast number of talented beginners the opportunities they now lack and which would, at the same time, provide the various communities with valuable entertainment, a source of civic pride, and a chance to see and hear great works.

The motion picture theater has become the popular temple of amusement, because it offers fun for all at accessible prices. The same thing should be done for flesh and blood performances. Taking the governmentally subsidized theaters of Europe as my model, I propose a plan, and I believe that each of us could look forward to a healthier national art by helping to champion it.

Intercity Opera Production

FIRST, LET US ORGANIZE complete theatrical units in a dozen key cities—in New Orleans, Dallas, Los Angeles, San Francisco, Omaha, Denver, Chicago, St. Louis, Cincinnati, Cleveland, Boston, Buffalo, and Philadelphia. (It is interesting to note that most of these cities already possess first class symphonic organizations.) Let each of these units be staffed with a full local personnel of singers, conductors, musicians, actors, dancers, technical directors, electricians, stage hands, and so on. Let half the week's performances be devoted to dramatic plays and the other half to opera, if you will combine drama and music. Let the municipal government contribute half the expenses, and let the other half be raised by contributions from the owners of radio sets, in exchange for the privilege of having the performances broadcast.

As to the artistic direction of these establishments, let well qualified regional supervisors be put in charge of each, competing with each other, not in terms of box office intake, but in terms of artistic achievement. And let all concerned be well aware that such a project is not conceived for the purpose of cash returns. The performers would be adequately but modestly paid. They could receive a small monthly salary, regardless of the number of times they appeared, and each performance would bring its additional fee. A beginner could thus be assured of some certain income, enough to permit of freedom from worry and the peace of mind to go on towards bigger things. Creative work needs release from money cares.

Our beginner could appear four times a week, in a comparatively large number of rôles, working up experience in many types of activity and polishing off the corners in the indispensable routine of practice. Incidentally, I do not hold that every beginner must start off in minor parts. It sometimes happens that an unusual gift or an unusual capacity for expression may be best served by an immediate beginning in leading parts—but not, to her best interests, on the stage of the Metropolitan Opera House. The course of training could be enriched by rotating the singers and players in a system of guest performances. Thus, a girl who made her start in the St. Louis theater would be sent for a few weeks of "guest" work in New Orleans; while a singer from Omaha or Buffalo would take her place at St. Louis. This entire course of preliminary training would be calculated to occupy from three to five years of intensive work and activity, after which there still would be ample time for our hypothetical heroine to try her wings with The Chicago City Opera, The Metropolitan Opera Company, and at the larger opera houses of Europe. And it would be infinitely better for her, for her audiences, her colleagues, and for the Metropolitan, if she arrived there after several years of preliminary drill, instead of making her first stage appearance on boards that should be reserved for the banners of tradition.

A Small Beginning

ODDLY ENOUGH, the start has been made, by cruel necessity. The WPA Music Projects, born of need and depression, have pushed the entering wedge into the realm of governmentally sponsored art. And except for the undeserved stigma of "charity" they have proved highly promising of achievement and success. How much better it would be if the charity element could be supplanted by a spontaneous desire for theaters of this sort, which could build towards uninterrupted growth. Indeed, we have evidence that the public responds eagerly to inexpensive repertory theaters for great music. I point to Mr. Salmaggi's enterprise at the New York Hippodrome, where opera is presented at a "ninety-cents top" price. I know nothing of the way in which these operas are organized, cast, or remunerated; but I do know that they are excellently presented and that hundreds of people crowd this theater. Let us envisage a goal of small organizations all over our land, governmentally subsidized during lean years and fat years alike, and honored as our museums and libraries are honored. To-day, with the will in the world, one can give but little help to those who long to try their wings. At best, one can tell them to seek openings in radio or "the movies," without having attained their flesh and blood heritage. When I look back to my own little opera company which gave an abridged version of "Carmen," and played one hundred twenty-three performances in one-hundred twenty days, despite crucifying fatigue. That, I believe, was a greater joy than radio or the movies. When the people desire them sufficiently, we shall have more flesh and blood performances. It is with hope that I advocate a helping hand in our art world by aiding the teachers to carry it to the public ear. The public's part in sustaining our musical art may come yet to be a source of national pride in the development of our rich home talent.

Musicians of September Birth

By W. FRANCIS GATES

SEPTEMBER, with its theme of harvest, has left with us an unusual yield of musicians.

To America it has given such lights as Edwin Shippen Barnes, Mrs. H. H. A. Beach, Frederick Field Bullard, Ernest Carter, Charles Dennée, Henry T. Finck, Adam Geibel, George Gershwin, F. Flaxington Harker, Francis Hopkinson (our first native American composer), Karl Merz, Horatio Parker and George E. Whiting.

Of composers it has given to the world a fine galaxy led by Anton Bruckner, Antonin Dvořák, Girolamo Frescobaldi, Engelbert Humperdinck, Michail Michailovitch Ivanoff, Ildebrando Pizzetti, Arnold Schönberg and Cyril Scott.

Of conductors, a few choice spirits, in Rhené-Baton, Sir Dan Godfrey, Charles Lamoureux and Bruno Walter.

Pianists, in such quality as Alfred Cortot, Theodor Kullak, Isidor Philipp, Eugenio di Pirani and Clara Schumann.

Singers: Marianne Brandt (historic dramatic soprano), Katherina Klafsky, Sims Reeves (immortal English tenor), and Myron Whitney (perhaps best of all American bassos).

Organists include Edward Henry Lemare, Alfred Hollins, and Sir George Martin (all English).

Of violinists, the brilliant Ovide Musin, Kathleen Parlow, Jacques Thibaut and August Wilhelmj.

Harpist: Ada Sassòli.

Publisher, two of the world's leaders, Vincent Novello and Gustav Schirmer.

A Natal Chronology

1st—Johann Ernst Bach (1722), Cleofonte Campanini (1860), Charles (Frederick) Dennée (1863), Engelbert Humperdinck (1854), Johann Pachelbel (Bapt. Sept. 1, 1653), Cornelius Van Vliet (1886)

2nd—Isidor Philipp (1863), R. Kennerley Rumford (1870)

3rd—Ernest Carter (1866), Théodore Lack (1846)

4th—Sir Daniel Godfrey (1831), F. Flaxington Harker (1876)

5th—Mrs. H. H. A. Beach (Amy Marcy Cheney—1867), (Christian) Louis (Heinrich) Köhler (1820), Giacomo Meyerbeer (1791), Rhené-Baton (1879), Theodore Spiering (1871), Myron William Whitney (1836)

6th—Georg Christoph Bach (1641), Robert Coverly (1863), Benjamin Cutter (1857), Antonio Diabelli (1781), Heinrich Nikolaus Gerber (1702), Ferdinand Hummel (1855), Vincent Novello (1781), Rose Olitzka (1873), John Powell (1882), Emerson Whithorne (1884)

7th—Anton Hekking (1856), François-André Danican-Philidor (1726), Thomas Whitney Surette (1862), H. Evan Williams (1867)

8th—Antonin Dvořák (1841), Marin Mersenne (1588), Eugenio di Pirani (1852)

9th—Girolamo Frescobaldi (Bapt. Sept. 9, 1583), James Cuthbert Hadden (1861), Edward Burlingame Hill (1872), Edwin Henry Lemare (1865)

10th—François Benoist (1794), Henry Mollenhauer (1825)

11th—Paul Bekker (1882), Karl Bohm (1844), Eduard Hanslick (1825), Alfred Hollins (1865), Friedrich Kuhlau (1786), Ignaz Lachner (1807), Sir George (Clement) Martin (1844)

12th—Marianne Brandt (Marie Bischof—1842), Melville Antone Clark (1883), Karl Doppler (1825), Theodore Kullak (1818)

13th—Heinrich Conried (1855), Ernest Gillet (1856), Arnold Schönberg (1874), Clara Wieck Schumann (1819)

14th—Edward Shippen Barnes (1887), Luigi (Carlo Zenobio Salvatore) Cherubini (1760), (Johann) Michael Haydn (1737), Jenö Hubay (1858), Antonio Sangiovanni (1831), Otto Singer (1863), George Elbridge Whiting (1842)

15th—Aurelio Giorni (1895), Halfdan Kjerulf (1815), Horatio William Parker (1863), Jules-Étienne Pasdeloup (1819), Bruno Walter (1876)

About Pieces for Two Pianos

A Discussion of Musical Works Rapidly Rising in Popularity

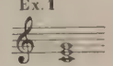
the Late DR. PRESTON WARE OREM

This posthumous article was written in response to a wide demand for authentic information upon this timely subject. Mr. Guy Maier, Editor of our Teachers' Round Table, with Mr. Lee Pattison as Team mate, made an international reputation in Two Piano Recitals

VING DISCUSSED at some ength, in THE ETUDE for February, 938, the matter of "All About nd Music"; and therein expressed enthusiasm for the subject; it has to us to continue with a depart- er which we are equally enthusi- at of music for two players at two n so doing, we are in little danger ition; in fact, it is altogether an- ory. It is a curious fact that certain ing composers, who have written two pianos, have not shone in their ons for four hands at one piano; contrary is likewise true, although e a few bright exceptions.

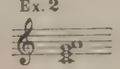
e article aforementioned, we have at the piano is a "home orchestra." , but two pianos are two orchestras. older writers found this out at a rly date; the great Bach himself in music for two (and even more) ords. But the piano has its own peculiarities: outside of its own interior it is not an instrument of sympathetic vibration; two pianos do not react, one upon the other; and, in a way, this has some advantages. A multiplicity of pianos played in unison is hardly worth while; we may, in a measure, increase the noise but not the true sonority. But, to come back to two pianos, we have available some important resources. A considerable number of years ago, with a zealous and competent colleague, the present writer undertook to explore the existing literature for two pianos, chiefly, of course, of original works, not arrangements. Some results of these explorations will be divulged, as we go on. The pair of us, after some three years of weekly rehearsals, finally reached the recital stage; we hope to the gratification of our audiences, and certainly at least to our own. It was all great fun. There is no joy in music like playing with others.

And now let us consider the resources.



ETHEL BARTLETT AND RAE ROBERTSON
Noted English Two Piano Performers.

THE FAMOUS SUTRO SISTERS
ose and Ottilie Sutro, friends of Brahms, Saint-Saëns, and Richard Strauss, or whom the term duo-pianists was created and originally used. They have ade many very widely used two piano arrangements of famous compositions, including A Day in Venice *by Ethelbert Nevin.*



For two orchestras, as it were, comes first the antiphonal aspect. Like many Greek derivatives, the word antiphonal has a wide meaning: not even musical, necessarily; two anvils might be beaten antiphonally; or even echoes might be considered antiphonal. And two orchestras? Well, good old father Bach showed us how to manage those; and of antiphonal choruses there are a multitude. Two pianos are susceptible of many such effects, almost inexhaustibly so. And, by the way, there is a symphony for double orchestra, "The Consecration of Tones" by Ludwig Spohr, classic violinist and pedagog, that is well worth the study of any profound musician. If two orchestras can conduct a colloquy, how much more readily two pianists? Naturally, we have all the resources of four-hand playing, as outlined in our previous article, but somewhat modified, of course. Another, and most valuable, resource lies in the ability to double any part or voices; not necessarily in the octave, above or below. For instance, one player may double in the third or the sixth a melody or ornamental passage played by the other; and when this same resource is employed in the doubling of a counter theme also, we come perilously near to having to manipulate the devices of double counterpoint. Just see how it all fits in, really! And a crossing of the parts, frequently involving contrary motion, another contrapuntal device; and there we are, once again. The beauty of it is that all of these resources serve to bring within our reach passages that, on a single piano, would be either impossible, or else demand the technic of the virtuoso. And at that, one does not have to bang the life out of the instrument. From the preceding, one can gather readily that the purely vertical aspect of harmony alone will not answer in this type of musical creation. Even in an easy teaching piece, by a slight deftness of treatment we can spin a little musical web that will lift us right out of the commonplace. A composer of music is a poet in tones; and a poet, as the Greek derivation of the word informs us, is a worker, a creator, not an extemporizer. Not long ago we happened to hear a "duo team" extemporize on a very well known American art song. By the time they had discharged their torrents of ill-assorted chromatics and other pestilential passage work, the excellent theme had disappeared entirely. One player might as well have been in New York, the other in San Francisco. We wished them both elsewhere. Music is not made in this manner. Nor is it made by taking an otherwise good piano composition and, in arranging it (*de*-ranging it, rather) for two pianos, changing many such entirely proper common chords as

Ex. 1

into "added sixths" (so-called), till it becomes

Ex. 2

Why? Shades of Mendelssohn! what has happened to his chord? That striking chord which opens the famous *Wedding March* is really a chord of the eleventh. But, after all, no chord is really beautiful of itself, but rather from its juxtaposition with other chords; music is motion; and it is not so much the chord that counts as its progression. May we be pardoned this apparent disgression? We feel strongly on this subject.

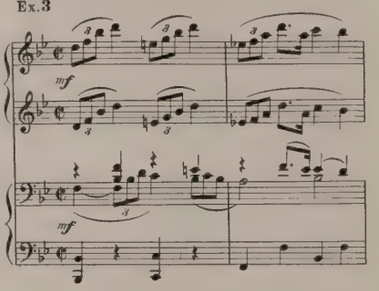
Now, to consider the real literature for two pianos. We found a good historical starting point in J. S. Bach, with concerted pieces for two, three, or even four pianos, one player at each. But in the case of Bach there is always an accompaniment for small orchestra; with the concerto form, we are not concerned in this article; besides Bach used harpsichords, really. Then comes Haydn, with nothing original for two pianos. And Mozart? Nothing original except a very effective "Concerto in E-flat" (requiring an orchestra) and a "Sonata and Fugue" (little played). But Clem-

(1752-1832), never great but always workmanlike, and a real pianist, comes along with a set of sonatas which might serve as excellent preparatory material for students able to undertake them.

Beethoven offers nothing in this line; but Moscheles (1794-1870), a disciple of Beethoven, a friend of Mendelssohn, and a power in his day, leaves us that old conservatory "war-horse," his "Homage to Handel," an excellent study piece. Schubert, so prolific in the four-hand field, seems not to have been interested in two piano work; but Mendelssohn and Moscheles are said to have played much together at two pianos, even to have improvised together. As to this latter, we are inclined to feel skeptical; and at least, we believe that we would not care for it. We have known but few musicians who could really improvise; and these could do little else, unfortunately. We have known but one who could improvise a genuine fugue; and it was dry stuff at that. But, when it comes to two players, excuse us, please!

But let us continue our survey, as we have reached the beginning of the Romantic School. Mendelssohn (born in 1809) and Robert Schumann (born a year later) coöperated in 1843 in the establishing of the Leipzig Conservatory. And thereafter started the warfare between the Romanticists and the Philistines, as they were called at that time. Our present interest in Schumann lies in the fact that he has given us one of the finest pieces ever written for two pianos—his "Andante with Variations, Op. 46," a work composed in his best period, just as he was abandoning the habit of composing exclusively at the piano keyboard; never a good thing to do, provided one can learn to dispense with it. And Chopin, born in the same year as Mendelssohn? Yes, he has just one piece for two pianos to his credit, the *Rondo in C, Op. 73,* well worth study, and a fine "exhibition piece."

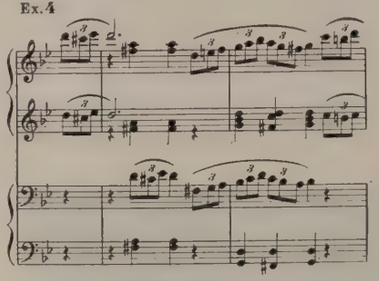
In this estimate of individual compositions, it is to be understood that we are hitting only the "high spots." An examination of catalogs of standard works discloses the literature of original compositions as far more limited than that for four hands. Nevertheless, it is to-day growing by leaps and bounds, and especially in the earlier degrees of difficulty. Two pianos have become available in so many more studios and classrooms, and even in private homes. In the matter of transcriptions, of course, the lists are much larger. And just now, they are growing strongly.



But, to continue—in his own career Chopin was surrounded by a galaxy of lesser lights, men of real ability, who played and composed, but left little that has survived. Even his friend Liszt left nothing original for two pianos. The generous-minded Schumann contributed much to the vogue of certain composers, so that when we reach Brahms, we really find something, his *Variations on a Theme by Haydn, Op. 56.* Not to forget dear old Carl Reinecke, his *La Belle Grisélidis* is a conservatory standby; and his *Improvisation on a Gavotte by Gluck, Op. 125,* is very fine. And when we reach the composers of "national" tendencies we are much impressed by Grieg's *Northern Romance, Op. 51;* then (still later) Sinding's *Variations, Op. 2;* and the Russian, Arensky, gives us something very good indeed, in his "Silhouettes, Op. 23," and the "Suite, Op. 15," which is less difficult. We used to enjoy very much the *Feu Roulant, Op. 256,* by Duvernoy, a sort of "perpetual motion" piece. And there is a *Don Juan fantasie, Op. 284* (on the *Serenade* from Mozart's opera), which was a great favorite.

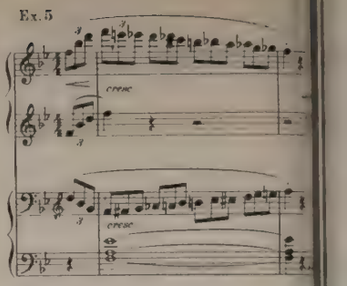
The custom of writing second piano parts, both to standard solo numbers and to current teaching pieces of various grades of difficulty is by no means new; and it has been productive of some interesting results. Even the indefatigable Czerny (1791-1857) made such accompanying parts to his own "Velocity Studies." And similarly there are second piano parts to Kuhlau's "Sonatinas." Henselt, a remarkable pianist, wrote some famous accompaniments to standard studies; but probably the most distinctive of such accompaniments are those by Grieg to four of the piano sonatas of Mozart; these are most enjoyable to play; and, aside from Grieg's characteristic employment of major ninths and descending thirds of dominant chords, they do no violence to the originals.

In creating second piano parts, one has available the same resources as are herein outlined for creating and arranging. We do not believe in mere accompaniments, or in strengthening certain parts to the disadvantage of others; one must seek balance always. Rather should we weave about the piece to be accompanied additional parts or voices, above and below; possibly with motives or ideas derived from the piece itself. There is still much to be done in this department; but it is not to be done off-hand; the piece to be accompanied demands close study and analysis before such treatment is even attempted.



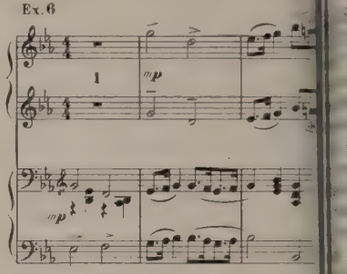
The absolute rearrangement of solo piano pieces or other published numbers draws upon all of our resources, with a technic of its own. In a third grade teaching piece of rather popular character, *Dance of the Rosebuds,* by Frederick Keats, we have ventured to put into practice some of our own precepts, and to dignify this number by free contrapuntal devices. Foreshadowing this in the light *Introduction,* we start off the first theme with Piano I taking the melody in octaves, while Piano II takes the accompaniment combined with a counter theme, as in Ex. 3.

Ex.3



As the second theme starts, we employ a bit of imitation, and continue the counter theme in sixths.

Ex.4



For heightened interest, at the close of the first portion scales in contrary motion are interpolated.

Ex.5

Then, in the *Trio,* we seize a ch a bit of canonic imitation.

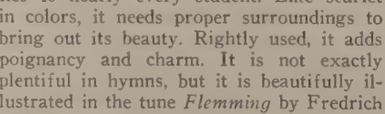
Ex.6

Big words, are they not, for su paratively inoffensive treatments? I it on some time! We learn count not as a collegiate "snap," wher covered reams of paper, with no app music emerging from it, but to acc just such apparently simple but e results as these. In the course of rangement, we had only to alternat effects between the players in o insure a suitable balance.

As already suggested, of transc there is no end; duo players seeking thing monumental might try, for i Franz Liszt's transcription of Beet "Ninth Symphony." From that w downward, to the smallest teaching almost everything may be had. But there are some high spots: Saint "Suite Algerienne," for instanc Brahms' "Hungarian Dances"; as many other such numbers.

Fortunately, all of the great pia certos, from Bach to Rachmaninoff, had for two pianos, the 2nd piano the orchestral accompaniment. This a great boon to both artists and st with the advantages obvious.

Hymns in Teaching Harmony



By RUTH E. FRENCH

MANY TEACHERS of harmony overlook a vast vein of harmonic ore by not using hymnals as reference books. Many of our best hymn tunes were written by the greatest composers and are miniature masterpieces. In these we find actual examples of the very things we endeavor to teach our pupils. Harmonic principles are illustrated in all music, but hymns are written in four voices and thus more nearly resemble the exercises of the student than do his solo pieces. Studying hymns, and finding in them the exemplification of the rules of the text book, will prove an inestimable aid to the student in connecting his work in harmony with his previous musical experience.

The teacher who wishes to impress upon his pupils' minds the possibilities of very simple harmonies can find no better illustration than is afforded by the hymn tune *Ellesdie,* associated with the words, "Jesus, I my cross have taken," which is arranged from Mozart. It contains scarcely anything but tonic and dominant harmony, and yet it is in every way satisfying. Practically the same thing is true of Beethoven's *Hymn to Joy,* which is found in most hymnals. Study of such hymns as these gives the student an appreciation of the simplicity of great art.

The second inversion of the major triad, the six-four chord, is one of the first stumbling blocks the student encounters. Its use is hedged about with many rules and often, for no apparent reason, it does not sound well. Study of hymns will do much to clear up the mind of the student regarding this important chord.

The augmented chord presents difficulties to nearly every student. Like scarlet in colors, it needs proper surroundings to bring out its beauty. Rightly used, it adds poignancy and charm. It is not exactly plentiful in hymns, but it is beautifully illustrated in the tune *Flemming* by Fredrich F. Flemming.

A newer hymn tune, *Cushman,*[1] by Herbert B. Turner, gives another example of this sometimes awkward chord.

Triads and seventh chords on the second, third, and sixth degrees of the scale, generally called secondary chords, often cause the student unnecessary grief. They may sound harsh and strange, after studying the primary chords. However, if the student will carefully study the *Crusaders Hymn, Abends,* by Oakeley, and other familiar hymns, he will discover how these chords can be used. He will find that instead of being harsh, they have a mellowness which contrasts beautifully with the major harmonies of the primary chords. Thus by studying the harmonic effects of these chords he will save himself much groping about in what seems to him a maze of rules and exceptions.

Another hymn tune which will justify detailed study is *In Dulci Jubilo,*[2] a German melody of the fourteenth century harmonized by Canon Winfred Douglas. It has a number of interesting features, not the least of which is that it begins on the subdominant chord. Coming on an unaccented beat it brings out the tonic harmony of the first beat of the next measure. The deceptive cadence is found in a number of places, and also chords on the supertonic and mediant. These give the tune a peculiar harmonic flavor; and the student who makes a thorough study of this hymn will realize the charm of the so called secondary chords in a way that cannot be achieved by of the text book alone.

In order to make the best use of in teaching harmony, there must b considerable study by the teache should very carefully go through the book, noting the more salient ha features. These may be listed on a and finally noted on the flyleaf of t mony text in the following manner.

Tune	Composer	Harmonic
In Dulci Jubilo	Douglas	secondary
Lead Kindly Light	Dykes	unusual c
Darwall	Darwall	scale harm
Flemming	Flemming	augmente

The student who learns harmony the study of actual examples will vastly interesting. It will become a means of expression rather than a to avoid consecutive fifths and o Finally, a detailed study of noble tunes will give the student a greater of expression in all his musical wo will also help him to appreciate n worth whether in a hymn or a sym

The Threshold of Music

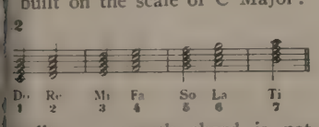
When Four Notes Get Together—Seventh Chords

By LAWRENCE ABBOTT
Assistant to Dr. Walter Damrosch

This article is the Seventh in a series on "The Doorstep of Harmony." The first appeared in The Etude *for January, and an article will appear each month hereafter.*

ADS ARE NOT BY ANY
ANS the only pebbles on the
ch. There are other chords—
chords—used almost as widely as
-note chords. These others are
enth chords.

he seventh chord itself and its
perfectly natural developments
asic idea behind the triad. This
remember, is that triads are built
one above the other. You start
te, jump an interval of a third to
note, and then jump another simi-
val to the fifth note. In forming
th chord you do the very same
d then go one step farther by
still another third to the seventh
you have four notes, each a third
3-5-7.



n remember it this way: A triad

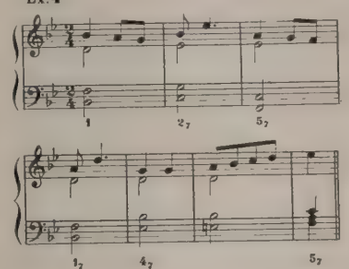
instead of a major seventh. Still
have their fourth note a diminished
above the first.

as there are seven triads in the
of Chords, one for every story, so
re seven seventh chords. Here they
built on the scale of C Major:

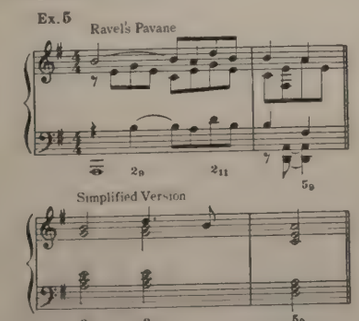


reality, a seventh chord is not so
a triad with an extra note above it
is a combination, or dovetailing, of
iads.

seventh chord on C, for example,
interlocking combination, or merger,
of the triad on C (a major chord) and the triad on E (a minor chord). The result is a blend of two chords; and, while the resulting seventh chord has a complex sound all its own, we still can hear in it the bright major sound of the C chord and the more serious-minded tones of the E chord. All seventh chords have this same blended character, like the blended flavor of "ale and porter mixed," or like Mocha, which has a flavor of its own, yet combines the flavors of chocolate and coffee.

Here are a few examples of seventh chords which will give you an idea of their characteristic sounds, Dvořák's *Songs My Mother Taught Me* has a poignant beauty which comes from the use of sevenths on various steps of the scale. You must know its melody so well that there is no need to quote it note for note. But the following skeletonized version shows the harmonic on which it is based:

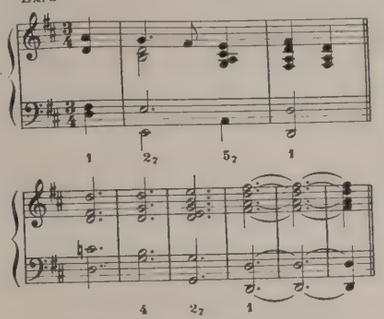
Ex.4



The figures underneath the chords will help in their identification. A figure by itself means a triad, the number showing which position of the scale it is on. A figure with a smaller 7 attached to it means a seventh chord on that position of the scale.

If the student happens to have a copy of Harold Arlen's song, *Let's Fall in Love*, he will do well to make a study of it to see how richly and satisfyingly the composer has indulged in a variety of sevenths.

In one short phrase of the *Pavane Pour Une Infante Defunte*, Ravel employs no less than five of the seven possible seventh chords belonging to the scale of G Major. Note the razor-blade sharpness of the resulting harmonies:

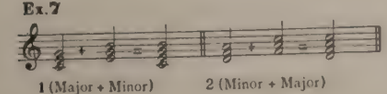


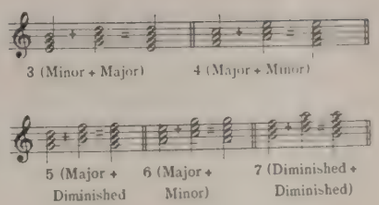
Ex.5

This quotation is published with the permission of Editions Max Eschig, owners of the copyright of Ravel's *Pavane Pour Une Infante Defunte.*

We have spoken of the seventh chord as a merger of two triads, and hence a blend of two personalities More often than not the lower of the two triads dominates and gives the seventh chord its chief character. But not always. The composer can place his emphasis on whichever triad he wants to stress. Often it is the upper triad that dominates, and the lowest note of the seventh chord is only lightly sprinkled in to provide seasoning to the harmonic dish. As an example of how this works out, here are two excerpts from the old *Prayer of Thanksgiving*, a Dutch melody of 1626.

Ex.6



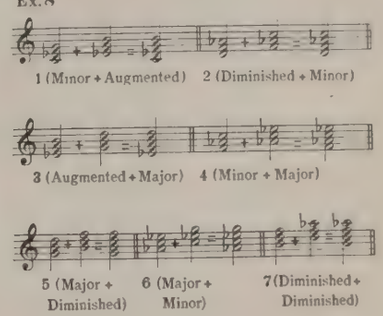


The seventh chord on Re (2), you will recall, is a dovetailing of the triads on Re (2) and Fa (4). The first phrase quoted above (sung to the words "to ask the Lord's blessing") has a seventh chord on Re which is very much "second floor" in character. The note D in the right hand is the only thing that makes it a seventh chord at all. Without it—and it would not be greatly missed at that—we should have nothing but a triad on Re. But in the second excerpt (sung to the words "Lord, make us free!") the Re seventh chord is more an elaboration and enrichment of the triad on Fa, with its "fourth floor" personality. The base note is G this time, not E. The chord that precedes it is a Fa triad. When the seventh chord makes its appearance we are still thinking in terms of Fa, and consider this new chord predominantly "Fa," not "Re," in its personality. The note which does the embellishing is E.

Another reason for considering this seventh chord an elaboration of the Fa triad is that these closing chords give us the feeling of a grand *Amen*—which, you remember, consists of subdominant (Fa) and tonic (Do) triads.

Here are all the seventh chords belonging to the major scale, showing you just what triads are combined to form each seventh chord:

Ex.7



Seventh Chords in Minor Keys

SEVENTH CHORDS in minor keys are formed exactly as they are in major keys; that is by dovetailing triads. In C Minor, for example, we have,

Ex.8

Notice that these minor key seventh chords are more colorful and bizarre than the ones in major keys. All of them except two contain either a diminished or an augmented triad.

If we look over the array of seventh chords in the major and minor keys and group together the ones which are formed alike, we shall make several interesting discoveries. In the major scale we will find five chords which are a dovetailing of major and minor triads (the brightness of the major tending to shine through the sadness of the minor, and, conversely, the sadness of the minor tending to dim the joyful mood of the major). And in the minor scale we will find two more dovetailings of major and minor. So we can count this particular combination as being a fairly common phenomenon, occurring on almost any position of the scale. Another combination occurs twice—that of diminished and minor. In the major scale we find it as Ti seventh (7_7) and in the minor scale as Re seventh (2_7). Another merger, too, occurs twice, major and diminished, but in this case the situation is different. For both times it occurs on the same position of the scale, the dominant. Thus, the fifth story of the scale is unique in having no other seventh chord than the major-diminished combination. And the major-diminished combination is unique in having the latchkey to no other floor in the House of Chords than the fifth.

The repercussions of this discovery are rather startling; so startling, in fact, that we had better pause for breath at this point and start afresh with another chapter.

Unfortunately for readers requiring back numbers of THE ETUDE *for the past year, containing this and other desired series of articles, e are compelled to report that the issues of many months have been completely sold out. While this emphasizes the importance of regular bscriptions to* THE ETUDE, *we are of course very sorry to disappoint our friends. Nevertheless, if you desire any special numbers, write and we will do our best to accommodate you. We strive to make every "Etude" of permanent value.*

Recent Record Releases

By PETER HUGH REED

PROMINENT AMONG RECORD RELEASES this past year have been those of various concertos. Though orchestral discs still remain the prime favorites with the record buyer, apparently the old admiration for the featured soloist still exists. And in what better way could the solo instrumentalist be heard than in the concerto, a work designed to exhibit his skill?

The classical form of the concerto owed its general lines of construction to Mozart. After him these remained much the same, but with Beethoven the orchestra came into greater prominence and the form was extended. Then came Liszt with his decorative innovations. The concertos written after Liszt have followed the patterns established by one or another of these three men.

Three concertos for violin, issued recently by Victor, represent the form in the romantic and modern schools. The first of these is a streamlined version of Nicolò Paganini's "Concerto No. 1," arranged and played by Fritz Kreisler with Ormandy and the Philadelphia Orchestra (Victor set M-361). Paganini, a celebrated virtuoso of the violin, was hardly a great composer. His thematic material and his instrumentation were weak, but his works abound in daring and brilliant technical effects that have made them attractive to later day violinists. Most of his music played to-day is heard, however, in arrangements. The famous violinist Wilhelmj rearranged Paganini's "First Violin Concerto" as a work in one movement. Kreisler, admiring this reduced work but not its orchestration, is said to have revised it considerably. The new revision proves to be a suave and more sentimental version of the original, which many record buyers will undoubtedly recall from the recording made of it by Yehudi Menuhin.

The second work, Schumann's "Concerto in D minor," played by Menuhin and the New York Philharmonic Symphony Orchestra (Victor set 451), owns a fascinating history. Schumann wrote this work for his friend, Joseph Joachim, the year before he entered the asylum where he later died. Joachim never played the work in public, some say because Schumann thought it lacking in effectiveness. After Joachim's death, his heirs gave the manuscript of the concerto to the Prussian State Library, with the odd stipulation that it should not be played until one hundred years after the composer's death. This was done in 1904. The existence of the work seems to have been forgotten after that. In 1933 Jelly d'Aranyi, the Hungarian violinist, who is a grand-niece of Joachim, attended a spiritualist séance in which Schumann's spirit is said to have begged her to look up the work and to play it. It took three years for her to locate the manuscript and to get it released for public performance. Later (1937), Menuhin independently became interested in the score. The work adequately represents the greatness of Schumann only in one part—the lovely slow movement. Although there are many effective and beautiful passages in the outer movements, both lack the touchstone of true greatness. Menuhin, who has a great affection for the concerto, plays the work superbly.

The third work is the "Second Violin Concerto in G minor, Opus 63," by the contemporary Russian composer Prokofieff. It is played by Jascha Heifetz and the Boston Symphony Orchestra, under the direction of Koussevitzky (Victor set M-450). Although this composition is modern in its rhythmic and harmonic idioms, it is also appealingly melodic. Its insinuating grace, its engaging humor and its fascinating rhythms, particularly in the superb performance given it in this recording, make of it an almost irresistible work.

The latest recording of Tschaikowsky's "Piano Concerto in B-flat minor," engages the services of Egon Petri, the Dutch pianist, the London Philharmonic Orchestra and conductor Walter Goehr (Columbia set 318). Petri plays the work with admirable finesse and a welcome restraint. The performance, which is excellently recorded, grows on one with repeated hearings. This concerto, incidentally, is classical in its form despite its romantic feeling.

Sir Thomas Beecham, with the London Philharmonic Orchestra, turning his attention to Schubert's "Unfinished Symphony" (Columbia set 330), brings out the songful qualities of the music. Although his reading is less vivid than Koussevitzky's recent one, it is nonetheless valid. Both are remarkably recorded performances of one of the greatest songs for orchestra ever conceived by man. Choice between them will undoubtedly be governed by personal predilections.

Sir Thomas, in his performance of Sibelius' *Finlandia* (Columbia disc 69180D), brings dignity and solemnity to a composition which all too often is recklessly performed for theatrical effect. His representation of the work, which is brilliantly recorded, does notable justice to its epic qualities.

Beethoven wrote four overtures in all to his one opera, "Fidelio." Three of these are known as the "Leonore Overtures, Nos. 1, 2 and 3." *Nos. 1* and *3* have been on records a long time, but *No. 2* was recorded for the first time recently by Felix Weingartner and the London Philharmonic Orchestra (Columbia set X-96). A study of these three overtures throws an interesting light on Beethoven's development. Although the *Leonore No. 3* occupies a conspicuous place in the standard repertory of the orchestra, the *No. 2*, according to the late Paul Bekker, owns more grandeur and imaginative originality than the other. To it, he contends, rather than to *No. 3*, rightfully belongs the adjective "great." Weingartner, who is said to share this same view, gives a notable performance of this seldom-heard work.

Dvořák, during his short sojourn in America in the early nineties, made a study of Negro and Indian music. Several works were written as a result of this, employing original themes similar in character to the music of the Negro and the Indian. The "'New World' Symphony" and the "'American' Quartet, Opus 96," sometimes called the "little sister" of the bigger work, are two of these. A new recording of the quartet, made by the Roth String Quartet (Columbia set 328), does notable justice to its unabashed sentiment, its facile gaiety, and its nostalgic wistfulness. A completely melodious work, this quartet has an especial appeal for the chamber music novice.

A new recording of the Mozart "Clarinet Quintet," K-581, engages the services of Benny Goodman and the Budapest String Quartet (Victor set M-452). Goodman, a swing music specialist, proves himself an excellent technician in his performance of this work. His transition from swing to Mozart is auspiciously made, and his many admirers will undoubtedly find this first serious music recording of his cherishable. Chamber music enthusiasts, on the other hand, will undoubtedly find his lack of feeling a definite drawback to the performance.

A facile work, melodically pleasant and technically effortless, is Haydn's "London Trio in D major for Piano, Flute and Violoncello." Le Roy, the French flutist, with Albert-Lévêque and Lucien Kirsch, unite to give a most enjoyable performance of this typical XVIII Century chamber work (Musicraft's album set No. 8). The recording is excellently balanced.

Bach's "Fourth Suite in E-flat," for unaccompanied violoncello, which Iwan d'Archambeau plays in Musicraft's album No. 19, is a work written to reveal the possibilities of the instrument. Although the music is genuinely inspired, and attests its composer's magnificent command of compositional technic, its appeal is a limited one. Mr. d'Archambeau, who was for twenty-five years the violoncellist of the now disbanded Flonzaley Quartet, gives a good account of this work and the recording does him justice.

Walter Gieseking, who has gained a high reputation for his performance of Mozart's music, contributes his reading of the somber veined "Piano Sonata in C Minor," K-457. This work possesses a dramatic drive and a depth of purport which rank it among the composer's greatest works for the keyboard. It is often linked to the famous *Fantasia* in the same key, K-475. Gieseking contributes a fine performance.

Simon Barer, who is rapidly becoming one of the most widely praised of recording pianists, combines prodigious technic with emotional fervor. In his performance of Chopin's difficult *Scherzo in C-sharp minor, Opus 39* (Victor disc 14926), a work in which clarity and precision are requisite qualities, he plays with almost too much dash and fire. His is a performance to admire but not for the student to imitate.

The Madrigal Singers, of WPA fame, record a group of eighteenth and nineteenth century American songs in Columbia set 329. The album contains examples of early Americana like *Bradford* (1793), *Ode to Science* (1798), *Bunker Hill* (1775), *Old Colony Times* (1800), *The Little Canoe* (1847), *Lubly Fan* (1844), *Lilly Dale* (1852), *Listen to the Mocking Bird* (1865), and *Cocaine Lil.* There are fourteen songs in all. Although the songs are effectively sung and recorded, one feels that they could have profited by better diction and a more spirited performance.

* * * * *

"A musician may, in fact, be defined as one who can hear two tunes together without effort."—A. H. Fox-Strangways.

MUSIC HELPS TELEGRAPHY

The latest scientific gadget in telegraphy is the use of the electric organ for flashing messages over the world. The Western Union Telegraph Company has given a demonstration of the use of this organ in their offices. Ninety-six tones of the organ may be used to send ninety-six messages by means of the same current on the same wire, at the same moment. In this picture we see J. W. Milner, the Western Union transmission engineer, showing the "tone detective," which, by a series of lights placed on clefs on the musical scale, shows the frequencies (vibrations) of the tones produced on the organ and the tones being used at any time by the generator in the carrier channel system. The device is derived from the Hammond Electric Organ.

The Modern Marimba and Its Relation to the Xylophone

By YOICHI HIRAOKA
Soloist of the National Broadcasting Company

A Conference Secured Expressly for The Etude *Music Magazine*
By ROSE HEYLBUT

THE GENERAL IMPRESSION of the xylophone is that it is a noisy sort of instrument, extending no further in service than as a medium for jazz or "swing" music, and an excellent addition to parties where the participants cannot perform on anything better. This is a notion that needs urgent exploding. Tonally, the xylophone is equal to a flute or any of the higher woodwinds. Musically, it is capable of presenting the finest there is. Its unfortunate status has been forced upon it, not through any deficiencies of its own, but because of the use to which it has been generally put, and the quality of the music that has been usually written for it. But it is a profound mistake to think that the instrument itself is worth nothing more. You might as well say that a drum or a horn (which instruments are also active in jazz and "swing" bands) are fit for nothing better.

The xylophone is one of the oldest instruments in the world. In museums, they will be found constructed of wooden keys with tubular resonators beneath them, among the primitive instruments of all countries. It has been found in Africa, in Asia, and in South America. The instrument most like the modern xylophone is the South American marimba. There are great differences between them, of course, although the construction is similar.

A Reputable Instrument

THERE IS NO REAL REASON why the xylophone has been so commonly associated with less than worthy music. Possibly it is just a matter of taste. Possibly, also, because it is a very easy instrument to learn, at the beginning, it lends itself more quickly to the kind of music which needs little thought or practice. But these factors, let me repeat, originate in the minds of the players, and not in the nature of the xylophone iself.

In my experience of ten years of concentrated study on the problems and possibilities of the xylophone, I have found that there is no type of classical music which cannot be artistically and effectively performed on my instrument. There are, however many individual works which do not lend themselves to it—just as there are works which cannot be sung, or played on a violin, or on a piano. As a general rule, polyphonic music of more than two voices should not be attempted on the xylophone, because the construction of the instrument makes sustained tone difficult to maintain. But neither can one play three or four voices on the flute. The xylophone is constructed somewhat like a piano; that is to say there is percussion upon keys. The xylophone keys, however, create the tones themselves, as opposed to the strings and hammers of the piano; and there are no pedals to sustain tone. Thus, xylophone tone is at its best at the moment when the keys are struck. That is why long sustained tone is difficult.

On the other hand, any work that is suitable for a single voice, such as a song, a violin, violoncello, or a flute selection, and piano pieces of one or two voices, are excellent for xylophone use. Especially fine are the early classics, written for harpsichord or clavier. The "Two-Part Inventions" of Bach, the gigues, gavottes, and sarabandes of the Bach suites, the minuets of Mozart, the melodies of Gluck, Couperin, and Purcell, the sonatas of Haydn; all of these lend themselves wonderfully well to xylophone use. Indeed, the less sustained quality of the xylophone's tone gives back the real feeling of the earlier instruments of the clavier type a great deal more faithfully than does the piano. Fast moving pieces are also good, because there is less need for sustained tone in them; and coloratura songs and arias are particularly lovely.

YOICHI HIRAOKA AT HIS INSTRUMENT

The instrument which Hiraoka plays is really a combination of the xylophone with the marimba principle, the tones each having an individual resonating chamber. The old xylophone had none. The modern marimba has superseded the early type for home, concert and symphony use. When Mr. Hiraoka speaks of the technic of the xylophone, the term may be applied to the marimba, which is as much an improvement upon the old xylophone as the modern grand piano is upon the old-fashioned square. See editorial in this issue.—Editor's Note.

My own introduction to xylophone playing was rather accidental. The first piece of music I ever heard was Gounod's lullaby serenade, *Chantez, riez, dormez.* I was a child of three, the song came out of a phonograph, and I became a complete slave to music, from that moment on. My sister was already able to play the piano, and I longed for lessons, too. But I was too small, my hands were too small, and I had to wait.

At the age of eight, I began to study the piano; but in time it developed that my hands would always be too small to stretch the intervals necessary for complete piano technic; and so I had to give up my beloved piano. I was determined, however, not to give up music! Somewhere in the wide world, I felt sure, there must be an instrument upon which an ardent student could play, regardless of the size of his hands. Then the xylophone came to my attention. By the use of the hammers, I could "stretch" four octaves, if I liked. The tone of the instrument was musical and pure, and its scope could be whatever I was able to make it. I bought a xylophone. Along with the instrument there came a printed book of directions and practice exercises. I studied them carefully. They were my only teacher. I have never studied other than alone. After a few months, then, I realized something of what could be done with the xylophone, and determined to develop its possibilities myself. Also, I determined to develop myself as a xylophonist.

For three and a half years I worked, developing touches and technics, experimenting with different kinds of hammers, trying to make a xylophone sound as beautiful as any other instrument, and searching for truly worthy music that should be well adapted to its use. After that length of time I felt surer of myself. Next, I began to take over sonatas and great music of all kinds on the xylophone, and to adapt music that needed it. Each year, now, in addition to my daily radio programs, I give full public concerts of classical works on the xylophone.

I can heartily recommend the xylophone to music students, either as an instrument for their entire concentration, or as an added instrument, with which to complement their studies in other fields. The xylophone is interesting; it is not too familiar; it presents no unusual physical difficulties; and it offers a wide scope for individual study and development. Furthermore, the instrument is of fixed pitch; and, except for a sudden change from one climate to another, it needs tuning no more than once a year. A xylophone is tuned by filing its wooden keys. Filing either end of a key raises its pitch, and filing it underneath lowers the pitch.

The xylophone will prove especially encouraging to youngsters who are impatient of "results," and who grow restless when their progress on the violin or the piano does not "sound" as fine as they might like. At the very beginning, the xylophone is extremely easy to learn. The keys are there, and one has only to strike them. As one advances, of course, problems of touch, tone, and virtuoso technic arise, which make the instrument as difficult as any other. But the start is surprisingly simple, and a few weeks of study can bring forth the much desired result of "pretty tunes to play."

To a child who approaches the xylophone as a complete stranger, it is suggested that he be given an instrument of two or three octaves, in order to obtain satisfying results of both tone and variety. My own instrument is four and a half octaves in range; but there is always time for a big one, later on. Also, I recommend a xylophone, that is, with wooden keys. As a matter of fact, the term *xylophone* means wood-sound. It is a Greek compound word of which *xylo* means wood and *phone* means *sound.* The instruments with metal keys are vibraharps or orchestral bells, excellent in ensemble work (where a definite bell tone is wanted), but less satisfying as solo instruments.

The keys are there, as I have said, and one needs only to strike them. What, then, are the problems and difficulties of xylophone playing? The chief problem is tone. Since the natural tone of the instrument is unsustained, the player must bring resonance, warmth, and round mellowness into it. He does this entirely by touch. The grasp on the striking hammers must be firm yet relaxed. Quite as in piano work, the arm must be without tension of any kind; and pressure must come, as it is needed, from the wrist, the forearm, the upper arm and shoulder, according to the demands of the movement. Arm pressure is exerted only for *forte* passages, and for *crescendi.* Mellowness of tone results from the proper relaxation of the wrist, like a violinist's *vibrato.*

There are no pedals and no foot work. There is, however, the question of body balance. I have found it advisable always to poise the center of balance directly over the keys on which I am playing, and to move my whole body as I change from higher to lower registers. This produces a better tone than to stand in one spot and move the arms only.

The technic of the hammers is, of course, the most important. Each hand manipulates a hammer of its own, and the beginner should learn to use both hands with equal fluency, from the very start. Scales should be studied by using alternate hands for each half-tone; do not play a passage with one hand and then a following one with the other.

The Prospect Expands

TONE IS REGULATED by the kind of hammers used. The larger ones, with the soft rubber (or felt) heads, produce a more mellow tone than the brilliant sound of the small hammers with hard rubber heads. Since these smaller, harder hammers make for greater brilliancy of tone, they are especially useful in the upper registers. Sometimes, depending on the needs of the piece, the player must change his hammers while playing. In time the player develops the technic of working with two hammers in each hand, thus producing polyphonic harmonies. It is because no more than two hammers can be conveniently held with each hand that many voiced fugues are inadvisable. *Staccato* tones, and even "ordinary" tones, are produced by a single blow of the

key. Sustained tone requires [illegible] quick strokes (always on the same key, of course): and these we call rolls. The greater the frequency of the strokes, and the less breaking of tonal continuity between them, the more sustained and mellow the quality.

The xylophone requires accompaniment, chiefly of the piano, but often by a trio or quartette of strings. Even a full orchestra may be used. Working with double hammers, the player can sometimes provide his own *obbligato;* but that is not always possible, and depends to a large degree on the nature of the music.

As more advanced technic develops, it will be found that the distribution of the two hands is even more equal than on the piano. On a piano there is usually a melody in the right hand and a simple accompaniment in the left. On the xylophone, alternate notes are struck with alternate hands (as a rule), and thus each hand comes in for a share of the actual work.

At the present time the greatest difficulty facing the xylophone player is the lack of a complete library for his instrument. The music that seems to be written exclusively for the xylophone is the kind which, very frankly, does not appeal to me. In my own work, I have found it necessary to depend almost entirely upon adaptations of really fine music. It is great fun to search through piano, violin, violoncello, flute, and vocal music, and select what will lend itself best to xylophone use. But it sometimes happens that music which *looks* suitable, on the printed page, turns out to be quite unusable: and then the search begins all over again.

I have a constant repertoire of about four hundred pieces. I need them. I play over the radio six mornings a week, using three numbers each day, and I try not to repeat anything inside of fifteen weeks. Since it is difficult to play from music at a xylophone, because one moves about before the keyboard, it is an excellent training in memory to keep one's entire repertoire in mind, for immediate use. In practicing, of course, one places the music stand over the middle of the instrument, and then tries to memorize as he goes along. There is no set rule about practicing. I find that I now require perhaps three hours of practice each day. In the beginning, of course, less time is needed. As one advances, interesting problems and tonal technic keep arising, which demand diligent and thoughtful working out.

On the whole, there are limitless opportunities in xylophone playing, for serious students who are eager to break their way into a comparatively new field. And, whether you decide to play the xylophone or not, cast aside the idea that it is not a wholly dignified and worthy instrument. Like any other, a xylophone is what you make of it.

Do Not Cast the Old Aside

By **Patricia Rayburn Olson**

Did you ever go through the miseries of sitting through a recital given by your promising pupils, and listen to ninety per cent of them play with mechanical correctness, but with about as much spontaneity of expression as an ancient grind organ? The writer struggled with this problem, until she stumbled upon a clue.

Passing the home of a pupil, there was heard the strains of a number she had first studied nearly two years before. That in itself was amazing enough—but what was still more amazing was the fact that the young lady was playing it as it should be played. The selection in question was MacDowell's *To a Wild Rose*, which, while simple in form, requires a depth of understanding to play it properly. She was putting everything into it, and I listened.

Investigating later, her mother informed me that she often took pleasure in playing over her old numbers, long after they had been officially laid aside.

And there was my cue! It led to a sweeping revision in the planning of recital programs. Instead of using only recently studied material, as heretofore, I had each pupil play at least two numbers, the first of which was an old one, one that he had "grown around," as it were. Or, to use a more homely simile, one that was like an old shoe: so blessedly comfortable that he could not possibly feel ill at ease in it. We spent a lesson or two brushing it up; that was all.

It worked wonders with the youngsters. Without exception, they were able to put more into these old pieces, with which they were technically so familiar that they could forget all the details and cautions; and I found the audience more appreciative of a number easier technically, but performed with a higher degree of imagination and artistry. Furthermore, and this *is* important: the second and newer number invariably gained in ease of performance as well. It had, in a way, become artistically, mentally, and spiritually digested. The pupil felt much more at ease after having played one selection creditably, and this confidence was reflected in his second piece.

Great musicians include certain selections in their repertoires year after year. Why should not we, who are students and teachers?

Fifty Years Ago This Month

An Unsigned Editorial on the theme, "How to Acquire a 'Sympathetic Touch'" bears so many impresses of our revered Mr. Theodore Presser that we want our readers to come again under the influence of his noble outlook upon life in the profession that he so fervently loved:

"If it be granted that the development of the expressive touch depends upon the cultivation of the heart, let us inquire into the best method of accomplishing this task. Too many students imagine that the study of music alone will afford all the training that the musician needs. They think that expression may be wrought out of the piano, or, perhaps, they think that the enthusiasm and feeling are to come from the compositions they play. Some time ago we urged the importance of certain 'outside' studies for the sake of the intellectual advantages they afford. Let us now urge some of these again for the direct bearing they have upon musical education.

"Modern thinkers have demonstrated the fact that the sensibilities may receive a distinct and special training. Educators must make practical use of this theory. The emotions may be pure, refined and exalted, or they may be vicious, coarse and low. Whether they are noble or evil depends, in a large measure, upon the character of the training they receive.

"The artist cannot afford to taint his soul. Corrupt influences he must shut out, coarse language he must not hear, and undignified behavior he must not see. His spirit must be kept pure, or his art is sure to suffer.

"But this is only the negative phase of the matter. The spirit must not only be kept pure, but it must grow into power and its capacities must be enlarged. It must be delicate and susceptible to the slightest touch; it must be strong and capable of soaring aloft; it must be swift to discern the subtlest beauty, and magnificent in its grapple with the glorious and the grand. How may such a soul be produced?

"The talent must be inborn, it is true. If there is no soul to begin with, no cultivation can produce it. But souls are not born full-grown. Indeed, infant souls (less the purity) are sometimes found in full grown bodies. Soul nourishment is necessary to spiritual growth, and the musician especially needs just such development.

"The following studies are recommended:

"1. The study of nature. Every year some 'familiar science' should be carefully reviewed, and observations should be made constantly. The student should endeavor to classify the results of his observations. The study of botany, geology and astronomy will greatly enlarge the sensibilities.

"2. The study of poetry and the other arts. Every week should witness some advance in the thorough knowledge of literature. Shakespeare and Milton alone will suffice for years of close study.

"3. The humanities. Generosity goes hand in hand with keen sensibility. With what unselfish profusion did Mozart, Beethoven and Liszt bestow their hard-earned money wherever they thought it was needed. The artist must cultivate love for his fellowman. Nothing so surely blunts the sensibilities as the practice of selfishness and thoughtless disregard of others. It makes the soul dark and obtuse and arrests the growth of all delicate feeling.

"These are some of the helpful studies which the artist cannot afford to neglect."

A MUSIC TEACHER-SEER AT EIGHTY-TWO

Here he is, Irish born George Bernard Shaw, now eighty-two years young and still "going strong." At the age of fifteen he had a fine keyboard acquaintance with all of the great masters of music; and during his entire illustrious literary career he has never lost his intimate contact with the musical art. For many years he was a music teacher in London. In his struggles to establish himself as a writer in the English metropolis, he lived for years in great poverty. For nine years he was an assistant to a music critic, now long forgotten, while Shaw's criticisms are treasured as classics. He has become one of the richest literary men of the day, but still lives in great simplicity. His religious philosophy is best expressed by his epigram, "You should live so that when you die God is in your debt."

The Chord "Twins"

By **George B. Thornton**

Although some readers of music magazines may not be interested in harmony and composition, a knowledge of these subjects, nevertheless, makes them better players, forearms them, as it were, and enables them to "expect" what is to follow. Because of the almost constant association of two of the minor chords, irrespective of the key, they might be called "twins."

The following example will illustrate them in the key of C.

These chords have technical names, but why mention them? They are sure to be recognized when they are played. They are given in the example as they usually occur in music. When you hear the first one, be on the lookout for the second; they are "twins"—brothers. This is a good illustration of how the study of harmony may arouse a keener interest in music.

THE SMETANA MUSEUM AT PRAGUE

THE NATIONAL THEATER AT PRAGUE

Picturesque Prague—Home of Dvořák and Smetana

By NORMA RYLAND GRAVES

PRAGUE, picturesque capital of Czechoslovakia, has long been a center of Bohemian Music. Although the nation lost its independence as far back as 1620, when it was annexed to Austria, still it did not lose its culture, its language or its music. Now that it is an independent country again, it takes renewed pride in the achievements of its native sons.

The city is full of distinctive interest to the tourist, for here is a community old in civilization, culture, and ideals, but new in outlook and spirit. A city of broad avenues and spacious buildings, it nevertheless snuggles into its older part a row of tiny houses, reputedly the smallest in the world, and numberless equally tiny cafes where peasants in colorful embroideries dance the lively polka or sit at small tables overlooking the placid Moldau, eating and drinking in contented fashion.

From the modern "Woodrow Wilson Station," down Prague's main avenue, which is one of the broadest in any of the world's capitals, are buildings ultra-modern in design. Overshadowing all is the magnificent National Theater on the bank of the Moldau—not that old theater where some of Mozart's early operas were given, but a building resplendent of the new nation.

Again in vivid contrast is the market place where congregate peasants as varied in racial characteristics as the costumes they wear. Here are Poles, Lithuanians, Magyars, Germans, Czechs, and Slovaks; for Czechoslovakia has long been known as the "crossroads of Europe." A peasantry paradoxically placid and savage, they add color to that nation which, as early as the fourteenth century, had already established the university now ranked as the oldest in Central Europe.

Ever flowing in its even tenor is the Moldau, carrying rafts of timber destined for manufacturing purposes, transporting tourists down to the romantic castle dating back to the eighth century, or to the royal palace with its more than seven hundred rooms.

Fascinating though Prague is to the tourist, it is even more intriguing to the musician; for it has long been a center of Bohemian music. In that early period, when both Austria and Germany were endeavoring to establish themselves musically, scant attention was accorded Bohemia. In spite of innumerable obstacles, that would have deterred a people less determined than the Czechs, the next three hundred years witnessed their constant struggle to achieve musical recognition.

With the beginning of the twentieth century, however, the old order changed. Even before the momentous year 1918—when as a result of the World War Bohemia emerged a victorious republic, as Czechoslovakia—the world had acknowledged as Bohemian the distinctive polka rhythms and dances, and the appealing folk songs.

Two Immortal Sons

UNDOUBTEDLY THE BEST KNOWN of the Bohemian composers are Dvořák and Smetana. Dvořák has become almost a household word by reason of his "Humoresque"; while Smetana's colorful opera, "The Bartered Bride," has, within recent years, become increasingly popular.

These two musicians, whose rise to fame was largely the result of their own efforts, are typically Bohemian; for they received most of their musical training in Prague. It is a city rich in musical background, and one whose citizens are noted for their love of music.

"Where there is a Czech—there is music," is an old saying which rapidly assumes significance to the newcomer; for, whether he dines sumptuously in the boulevard restaurants, or frequents the more humble cafes—and there seem to be hundreds of the latter scattered throughout this city of close to a million—always he finds music.

As the tourist is further guided around the city, great is his surprise—especially if he is an American—to discover that scant attention is paid Dvořák in comparison to Smetana. All Czechoslovakia reveres Smetana as the founder of Bohemian music; Dvořák is regarded in lighter, more popular vein.

In view of this latter fact, it is not surprising, then, to discover that one of Prague's most distinctive landmarks is the Smetana Museum. Commanding a magnificent view both up and down the river Vltva (Moldau)—the river which Smetana pictures so vividly in his "By the Moldau Suite"—this four-roomed shrine to-day contains priceless mementoes of Bohemia's greatest composer.

As the visitor enters the Museum and observes its walls covered with laurel wreaths, "Orders of Merit," and other tokens of high esteem, his first impression is that Smetana's life was filled with triumphs. A closer inspection of letters and pictures reveals far more significant details, for they tell of a struggle against terrific odds.

Youthful Vicissitudes

ALTHOUGH THE COMPOSER was born of a wealthy father who loved good music, yet the latter objected so violently to his son's becoming a musician that he disinherited him. Thus, thrown early on his own resources, young Smetana earned but a scanty living by giving music lessons; and he received still less encouragement as a composer. Finally, in desperation, he wrote Liszt, enclosing a manuscript dedicated to the great master.

The kind-hearted Liszt not only had this, as well as others, published; but he also invited the young composer to Weimar. Here, at his benefactor's home, Smetana decided upon his life work. On overhearing a chance remark to the effect that "Czechs were merely reproductive, but never creative," Smetana resolved to devote his life to building up a Bohemian national school. This decision seems to have been a turning point; for later, through Liszt's help, he was able to open an institute of music in Prague.

Even with his earliest attempts to create a national music, Smetana received little encouragement. Denied the backing of such an established institution as the Conservatory of Prague (founded in 1811), he became the target of ceaseless criticism. In Prague he was condemned for being unduly influenced by German standards; in Germany he was accused of too strong adherence to Czech traditions.

In 1866, at the age of forty-two his "The Bartered Bride" was first produced. At that time he held the important post of Conductor of Opera at the Provisional Opera House, a position he filled for eight years, until deafness forced him to resign.

Like Beethoven, he became deaf at the height of his creative work. Even more tragic, however, was the insanity that was brought upon him by the heartless persecution of his enemies, after he lost his hearing. Committed to an asylum near the city that he had loved so well, Smetana died there on May 12, 1884.

Cherished Treasures

AS ONE INSPECTS THE MUSEUM to-day, he cannot fail to observe the care with which all personal belongings of the composer have been arranged: his cup and saucer, his glasses, and even the deck of cards he used. But, as is so often the case of many a famous personage, it required death and the passing years to give a proper perspective. What a difference it would have made in the composer's life if, when living, he could have received but a modicum of the praise his memory now evokes!

Yearly, hundreds of visitors file through the Museum. Some perhaps step out on the tiny, flower-topped balconies, there to pause reflectively. Below them flows the Moldau, with its never ending procession of boats—all of which symbolize the spirit of the new Czechoslovakia. Nevertheless, at heart, this same little nation remains intensely loyal to the memory of the man who helped build it through creation of a national music.

With Antonin Dvořák some believe that

A MORAVIAN PEASANT BAND PARADING THE STREETS OF PRAGUE

patriotic ideals were not uppermost. Though he was often referred to as the "best known Czech composer of to-day," he still is to many simply "the man who wrote the *Humoresque*." If he had written this and nothing more, his fame would have been assured; but add to this the "Symphony, 'From the New World,'" with its wealth of melodies based on American negro spirituals, and the reason for his continued popularity—at least with American audiences—is readily understood. As a matter of fact, Dvořák was a voluminous composer, with the highest ideals—a real genius.

Although both Smetana and Dvořák wrote of their native land, there was as great a divergence in theme treatment as in their social position. Smetana imparted to his music an intellectual depth, an understanding of the soul of the people; Dvořák seldom interpreted sorrow or tragedy.

One of eight children born to a poor family, Dvořák throughout his life experienced little of the so-called luxuries of life. His father was a butcher, who wanted his son to be a lawyer. That failing, he desired Antonin to follow in his steps.

Family finances did not warrant much schooling; so, as a fourteen-year-old lad, Antonin was forced to become a butcher's assistant; on Sundays, however, he played the organ and sang. Later, through the generosity of his uncle, he was sent to the school for organists at Prague. But soon the small sum of money was exhausted, and Dvořák was dependent upon his own efforts. By playing his viola in the streets during the day, and in cafes in the evenings, he made barely enough to pay for his room and an "occasional loaf of bread."

At nineteen he was graduated from the organ school, thereby attracting the attention of Smetana, who secured a position for him at the National Theater. Although Smetana was interested in young Dvořák, still they never became personal friends as Dvořák was wholly lacking in the cultural standards that would have made him acceptable to Smetana and his circle of friends.

After Dvořák's marriage to one of his favorite pupils—Anna Cermakova—finances became even more acute; and he soon discovered that two could not live cheaper than one! Of this period the composer later remarked: "Now I ate even less and gave more lessons; I did much thinking—little eating."

When he was thirty-four, however, he won a state prize which enabled him to devote all of his time to composition. Three years later his "Slavic Dances" had made him famous enough to number among his friends many well known musicians, among them Brahms, friend of the young musician.

The composer was about forty years old when he was invited to become Director of the National Conservatory of Music, in New York, for a period of two years. Upon his arrival in this country he admitted that one of his greatest ambitions was to become founder of an American music based on Negro melodies. As a first step toward this realization, he succeeded in having Negroes admitted to the Conservatory and allowed to participate in concerts.

Although his visit to America resulted in the "Symphony, 'From the New World'," and other music, he returned to his native home without having accomplished many of his aims. In 1895 he again located in Prague, and six years later became director of the Conservatory, a position which he held until his death on May 1, 1904.

Two Varied Individualities

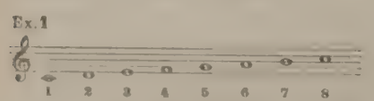
Unlike Smetana, Dvořák had few friends. Although he was well known in Prague, he preferred the simple pleasures of his modest country home, where he devoted a part of his time to raising pigeons. Typical of his modest way of living is the fact that he did most of his composing on a small table in the kitchen rather than in his larger, well equipped study.

That Prague greatly influenced the lives of both Smetana and Dvořák no one will deny; but other musicians, too, have been associated with this old Bohemian capital. Mozart, it is recalled, spent some of the happiest days of his all too short life here. After he had left Salzburg, vowing never to return to the town that had treated him so shabbily, he was warmly received by the Bohemians. Later his "Don Giovanni" was written as a means of "expressing thanks to his dearest citizens of Prague for their warm reception." The première of "The Marriage of Figaro" likewise aroused great acclaim in the capital.

Another famous musician, Gluck, lived there and, as a youth, studied under the great organist, Bohusla Cernohorsky. Also it must not be forgotten that the immortal Franz Schubert was part Bohemian, for in his veins flowed the Czech blood of his mother.

Whether the musician plans to spend a little or a great deal of time in Prague, whether he is an amateur or a professional, he will find in this old world capital a culture and musical appreciation often lacking in many a city far better known. Here in this "land of Smetana and Dvořák" dwell the kindly, hospitable people whose lives have been so vividly pictured by these famous Bohemian composers that one meets them as friends of long standing.

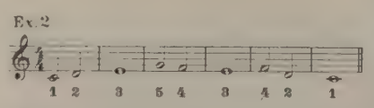
Transposing by Numbers



By GLADYS M. STEIN

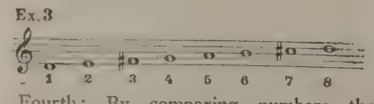
Teaching simple transposition to children generally calls for work in whole steps and half steps. This often puzzles the youngsters and while many of them can easily work out the transposition at the piano keyboard with the help of their ears, they cannot do the work on paper away from the instrument.

For such cases the writer has developed this method:



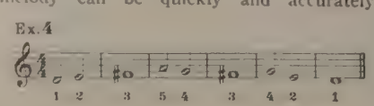
First: We write out the scale in which the given melody is written. Under each scale degree we place its number.

Ex.1



Second: Then the given melody is written out and the number for each note in its scale is added.

Ex.2



Third: We then write out the scale into which this melody is to be transposed, and number its degrees, too.

Ex.3

Fourth: By comparing numbers the melody can be quickly and accurately

Ex.4

transposed into the new key, without the aid of the piano keyboard or the ears.

Radio Flashes

By PAUL GIRARD

Television exhibits have been added to the guided tours for visitors at the National Broadcasting Studios in Radio City, New York. The exhibit covers all phases of the art. Three studios have been set aside for the benefit of the public. The first houses the Iconoscope camera and a special microphone, among other equipment, for broadcasting sight as well as sound. There are to be no "Hands Off" signs about the exhibit, according to the broadcast officials: instead people will be permitted to focus the camera, peer through the sights, and provide their own performance. Once the inspection of the equipment has taken place, visitors will adjourn to a neighboring studio, where the action taking place in the other room will be seen on the television screens.

Chamber music enthusiasts have had much to be gratified with in Columbia's Concert Hall series on Saturdays at noon (EDST). Opening these broadcasts the latter part of June with a program by the Kreiner String Quartet (known to record fans through both Victor and The Friends of Recorded Music), this series has sponsored some of the foremost American chamber music groups, in programs varying from music of the XVIII Century to music of contemporary times.

Speaking of chamber music, that Monday series, in which the talented young American conductor Bernard Herrmann presents rarely heard music of early classic origin is particularly worth hearing. This program has been heard from 5 to 5:30 P. M., EDST.

Bernard Herrmann is one of the most unique musical personalities in radio. Although he recognizes that there is good music and bad music, he contends that a lot of music has been neglected not because it is bad, but because people are too indifferent to look it up and to decide upon its worth. If a man took the trouble to compose a piece, he says, he was unquestionably sincere in his effort, and its worth cannot be adjudged except in performance. Recently, Herrmann was responsible for the first United States broadcast of England's first opera, "Dido and Aeneas," by Henry Purcell; and also for the first American program of the music of Bernard van Dieren, the Dutch composer, who died two years ago. Van Dieren has been hailed by some as a great genius, and condemned by others as an experimenter.

A worthy innovation was recently inaugurated in his program series of "Everybody's Music" by Howard Barlow (heard Sundays from 3 to 4 P. M., EDST). This was the inclusion of a new American work each week in the program. Some of these works are already known, but others are by the nation's unknown composers, who have written, in Mr. Barlow's estimation, something good enough to be heard. In presenting works like this, Mr. Barlow aims to help "the struggling talents in the hinterlands." Interested composers are asked to send their manuscripts by registered mail to the conductor (care of the Columbia Broadcasting System, New York, N. Y.), including a brief biography and personal description of themselves. Two points, adaptability to broadcast and worthiness, will govern the conductor's decision in regard to the use of a work.

"As there is no yardstick to measure the potentialities of a composer of to-day," says Mr. Barlow about his new plan, "and no way to calculate his success in the days to come, we are playing these compositions to let the public beyond the borders of New York, which is not America, hear the music written to-day, without any attempt to prophesy its future."

The summer symphony concerts have come and gone. This year their broadcasts are said to have established more listener interest than ever before. The established classics seem to have been as favored in the open air as in the concert hall. Music under the stars has a magic all its own, whether it is heard from a seat in the Lewisohn Stadium in New York, or in the famous Hollywood Bowl, or through a portable radio in a summer camp. There is no end of interest in music at present in America. It has been said that we are arriving at musical maturity while other countries are languishing in the material of a limited few periods of the past. Outside of England, America would seem to be the most active country in music at the present time. In line with this, one interesting feature of the Stadium broadcasts this past summer was that all were sent by short-wave to Central and South America with special announcements in Spanish.

Walter Koons, who has handled the publicity of the orchestra, points out that time and space are as relative to Toscanini as they are to Dr. Einstein. Although separated from the NBC Symphony Orchestra after his last broadcast in March by the Atlantic Ocean, he never lost contact with it. Despite the fact that the broadcasts reached Europe by way of short wave in the very early hours of Sunday morning, Toscanini sat up religiously to listen to those Saturday night programs under the direction of the guest conductors who came after him.

"Music Is My Hobby" is a program that is heard but once a week, and then only for fifteen minutes (Fridays 7:15 to 7:30 P. M., EDST, NBC Blue network), but it is one of the most important of its kind ever devised. It presents persons distinguished in various walks of life who make music solely as an avocation. Originating in February, 1933, it was the first series of programs by non-professional musicians to be presented over a national network. People from many walks of life are presented in these broadcasts. Recently, a Federal Internal Revenue agent, a retired international banker, an inventor, a prominent attorney, a dentist and a doctor were heard in programs of varied calibre. The quality of music in these broadcasts, which is consistently good, proves that there are a great many people in ordinary walks of life who know and respect the best in music. Many of the broadcasters have written music of their own, which listeners have praised on more than one occasion

Andre Kostelanetz, who conducts the orchestra on the Chesterfield hour (Columbia Broadcasting System), this past summer has been sojourning with his wife, Lily Pons, in South America, where he has been heard in a number of broadcasts especially arranged for him. The personnel of the Chesterfield Orchestra contains many well known figures in the symphonic world. Among the forty-five men are veterans of Carnegie Hall sitting side by side with men who have played for Broadway's best dance bands. The musicians include Lucien Henry Kirsch, for years first violoncellist of the New York Symphony Orchestra; Gregory Besrodry, former concertmaster of the Petrograd Grand Opera; Samuel Spielman, former first violoncellist of the Moscow State Opera; Martin Ormandy, violoncellist, brother of the conductor Eugene Ormandy; former first clarinetist of the San Francisco Orchestra, Chester Hazlett; harpist Francis Lapitino; and Jacob Altschuler, violinist, a veteran of many fine orchestras, and brother of the conductor and founder of the famous Russian Symphony Orchestra.

What Did Bach Mean?

How Each of His Motives Construes a Thought

By FLORENCE LEONARD

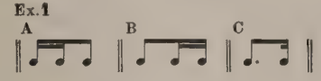
TO MANY MUSIC LOVERS, and to many students, the music of Bach is a sealed book, so far as expression of feeling is concerned. These listeners think of him as marvelously ingenious, but dry and dull, intellectual only. Other, and perhaps more musical people, divide his works into two styles, the ponderous and the "jigging." They can hardly fail to be moved by the richness of the heavier effects; but, if they are honest, they must admit that their interest in the lively style is chiefly because it *is* lively and is an energetic exercise for their fingers.

But Bach's writings are a store house of deeply expressive melodies, and they richly reward those who have learned to fix their minds on them. For they do require concentration of attention, if one is to derive the greatest pleasure from them.

There could hardly be a greater help to the listening powers than the fact which has been proved and pointed out by that great soul and master of music, Albert Schweitzer. Only a hint of this important truth had occurred to the musical world before he rendered it this remarkable service. In Schweitzer's opinion there is a distinct difference among the great tone-painters. Beethoven and Wagner belong in the group which deals with ideas, poetic music, and which appeals to feeling. Wagner's appeal is purely to the feelings. His themes are harmonic in quality, founded on a basic chord, which modulates to correspond to changes in emotion.

Bach, on the other hand, along with Schubert and Berlioz, deals with pictures, pictorial music, which appeals to our faculty of representing a feeling or an event in one characteristic moment. It is not a sequence of ideas or feelings or events that Bach wishes to present to us. He is setting before us " spiritualized tone painting."

"The key to the performance of many of his works is to be found in the signification that he attaches to certain definite motives." "Bach's musical language is based on the simple fact that for the representation of certain feelings he prefers certain definite rhythms, and that the association is so natural that it at once tells its own story to anyone with a musical mind. This does not at all exclude the employment of these rhythms in other ways, especially when the object is the representation of motion of some kind."



Furthermore, it must be observed that this scheme of writing does not bring about monotony; but that the very wealth of expression which distinguishes Bach's works lies in the manifold shadings of these characteristic themes. "The establishment of a musical language in Bach is not a mere pastime for the aesthetician, but a necessity for the practical musician. It is often impossible to play a work of his in the right tempo, and with the right accent and the right phrasing, unless we know the meaning of the motive."

A painstaking study of the compositions which were written for words has revealed the meaning of the motives. They are, as Schweitzer has pointed out, comprised in a few types. These are themes of joy (three types), grief (two types), faith, weakness or lassitude, tumult, peaceful rest, terror, angels, and Satan (the serpent), besides themes which clearly represent movement, as of waves or winds.

The motives are, as has been said, distinguished by rhythms. The function of the interval in the motive appears to be to give the quality of the emotion. The intervals do have a special significance, but this is much more difficult to trace than in the rhythms. "Sixths are plentiful, for the expression of joy; diminished thirds are used to express uneasiness and even loathing; strange and widely separated dissonances accompany the idea of pain or horror."

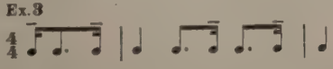
Since the rhythms are the chief determining factor in the fitting of music to words, by Bach, it will be well to look first at two of the most characteristic rhythms. These, as used by Bach, are not merely characteristic of certain emotions, but also they are used insistently in his compositions, and are therefore typical of the man himself. The first is a combination of two sixteenths and an eighth note, as in Example 1 A,

Ex.1

with the accent falling on either the first or last note of the group. Then there is the grouping as at Example 1 B. Nearly two hundred examples of this rhythm may be found in Bach's compositions, whereas it occurs but rarely in Handel or in Beethoven. This rhythm is used with words which express joyous agitation; "lively and radiant joy," says Schweitzer. But simple, direct feeling is depicted by groups of rapid notes, such as sixteenths, which flow along with little or no interruption by notes of other values. It is modified into "dreamy arabesques" to express rapturous or ecstatic joy. But the rhythm of the short and long notes is the most striking and characteristic of the "joy" rhythms.

The other rhythm which is so important to consider is the rhythm of the dotted eighth note followed by a sixteenth note, as in Example 1 C.

This rhythm is found in the early French overture form, where it gives the impression of dignity and solemnity. And so Bach uses it in many cases. But to understand the effect of it, one must study the many instances where it appears and discover its relation to the words. This relation will show how the group should be phrased and emphasized.



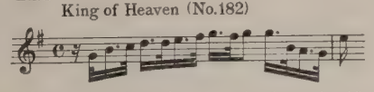
In the three types of this rhythm, two require a certain heaviness or emphasis on the sixteenth note, as well as on the dotted eighth. And furthermore, the sixteenth must be felt as a "fore-accent" to the succeeding note. It must be linked with the note which follows and not with the one which precedes it,

Ex.2

with the *tempo* slow and the tone not interrupted. Then there is this triple rhythm,

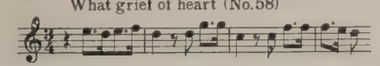
Ex.3

which appears mostly in an animated *tempo*, with notes of other values interspersed. These rhythms denote either (a) majesty or (b) grievous passion, terror and despair, according to the meter and the intervals, as will be seen presently. The third type joins the short note to the preceding long note,



Ex.4

and in this the short note must be light and delicate, and the emotion described is that of peace and happiness, the movement being light and charming.

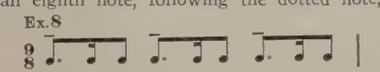


When the dotted eighth and sixteenth note rhythm portrays majesty—and it is frequently used with words which refer to the Godhood of Christ or to the majesty of God—the meter is four-four, with four quarters to a measure, and the theme enters on the first beat. This does not mean that the first note enters on count 1, but that some part of the figure begins before the end of first beat, as in

Ex.5 King of Heaven (No.182)

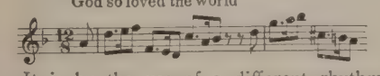
When the dotted note rhythm signifies passion, and passionate grief or terror and like emotions, the meter is three quarters to the measure, and the theme almost always begins on the second or third beat, as in

Ex.6 What grief of heart (No.58)



When the dotted note rhythm is of the "peace and happiness" type, with the lightly breathed sixteenth, it always begins on the first beat, and is usually in triple, or three beat, measure.

Ex.7

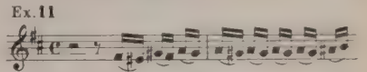


There is a fourth variety of a dotted note rhythm, but in this case it is combined with an eighth note, following the dotted note,

Ex.8

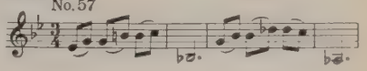
This rhythm is found in twelve-eight and nine-eight measure, and also occasionally in six-eight or three-four measure. Strange to say, this is another rhythm which is not found often in the works of other composers; but it is one of Bach's favorite and most expressive ideas, and is used to suggest the compassionate love of God, or transfigured joy, or some form of felicity of motion that is beyond the earthly.

Ex.9 God so loved the world



It is by the use of a different rhythm that the broad distinction is made between joy and grief. The rhythms of grief are groups of even eighths, combined with more or less frequent notes of greater length. And here again there are two types of motive-rhythm. In the first type the pattern is made of pairs of notes, pairs of eighths or sixteenths, which make an effect of sighing; for the second note of the pair must be phrased off more or less lightly. Such sequence is found in

Ex.10 No.13



This group or type is subdivided again, but now the difference is made by intervals as well as by the rhythm itself. If the movement is more flowing, and not interrupted by long notes, the emotion is lofty, spiritualized, and noble.

Ex.11

If, on the other hand, the rhythm is interrupted by longer notes, and also if the intervals are wide, or broken by irregularity, then Bach is telling us of grief which is not modified and spiritualized, but prevailing in natural outbursts, often manifested in sobbing accents. Such a type is this,

Ex.12 No.57

These are the two expressions of grief in which the notes are grouped in pairs. But Bach has another form of expression for a grief which is of the deepest, most poignant intensity, "torturing grief," Schweitzer calls it. And this is a group of notes of even rhythm, of eighths or quarters. But here are four or five or six notes in a group, as the foundation of the motive; and they are not in sobbing pairs but creep or march steadily onward, as if embodying a force that cannot be checked or withstood. The intervals in this case are always chromatic, and the idea of the chromatic progression is not to be separated from the idea of overwhelming grief.

There are innumerable instances of this motive, so many that one can almost instantly call one to mind. One of the most famous is found in the *Crucifixus* of the monumental "Mass in B minor,"

Ex.13

Then there is the notable *Lament, Daughter of Zion* from the "St. Matthew Passion,"

Ex.14

and a *Lament* from the *Capriccio in C minor*,

Ex.15

With the even movement, or rhythms of steadily moving notes, we come to another of the most important of Bach's pictorial effects. It has been called the "step motive," because it makes a steady progression. But this rhythm cannot be separated from the idea of the interval. The intervals themselves are not at all always "steps," as we understand the word to mean adjacent degrees of the scale. They are, many times, diatonic progressions (the chromatic progressions, it will be remembered, are assigned to painful grief); but these are often interspersed by skips; sometimes they alternate, regularly, with skips; and the width of the skip has a definite relation to the meaning of the words. Then sometimes the idea is expressed by skips alone, even the regular skips of a broken chord.

The "step motive" covers an extremely wide range of symbolism, that is, it is varied to express many ideas, from the simplest, tranquil steps which signify reso-

lution and confident faith, or mere "going" or walking, to pride or defiance or power, and, in movement to haste, and hurrying steps. Of these we have examples in the *Credo* of the "Mass in B minor."

Ex. 16

and in *Healing and Power* from "Cantata No. 50."

Ex. 17

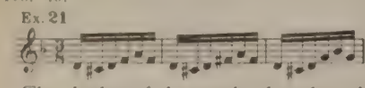
Rhythm, again, is what changes the "step" of strength or faith to one of weariness and exhaustion, or of doubt and vacillation. And this is accomplished by syncopation. The intervals may be, as in the first type of "step" motive, either seconds or wider skips of any sort. But the intervals are seldom chromatic. The chromatic effect is reserved for the expression of extreme grief; while syncopation is the mark of uncertainty, as in *Weak Steps Yet Diligent,* from "Cantata No. 78."

Ex. 18

Closely connected with the step motive is the one which represents tumult. It is a rhythm of even notes, usually sixteenths, in longer or shorter groups, and one note of the group, usually the lower note, is repeated. A sort of "stamping" rhythm often results from this repetition, and this figure is used to suggest combat.

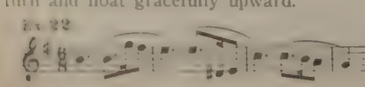
Logically derived from this is the repeated figure of sixteenths or thirty-seconds which, primitive though it may appear to be when it is first suggested, is made by Bach to depict horror, terror, no less an emotion than that caused by the thought of the Judgment Day.

Ex. 19



Of the remaining motives, two are particularly pictorial. One of these is the Satan motive. While this is constructed of groups of even notes, as sixteenths or eighths, interspersed with occasional notes of greater length, and in this way is similar to the step motive, yet here the intervals have such a distinctive meaning that there can be no mistake about Bach's intention. The theme is always a contorted, twisted one. Schweitzer writes, "The devil appeals strongly to the musician in Bach. As he is represented in the opening chapters of the Bible as a serpent, so Bach always delineates him by means of a contorted motive. According to his theology, Satan is identical with the devil; therefore, whenever the 'evil one' is spoken of as Satan, Bach introduces the twistings of the serpent. In the verse, 'If the world were full of devils,' Bach launches a whole army of devils against the divine power." These appear graphically in *Fearful and uncertain steps,* from "Cantata, No. 35."

Ex. 20



and again in *Hellish Serpent,* from "Cantata No. 40."

Ex. 21

The rhythm of the angels, the other pictorial of these last two themes, is the rhythm which we have learned to recognize as that of supercarthly, transfigured joy—one of the dotted note rhythms. But here again the intervals chosen form a graceful, floating motive, the notes rising to turn about and float downward, or falling gently to turn and float gracefully upward.

Ex. 22

Finally, there is one more strongly characteristic rhythm, which signifies neither simple nor passionate nor superearthly joy, but the feeling of charm and happiness. It has been called the rhythm of felicity, and is found in eighths and quarters, or sixteenths and eighths, and sometimes in notes of even values as well as in long, flowing groups of wavelike sixteenths. It is of very frequent occurrence, and of many variations in both rhythm and interval. But it has always a graceful, flowing effect, as in this phrase from *Come thou gentle breeze,* from "Cantata, No. 172."

Ex. 23
